Mr. RAUSHENBUSH. Oh, it is in the light class?

Mr. WILDER. In that letter which you had up there, or rather in Senator Trammell's letter to the President—we have not that one except in the press. Senator Clark has that, has he not?

Senator CLARK. What is that?

Mr. WILDER. Senator Trammell's letter to the President.

Senator CLARK. Here it is [producing paper].

Mr. WILDER. This is it.

Mr. RAUSHENBUSH. Is this in reply to the question concerning the heavy destroyers?

Mr. WILDER. No; the light destroyers, 15-hundred-ton.

Mr. RAUSHENBUSH. Three hundred and sixty-four to three hundred and seventy-nine?

Mr. WILDER. Yes, sir.

Miss KITCHEN (reading):

> I am unable to justify my own opinion to increasing the cruiser costs as indicated by the 1932 and 1933 bids, particularly when those bids are compared with the destroyer bids of 1931 and 1933. I am convinced that the cruiser bids should be rejected.

Mr. WILDER. Somewhere it is stated how much they were.

Mr. RAUSHENBUSH. The United had an adjusted-price basis of $3,400,000, for 2; Bath received 2 on an adjusted-price basis of $3,429,000; and Federal received 2 on an adjusted-price basis of $3,410,800.

Was your point there that these prices were lower than the 1931 figures?

Mr. WILDER. One bid of Bethlehem in that category was.

Miss KITCHEN. That is here.

Mr. WILDER. On page 16 it says: (1) Bethlehem Shipbuilding Corporation bid for one 15-hundred-ton destroyer, $2,728,500; and on July 26, 1933, Bethlehem Shipbuilding Corporation bid for an identical destroyer $2,670,000, or a decrease in price of $58,000.

Mr. RAUSHENBUSH. I do not follow those figures, Mr. Wilder. Could you go to the heavy destroyers and repeat any comments you made about those in connection with this bidding?

Mr. WILDER. What is it that troubles you?

Mr. RAUSHENBUSH. I want to find out if you consider the heavy destroyers a part of the picture which you have made and charged was a collusive arrangement at that time?

Mr. WILDER. Yes, sir.

Mr. RAUSHENBUSH. In what respect did the heavy destroyers fit into that picture?

Mr. Wilder. To compensate New York Ship and Bethlehem, or to make up the value somewhat near equal to what Newport News was going to get. Roughly, Newport News got $38,000,000 for two aircraft carriers, and you had also to divide up the heavy destroyers between the Big Three, between Bethlehem and New York Ship.

Mr. Raushenbush. Then you interpret the somewhat higher bid of Newport News on the heavy destroyers as being upon that arrangement?

Mr. Wilder. Part of that set-up.

Mr. Raushenbush. Is there any further comment on this bidding in 1933 that was made and on which I have neglected to question you, as far as the figures go?

Mr. Wilder. Yes, sir; this point on which we do not seem to be clear on light destroyers, and may I call your attention to this—"Bids received as published by the United States Guaranty Co.", which agrees with the other surety people at the time. It is a custom immediately after the opening to tabulate the bids. As you know, they sit in the front row at the opening.

Under "Destroyers 364 to 379, of 1,500 tons", as of July 26, 1933, the Bethlehem Shipbuilding Corporation put in a bid of $2,670,000, for one 1,500-ton destroyer. That bid was lower than Bethlehem's bid of $2,728,500 as of September 16, 1931.

I made the statement, sir, that they decreased their destroyer prices and that the decrease was such that it scarcely justified an increase in cruiser prices, as the rate of increase in labor costs for destroyers is infinitely higher than it is on cruisers.

The only justification for this Bethlehem bid going somewhere to this region [indicating on chart] would be work under the codes, and that labor was going to cost more. In other words, the thing is entirely inconsistent.

Mr. Raushenbush. But actually, you say, on their destroyer bids, they show they were actually willing to change the bid although the labor cost was greater proportionately than on the cruiser?

Mr. Wilder. Although your labor cost, per ton, just guessing at it, is five times as much on a destroyer as on a cruiser.

Mr. Raushenbush. Just one more question, Mr. Wilder. If the 1932–33 bid of Bethlehem of $8,196,000 was an honest bid, without agreement, does it not follow that the bids in 1929 and the bids in 1927 could not be characterized by the same word?

Mr. Wilder. Correct.

Mr. Raushenbush. That is all I have.

Senator Bone. Now, Mr. Wilder, when you were down here in 1928, joining with others in formulating the text of the Jones-White Act, I believe that you said that in connection with this engineering work, experimentation, and so forth, you spent a quarter of a million dollars.

Mr. Wilder. Yes, sir.

Senator Bone. Were the other private shipbuilding companies equally interested?

Mr. Wilder. No. I think New York Ship carried much the bulk of it.

Senator Bone. They carried the major burden?

Mr. Wilder. And I, myself.

Senator BONE. Were the other shipbuilding companies exhibiting a friendly interest in your activities?

Mr. WILDER. Fairly.

Senator BONE. They were not hostile to it?

Mr. WILDER. They were not hostile to it.

Senator BONE. Was Mr. William B. Shearer connected with your organization?

Mr. WILDER. Yes, sir.

Senator BONE. Was he interested in the Jones-White Act?

Mr. WILDER. No, sir.

Senator BONE. What was he doing down here in connection with it?

Mr. WILDER. He was not, to my knowledge, doing anything in connection with the Jones-White Act.

Senator BONE. He was not?

Mr. WILDER. No, sir. Mr. Shearer has been a gold mine of information to me.

Senator BONE. He had access to sources of information which were very valuable to you?

Mr. WILDER. He has followed this marine practice the world over for a great many years, and knows a hundred times more about it than I do.

The CHAIRMAN. Mr. Wilder, what of the 1934 bidding?

Mr. WILDER. I was not as close to it, Senator Nye, as I was to 1933, because I was not here, but it has exactly the same identification marks.

The CHAIRMAN. It has all the earmarks of practices that may have been resorted to in other years?

Mr. WILDER. That were resorted to in 1933. It is a lot rawer than 1933.

The CHAIRMAN. You mean the margins or the evidences?

Mr. WILDER. Both the margins and the methods.

The CHAIRMAN. Before taking a recess, the Chair should announce that the committee will desire the presence tomorrow morning at 10 o'clock of all witnesses who were asked to be here today. The committee will be in recess until 10 o'clock tomorrow morning.

(Whereupon, at 12:15 p.m., the committee recessed until tomorrow, Thursday, Jan. 31, 1935, at 10 a.m.)

INVESTIGATION OF MUNITIONS INDUSTRY

THURSDAY, JANUARY 31, 1935

United States Senate,
Special Committee to Investigate
the Munitions Industry,
Washington, D.C.

The hearing was resumed at 10 a. m., in room 357, Senate Office Building, pursuant to recess, Senator Gerald P. Nye presiding.

Present: Senators Nye (chairman), Clark, Bone, Vandenberg, and Barbour.

Also present: Stephen Raushenbush, secretary to the committee; and F. W. LaRouche, investigator.

The Chairman. The committee will be in order. All right, Mr. Wilder.

TESTIMONY OF LAURENCE RUSSELL WILDER—Resumed

The Chairman. Mr. Wilder, I believe you wanted to correct some of yesterday's testimony or check up on it.

Mr. Wilder. I did, Senator.

The Chairman. Will you proceed, then, Mr. Wilder, in whatever way you desire to clarify the matter?

Mr. Wilder. There were one or two minor points. Miss Kitchen pointed out after I testified that she believed Mr. Barrett left before I was through the first conversation with Mr. Gravem, and she does not think that the first memorandum was shown to him. I believe I testified it was.

The Chairman. Just incidentally, I would like to say that Mr. Barrett called on the chairman of the committee and said very emphatically that he had not seen the copy of any memorandum.

Mr. Wilder. I believe that he is correct in that.

The Chairman. All right.

Mr. Wilder. The second point was that some of my associates have pointed out that in relation to the 1927 program, the new cruiser program, it was generally understood that we were to get, that is, New York Ship was to get, a cruiser, a new cruiser in consideration of taking over that Cramp job.

I would like to correct that testimony.

Mr. Raushenbush. Among whom was it generally understood, Mr. Wilder?

Mr. Wilder. One of my associates, who was in the yard at the time, said that it was generally understood in the organization. I presume, although I do not definitely recall it, among the shipbuilders and the Navy.

Mr. Raushenbush. One cannot have an understanding that the yard is to get a cruiser ahead like that without also having an understanding among the other two big yards as to price, can one?

Mr. Wilder. That would be true.

Mr. Raushenbush. You are speaking of the 1927 scout-cruiser program?

Mr. Wilder. Yes, sir.

Mr. Raushenbush. It was in that connection that Mr. Bardo was asked a series of questions concerning the fixing with Bethlehem of the oil guarantees. A letter from you to Mr. Bardo, labeled "Exhibit No. 1464", was entered in the record, and I ask you to look at that and see what you remember about it. [Handing paper to witness.]

Mr. Wilder. That had to do with the oil-consumption rate of those cruisers.

Mr. Raushenbush. The oil-consumption rate was an important part of the valuation?

Mr. Wilder. Yes, sir; there are very high penalties on that.

Mr. Raushenbush. And had an important part in the price situation, did it not?

Mr. Wilder. In evaluating the bid; yes.

Mr. Raushenbush. The point I am trying to make, Mr. Wilder, and get a check from you on, is this: That if in 1927, in connection with the bids on the scout cruisers, when the bidding was comparatively low related to bidding later on, it developed that those bids were arranged between you and Bethlehem and Newport News, as they must have been, if you had the advance understanding that you were going to get one of these cruisers; then the bids in the following years, which show that New York Ship as brought out in earlier testimony, had an estimate of about $700,000 lower than it had in the year 1927, that therefore the bidding in 1929 must have been equally prearranged, or New York Ship would not have been able to jump over its 1927 bid and still count on getting the ship.

Mr. Wilder. Yes, sir.

Mr. Raushenbush. Do you follow that?

Mr. Wilder. Yes, sir.

Mr. Raushenbush. Do you agree with it?

Mr. Wilder. I agree with it.

The Chairman. Had you finished any amending of yesterday's record that you had in mind?

Mr. Wilder. Yes, sir.

The Chairman. Tell us very briefly, as briefly as you can, again what your understanding was in 1933 concerning the plan as to the intent of the Navy to throw out the bids that year, that were originally placed.

Mr. Wilder. Senator Nye, I only know what was stated in that article which appeared in the Washington Herald and which was read into the record yesterday.

The Chairman. Yes, sir.

Mr. Wilder. In which the Navy was quoted as being entirely dissatisfied with the cruiser bids, the immense increase from $8,000,000 to nearly $12,000,000 in a period of about 7 months. It stated that their engineers were then at work on the problem of building these cruisers in navy yards, unless the private yards would materially reduce their bids.

The CHAIRMAN. Then we are to gather this: The naval authorities, according to your understanding, were very much distressed by reason of the tremendous increase in those amounts?

Mr. WILDER. Yes, sir; from $8,000,000 to nearly $12,000,000.

The CHAIRMAN. And had indicated that they might throw the bids out?

Mr. WILDER. The press statement said they would throw out the bids unless the private yards would materially reduce their prices?

The CHAIRMAN. Did they throw them out?

Mr. WILDER. No, sir; they were awarded exactly on those prices.

The CHAIRMAN. Why did not they go through with what was understood to be a threat to throw them out?

Mr. WILDER. It is my understanding there was a meeting—this press release I believe was the 28th of July, and the awards were the 3d of August——

The CHAIRMAN. The press release was from the Navy Department?

Mr. WILDER. Supposedly. It is a signed article which appeared in the Washington Herald. I only know what appeared in the press. That is what occasioned our writing the letter to the Secretary of the Navy that we were prepared, if he did throw them out, to build one, two, or three at less than $10,000,000 each.

Now, it is my understanding that there was a meeting at the Mayflower Hotel on Saturday evening, a dinner meeting, Saturday evening I believe would be July 29, at which the matter was discussed by the shipbuilders with the Secretary, and following that the admirals were instructed, Admirals Land, Robinson, and I do not know who the other one was—there were three—were instructed to fly to Hyde Park.

The CHAIRMAN. Were the admirals in attendance?

Mr. WILDER. No; they were not. The admirals, so far as I know, this is, of course, hearsay—I was not present—but I was so curious to know why the awards were made exactly on the bid prices, with no reduction.

The CHAIRMAN. The admirals were instructed to fly where?

Mr. WILDER. Hyde Park, and they went up there Monday or Tuesday following that meeting.

The CHAIRMAN. What further knowledge do you have in that connection?

Mr. WILDER. Merely the evidence, sir, that the awards were made exactly on the bid prices.

The CHAIRMAN. When?

Mr. WILDER. On August 3, no reduction.

The CHAIRMAN. Four days after the meeting at the hotel?

Mr. WILDER. Yes, sir; just about a week elapsed. You see that is between the opening of the bids and the final awards.

The CHAIRMAN. You say this is hearsay, that your knowledge of this is hearsay?

Mr. WILDER. My knowledge of that is hearsay.

The CHAIRMAN. Do you have any definite knowledge of that meeting at the hotel?

Mr. WILDER. I think you could readily obtain it from the hotel records, sir. It was a private dinner. The maître d'hôtel could give you that.

The CHAIRMAN. Were you, as a result of the letter of protest written by yourself to the Secretary of the Navy, invited to personally lay your complaint before the authorities?

Mr. WILDER. I was not.

The CHAIRMAN. You had no contact other than in the letter you wrote and in the acknowledgement you had from the Secretary?

Mr. WILDER. That is all, sir.

The CHAIRMAN. The question in my mind is not yet answered as clearly as I had hoped you might be able to supply the answer. Why were not these bids thrown out, in keeping with what was understood to be an intent to throw them out?

Mr. WILDER. Mr. Nye, if I may answer that a little at length, I think that the Navy were coerced, forced by political pressure into making those awards against its will. This has been going on a long time. These yards have tremendous financial forces behind them. If you trace back the hearsay of the post-Spanish War Navy, you will first go through the armor plate period, where the Navy was forced to build ships and place all private armor plate on them, whether they wanted that type of ship or not.

There was an investigation made, I think sometime just prior or during our entry into the War, and Congress, in answer to the Navy's plea, gave an appropriation to build their own armor plant.

In I believe, 1910, Bethlehem first went into shipbuilding. Up to that time there had been a question of forcing armor on the Navy. Then it started to purchase shipbuilding plants; first I believe the Fore River plant, and then Hollingswood and Sparrows Point, and I do not know when they bought Union Iron.

From then on, as the record shows, it has been poor ships that the Navy has been forced to take.

There was an instance in 1924, and I believe Admiral Koontz made a report on it.

Senator BONE. I want you to explain the word "forced." They do not seem to be forced, when I talked to them, and seem to be very glad to go ahead with the program. I would like to have you amplify that a little bit.

Mr. WILDER. You had a specific example here in a letter from Mr. Bardo to the Secretary of the Treasury. If the Secretary—I do not know that he did—responded to that pressure, he of course was in a very powerful position. Bethlehem had a man named Colonel Thompson, who had a palace out on Massachusetts Avenue, who was the armor-plate man. In 1924, some submarines were selected from Electric Boat, a Bethlehem subcontractor, which were the T-boats, and accepted and paid for and immediately decommissioned as unseaworthy, with the statement of the admiral that they were more dangerous to the crew than to the enemy.

So it goes down the long history of the thing, the political power used to force the Navy to do things that it itself would not do. I feel that the Navy is in a vice, controlled by these three big yards.

Senator BONE. How does this political force to which you refer work? Can you not enlighten us, so that we can enlighten the country? Tell us how it works. How do they apply the "heat" or the "squeeze", or however they term it?

Mr. WILDER. The best example is that example of Mellon. They are large organizations. They have considerable political force.

Senator BONE. I understand that, but how is it applied? I want to know how it is applied. It is all right to refer to it as "force", but that does not enlighten us. How do they apply this "heat" on ships? Do they come down and threaten Congressmen with political extinction if they do not go along? They cannot fire the admirals. Why does an admiral yield to that sort of force? He is in there for life. Why does he have to yield? Is it under threat that he will not be promoted, or how does it apply?

Mr. WILDER. There was an example, sir, of a man who I understand had more hours in submarines—they were then rated as they were in the air by the hours they had in them—and I think it was Commander Welsh, stationed at the New London Ship. He disapproved of some of the work that they were doing. He was told that if he did not pass it, he would be removed.

Senator BONE. Who told him that?

Mr. WILDER. I believe Mr. Spear.

Senator BONE. Spear in the Boat Co.?

Mr. WILDER. Lawrence Spear; yes, sir.

Senator BONE. He told him that he would be removed if he did not accept the work?

Mr. WILDER. Accept the work.

Senator BONE. All right.

Mr. WILDER. I think that the explanation is that a naval officer is not overly paid. He has a family, and let us say he settled down here with his family and puts his children in school. If he misbehaves, he is threatened to be sent to Guam.

The CHAIRMAN. Now, Mr. Wilder, according to the record, July 28, 1933, witnessed the appearance in the Washington Herald of a signed article in which the Navy was quoted as being dissatisfied with the bids which had been tendered for the cruisers. When was this meeting of which you speak?

Mr. WILDER. I believe Saturday, the 29th.

The CHAIRMAN. The following day?

Mr. WILDER. Does Saturday figure out the 29th? Have you a calendar there, sir?

The CHAIRMAN. No; I have no calendar.

Mr. WILDER. The Saturday following the opening of the bids.

The CHAIRMAN. At this meeting, who was in attendance?

Mr. WILDER. The representatives of the big three, and, I understand, the Secretary.

The CHAIRMAN. The Secretary of the Navy?

Mr. WILDER. Yes, sir.

The CHAIRMAN. Then, on the 3d of August, after what you understand to have been instructions to the admirals to go up to Hyde Park, the bids were awarded?

Mr. WILDER. Yes, sir. The awards were made exactly on the bid price; no reduction. You will notice in that article that the Navy is reported to have said unless the prices were greatly reduced, they would throw the bids out, and it was in the interim there that we offered to take the cruisers for $10,000,000 each. That is, if they had accepted our offer on the 3 destroyers and on the 3 cruisers, which we were in position to build, we would have saved the Navy about $7,000,000. There is nothing new in that, as I had done that previously on the *Saratoga.*

Mr. RAUSHENBUSH. Mr. Wilder, in the examination of Mr. Bardo the other day the question was raised as to whether the fact that some of the yards had certain of the merchant-marine vessels to build had any influence on their bidding, or protective bidding on the naval vessels. In 1930, for example, New York Ship had the *Manhattan* and *Washington*, two big merchant-marine jobs. Have you followed the bidding in those years carefully enough to make any comment on whether that influenced them, or would naturally do so, or do you have enough expert experience in the shipbuilding business to know whether that would influence them in trying to get ships on the bids at that time?

Mr. WILDER. I have not any too much information on that, Mr. Raushenbush, but I would say, rather, that the merchant ships were a separate thing, that is, they were a separate kitty. I believe one of my associates testified the other day that in the instance of the *Malola*, Mr. Langell called up the estimator for Cramp as to what the complementary bid was to be, what New York Ship's complementary bid was to be. In other words, the merchant ships are treated just as the Navy ships are.

Mr. RAUSHENBUSH. We find from the Black Committee files, that Mr. Bardo was questioned about it, and that on the bidding on the *Manhattan* and *Washington*, that Newport News and Bethlehem had bid exactly the same figure, which I believe was $9,750,000, and New York Ship had bid just a little under. And there was further discussion also on the agreement between certain of these shipbuilding companies, apparently on some of the other ships. A letter from Robert Haig of the Sun Ship to Mr. Bardo was introduced, appearing at page 6734 of the record showing that Newport News and Federal and Bethlehem had promised to go along on these Gulf Pacific boats, and he was trying to get New York Ship to do so.

Do you know anything about that as a customary practice?

Mr. WILDER. It evidently is, sir. You have developed a great deal of it, and I have dug out some myself. It apparently has been going on for as long as these shipyards have been together. You see it is easier now. Prior to the War there were quite a number of independent yards, that is, before Bethlehem bought them up, and now there are only three. When we get into the 1934 question, it is a little different.

LOBBYING FOR THE JONES–WHITE ACT

Mr. RAUSHENBUSH. When the Jones-White bill was being put through, did the American public at any time have any idea that that was what was going to happen; that a few shipbuilders would get together and agree on what their bids would be on the terrifically large merchant-marine program?

Mr. WILDER. No, sir; no, sir. The Jones-White Act has been to me a horrible disappointment. My own efforts, and my own desires, were to put us back on the high seas right.

At that time I had not had sufficient time to study the situation. I believed that we could not build American vessels at competitive cost. I have changed my view completely as a result of 4 or 5 years further study, that we are designed to build new, sound, safe, fireproof ships. It has been horribly abused. I am with Senator Bone if he wants to take it off the books.

Mr. RAUSHENBUSH. Were you aware, in that connection, that the vice president of the United States Lines, Mr. Sheedy, was apparently informing shipbuilding engineers that he was giving the Shipping Board incorrect information as to the British bidding on the ships, stating that he gave the amount of the bids from British yards to the Shipping Board at a figure lower than actual for mail-contract reasons?

Mr. WILDER. When you brought it out in the testimony, it was the first I heard of it. That is just the way the act has been treated, as evidenced in the Black and Post Office investigations.

Mr. RAUSHENBUSH. This was a measure put through for the purpose of securing adequate national defence, was it not, Mr. Wilder?

Mr. WILDER. Adequate defense; yes, sir.

Mr. RAUSHENBUSH. Here we come into a situation where the American public did not know that a considerable number of things were happening: First, that the shipbuilding companies were going to agree on what the prices on those ships would be; second, that the Shipping Board was going to be incorrectly informed by responsible shipping companies concerning English figures, for mail-contract purposes; and now we have a third thing that the American public did not know that the safety at sea would not be adequately covered by those ships built under that act.

Mr. WILDER. I offer you, Mr. Raushenbush——

Mr. RAUSHENBUSH. Offer it to the committee, please.

Mr. WILDER. I offer to the committee the Senate hearings on the safety of life at sea as a result of the London Conference, 1914. The London Conference on the Safety of Life at Sea was the outgrowth of the *Titanic* disaster. Mr. Homer Ferguson, among others, was a delegate to that conference. At that conference the question of the subdivision of ships was the prime consideration. Now these London conferences are not for. " how good can we build the ships ", but " how poor a ship are we permitted to operate, will we permit to enter our ports." The different countries have different problems. If you have got to carry a lot of pilgrims to Mecca, or you are carrying a lot of standing Chinamen, that is one thing, and carrying Americans is another.

Senator CLARK. Mr. Wilder, I do not think the committee is interested in hearing a speech.

Mr. WILDER. I beg your pardon. I meant to say, that they attended this conference—I am sorry I am quite heated because I put a lot of work in on this conference—and the *Mohawk* was sunk, and if we followed the conventions put down in 1914, the *Mohawk* would be afloat now.

Senator BONE. May I point out that that clause you spoke of yesterday about the recapture of ships, is an amendment and was not in the original act.

Let me at this point, Mr. Wilder, read this queer and peculiar provision of the Jones-White Act under which ships that have been sold to private ship companies for as low as one-seventieth of their cost—I have in mind some steamers sold to a line, which got a mail contract, and for hauling one letter across the ocean that they received almost the entire price of those boats. You are aware of that weird sort of picture, are you not?

Mr. WILDER. Yes, sir.

Senator BONE. Under the Jones-White Act which made that sort of raid on the Treasury, we find this sort of language [reading]:

> The following vessels may be taken and purchased or used by the United States for national defense or during any national emergency declared by proclamation of the President—

and it goes on to define these vessels which have been sold, on which loans have been made, and which are operating under these particularly juicy mail contracts that Senator Black referred to [reading]:

> Any vessel in respect of which an ocean-mail contract is made under title IV of this act, at any time during the period for which the contract is made.
>
> In such event—

that is in the event of the Government taking them for war purposes—

> * * * the owner shall be paid the fair actual value of the vessel at the time of taking or be paid the fair compensation for her use based upon such fair actual value.

In other words, it means if we sell one of these beautiful steamers to a private outfit, or make a loan to one of these outfits, and the Government has given them the vessel almost as an outright gift, and wants to take it back, they must pay the entire fair value price if they take it back.

Mr. WILDER. That is the way it was written.

Senator BONE. And they skinned the Government out of its eyeteeth in writing into law such sort of legislation?

Mr. WILDER. I would say they did.

Senator BONE. Is that typical of the patriotism of these gentlemen? Is that the sort of 100-percent Americanism that they boast of?

Mr. WILDER. Yes, sir. Might I suggest also that you might inquire of the Treasury Department who made the overnight loan at a quarter of 1 percent at the time that Stanley Dollar got his loans from the Shipping Board at one-quarter of 1 percent for 20 years? That loan provision was supposed to be at the Government's current rate of interest on similar loans. Unfortunately, it did not say "similar length." In other words, they made overnight loans and Congress finally had to fix a definite interest rate, so that these patriotic gentlemen have gotten these big loans at an interest rate of one-quarter of 1 percent, three-eights of 1 percent, and one-half of 1 percent.

Senator VANDENBERG. That has been corrected, Mr. Wilder.

Mr. WILDER. Yes, sir; that has been corrected.

Senator VANDENBERG. I introduced the legislation.

Mr. WILDER. I salute you.

Senator BONE. We must admit that there was a tremendous amount of this before that was corrected.

Mr. WILDER. Yes. sir.

Senator BONE. The boys got in the looting before it was corrected.

Mr. WILDER. They got in when it was hot.

Senator VANDERBERG. But the loans which they got at these cheap rates could be legitimized under the legislation as it then existed?

Mr. WILDER. You had to correct it; yes, sir.

Senator CLARK. Mr. Wilder, you testified that in connection with this Jones-White bill lobby you had spent approximately a quarter of a million dollars. I have been furnished with the record of the Black committee, and I find taken from the record of the New York Shipbuilding Co. you presented a claim to them of itemized expenses in the amount of $235,434.03. Is that about correct?

Mr. WILDER. About correct. I was speaking from memory, sir.

Senator CLARK. That refreshes your recollection? Among other items are the following, Carlton Hotel, $23,995.28. Who did you have stopping at the Carlton Hotel?

Mr. WILDER. We had all those committees for about 3 months.

Senator CLARK. As a matter of fact, you had a whole floor at the Carlton Hotel?

Mr. WILDER. We had a whole floor at the Carlton Hotel.

Senator CLARK. "Other Washington Hotels, $1,142.54." "John Schuette, $10,000." Who was he?

Mr. WILDER. He bought some patents on the German dirigibles. You remember at that time the *Akron* and the *Macon* were up and we had a hearing before a subcommittee of the Appropriations Committee of the House, and I told them that I wanted to bid on the dirigibles.

Senator CLARK. "Ivy Lee, $26,321.80." Who was Ivy Lee?

Mr. WILDER. Publicity.

Senator CLARK. He was a propaganda artist, was he not?

Mr. WILDER. Yes, sir; worked for the Pennsylvania Railroad and the Rockefellers.

Senator CLARK. "William B. Shearer, $10,150." Is that the same Shearer who was hired by the "Big Three" to go over and break up the Geneva Conference?

Mr. WILDER. He was hired by the "Big Three", but not to break up the conference. That is a controversial point.

Senator CLARK. That is a question of opinion. His own testimony showed he did.

Mr. WILDER. It is a question of opinion, but the Senators could not finish with him, and I do not think were fair to him. They called him in and questioned him and did not make a complete report.

Senator CLARK. That was in connection with his own claim for services that he did testify that that was what he was doing.

Mr. WILDER. He had a contract, growing out of that, from them, to come down here and act as their contact man, and they reneged on the contract. I had a war on that subject.

Senator CLARK. Was Mr. Shearer employed by you at that time?

Mr. WILDER. Yes, sir.

Senator CLARK. In what capacity?

Mr. WILDER. Advisor.

Senator CLARK. "Addison Foster (Washington representative), $2,802.64." What did he do?

Mr. WILDER. He sat in the Mayflower Hotel and talked to people. He formerly had been with the United States Lines as passenger traffic manager, and was on the economic committee.

Senator CLARK. "John E. Slater (treasurer), $15,383.51."

Mr. WILDER. At that time he was comptroller of the company. I guess part of his time for Washington services was charged to this account.

Senator CLARK. What did he do?

Mr. WILDER. Also on the economic committee. He had been professor of transportation at the University of Illinois.

Senator CLARK. "N. R. Parker (assistant secretary), $1,473.08." What did he do?

Mr. WILDER. He was in the company.

Senator CLARK. "C. L. Bardo, $1,034.20."

Mr. WILDER. Traveling expenses.

Senator CLARK. "L. Wilder, $37,860.81." What was that?

Mr. WILDER. Expenses.

Senator CLARK. "John Libby, $8,467.98." What did he do?

Mr. WILDER. Another economist.

Senator CLARK. "Frank Lord, $3,801.38." Who was he?

Mr. WILDER. He was a contact man.

Senator CLARK. An old Washington newspaper man, was he not?

Mr. WILDER. Yes, sir; attached with the Shipping Board.

Senator BONE. Mr. Wilder, yesterday, as I recall it, you testified that Mr. Shearer had nothing to do with this Jones-White lobby, and here is an item of expense for it.

Mr. WILDER. Mr. Shearer had nothing to do with that lobby, sir. Mr. Shearer advised me, helped me tremendously, and painted some pictures which we used—you might say the pictures were used as a part of the lobby.

Senator BONE. Political pictures?

Mr. WILDER. No, sir; pictures of ships.

Senator CLARK. Was Mr. Shearer a painter?

Mr. WILDER. Shortridge would not let me put them in.

Senator CLARK. "Comdr. Herbert Hartley, $9,607.87." Who is Commander Hartley?

Mr. WILDER. He had been on the *Leviathan* and was on the economics committee.

Senator CLARK. "Commandant United States Navy Yard, $3,250." Who was that?

Mr. WILDER. Model tests, tank tests.

Senator CLARK. "Mayo & Wright, $7,500."

Mr. WILDER. Rent.

Senator CLARK. Is that the same item that is in the other column as rent?

Mr. WILDER. Lord, I don't know, man. It is 6 years ago.

Senator CLARK. "H. C. Fadler, $2,498.57."

Mr. WILDER. Dean of engineering school, Michigan.

Senator CLARK. "Capt. E. W. Higgins, $2,722.50."

Mr. WILDER. Committee on economics.

Senator CLARK. Who is Captain Higgins?

Mr. WILDER. Used to be staff captain of the *Leviathan*.

Senator CLARK. "Noble & Harris, $2,416.67."

Mr. WILDER. Engineering in relation to dirigibles. They built the all-metal dirigibles.

Senator CLARK. "E. O'Brien, $2,960.66."

Mr. WILDER. E. O'Brien?

Senator CLARK. E. O'Brien.

Mr. WILDER. I do not remember.

Senator CLARK. An item of $3,000; I guess you would not. "E. H. Rigg, $1,473.67."

Mr. WILDER. He was the naval architect of New York Ship for drafting them.

Senator CLARK. "William Hovgaard, $1,313.81."

Mr. WILDER. Professor, marine engineering and naval architecture, Massachusetts Institute of Technology.

Senator CLARK. "J. W. Davis, $650."

Mr. WILDER. Patents.

Senator CLARK. After you left the Carlton Hotel, Mr. Wilder, you rented a house up on Sheridan Circle, did you not?

Mr. WILDER. 2306 Massachusetts Avenue.

Senator CLARK. How long did you have that house?

Mr. WILDER. Couple of years.

Senator CLARK. I see an item here of rent, $7,500. That was the rent on that house?

Mr. WILDER. Yes; I presume so.

Senator CLARK. Furnishings for the house, $25,000. That was for the shipping bill, I suppose. "Consultants, $24,479.55." Are they the same?

Mr. WILDER. No, sir; that must have been paid through the company.

Senator CLARK. "Publicity, $25,634.54."

Mr. WILDER. Printing pamphlets.

Senator CLARK. "Traveling, $2,444.14." "Washington office and supplies, $17,352.78."

Mr. WILDER. Are there two sets of accounts there?

Senator CLARK. Yes, sir. There may be some duplications. I am trying to find out about that. This column which I am now reading totals $125,928.88.

Mr. WILDER. As I recall, Mr. Bardo put into the record before I was on the stand certain itemized expenditures as they were itemized on the books of the company, and then I put in a supplementary one, so that you would have to cross the two. Mine was complete and included his, as I remember now.

Senator CLARK. This itemization which I am now reading totals $125,928.88.

Mr. WILDER. Was that submitted by Mr. Bardo?

Senator CLARK. This is from the records of the Black committee, as the result of their own investigation of the New York Shipbuilding files.

Mr. WILDER. Then, that would be what he submitted, and the other would be what I submitted. I submitted the $235,000, which would include his.

Senator CLARK. "Telegraph and telephone, $1,416.35; light and heat, $732.11; house supplies, $3,436.03." Who was living out at that house with you, Mr. Wilder?

Mr. WILDER. Mrs. Wilder and her sister were in residence there continuously and, of course, we had a number of guests from time to time.

Senator CLARK. "Servants, $6,931.77; food, $3,097.32; rent, $7,500; dirigible, $32,904.29."

What was the "dirigible"?

Mr. WILDER. We asked Congress, or rather we asked that we have the privilege of bidding on what subsequently they contracted for with the Goodyear Zeppelin, in connection with the *Akron* and *Macon*. We told them that was the shipbuilders job, and it was a sort of proprietary bill, as it appeared, and it resulted in its being opened up again for rebidding, and that necessitated us getting up a design, which was charged to this account.

Senator CLARK. I guess, Mr. Wilder, that dirigible proposition was simply window-dressing to help get the Jones-White bill through, was it not?

Mr. WILDER. No, sir.

Senator CLARK. You have never put forward a serious effort to get a dirigible?

Mr. WILDER. We made a serious effort to get in a design which the Navy would accept. You will find that in the record. It went in on the same condition.

Senator CLARK. We find several items for food, and so forth, how much money did you put up for wines and liquors during that period ?

Mr. WILDER. Plenty.

Senator CLARK. You have no record of that?

Mr. WILDER. No, sir.

Senator CLARK. Where was that accounted for?

Mr. WILDER. I think in "Miscellaneous supplies." [Laughter.] I much prefer to be questioned on that now than in 1929, because I might have had to say who had it.

Senator CLARK. How much of this expenditure were you reimbursed for, Mr. Wilder?

Mr. WILDER. I think I was about $100,000 out at the end of it.

Senator CLARK. As a matter of fact, the New York Shipbuilding Corporation contended later that you had exceeded your authority in the matter, and had included items such as "women's dresses" and things of that sort in their account, did they not?

Mr. WILDER. Did they? I did not know that.

Senator CLARK. That is all.

Senator BONE. Mr. Wilder, can you tell us whether or not Members of Congress visited your house up there to discuss the pending legislation, or the legislation which was proposed to be drawn?

Mr. WILDER. Yes, indeed; they came in socially.

Senator BONE. Socially. But as a result of these social calls, this Jones-White act was discussed and its proposed terms?

Mr. WILDER. Very little.

Senator BONE. Enough to know what it was all about?

Mr. WILDER. Oh, yes.

Senator BONE. Were they advised that the Government was going to sell the ships for a song and then buy them back at full price in the event of war?

Mr. WILDER. That was not in the original draft.

Senator BONE. When was that put in?

Mr. WILDER. I have been trying to find out this morning. If you call Senator White, you can find out. It was not in the bill at the time. I would never have stood for that then. There was a deliberate clause in the bill that in the case of national necessity the Government should take the ships back at cost, less depreciation to date.

Senator BONE. If you can express an opinion on the point, why is it the Government should pay more for those ships, in the event of war, when it would have to preserve itself, than the companies paid themselves? Do you know any reason?

Mr. WILDER. Certainly it should not. That has a very salty English smell to that clause. I do not know who wrote it.

Senator BONE. It is an English smell?

Mr. WILDER. Yes, sir.

Senator BONE. It seems typical of the Americanism that we have had developed in these hearings.

Mr. WILDER. I do not know. Great Britain built 8,000,000 tons of new ships since the war, and has not paid any money to us. There was the *Belgianland*, 20,000 tons. That old tub walked out of her own way. That is what we got.

Senator BONE. There is one other thing. You referred some time ago to a meeting at the Mayflower Hotel, and you said this morning that the Secretary of the Navy was at that conference.

Mr. WILDER. I have nothing but hearsay evidence to that effect.

Senator BONE. There is nothing in the way of assurance that you can give us to show that that is a fact?

Mr. WILDER. No, sir.

Senator BONE. Is that also true of the fact that these admirals were said to have flown to Hyde Park?

Mr. WILDER. That was probably stated. That was in the press.

Senator BONE. Were these admirals at this conference?

Mr. WILDER. They were not, according to the information I have. They were instructed as a result of the conference.

Senator BONE. How were the results of this conference brought to the attention of the Navy Department, if you know?

Mr. WILDER. I presume, if the Secretary was there, through him, sir.

Senator BONE. Your only knowledge of his being there is from gossip or hearsay?

Mr. WILDER. That is it.

Senator CLARK. Mr. Wilder, during the time that you had these extensive quarters up on Sheridan Circle, were naval officers frequently guests at your place?

Mr. WILDER. No, sir; some of my old friends came in occasionally. They were not involved in that. They would drop in to see me, but not often.

Senator BONE. Were the Members of Congress who came to your place those who were interested in the expansion of the Navy?

Mr. **Wilder.** No; that was not a naval lobby in any way.

Senator **Clark.** Did one admiral in particular not spend a good deal of time with you, Mr. Wilder?

Mr. **Wilder.** Bill Moffatt used to be there occasionally.

Senator **Clark.** Was there not another admiral also?

Mr. **Wilder.** I do not remember that.

Senator **Clark.** Admiral Magruder?

Mr. **Wilder.** Yes; he is an old friend.

Senator **Bone.** What was the attitude of the Navy Department or the admirals who were in charge down there, toward this White-Jones Act? Did they give it their apostolic blessing?

Mr. **Wilder.** No; they did not. It was strange. They were not particularly interested. I could not understand why, because it was such an important element to the national defense. I would say they were apathetic toward it. I tried to get them enthused, but I could not.

Senator **Bone.** Did they not try to stop this provision which would soak the Government 100 percent?

Mr. **Wilder.** If they did not, they should. I do not know how that got through.

Senator **Bone.** Nobody else seems to know, and I wondered if you could throw any light on it.

Mr. **Wilder.** It was not in the original bill.

Mr. **Raushenbush.** One more question on this, Mr. Wilder. These expenses which were put up by New York Ship and the other shipbuilders to put through the merchant marine as a matter of national defense, were they charged to labor or materials?

Mr. **Wilder.** Gee, I do not know.

Mr. **Raushenbush.** If they were not charged to labor and materials, would they be charged to overhead?

Mr. **Wilder.** I think they would go to overhead. It is a sales expense, where they belong, sale of ships.

Mr. **Raushenbush.** We had some discussion the other day on overhead being allotted to the cost of the cruiser, and with an estimate around $7,000,000, New York Ship was bidding almost $11,000,000, and the question was raised: "What was the difference for?" We were told a large part of it was profit and a certain percentage overhead.

Mr. **Wilder.** Do you know what the labor was in the $7,000,000 item?

Mr. **Raushenbush.** I do not, but it is in the record. It was about $3,000,000, as I remember it.

Mr. **Wilder.** The overhead in that period would be roughly 50 percent in the labor, which would be one and one-half million dollars, and eight and a half from eleven, and the difference is profit.

Mr. **Raushenbush.** The question asked of you now is whether all of these expenses shared by New York Ship, Bethlehem, and Newport News, would not be allocated to the cost of the cruisers in 1927, which were building in 1928, and the cruisers in 1929?

Mr. **Wilder.** They have got to be paid for somewhere.

Mr. **Raushenbush.** A certain amount of it would be allocated?

Mr. **Wilder.** Yes, sir.

Mr. RAUSHENBUSH. Would that apply today when the shipbuilders come down and take rooms here and there are such expenses? That would be a part of the overhead which would have to be charged?

Mr. WILDER. That is sales expense.

Mr. RAUSHENBUSH. In other words, the taxpayers of the country, in the amounts paid out for these naval vessels, are paying for whatever entertainment the shipbuilders give?

Mr. WILDER. Exactly as a taxpayer in buying an automobile pays for the automobile show. I differ with Mr. Charles Schwab and others on that. I think in the Shearer investigation, for example, they should have pointed out that every industry in this country appoints salemen and advertises, and charges it off to sales and advertising expense, and when you buy an automobile or a stick of gum, you are paying for that.

Mr. RAUSHENBUSH. I do not care for the analogy in this sense, Mr. Wilder. We are told that we must buy the naval vessels, and we are not told that we should buy gum. It is suggested to us that it would be good for our welfare if we did, but naval vessels are something which we must have, we are told. They are not exactly comparable. Here are the shipbuilders handling money, which in turn is going to be charged up to the taxpayers. So that these expenses that are run up for liquors, or paintings, or what have you, are going to be charged to the taxpayers, and should be regarded in a somewhat different light.

Mr. WILDER. They should be, but that would call for a consistent naval program on the part of Congress. If Congress would free the Navy from this influence—look at the position they are in. They want adequate national defense.

Mr. LAROUCHE. What influence do you mean?

Mr. WILDER. The influence of the "Big Three" and the satellites.

Mr. LAROUCHE. We are told, on the one hand, that the "Big Three" are a part of the scheme of national defense, and now, we are told, on the other hand, that they have to advertise. Presumably, if they are a part of the national defense, no advertising is necessary.

Mr. WILDER. If you had a consistent naval building program, no advertising would be necessary. If you followed the English system—we have no system, and let us say the English system is probably the best one—what would happen? They build in the navy yard a leader ship, first of a series of ships, and they work out the errors and they make the changes on one ship, and then on the following ships they open them up for competitive bidding, and the builder knows what he is up against exactly.

Senator VANDENBERG. They make the complete design?

Mr. WILDER. Yes, sir.

Senator VANDENBERG. The Government makes it?

Mr. WILDER. The Government makes it and they take the first ship, with all the extras and changes, and they are not made on a flock of ships, but only on one ship.

Senator VANDENBERG. There is no outside aid there?

Mr. WILDER. No, sir. If you want 20 destroyers, you build one and get it right, and you can eliminate sales expense, and your vessels would not cost you one-half as much as if you have got to do it the other way. You have a known design, which is not going to be changed in the course of construction, but they carry out a consistent program.

Now we are faced with the fact that for 10 or 12 years we have not built any vessels, and we have got to build some and have no designs. Obviously the boys get their hands in and this sort of thing occurs.

Senator CLARK. Mr. Wilder, this expenditure of $250,000 or $235,000, or whatever it was, was counted as a part of the overhead of the New York Shipbuilding Corporation and the other shipbuilding companies?

Mr. WILDER. Oh, yes; sales cost.

Senator CLARK. And when the time came to build naval vessels, of course that overhead was figured in the figures?

Mr. WILDER. They have got to figure it in somehow and get paid.

Senator CLARK. So that the expenditure of $7,500 for rent, and $25,000 for house furnishings for your house, actually were figured into the cost of naval vessels actually constructed?

Mr. WILDER. Naval and merchant vessels.

Senator CLARK. Yes, sir.

Mr. RAUSHENBUSH. Mr. Chairman, in connection with the evidence given a moment ago regarding the English system, it was brought out in the testimony of the Electric Boat Co. at the hearings that some English bidders, Vickers and Vickers-Armstrong, were also altering some bids according to the information furnished from the files of the Electric Boat Co. at the time.

TESTIMONY OF AXEL B. GRAVEM

OFFER TO "FIX" NAVAL AWARDS

(The witness was duly sworn by the chairman.)

Senator VANDENBERG. Mr. Gravem, will you state your full name, please, to the committee?

Mr. GRAVEM. Axel B. Gravem.

Senator VANDENBERG. When did you come to Washington?

Mr. GRAVEM. February 13, 1932.

Senator VANDENBERG. In what capacity?

Mr. GRAVEM. Counsel, Reconstruction Finance Corporation.

Senator VANDENBERG. How long were you with the Reconstruction Finance Corporation?

Mr. GRAVEM. Until July 15, 1933.

Senator VANDENBERG. What did you do there?

Mr. GRAVEM. I was in charge of the Legal Division, having to do with the building and loan associations, credit unions, did a certain amount of work on the legal matters pertaining to relief to States, went to Ohio for the purpose of discussing a code of building loan associations, at the request of the Governor of Ohio; did a certain amount of legal work on self-liquidating loans, a certain amount of work on the legal side of agricultural loans.

Sometime in March 1933, I believe on March 2, I was asked by the then chairman of the board to go to the Treasury and be one of the legal advisers or assistants to Secretary Woodin in connection with the bank holiday.

That comprised all of my duties with the Reconstruction Finance Corporation.

Senator VANDENBERG. You carried some rather substantial responsibility in the course of that time?

Mr. GRAVEM. Yes, sir; I should say so; of a legal nature.

Senator VANDENBERG. What did you do after you left the Reconstruction Finance Corporation on July 15, 1933?

Mr. GRAVEM. On July 15, I left the Reconstruction Finance Corporation and on July 19, an interval of 4 days, I opened up an office for the practice of law in the Tower Building, in this city.

Senator VANDENBERG. Who were your associates in that law office?

Mr. GRAVEM. I had no associates.

Senator VANDENBERG. Was it your own office?

Mr. GRAVEM. It was my own office.

Senator VANDENBERG. Shared with anyone else?

Mr. GRAVEM. Shared with no one else. There were one or two people who used to come in and want to telephone, but I shared it with no one else.

Senator VANDENBERG. Since you opened your office, have you made any change in your office relationship? Do you share your office now with anyone else?

Mr. GRAVEM. I have no office of my own now. Some time, I think in January or February of 1934, I became associated with the law firm of Tilson, Frodel, Stanley & McCuen. I am there now. I am not a partner. I am an associate there.

Senator VANDENBERG. Did you call upon Mr. Laurence Wilder in the Washington Hotel on August 2?

Mr. GRAVEM. I cannot say as to the date, but some time in the summer of 1933, I did call upon Mr. Wilder in the Washington Hotel.

Senator VANDENBERG. For what purpose?

Mr. GRAVEM. On that particular day Mr. Charles S. Barrett, formerly president of the American Farmers' Union, and I were walking down the street from Childs' restaurant. As we passed the Washington Hotel, Mr. Barrett said that "as long as we have some time, let us go up to the Washington Hotel. There is a man building ships up here on one of these floors." I said, "All right." Mr. Barrett then went into the hotel with me and telephoned up to Mr. Wilder's room and said, "This is Charles Barrett, the poor downtrodden farmer", which Mr. Barrett usually terms himself, and Mr. Wilder said, "Come on up"; and we went up.

Senator VANDENBERG. Mr. Gravem, why did it occur to Mr. Barrett or to you that an interview with a shipbuilder would be of interest?

Mr. GRAVEM. I had never heard of Mr. Wilder in my life until that day. It did not occur to me to be of any importance whatsoever. I do not know why it occurred to Mr. Barrett except that Mr. Barrett apparently was a director or an officer of Mr. Wilder's then company, the Gulf Industries Co., and Mr. Barrett and I had been good friends and I saw Mr. Barrett every day, and we had been out to lunch together, but I am not certain on that, but I believe we had just returned from lunch and Mr. Barrett said, "I want you to meet a man upstairs in the Washington Hotel who is building ships."

Senator VANDENBERG. Did you ever talk to Mr. Barrett about building ships?

Mr. GRAVEM. I never had talked to Mr. Barrett about building ships; that is to say, up to that time.

Senator VANDENBERG. You mean up to the time you had lunch that day?

Mr. GRAVEM. Up to the time we had lunch that day, I had never discussed building ships with Mr. Barrett.

Senator VANDENBERG. Did you discuss it at lunch that day?

Mr. GRAVEM. We did not, sir; by no means.

Senator VANDENBERG. But just out of the clear, Mr. Barrett thought you might be interested in going up to meet this shipbuilder?

Mr. GRAVEM. That is correct, sir.

Senator VANDENBERG. Had you ever heard of Mr. Wilder before?

Mr. GRAVEM. I had never heard of Mr. Wilder before that time, as far as I remember.

Senator VANDENBERG. Did Mr. Wilder apply for a R. F. C. loan while you were connected with the Reconstruction Finance Corporation?

Mr. GRAVEM. I did not know that Mr. Wilder had applied for a loan at the Reconstruction Finance Corporation, but I knew the Gulf Industries had applied for a loan at the Reconstruction Finance Corporation. I did not know then that Mr. Wilder was connected with Gulf Industries.

Senator VANDENBERG. So that you went up to see him without any previous knowledge about his connections, and without any particular interest in meeting a shipbuilder?

Mr. GRAVEM. That is absolutely so.

Senator VANDENBERG. Then, when you got upstairs, what happened?

Mr. GRAVEM. Do you want me to state exactly what happened when we got upstairs, how we met Mr. Wilder, and what he was doing, and all that sort of thing?

Senator VANDENBERG. I am interested particularly in your discussion with Mr. Wilder.

Mr. GRAVEM. Then I will not relate the circumstances of just what Mr. Wilder was doing. I will state exactly what happened.

Senator VANDENBERG. All right.

Mr. GRAVEM. Mr. Barrett and I went into Mr. Wilder's apartment, which I think was composed of two rooms. Mr. Barrett introduced me to Mr. Wilder, saying, "I want you to meet my young friend, Mr. Gravem, a lawyer here in Washington, who has just opened his office. You are doing a lot of things, Mr. Wilder, and perhaps Mr. Gravem may be able to help you some time." We stayed in Mr. Wilder's room for not more than 5 minutes, I would say. There were two other gentlemen there. There was no discussion of business whatsoever.

Senator CLARK. Who were the two other men, Mr. Gravem?

Mr. GRAVEM. I have no recollection except that my memory was refreshed yesterday when Mr. Wilder testified that a Mr. Hyde was there, and it is my recollection that there was a Mr. Hyde. There was also another gentleman sitting at a typewriter in the other room and he was typewriting. Those are the gentlemen I have recollection of being there.

Senator CLARK. This was on the first occasion?

Mr. GRAVEM. This was on the first occasion, sir. I want to make it definitely clear that I was in that room with Mr. Barrett and those gentlemen for not over 5 minutes.

Senator VANDENBERG. What did you talk about?

Mr. GRAVEM. I have stated what we talked about. I will repeat it. Mr. Barrett introduced me to Mr. Wilder and he told him he wanted to meet Mr. Gravem, a young lawyer who had been with the Reconstruction Finance Corporation and who might be able to be of some assistance to Mr. Wilder.

Senator VANDENBERG. What kind of assistance?

Mr. GRAVEM. Legal assistance. Mr. Barrett waved his hands, as I remember, and said, "Are you still building ships?", or something to that effect. Mr. Wilder—it was testified yesterday, and I think properly—was suffering from a cold. He was in bed at the time, or was at least sitting on the edge of the bed in his dressing gown. He did not seem to be in a position to say anything but just "hello."

Senator VANDENBERG. Did you suggest to Mr. Wilder that it was possible for you to help him secure some Navy shipbuilding awards?

Mr. GRAVEM. Absolutely not, sir.

Senator VANDENBERG. Did you say to Mr. Wilder that you had participated in securing the award of two destroyers for the Bath Iron Works?

Mr. GRAVEM. Absolutely not.

Senator VANDENBERG. Did not Mr. Wilder say to you that inasmuch as the Bath Co.'s bids were higher than Gulf Industries' bids, that he was surprised?

Mr. GRAVEM. He did not, sir. There was no reference to the Bath Shipbuilding Co. or any shipbuilding company, to my recollection, at that meeting.

Senator VANDENBERG. Did you suggest to Mr. Wilder that you had a friend who was a "chiseler" and that if Mr. Wilder would subject himself to this "chiseling" your friend could get him an award?

Mr. GRAVEM. I did not, sir.

Senator VANDENBERG. And that without a little of this "chiseling" there would not be any award?

Mr. GRAVEM. I did not, sir.

Senator VANDENBERG. You had some familiarity, however, with what had been going on in connection with shipbuilding bids and contracts, had you not?

Mr. GRAVEM. I had some realization or knowledge of what was going on, largely obtained from the newspapers, and largely obtained from a friend of mine.

Senator VANDENBERG. Who was the friend you were speaking of?

Mr. GRAVEM. The friend I was speaking of was Arthur P. Homer, a man whom I have known for some 12 years, and he has known my wife since she was 2 or 3 years old, and incidentally saved my wife's life in an explosion in a motor boat. That is the man I had in mind.

Senator VANDENBERG. Had you talked with Mr. Homer about these naval bids at any time?

Mr. GRAVEM. Prior thereto; no, sir.

Senator VANDENBERG. Mr. Wilder did not ask you at that time who your friend was, did he?

Mr. GRAVEM. There was no discussion of my friend. There was no discussion of business. He asked me nothing of a friend.

Senator VANDENBERG. Did you tell Wilder when you left that you would communicate with your friend and see him later about this arrangement?

Mr. GRAVEM. I did not, sir. There was no talk of any arrangement, and there was no talk about a friend. Consequently, I could not talk about seeing him later on something which had not been talked about.

Senator VANDENBERG. Did you tell him in the 20 months you had been here you had made some valuable contact and learned the ropes?

Mr. GRAVEM. No.

Senator VANDENBERG. That you had made some contact?

Mr. GRAVEM. No more than anybody else would have made in 20 months. I worked very hard at the R. F. C. and, as I recall, every Saturday and Sunday until about 10 or 12 o'clock.

Senator VANDENBERG. Did you ever hear about Senator Trammell's letter concerning collusion in naval bids?

Mr. GRAVEM. I never heard of that letter until yesterday.

Senator VANDENBERG. You had never talked to Mr. Wilder about it?

Mr. GRAVEM. I had never talked to Mr. Wilder about Senator Trammell's letter. I heard of it yesterday for the first time.

Senator VANDENBERG. Then after a few minutes' casual conversation you left?

Mr. GRAVEM. I did, sir.

Senator VANDENBERG. After you left, did you go and see Mr. Homer?

Mr. GRAVEM. Not just after I left, but about 4 or 5 days later. I do not recall the exact number of days.

Senator VANDENBERG. Never mind that. Within the next 24 hours did you go to see Mr. Homer?

Mr. GRAVEM. I did not, sir.

Senator VANDENBERG. Did you go back to see Mr. Wilder the next day?

Mr. GRAVEM. No, sir; I did not on the next day.

Senator VANDENBERG. When did you go back to see Mr. Wilder?

Mr. GRAVEM. I went to see Mr. Wilder, if my recollection is correct, about a week later.

Senator VANDENBERG. If this first interview was on August 2——

Mr. GRAVEM. I do not recall that date, sir.

Senator VANDENBERG (continuing). And if it is testified by all concerned that the next interview was on August 3, you say that that is a mistake?

Mr. GRAVEM. It is a mistake. May I at this point, Senator, ask a question?

Senator VANDENBERG. What about?

Mr. GRAVEM. I would like to ask a question in connection with this particular matter. Perhaps after asking the question, you can tell me whether it is proper. In view of the fact that my character as a lawyer has been subjected to considerable attack by Mr. Wilder and his associates, and in view of the fact that certain statements have been made, apparently in concert, and apparently by a memorandum about me and about this first conference, which you have now completed asking about, may I at this point introduce into the records of this hearing an affidavit signed yesterday by Mr. Charles Barrett with reference to the testimony given by Mr. Wilder, and which substantiates what I have just been saying?

Senator VANDENBERG. This is an affidavit of Mr. Barrett, who was present at the first conference?

Mr. GRAVEM. Yes, indeed, sir.

Senator VANDENBERG. I think it is legitimate. You can present it.

Mr. GRAVEM. This affidavit was signed yesterday by Mr. Barrett, Charles S. Barrett. [Reading:]

District of Columbia, ss:

Charles S. Barrett, being duly sworn deposes and says:

That he is the Charles Barrett mentioned in the testimony of Mr. L. Wilder at the hearing held today before the Senate Munitions Investigating Committee.

That he was present at a meeting in Mr. Wilder's room at the Washington Hotel with Mr. Gravem in the summer of 1933 and that he was present at only one such meeting and never was in the presence of Mr. Wilder with Mr. Gravem at any other time.

That at such meeting, which did not last over 5 or 10 minutes, there was no discussion whatever of shipbuilding contracts or an offer by Mr. Gravem to do anything for Mr. Wilder or Gulf Industries, Inc., in connection with securing shipbuilding contracts.

That neither the sum of $60,000 or any other sum was mentioned and that there was no discussion of any person by Mr. Gravem and termed by him as a "chiseler", "fixer", or otherwise.

That Mr. Wilder at no time submitted a memorandum of the meeting for Mr. Barrett's approval and that he, Mr. Barrett, did not know of any memorandum ever having been made of what transpired at that meeting.

Further deponent sayeth not.

CHARLES S. BARRETT.

Dated January 30, 1935.

Subscribed to and sworn to before me, a notary public, this 30th day of January 1935.

[SEAL] ELVA RICHARDY.

Senator VANDENBERG. There was no charge that the $60,000 was mentioned in the interview when Mr. Barrett was present. It was subsequent.

Mr. GRAVEM. May I recall, Senator, that at yesterday's meeting a memorandum was read into the record here by the secretary of Mr. Wilder, that at that first meeting a matter of $60,000 was discussed by me?

Senator VANDENBERG. It is not in the first memorandum. We are coming to that now in the second memorandum, respecting the second day's conversation.

Now, as I understand it, you deny that this conversation occurred the next day?

Mr. GRAVEM. That which conversation occurred the next day?

Senator VANDENBERG. The second conversation with Mr. Wilder.

Mr. GRAVEM. It did not occur the next day. That is correct.

Senator VANDENBERG. And all of these gentlemen who participated in the conference and say that it occurred on August 3 are in error?

Mr. **Gravem**. Senator, I have no recollection that it was August 3. It was in the summer of 1933. It may or may not have been August 3.

Senator **Vandenberg**. But it was not the next day, according to your statement?

Mr. **Gravem**. It was not the next day, sir.

Senator **Vandenberg**. How did you happen to have your next meeting with Mr. Wilder?

Mr. **Gravem**. About a week after discussing the matter with Mr. Barrett, or about a week after going with Mr. Barrett to Mr. Wilder's hotel room, I was in the office of Mr. Arthur P. Homer, in the Washington Building. Mr. Homer is a man whom I have known, as I said before, for about 12 years. I went there on some other matters—I constantly called on Mr. Homer—and the thought occurred to me that perhaps Mr. Homer, being experienced in the shipbuilding business, might know something about this Gulf Industries Co.

Senator **Vandenberg**. You say you constantly called on Mr. Homer. What was the occasion of your constant calls on Mr. Homer?

Mr. **Gravem**. Mr. Homer is an old friend of mine and my family. Mr. Homer is very close to us, and I saw Mr. Homer I think at that time perhaps an average of once a week, and sometimes go 2 or 3 months, and not see him.

Senator **Vandenberg**. In all these conversations to which you refer, did you ever talk about ships with him?

Mr. **Gravem**. Prior to the time I am now speaking of, I had not discussed shipbuilding with Mr. Homer.

Senator **Vandenberg**. But you are now about to discuss ships with Mr. Homer?

Mr. **Gravem**. Yes, sir.

Senator **Vandenberg**. All right, go ahead.

Mr. **Gravem**. At this meeting with Mr. Homer, on this particular day, I asked him whether he knew anything about Gulf Industries, Inc. Mr. Homer threw up his hands, made a gesture. He said, "Yes, they have not got anything." I believe that was testified to yesterday by Mr. Wilder, that they did not have anything.

Senator **Vandenberg**. That is your conclusion. You just tell your story and we will draw our own conclusions.

Mr. **Gravem**. Mr. Homer stated that Mr. Wilder's company had a bit of shipyard down in Florida, had no personnel, had no organization, and had no financing; that they needed something like $30,000,000, in view of the fact that they had applied to the R. F. C. for a loan of $30,000.000; that Mr. Wilder had been trying for some time to do a shipbuilding business; that he had been connected with the New York Shipbuilding Co., I believe, and several other shipbuilding companies, the American Brown Boveri Co., which is the holding company or parent company of the operating company.

Mr. Homer stated that there was nothing he could do for Mr. Wilder. Thereupon, I said to Mr. Homer, "You have had a great deal of experience in the shipbuilding business. You have been with the Bethlehem Steel Co. and various other shipbuilding companies, and perhaps this is a situation which you could take hold of and make something out of the company"—I do not mean money, but make something for the company.

Mr. Homer stated that he did not see that there was anything that could be done in connection with Mr. Wilder's company, as that company had nothing.

I think I thereupon asked him, "If they had adequate financing, and if they had adequate personnel and organization, could anything be done?", and Mr. Homer said, "Well, if they could put themselves in good shape, perhaps they could bid for shipbuilding contracts like anybody else."

Mr. Homer then went on to say that the shipbuilding business of the United States was apparently in the hands of four or five companies, and that there were only four or five companies that were capable of building ships; that it took a very high-grade personnel and capitalization and equipment to bid for ships; that this took years of training, years of organization, and years of experience and management. Mr. Homer stated that Mr. Wilder's company had none of these things.

I said to him, "But this seems such a particularly good opportunity for someone that is adequately financed to break into this business."

Mr. Homer did not pay very much attention to it, but thought that if Mr. Wilder and his company could get themselves adequately financed, he might then be in a position to help them in the matter of preparing specifications and bids for Government work.

I have no recollection of anything further being said at that meeting with Mr. Homer.

Senator VANDENBERG. Was this conversation with Mr. Homer after the 1933 bids had been opened?

Mr. GRAVEM. I do not know when the 1933 bids were opened. I can only say that it was about a week after I had talked to Mr. Wilder.

Senator CLARK. Was anything said about the Bath Iron Works in that conversation with Mr. Homer?

Mr. GRAVEM. In that conversation with Mr. Homer nothing was said about the Bath Iron Works. I had met Mr. Newell, the president of the Bath Iron Works, in Mr. Homer's office some 4 months before, or perhaps 6 months before. There was nothing said about the Bath Iron Works.

Senator VANDENBERG. Was there nothing said in that conversation about the general situation with respect to the Navy's bids?

Mr. GRAVEM. There was not, so far as I remember.

Senator VANDENBERG. You are talking to Mr. Homer about the possibility of injecting a brand new shipbuilding company into the naval bidding?

Mr. GRAVEM. That is correct.

Senator VANDENBERG. At the very time when naval bidding is in progress, and you are discussing with Mr. Homer whether or not this new bidder might not have some chance at some of this business, and yet there is no discussion whatever respecting the bidding itself?

Mr. GRAVEM. I did not know that bids were then in process. There was no discussion of the bids themselves at that time.

Senator VANDENBERG. Mr. Homer volunteered all this information about Mr. Wilder, but volunteered no information whatever about the bidding with which he was connected?

Mr. Gravem. None whatever. Mr. Homer volunteered about one-half an hour's statement to me on the technical difficulties of building naval vessels, particularly emphasizing the triaton control.

Senator Vandenberg. He talked to you about a half an hour about this problem without ever once mentioning the fact that these large contracts were either just let or about to be let?

Mr. Gravem. Absolutely; he did not discuss any contemporaneous, or future, or past bidding on contracts.

Senator Vandenberg. Did you know that he was interested in some of these shipbuilding operations?

Mr. Gravem. I did not know it at that time. I knew it later.

Senator Vandenberg. If you did not know he was interested in it, why did you talk to him about it?

Mr. Gravem. Because I knew Mr. Homer had been a naval architect since 1911, and I knew Mr. Homer had gone to England in 1917 as a naval expert. I knew he went to the Admiralty in England and performed some very technical services, and that he was technically qualified as a shipbuilder.

Senator Vandenberg. You were quite familiar with Mr. Homer's general record, and you were quite close to him in a friendly sort of way?

Mr. Gravem. Yes, indeed.

Senator Vandenberg. Then you must have known that Mr. Homer was living at the time with one of the officers of the Bath Iron Works, did you not?

Mr. Gravem. I did not know that; no. I do not know it now.

Senator Vandenberg. All right. You have told of your interview with Mr. Homer, and you have not talked about anything but Mr. Wilder.

Mr. Gravem. I mean to say by that, sir, that I had not talked to him about anything except Mr. Wilder. I told you, Senator, that I talked to him about naval construction for about a half hour, and Mr. Homer told me a great deal about the technical side of shipbuilding.

Senator Vandenberg. But he told you nothing whatever about the bidding which was about to be done?

Mr. Gravem. Nothing whatever.

Senator Vandenberg. All right; then what happened?

Mr. Gravem. About a day or two afterward—I cannot say exactly—I telephoned to Mr. Wilder. Mr. Wilder testified that he telephoned to me or Mr. Hyde did. That is not so. I telephoned to Mr. Wilder and merely asked if I could go down to see him. I think that was at some time about 8 days or a week after my first talk with Mr. Wilder.

Senator Vandenberg. Why did you want to see Mr. Wilder again?

Mr. Gravem. I wanted to see Mr. Wilder again because Mr. Homer had told me that if Mr. Wilder got himself adequately financed, and if he had personnel and had equipment, that he might be able to bid on these contracts that might be next or might be coming along some time in the future.

Senator Vandenberg. Why did you think Mr. Wilder would be interested in hearing from you specifically on that matter, as he had not said anything about it at the first interview?

Mr. Gravem. Because I knew Mr. Wilder had a shipyard he could not finance in Florida, and that only 18,000 tons of private shipbuilding had been built in that year. Every bit of the tonnage built in that year was naval tonnage. The conclusion was obvious that the only purpose of Mr. Wilder's shipyard was to bid on naval vessels.

Senator VANDENBERG. The situation is, that after having had a 5-minute conversation with Mr. Wilder, 10 days before, in which there was no discussion of business whatever, you concluded that you wanted to volunteer some information to Mr. Wilder about his situation?

Mr. GRAVEM. Mr. Barrett had indicated that I might be of some help to Mr. Wilder, and it was in pursuance of that thought that I went back to Mr. Wilder. I thought myself it might be well to have independent shipyards come into the situation, as it was so closely held by 4 or 5 or 5 or 6 companies.

Senator VANDENBERG. You called on Mr. Wilder and what did you say to him?

Mr. GRAVEM. I called Mr. Wilder and I do not believe Mr. Wilder was in at that time. Mr. Wilder's office called back later on and said, "Come on down."

I went down to the Washington Hotel a little later, and I think I was there 10 minutes or perhaps 15. At this time I said to Mr. Wilder, "How are you getting along building ships down in Florida?" Mr. Wilder merely intimated, "We are getting along all right."

Senator VANDENBERG. You asked these questions because of the things Mr. Homer said to you?

Mr. GRAVEM. I cannot say why I asked those questions, Senator. That is 18 months ago. I am relying on my recollection and not on a memorandum.

Senator CLARK. Wilder had not said anything to you about his financing at all before, had he?

Mr. GRAVEM. I knew Mr. Wilder had been attempting to finance for a long time, and knew he had not succeeded.

Senator CLARK. After this casual visit which you say you had the first time, you called him up and opened up the conversation about finances?

Mr. GRAVEM. Yes, sir; because Mr. Homer told me several days prior thereto that if Mr. Wilder could get himself financed and get an organization in shape, that he might be in position to do business.

Senator CLARK. In other words, if I understand Homer's proposition correctly——

Mr. GRAVEM. Homer made no proposition, sir.

Senator CLARK. Your proposition on behalf of Homer——

Mr. GRAVEM. I was not authorized to represent Mr. Homer.

Senator CLARK. I understand, but you say you went down and opened up the business of Wilder's financing and personnel, as a result of a conversation with Homer.

Mr. GRAVEM. That is right.

Senator CLARK. It was your idea that Wilder could go out and get 30,000,000?

Mr. GRAVEM. It was my idea that Wilder could go out and get 30,000,000.

Senator CLARK. Did you not say that Homer said he needed $30,000,000?

Mr. GRAVEM. No, I did not, sir.

Senator CLARK. What is the $30,000,000?

Mr. GRAVEM. $30,000,000 came from the application which I understand Mr. Wilder made at the R. F. C. for a loan.

Senator CLARK. Put it in your own words. If Wilder could go out and raise money enough to be adequately financed and have a personnel and satisfy Mr. Homer, and had a ship to build, then he would have the inestimable privilege of hiring Mr. Homer to draw a design for it. Is that your idea?

Mr. GRAVEM. No, sir; I have not been asked about that. I will talk about that now, if you want me to.

Senator CLARK. All right.

Senator VANDENBERG. Before you come to that, how does it happen that when the investigators of this committee interviewed you in the first instance, you did not remember any of these conversations with Mr. Homer in the detail which you have now given. You seem to have refreshed your recollection.

Mr. GRAVEM. I will answer that question, Senator. I have not asked Mr. Homer——

Senator VANDENBERG. I am not asking you that. I am asking how it happens that you can tell us things in detail which you could not tell our investigators 4, 5, or 6 weeks ago?

Mr. GRAVEM. I am going to answer your question. I have refreshed my recollection as far as I could with Mr. Homer yesterday, after this hearing, at 2:30 in the afternoon, and I intentionally did not go near Mr. Homer since November 28, and I remember the date, because it is the day before my birthday, and I stayed away from Homer and went there yesterday at 2:30 in the afternoon, when I was asked to be here to be called on yesterday at 10.

Senator VANDENBERG. You went to Mr. Homer after you heard the memorandum read?

Mr. GRAVEM. After I heard Mr. Wilder testify on that conference, after Mr. Wilder stated what it was about. That was because Mr. Wilder made a misstatement yesterday under oath, which was not correct, and I went to Mr. Homer, because I realized that everything that Mr. Wilder said was not truthful, as far as that conference was concerned.

Senator VANDENBERG. Let us not have any argument on the subject. We are after information. What is it which refreshes your recollection, I repeat, which refreshes your recollection on these conferences? Is it what Mr. Homer said yesterday?

Mr. GRAVEM. No, sir.

Senator VANDENBERG. What is it?

Mr. GRAVEM. When a person is charged with the things that I am charged with by Mr. Wilder, he will do everything he can to refresh his recollection as to what happened.

Senator VANDENBERG. That is right.

Mr. GRAVEM. I have tried to the best of my ability and effort to do so, and Mr. Barrett came from Georgia yesterday, a sick man, to help me out in this particular. Mr. Barrett came up to refresh my recollection and discussed the matter with me, and

I have done everything I can to refresh my recollection, not being supplied with memoranda which were dictated by Mr. Wilder after the meeting.

Senator Vandenberg. How do you refresh your recollection regarding any conversations with Mr. Homer, except as you discuss it with Mr. Homer?

Mr. Gravem. I did everything I could to remember what was said, and I went to see Mr. Homer and definitely after the hearing yesterday, which is definite proof, I suggest, Senator, that there was no effort on my part to check notes with Mr. Homer, because I was to be called on the stand yesterday.

Senator Vandenberg. In your conversation with Mr. Homer before the second interview, did you suggest to him a 50–50 split on any arrangement you could make with Mr. Wilder?

Mr. Gravem. Definitely not.

Senator Vandenberg. If that is Mr. Homer's recollection, Mr. Homer is in error; is that right?

Mr. Gravem. I would say, sir, Mr. Homer would be in error.

Senator Vandenberg. Did you talk about that with Mr. Homer yesterday?

Mr. Graven. No, sir; I did not.

Senator Vandenberg. All right. You went back to see Mr. Wilder. What happened?

Mr. Gravem. So far as I can remember, when I went back to see Mr. Wilder, I said to Mr. Wilder, "If you are in a position to finance your plant, to get trained personnel, to get the proper equipment, it would seem to me that you should be in a position to get your share of shipbuilding business in spite of the 4 or 5 companies that are apparently to have the business."

Senator Vandenberg. You are telling Mr. Wilder now the things which Mr. Homer told you?

Mr. Gravem. You asked me to state what I told Mr. Wilder, and that is what I told Mr. Wilder.

Senator Vandenberg. Before you continue with that, may I recur just a moment to the previous question, because I want to be sure I understand your answer. You did not talk with Mr. Homer yesterday about the fact that you were told by Senator Clark and myself in a conference 4 weeks ago that Mr. Homer had indicated that you made a 50–50 split proposition to him?

Mr. Gravem. Absolutely not.

Senator Vandenberg. You were greatly surprised when you heard that suggestion, were you not?

Mr. Gravem. Which suggestion, Senator?

Senator Vandenberg. The 50–50 suggestion.

Mr. Gravem. You mean just now?

Senator Vandenberg. No; 4 or 5 weeks ago, when you talked to Senator Clark and me.

Mr. Gravem. I heard no suggestion 4 or 5 weeks ago as to a 50–50 split.

Senator Clark. You mean to say that when you had an interview with Senator Vandenberg and myself, that we did not ask you about a 50–50 split with Mr. Homer, and you denied it, and then Homer's contention was that you had made such a proposition?

Mr. Gravem. My point is that Mr. Homer's recollection was as to a figure of $250,000 and nothing as to a 50–50 split. The Senators may have said that, but that is not my recollection. I understood the Senators to say that Mr. Homer's recollection was a figure of some $250,000.

Senator Vandenberg. That is another phase of the question, Mr. Gravem. I remind you that repeatedly Senator Clark and I specifically talked about this possible 50–50 arrangement which you were suggesting to Mr. Homer, and that for some time we did not indicate to you the source of our information, and that you denied that you had ever made a 50–50 offer to Mr. Homer?

Mr. Gravem. I deny that now.

Senator Vandenberg. And when we finally suggested to you that that might be Mr. Homer's report upon your conversation with him, you expressed great surprise and were greatly disturbed about it. You have no recollection of that whatever?

Mr. Gravem. I have no recollection whatever, Senator.

Senator Vandenberg. You remember minutely all these conversations 18 months ago, but you cannot remember this thing which happened in the presence of Senator Clark and myself 4 weeks ago?

Mr. Gravem. I do not remember the conversations minutely, Senator. I am giving you my recollection of what those conversations were.

The Chairman. Let the Chair inquire: Were the Senator from Michigan and the Senator from Missouri alone in this conference with the witness?

Senator Vandenberg. No, sir. Mr. Raushenbush and Mr. La Rouche were present, and Mr. LaRouche made the first suggestion to Mr. Gravem, presenting the source of this 50–50 matter.

Senator Clark. That is my recollection.

Senator Vandenberg. You started to tell us what you said to Mr. Wilder. Please continue with your statement.

Mr. Gravem. As far as I can remember a conversation 18 months ago, I said to Mr. Wilder:

> If you can get enough to properly finance, with proper equipment and proper personnel, I know a man in Washington who is technically equipped to aid you in getting the finances, if you cannot get them yourself, and will aid you in making your bids ready for proper submission to the Navy.

Senator Vandenberg. Did Mr. Homer authorize you to do that?

Mr. Gravem. Absolutely not.

Senator Vandenberg. That is your own suggestion?

Mr. Gravem. Absolutely. Mr. Homer had made no suggestion to me on the subject.

Then I said to Mr. Wilder:

> This is a man I know well and whom I have known for some years, who is technically equipped to help you. He is a naval architect. He has been to England for the United States Government, either officially or semiofficially, and he has been connected with the shipbuilding industry for a number of years, and I know of no better person who can aid you.

There was nothing said about any fee or any compensation of any kind, and I have heard or read Mr. Wilder's testimony to the contrary.

Senator VANDENBERG. You did not tell Mr. Wilder in that interview that it was too late to do anything about this particular batch of naval awards?

Mr. GRAVEM. Absolutely not. I knew nothing about the batch.

Senator VANDENBERG. You did not tell him that for the consideration of $250,000 you and your friend could probably secure the extension of the naval program and get him ten or fifteen million dollars of awards?

Mr. GRAVEM. It is perfectly ridiculous and preposterous, Senator, and I deny it unequivocally. Mr. Wilder had nothing at the time. There could have been no such suggestion. If I may interject, Mr. Wilder testified yesterday that he had no equipment——

Senator VANDENBERG. Never mind what Mr. Wilder testified. We can draw our own conclusions from the testimony. I am simply trying to find out from you what your version of the story is.

Mr. GRAVEM. That is right, sir.

Senator VANDENBERG. If Mr. Wilder says that you discussed this $250,000 with him and that you stated that this was a very "practical administration" and that that is the way you had to do business—if Mr. Wilder says that is what you said, he is mistaken?

Mr. GRAVEM. He is definitely mistaken.

Senator VANDENBERG. And if Miss Kitchen says that she heard you say that to Mr. Wilder, she is mistaken?

Mr. GRAVEM. Miss Kitchen would be mistaken also. Miss Kitchen said yesterday that Mr. Wilder dictated that memorandum——

Senator VANDENBERG. Miss Kitchen also said she heard the entire testimony and that the memorandum was correct. You say that is false testimony?

Mr. GRAVEM. I say that is false testimony. Mr. Barrett's affidavit supports me on that.

Senator VANDENBERG. Mr. Barrett had nothing to do whatsoever with this second interview, and no one has intimated that.

Mr. GRAVEM. May I ask a question, Senator—whether or not the memorandum of the first interview does not contain some of these assertions about my offer? May I have that first memorandum which Mr. Wilder submitted read at this time?

Senator VANDENBERG. No; because it has been read repeatedly, and there is nothing in it which refers to the $60,000 or $250,000; and on the contrary there was a repeated assertion that you were not asking for anything in that interview. I am not going to argue with you, but I am trying to find out your story.

Mr. GRAVEM. Pardon me, Senator, with all due respect, I do believe and it is my recollection that at the time the first memorandum mentioned a figure of $60,000 and that I made some overtures, which are denied by Mr. Barrett.

Senator VANDENBERG. The record will answer that. You are sure you are not confusing your recollection of the memorandum with your recollection of the interview?

Mr. GRAVEM. I believe not, sir.

Senator VANDENBERG. If Mr. Calvin says that you discussed this $250,000 proposition with Mr. Wilder and made this offer to him on behalf of one whom you have described as "the chiseler", Mr. Calvin is swearing falsely in respect to the matter?

Mr. Gravem. Mr. Calvin is also mistaken. The multiplication of zero by ten would still be zero, Senator.

Senator Vandenberg. Can you think of any reason why Mr. Calvin should have an interest in misstating what he heard?

Mr. Gravem. Yes; I can think of plenty of reasons, sir, for these misstatements, if you will permit me to state them.

Senator Vandenberg. I am talking about Mr. Calvin.

Mr. Gravem. Yes, sir; you have asked me this question, and I will answer it, if I am permitted.

Senator Vandenberg. You may answer in respect to Mr. Calvin.

Mr. Gravem. Mr. Calvin is apparently one of the associates of Mr. Wilder in this testimony, along with Mr. Frey. I believe, or it is my opinion, that Mr. Wilder is a disgruntled bidder, and that Mr. Calvin and Mr. Frey are here to show that Mr. Wilder is the good boy of the industry; and Mr. Wilder is testifying to the truth of all these things, whereas everyone else is disreputable.

Senator Vandenberg. I am not asking you about Mr. Wilder; I am asking you about Mr. Calvin.

Mr. Gravem. And I am stating that Mr. Calvin is associated with Mr. Wilder in this testimony, and that the same interest and same reason which would impel Mr. Wilder would impel Mr. Calvin.

Senator Vandenberg. What interest has Mr. Calvin, except as an executive of the American Federation of Labor, to facilitate employment in shipyards? What interest has he besides that?

Mr. Gravem. I can think of no other interest except for the fact that Mr. Frey, who is associated with Mr. Wilder in this testimony, and Mr. Calvin, who is associated with him—and that Mr. Wilder saw fit to change Mr. Frey's testimony——

Senator Vandenberg. I am not talking about Mr. Frey, but Mr. Calvin.

Mr. Gravem. I will give you the answer. Mr. Calvin, being associated with Mr. Wilder, has the same ideas as Mr. Wilder.

Senator Vandenberg. So that you want us to understand that Mr. Calvin asserts that immediately after hearing this interview he dictated a memorandum containing the things indicated—that he was swearing falsely?

Mr. Gravem. Did Mr. Calvin dictate the memorandum?

Senator Vandenberg. Mr. Calvin dictated a memorandum from which I have read to you.

Mr. Gravem. I say he is mistaken.

Senator Vandenberg. What happened when you had this second interview with Mr. Wilder?

Mr. Gravem. Nothing further happened than what I have stated. I was there not more than 10 minutes. Mr. Wilder said, as I remember it, "Well, I might be seeing you", or something to that effect, and that was the end of it. I want to state to you that Mr. Wilder did ask me for the name of my friend several times, and I refused to give it to him.

Senator Vandenberg. Why did you refuse to give it to him?

Mr. Gravem. Because I was not becoming particularly impressed with Mr. Wilder, and I did not want to bother Mr. Homer with any talks about the possibility of doing things when he did not have any way to perform them.

Senator VANDENBERG. When was it you began to lose your confidence in Mr. Wilder? You had sought this interview with him?

Mr. GRAVEM. Even at the expense of my own testimony now, Senator, I want to say that I was not particularly impressed with Mr. Wilder at the first meeting.

Senator VANDENBERG. Why did you follow him up?

Mr. GRAVEM. I am saying, at the expense of my own testimony now, I will say I was not impressed with Mr. Wilder at the first meeting.

Senator VANDENBERG. That does not explain why you followed him up at all. If you were not impressed with him, why did you follow it up?

Mr. GRAVEM. I should not have followed him up.

Senator CLARK. Why did you do that?

Mr. GRAVEM. Because, in spite of the fact that he did not make a good impression on me at the beginning, something might be done about financing the company.

Senator VANDENBERG. Did you know about Mr. Homer's connection with the Bath Iron Works?

Mr. GRAVEM. At that time, no. Afterward, yes.

Senator VANDENBERG. Mr. Homer never talked to you about his various activities in which he was associated in connection with this cruiser bidding?

Mr. GRAVEM. Absolutely not.

Senator CLARK. You were familiar with shipbuilding in a general way?

Mr. GRAVEM. In a general way, yes; but very general.

Senator CLARK. How did you happen to know the tonnage of merchant construction and naval construction?

Mr. GRAVEM. Last Sunday in the New York Times, or perhaps the Tribune, there was an article on shipbuilding in the United States, and how it had fallen down and there was a table of figures showing the private construction of mercantile vessels in the United States in the last 5 years.

Senator CLARK. When do you mean?

Mr. GRAVEM. This last Sunday.

Senator CLARK. You testified a while ago that was how you happened to be interested in Wilder, because you knew, because of the figures you quoted, he would have to go out after naval construction, if he got any at all.

Mr. GRAVEM. I did not mean to testify to that, Senator, and I do not believe I did, sir. I testified that in view of the fact there were four or five companies getting apparently all the business, that Mr. Wilder's company, or any independent company, might be able to get some business.

Senator CLARK. Did you not state that only 18,000 tons of merchant construction had been handled throughout the preceding year?

Mr. GRAVEM. I did not testify that I told that to Mr. Wilder.

Senator CLARK. You testified to that as a certainty and as the reason why he would have to go out for that business.

Mr. GRAVEM. I did not testify because of 18,000 tons Mr. Wilder would have to go into the business of shipbuilding.

Senator BONE. Mr. Gravem, had you been aware prior to this that only a few big concerns had been getting practically all the naval business?

Mr. GRAVEM. Yes; I was aware of it in a general way, Senator, just as any reading member of the general public might be aware of it.

Senator BONE. How did that seem to impress you?

Mr. GRAVEM. That seemed to impress me as being on the surface mighty fine. I have spent considerable time in Europe, and I know particularly in Germany the big concerns there which are adequately equipped to do construction business generally do get together.

I believe, Mr. Raushenbush said this morning, today, that the British shipbuilding companies do get together. Inherently I think there is nothing wrong in that, Senator.

Senator BONE. I am referring now, in this question, to the monopolistic aspects of this business, whether you had at that time the impression that any monopoly in that business was healthy or unhealthy.

Mr. GRAVEM. I have had the impression that there is a monopoly in that business. I think the monopoly may be healthy but usually it is not healthy.

Senator BONE. In this particular, you do think the monopoly was healthy or unhealthy?

Mr. GRAVEM. I have not given it any thought, Senator. Judging by the figures developed during the last 2 or 3 days, I would say it is unhealthy.

Senator BONE. Did you have the impression at the time that it might be the healthiest thing for the country?

Mr. GRAVEM. I had not thought of it at that time, Senator. I knew, as everyone else commonly knows, that there were four or five companies doing most of the business.

Senator BONE. It would not have been an extraordinary thing for a man to be a little disgruntled over a situation of the kind, if he was in position to build ships?

Mr. GRAVEM. I think it is possible he might be disgruntled, and I think it is unfair that an independent shipbuilder could not build ships.

Senator BONE. That is what I am getting at.

Mr. GRAVEM. That is right.

Senator BONE. And a disgruntled attitude on the part of any man does not make for a healthy state of the industry.

Mr. GRAVEM. I can conceive that, Senator.

Senator BONE. There would not have been anything weird in that?

Mr. GRAVEM. Per se, no, there would not; but perhaps in the issues which Mr. Wilder has discussed, he might be disgruntled, from another point of view.

Senator VANDENBERG. Mr. Gravem, Mr. Homer had been talking to you about this "Big Three" monopoly, had he not?

Mr. GRAVEM. No, sir; not the "Big Three" monopoly. I testified a few minutes ago that at this meeting with Mr. Homer, Mr. Homer said that most of the business was in the hands of 4 or 5 companies. I testified to that 5 or 6 minutes ago, and that is true.

Senator VANDENBERG. Is that all he said about it?

Mr. GRAVEM. That is all that I recall, sir.

Senator VANDENBERG. Did he not tell you in view of the fact that it was in the hands of this small group, that it would be exceedingly difficult for somebody else to get in on it?

Mr. GRAVEM. Yes; I believe he did indicate that, but I am not certain of that, Senator.

Senator VANDENBERG. You do not recall any conversation with Mr. Homer about the "Big Three" monopoly?

Mr. GRAVEM. The "Big Three" monopoly, I have not heard until now from you. The expression "Big Three" I have not heard. We did discuss four or five companies having the major share of the business. I think I can repeat the names of those companies. If it is not Bethlehem Steel, Newport News, Sun Shipbuilding, perhaps, and New York Shipbuilding companies, I do not know what companies would be included.

Senator VANDENBERG. Do you know what influence was used by these companies to defeat the Gulf application for an R. F. C. loan?

Mr. GRAVEM. No, sir; I do not know anything about that. I have no recollection of any influence being used against an application for a loan at the R. F. C. in connection with Gulf Industries.

Senator CLARK. How did you happen to know of the Gulf Industries' application? It did not have anything to do with the department you were in, did it?

Mr. GRAVEM. It was a very casual matter, and came up in this way: When I was in Senator Pomerene's office, who sent me to Ohio on the other matter, and Senator Pomerene and I were discussing the kind of loans coming into the R. F. C., and dealing at that time with the rather heavy self-liquidating loans, Senator Pomerene said, "We get all kinds of things. For instance, here is a shipyard in Florida, the Gulf Industries, who wants a large loan."

I do not recall he mentioned any figure.

Senator CLARK. Where did you get the $30,000,000 which you used this morning?

Mr. GRAVEM. $30,000,000 came from Mr. Homer. I think I testified Mr. Homer made the statement as to $30,000,000. I think that is correct; it was the $30,000,000. I am not positive it is.

Senator CLARK. How did Mr. Homer know what was going on in the R. F. C.?

Mr. GRAVEM. I have not the slightest idea how Mr. Homer knew what was going on in the R. F. C. Mr. Barrett stated to me that Mr. Wilder had said $60,000,000. I have heard everything from $400,000 to $12.000,000, to $30,000,000, to $60,000,000, all in connection with Gulf Industries.

Senator VANDENBERG. How does it happen that you confused that $60,000 item with the first interview? I do not understand that.

Mr. GRAVEM. Because I was sitting here the other day, Senator, and I thought the testimony was that it was in that first memorandum.

Senator VANDENBERG. I hand you the first memorandum and ask you to find the $60,000 therein [handing paper to witness].

Mr. GRAVEM. That is my recollection of it [examining said document]. Is the memorandum of the first interview here?

Senator VANDENBERG. That is the one, of August 2.

Mr. GRAVEM. Is the memorandum here?

Senator VANDENBERG. That is it.

Mr. GRAVEM. I was in error. That is in the second memorandum.

Senator VANDENBERG. Precisely; it is in the second memorandum. Now just to conclude this matter for the record—although we will want to revert to it later—you stated some time ago the proposition, that Mr. Wilder, Miss Kitchen, and Mr. Calvin are mistaken, to put it mildly, respecting their story of your interviews with Mr. Wilder?

Mr. GRAVEM. Yes, sir

Senator VANDENBERG. That if Mr. Homer testifies to a discussion of a 50–50 split, Mr. Homer is in error?

Mr. GRAVEM. Yes, sir.

Senator VANDENBERG. That if Senator Clark and Mr. Raushenbush and Mr. LaRouche and I testify to your discussion of this 50–50 split before us 4 weeks ago, that we are in error?

Mr. GRAVEM. I am in error, then, sir.

Senator VANDENBERG. That is all for the time being.

The CHAIRMAN. Mr. Raushenbush, you have had a communication this morning, concerning the availability of another witness who was called to appear today, Mr. Homer?

Mr. RAUSHENBUSH. Yes, sir. Some days ago Mr. Homer was subpenaed.

The CHAIRMAN. How long ago was he subpenaed?

Mr. RAUSHENBUSH. My memory is about a week ago or longer. I am not quite sure on that. I will furnish that to the committee.

Last night I received this communication from Robert Oden, M. D.,

WASHINGTON, D. C., *January 30, 1935.*

MR. STEPHEN RAUSHENBUSH,
Secretary Senate Special Investigating Committee, Munitions,
Washington, D. C.

DEAR SIR: Mr. A. P. Homer has been under my treatment for more than a year. I have made an examination on him this date and find that he has a blood-pressure condition which will make it positively dangerous for him to undergo the excitement of a hearing before your committee. He will, in fact, jeopardize his life by doing so at this time.

Very truly yours,

ROBERT ODEN.

I called Dr. Oden this morning and he stated that he had signed this communication. I understand he is in the hands of the doctor at the moment.

The CHAIRMAN. There has been word, Mr. Raushenbush, that Mr. Homer is present in the chamber at this time. Are you aware of it? Do you know Mr. Homer?

Mr. RAUSHENBUSH. I have met him. I do not know whether I would remember him.

The CHAIRMAN. Is Mr. Homer present?

Mr. HOMER. Yes, sir.

The CHAIRMAN. Mr. Homer, are you counting yourself available to be heard today on this matter?

Mr. HOMER. If the committee wants to call on me, I will be present.

The CHAIRMAN. What of the circumstances set forth in the letter of your physician, Mr. Homer?

Mr. HOMER. They are true. I have been under the doctor's care for a year.

The CHAIRMAN. The committee will be in recess until 2:30 this afternoon.

(Whereupon at 11:50 a. m., the hearing recessed until 2:30 p. m.)

AFTERNOON SESSION

The CHAIRMAN. The committee will be in order.

The committee would like to hear Dr. Oden.

TESTIMONY OF DR. ROBERT ODEN

(The witness was duly sworn by the chairman.)

Dr. ODEN. I would like to say this, that I am taken away from a deathbed by being summoned to this place right now, despite my objections. My patient is dying.

The CHAIRMAN. Were you summoned to be here?

Dr. ODEN. Yes. I told them this morning that I am at the deathbed of a patient.

The CHAIRMAN. Has a summons been served upon you? At what time was it served?

Dr. ODEN. At noon. However, I can cut this short.

Mr. RAUSHENBUSH. Mr. Chairman, the doctor did not accept the subpena himself. We were not under the impression he would be here.

Dr. ODEN. I was told to come or be fined. My secretary told me that.

The CHAIRMAN. Dr. Oden, we have a letter which you addressed under date of January 30, 1935, to Mr. Stephen Raushenbush, secretary of this committee.

Dr. ODEN. Right.

The CHAIRMAN. In this you say:

> Mr. A. P. Homer has been under my treatment for more than a year. I have made an examination on him this date and find that he has a blood-pressure condition which will make it positively dangerous for him to undergo the excitement of appearing before your committee. It will, in fact, jeopardize his life by doing so at this time.

The committee wants you only to indicate your opinion concerning the consequences of examining Mr. Homer at this time. Are you of the belief that to examine him did jeopardize his life?

Dr. ODEN. I examined him last night. His blood pressure was 220 last night over 120. I have had patients who have died with a blood pressure of 200.

Senator VANDENBERG. How long has he been your patient?

Dr. ODEN. Since April 7, 1934.

Senator VANDENBERG. What would you say as to the prospect of a subsequent examination? Would you have any view as to when it might be safe to do so?

Dr. ODEN. He is a highly emotional individual, and his pressure goes up with emotions.

Senator VANDENBERG. What would be your answer to the question as to whether in your judgment it would be safe to proceed at some subsequent date?

Dr. ODEN. When this pressure comes down to approximately 175.

The CHAIRMAN. How long since it has been down to that?

Dr. ODEN. On the 8th of November, under treatment, it was 160. Before that, I want to add this to it first: When I first saw him he had a pressure of 190 over 110. That was on April 7, 1934. June 6, 1934, he had a pressure of 200. July 14, he had a pressure of 168. This is under treatment. On March 10, 180. He is under treatment now. On December 10, 1934, 190.

The CHAIRMAN. That is the 10th of this month?

Dr. ODEN. No, no, 1934. That is 2 months ago. On the 3d of November 1934, 190. He is still under treatment. On the 4th—that is the following day—under very drastic procedure, it went down to 160. On the 8th it went to 170. On the 15th it was 150. On the 26th it was 165. On the 28th it was 155. On January 28—that is this year, 1935, now—215; and yesterday, 220.

Senator VANDENBERG. Doctor, without taking your time from your other obligations to linger here, would you have any objection to consulting with a physician representing the committee?

Dr. ODEN. Not at all.

Senator VANDENBERG. As to whether or not subsequently it will be appropriate for us to proceed to examine Mr. Homer.

Dr. ODEN. Here is the photographic action of the heart. [Indicating.]

Senator VANDENBERG. We should prefer, I think, to have you discuss it with our physician. You have no objection to that?

Dr. ODEN. Not at all, provided you do not take me away as you have done now.

The CHAIRMAN. You may understand yourself to be excused, doctor.

Dr. ODEN. Thank you.

The CHAIRMAN. Mr. Homer, if you will leave with the secretary of the committee your address, where you can be reached, the committee will be glad to excuse you for the day.

Mr. HOMER. I ask that the committee take me at the earliest possible moment that the doctor will allow me to come before your committee, that I may refute some of the statements that have been made about me.

The CHAIRMAN. Mr. LaRouche, you will take the stand, please.

TESTIMONY OF FLOYD W. LAROUCHE

1933 DESTROYER PROGRAM—ACTIVITIES OF A. P. HOMER

(The witness was duly sworn by the chairman.)

The CHAIRMAN. Mr. LaRouche, you are an employee of this committee, are you not?

Mr. LAROUCHE. That is correct.

Senator VANDENBERG. Mr. LaRouche, for the past several weeks you have been dealing with the episode involved in the Wilder-Gravem-Homer incident, have you not?

Mr. LAROUCHE. Yes, sir.

Senator VANDENBERG. First, let me ask you if you were present in the home of Mr. Raushenbush at the time Senator Clark and I were there with Mr. Raushenbush interviewing Mr. Gravem.

Mr. LAROUCHE. That is true.

Senator VANDENBERG. At that interview was Mr. Gravem advised that Mr. Homer may have indicated to you that in the conversation between Gravem and Homer, Gravem had suggested a 50–50 split in connection with any arrangement he might make with Mr. Wilder?

Mr. LAROUCHE. That is true.

Senator VANDENBERG. Was the 50–50 split proposal discussed at some length with Mr. Gravem at that time?

Mr. LAROUCHE. At considerable length, as I remember.

Senator VANDENBERG. Subsequent to these preliminaries, you have made a careful check, have you not, with Mr. Homer respecting his activities in connection with these events in which the committee is concerned?

Mr. LAROUCHE. Yes, sir.

Senator VANDENBERG. I wish you would proceed to tell in your own way the net result of those contacts, using any memorandum which you may have available for that purpose.

Mr. LAROUCHE. In the latter part of the month of December, the 17th, as I recall it, I want to Mr. Homer's office. While there, with two other men from this committee, representatives of the committee, we conferred with Mr. Homer at some length, not only as to this incident but as to all of his activities both with regard to the Navy and any other connections he had. We were particularly interested in whether or not he really was associated in any way with Mr. Gravem, and just what that connection was. Also we wanted to find out whether or not there was any substance or any basis to these earlier reports about that connection and about this Wilder proposition. To that end we made a rather careful examination of all of Mr. Homer's files. From time to time we discussed things we found there with Mr. Homer.

One of the things that we found was a file of correspondence dealing with Mr. Homer's connection with the Bath Iron Works that seemed very pertinent to the inquiry. We pursued it. I found at one stage a document I did not understand, and so that we might have the full import of the thing, I discussed it with Mr. Homer. The document I refer to was taken from Mr. Homer's files and seemed to be in the nature of a memorandum. It was without a date. When I discussed it with Mr. Homer, he explained that it referred to an agreement that he had with the Bath Iron Works to the end that he, Mr. Homer, would get business, namely, destroyer business from the Navy for Bath Iron Works.

In this memorandum or document, which seemed to me at the time a little unusual, he sets forth the history of what he considered his service to the Bath Iron Works in 1933, to the end that Bath Iron Works was given two destroyers. I have that memorandum here. It has been thoroughly discussed with Mr. Homer, who has explained it to my satisfaction. I would like to read it.

Senator VANDENBERG. What do you mean, to your satisfaction?

Mr. LAROUCHE. I mean, he has identified it and has explained its intent and its importance, the purpose for writing it, all of which I asked him about at some length.

Senator VANDENBERG. I suggest that the memorandum be identified as an exhibit and that you proceed then to read from it, and, as you proceed, I suggest that you interrupt yourself at any time with an explanation.

(The memorandum referred to was marked "Exhibit No. 1484", and is included in the appendix on p. 4921.)

Mr. LaRouche. This is the memorandum [reading]:

> Mr. Homer, talking with Capt. Ormond L. Cox, of the Navy, discovered that a rumor had been started around the Navy Department that the Bath Iron Works Corporation was not an equipped shipyard, had no machinery or facilities for the building of destroyers, and that therefore their bid would not be considered. Checked on this rumor with Captain Oberlin, technical adviser to the Secretary of the Navy, and Captain Stark, aide to the Secretary of the Navy, and found that this rumor was general. Called Mr. Newell at Bath—

Mr. Newell is the executive head of that organization—

> and explained this situation to him. He asked for suggestions as to how to overcome it. Mr. Homer suggested that a series of photographs of the shops be taken showing the workmen, tools, etc. These pictures were taken, and on a Sunday in November 1932, at 144 East Twenty-fourth Street, New York City, Mr. Newell brought the pictures in, and Mr. Homer laid out a plan for their presentation to the Navy Department. The suggestions made were carried out on the following Monday. Mr. Homer left New York for Washington Monday night, and on Tuesday checked around the Navy Department and found that the rumor had been killed, and that the Bath bid would be considered. Result: On December 11, 1932, contract was awarded to Bath Iron Works Corporation for the destroyer *Dewey*, contract price about $3,000,000.

That, of course, precedes the period in which we are most interested, in which he claimed to have done the most service.

The next notation on this memorandum is April 6, 1933 [reading]:

> Mr. Homer, having conceived an idea for allotment of work for relief of unemployment, called Mr. Newell at Bath and asked him to come to Washington for a conference.
>
> April 7, 1933: Mr. Newell arrived and spent 2 days at Mr. Homer's office going over the labor situation, the relief of unemployment, etc., and a plan was prepared, including charts, etc., for presentation to the President.
>
> April 13, 1933: This plan was submitted to the White House by Mr. Homer, who delivered same to Mr. Marvin H. McIntyre personally, who, in turn, submitted it to the President.
>
> April 16, 1933: This plan was returned by Mr. McIntyre with the approval of the President, who asked that the matter be taken up with Assistant Secretary of the Navy Henry Roosevelt, and the idea sold to him.
>
> April 17, 1933: Mr. Homer talked with Mr. Newell at Bath and told him what had happened, and that he had arranged for a conference with Assistant Secretary Roosevelt on the morning of April 18.
>
> April 18, 1933. At 9:30 a. m. Mr. Homer had a conference with Assistant Secretary of the Navy Henry Roosevelt, Admiral Land, Chief of the Bureau of Construction and Repair; Admiral Robinson, Chief of the Bureau of Engineering; Admiral Brinser, in charge of navy yards; and Admiral Murfin, Judge Advocate General of the Navy. This conference lasted for several hours, and, at the end, it was agreed that the plan was practical, and it was turned over to the Navy Department without obligation, to be used as they saw fit.

Mr. Raushenbush. Mr. LaRouche, as you discussed with Mr. Homer those paragraphs you just read, did you take that to be the origin of this plan to allocate P. W. A. funds to shipbuilders?

Mr. LaRouche. Mr. Homer said it was. He said that was where the idea was born, that he conceived it.

Senator Vandenberg. Mr. Homer also indicated, did he not, that in times past he had been a long-time friend of the President's, and that he felt the President had his confidence?

Mr. LaRouche. Yes; he said that on numerous occasions.

Senator Vandenberg. All right, go ahead with your memorandum.

Mr. LaRouche (reading "Exhibit No. 1484"):

> Early in July, a rumor having started around the Navy Department that the Bath Iron Works wished that they did not have the *Dewey* to build, as they found that it was a large job to handle and were having difficulty in financing it, and felt that they should not go in for any further work of this kind, Mr. Homer immediately called Mr. Newell by telephone, and he came to Washington and succeeded in refuting these rumors.
>
> July 24, 1933: Mr. Newell conferred at Mr. Homer's office with Mr. L. C. Rosenkrans of the Fidelity & Deposit Co. of Maryland. While in Mr. Homer's office on this date, Mr. Newell told Mr. Homer that he had figured Mr. Homer in on the bid for the destroyers, and that he was deeply appreciative of what Mr. Homer had done, not only on the new bid, but also on the *Dewey*.

Senator Vandenberg. Did Mr. Homer indicate to you what this language means, that he had been figured in on the bid for the destroyers?

Mr. LaRouche. Yes; he said that his end of it—I think he called it a fee—was to be $50,000.

Senator Vandenberg. From the Bath Iron Works?

Mr. LaRouche. That is correct.

Senator Vandenberg. All right, go ahead.

Mr. LaRouche. Incidentally, I asked at that time at some length as to the nature of the services that he had performed in addition to what he stated here. We had a rather extended discussion not only that day but other days as to the precise services that he had performed, some of which I intimated to him were of an intangible nature. He persuaded me, or attempted to persuade me, that they were very tangible and that he had performed very real services.

Senator Vandenberg. Before you continue, the first date indicated in this memorandum was in December 1932. Mr. Homer did not have an office in Washington in 1932, did he?

Mr. LaRouche. No; he did not.

Senator Vandenberg. When did he open his office in Washington?

Mr. LaRouche. I believe it was in March 1933, but I am not positive. I will have to check. I have it noted down. It was early in 1933.

Senator Vandenberg. I confirm your recollection, because I was present at one interview in which Mr. Homer said that he opened his office the first week in March 1933.

Mr. LaRouche. Just along that line, Mr. Homer was very proud of the fact, apparently—I mean, I gathered that he was, from his attitude—that in the preceding December he had been not only without an office in Washington but he said without an office anywhere. He had been peddling paint, he told me, for $25 a week in New York. So he was considerably elated over the change in his circumstances from the preceding December until March.

Senator Vandenberg. All right, proceed now with the memorandum. You had finished with July 24. The next date is July 28.

Mr. LaRouche (reading from "Exhibit No. 1484"):

> July 28, 1933: Bids for the naval program destroyers were opened, and Admiral Murfin, Judge Advocate General of the Navy rejected the Bath Iron Works bid as being illegal, on the grounds that they had not presented fixed-price bid as well as adjusted-price bid. Mr. Newell said that afternoon that he was going home and that he hoped he would have better luck next time, that

he had felt that he was doing the right thing and that it was unfortunate that the matter had come out that way. At Mr. Homer's urging, Mr. Newell stayed here to confer as to what could be done to overcome the situation.

July 27, 1933: Mr. Homer called Admiral C. J. Peoples, Paymaster General of the Navy, who is the President's closest friend in the Navy Department, to luncheon and they conferred with him as to the best method to be followed in overcoming this awkward situation.

Senator VANDENBERG. What is the "awkward situation" to which that refers?

Mr. LAROUCHE. The awkward situation of Mr. Newell having failed to put in the kind of bids that were requested by the Navy and his failure to be considered for an award.

Senator VANDENBERG. His bid had been rejected prior to this date?

Mr. LAROUCHE. Informally rejected, Mr. Homer told me. It was not officially so. But according to Mr. Homer's statements to me, Pete Newell of Bath was out of the picture until Homer stepped in.

Senator VANDENBERG. Am I to understand now that this conference with Admiral Peoples is in relation to reinstating the Bath bid?

Mr. LAROUCHE. That is right.

Senator VANDENBERG. All right.

The CHAIRMAN. Can you identify any further than he has identified here Admiral C. J. Peoples?

Mr. LAROUCHE. Yes. He was formerly in charge of the Bureau of Supplies and Accounts of the Navy, according to my best knowledge, and is now Director of Procurement, and as I understand it, working under the direction of the Treasury Department.

The CHAIRMAN. Is this the same man who is active at the present time in the public-works program or in legislation that is pending for a continued public-works program?

Mr. LAROUCHE. Yes, sir; that is my understanding. He is the man, according to my best knowledge.

Senator VANDENBERG. Do you know what his status was during the war?

Mr. LAROUCHE. I do not.

Senator VANDENBERG. All right, go ahead.

Senator BONE. Is there a twilight zone between an informal rejection and a formal rejection, and how are these informal rejections communicated to these companies?

Mr. LAROUCHE. I do not know that I am enough of an authority on the informality of those rejections to discuss them.

Senator BONE. Are you in a position to know whether they are communicated to a company so the company can fix things up? Is that the idea?

Mr. LAROUCHE. I know this from my study of the matter, that very frequently between the time the bids are opened and the time the awards are officially announced, there are many conferences, sometimes conferences among the bidders, sometimes conferences between the bidders and the naval officials. In some cases there is no secrecy about those conferences; in some cases they are not particularly made public.

Senator VANDENBERG. I forgot to ask you one thing that I wanted to know about: Was Mr. Homer connected with the Democratic National Committee in the campaign of 1932?

Mr. LAROUCHE. I am not informed as to his precise status. I know he was very active.

Senator VANDENBERG. Have you any information about letters that he sent out to shipbuilders soliciting funds?

Mr. LAROUCHE. Yes. He sent such a letter to the Bethlehem Shipbuilding Co., and I have been told that he sent similar letters to the others, but I have not seen the others.

Senator VANDENBERG. You have seen the Bethlehem letter?

Mr. LAROUCHE. That is correct.

Senator VANDENBERG. Now we are proceeding with this memorandum on July 27, 1933.

The CHAIRMAN. Just on thing more.

Upon what stationery was that letter to the Bethlehem people written?

Mr. LAROUCHE. I cannot remember, but I have a copy of it which I will get. I just cannot recall.

Senator VANDENBERG. Now we are down to the luncheon between Mr. Homer and Admiral Peoples.

Mr. LAROUCHE. I will start at the beginning of July 27 again.

Senator VANDENBERG. All right.

Mr. LAROUCHE (reading from "Exhibit No. 1484"):

> July 27, 1933: Mr. Homer called Admiral C. J. Peoples, Paymaster General of the Navy, who is the President's closest friend in the Navy Department, to luncheon and they conferred with him as to the best method to be followed in overcoming this awkward situation. Admiral Peoples concurred in the suggestions of Mr. Homer, and made further suggestions which were immediately carried out: Ten telegrams were prepared in Mr. Homer's office and they were transmitted to Bath by Mr. L. E. Thebeau to his secretary, who, in turn, transmitted them to the parties who were to send then to the President. At 6:30 p.m. Mr. Homer called Mr. Marvin McIntyre in the presence of Mr. Thebeau and asked that these telegrams be segregated from the mass of telegrams and delivered to the President at breakfast. This was done.

Senator VANDENBERG. As I understand it, you are reading Mr. Homer's memorandum?

Mr. LAROUCHE. That is correct.

Senator VANDENBERG. This is nothing you have prepared. this is Mr. Homer's memorandum?

Mr. LAROUCHE. This is Mr. Homer's record of his accomplishment for Bath.

Senator VANDENBERG. All right.

Mr. LAROUCHE (reading from "Exhibit No. 1484"):

> July 28, 1933: At 2 p. m., the President called to the White House, Admiral Stanley, Chief of Operations; Admiral Murfin, Judge Advocate General of the Navy; Admiral Robinson, Chief of the Bureau of Engineering; Admiral Land, Chief of the Bureau of Construction and Repair; and Admiral Peoples, Paymaster General of the Navy, for a conference.
>
> July 29, 1933: Mr. Newell, acting under the advice of Mr. Homer went to the Navy Department, where he was told to call to a conference Mr. J. W. Powell, president of the United Drydocks Co, and Mr. L. I. Korndorff, president of the Federal Shipbuilding & Dry Dock Co. Mr. Newell called those gentlemen and asked them to come to Washington and confer with him and insisted that they do so.

In parenthesis—

> It will be noted at this point, that Mr. Newell's situation is completely reversed, that he is now in command of the situation, instead of being out.

The CHAIRMAN. Is that note yours?

Mr. LAROUCHE. No, sir; that is Mr. Homer's note.

Senator VANDENBERG. What is Mr. Homer's explanation of that?

Mr. LAROUCHE. He said to me that that was one of the services that he was able to perform for his client; that instead of Pete Newell being on the outside, by Homer's intervention and by his knowledge and background, he had brought about this conference between the "little three", Korndorff, Powell, and Newell. That is the Bath Iron Works, Federal Shipbuilding & Dry Docks, and United Dry Docks. And that those three, Mr. Homer told me, had a conference in his apartment—Mr. Homer's apartment in the Hay-Adams House.

Senator VANDENBERG. We are coming to that in the next paragraph. What I am interested in at the moment, before you reach that, is the implication in this paragraph. I call your attention to the first sentence:

> Mr. Newell, acting under the advice of Mr. Homer, went to the Navy Department—

where he was told to call this conference. Have you any information as to who it was in the Navy Department that told Mr. Newell to call this conference?

Mr. LAROUCHE. I have noted it down, but my memory fails.

Senator VANDENBERG. Let us not have anything about which there is any doubt. This suggestion that Mr. Newell is now in command of the situation would seem to indicate Mr. Homer's belief that as a result of these various contacts that he had made with public officials he had been able to create a situation in which Mr. Newell was again in good standing. Is that the interpretation?

Mr. LAROUCHE. Oh, that is what Mr. Homer intended to convey and did convey to me. He said that he hoped to make Pete Newell the no. 1 man of the shipbuilding industry, and that he, Homer, had aspirations to be the power behind the throne.

Senator VANDENBERG. All right; now we will proceed to July 30.

Mr. LAROUCHE (reading):

> July 1933: Mr. Powell, Mr. Korndorff, and Mr. Newell spent the entire day until 6:30 at night in Mr. Homer's apartment, no. 722 of the Hay-Adams House, and reached a definite agreement as to procedure, and that each would have two destroyers to build.

Senator VANDENBERG. What does that mean?

Mr. LAROUCHE. It meant, as explained by Mr. Homer to me, that they had this session at the Hay-Adams House, which Mr. Homer said he did not attend, but which he caused to happen; he brought it about.

Senator VANDENBERG. It was in his apartment?

Mr. LAROUCHE. It was in Mr. Homer's apartment, but he, Mr. Homer, said he did not attend that conference. I have no reason to think otherwise.

Senator VANDENBERG. He announces in this memorandum, and I understand he has raised no question with you regarding any of the statements in this memorandum——

Mr. LAROUCHE. Oh, not at all. No, no; he is very proud of it.

Senator VANDENBERG. His memorandum indicates, perhaps, that at this meeting in his apartment, he, at least, had knowledge that an agreement was reached to parcel out the results of the Naval bidding. Is not that what it means?

Mr. LaRouche. Yes; that was what Mr. Homer stated he hoped would be done at that conversation, that they would get together on a common plan, and that as a result of that plan and as a result of their agreeing to build a certain type of destroyer the business would be so divided.

Senator Vandenberg. How could they do that without collusive bidding?

Mr. LaRouche. Well, that is a long story.

Senator Vandenberg. Could they do it without collusive bidding?

Mr. LaRouche. I see no way.

Senator Bone. Was this prior, Senator, to the filing of the bids?

Senator Vandenberg. What about that?

Mr. LaRouche. The bids had been put in, but this was——

Senator Bone. They could not collude on bids after they were once in.

Mr. LaRouche. That is what I meant when I said it is a long story, Senator. I rather think that they can.

Senator Bone. Enlighten us, then, as to the technic.

Mr. LaRouche. There are certain matters—of course, I am not a naval authority; I know lots of people who can discuss it better than I can—but there are certain matters of purchases and of arrangement as to details which I think are if not collusive at least a very near approach to it.

The Chairman. Mr. LaRouche, are you meaning to say that when a bid is submitted it is not necessarily sealed and closed and final?

Mr. LaRouche. Oh no; there are always, or very often, conferences and discussions and some changes from time to time are made in bids after they are opened.

The Chairman. After they have been opened?

Mr. LaRouche. Yes, sir.

Senator Vandenberg. That is precisely what Mr. Homer was doing in behalf of the Bath Iron Works, is it not, as indicated in the preceding paragraph?

Mr. LaRouche. I think some such thing is indicated.

Senator Vandenberg. Go ahead. Perhaps this discloses its own purport.

Senator Barbour. I suppose, Senator, just to interpose for a moment, this matter of inspection during construction and that sort of thing is elastic, or might be at least elastic, and subject to discussions of that kind? A great deal depends on that.

Mr. LaRouche. I do not seem to get the question. I do not understand what you mean.

Senator Barbour. The matter of Government inspection is something which people who are building a ship might be very much interested in in relation to one another.

Mr. LaRouche. Yes.

Senator Barbour. Speaking of the things that might be done.

Mr. LaRouche. Yes.

Senator Barbour. That might be a field which is quite fertile in that respect.

Mr. LaRouche. Oh, yes; Naval inspectors have told me from time to time the Navy can ruin any yard they want to if they enforce the specifications rigidly enough.

Senator Barbour. That is the point I want to make.

Mr. LaRouche. They can put any yard out of business.

Senator Vandenberg. Let us go ahead with the story. They have now had a meeting in Mr. Homer's apartment and agreed that he should have two destroyers to build.

Senator Bone. May I ask Mr. LaRouche one question?

It is, I take it, quite customary not only in the Navy Department but in most business enterprises when a bid is filed and there is any question in the mind of the organization calling for the bids, be it a public body or private, to find out something of the financial and physical status of the bidder? There would not be anything unusual in calling the parties to Washington to find out about their equipment?

Mr. LaRouche. No; I think that is perfectly natural.

Senator Bone. The Navy would want to know that the yard could actually go through with the program.

Mr. LaRouche. I think they usually find that out, Senator, before the bids are submitted.

Senator Bone. Do they have any preliminary examination of the yard?

Mr. LaRouche. Yes.

Senator Bone. Or can any outfit bid?

Mr. LaRouche. No. The procedure is very well defined.

Senator Bone. Is it a fact that after bids are in the Navy sometimes makes an inquiry as to the condition of the yard and the equipment and personnel, and the like?

Mr. LaRouche. My understanding is—if you want to accept that; I do not hold any brief for it—that before a yard is given specifications upon which to bid, this examination is made. Everyone does not have a chance to bid.

Senator Bone. I happen to know of one case where a yard bid and was afterwards advised by the Navy that they did not think their equipment was sufficient, and the general set-up and personnel was sufficient, to assure a good job. That is why I ask. I did not know that there was any prohibition against anyone bidding.

The Chairman. Proceed, Mr. LaRouche.

Mr. LaRouche. I believe I had not finished.

Senator Vandenberg. July 30, 1933.

Mr. LaRouche (reading from "Exhibit No. 1484"):

> Mr. Homer this day took Admiral Peoples, Mr. Thebeau, treasurer of the Bath Iron Works, and Mr. Nugent of the Public Works Adminstration to Harper's Ferry for an all-day trip.
>
> July 31, 1933: Mr. Newell, Mr. Powell, and Mr. Korndorff went to the Navy Department at 9 o'clock and saw Capt. Claude Jones, of the Bureau of Engineering; there they met Admiral Robinson and Admiral Land and offered to work together, building from one set of designs.
>
> August 3, 1933—

August 3, 1933, is the date of the contracts—

> The Navy Board went to see the President at Hyde Park for his decision in regard to the contracts, which came out exactly as planned regarding the three above-mentioned yards.

Senator Vandenberg. When it says "exactly as planned", am I to understand that that refers back to the agreement made in Mr. Homer's apartment on the evening of July 30th?

Mr. LaRouche. That is the intent, as I understand it.

Senator Vandenberg. Do you have any recollection as to whether Mr. Homer made any statement to you on that subject?

Mr. LaRouche. No. I do not recall any definite statement that he made.

Senator Vandenberg. All right.

Mr. LaRouche (reading from "Exhibit No. 1484"):

> August 4, 1933: Mr. Homer went to Captain Stark's office and secured for Mr. Newell word of the award of the contracts and got an advance copy of the news release and delivered same to him.
>
> Between August 4 and August 26, Mr. Newell and Mr. Thebeau were working in New York endeavoring to get bond.
>
> August 26, 1933: Mr. Newell returned to Washington with Mr. Homer.
>
> September 5 and 6, 1933: Mr Newell and Mr. Thebeau here in regard to bond. Constantly in conference with Mr. Homer's partner, Mr. Perkins, and with Mr. Homer by long-distance telephone.

Senator Vandenberg. Do you know who Mr. Perkins is?

Mr. LaRouche. He was at that time Mr. Homer's partner. George H. Perkins, I believe the name is.

Mr. Raushenbush. At that point, is it not very unusual for an award to be given before the company has bonds?

Mr. LaRouche. There again, there are lots better people to discuss that than I, but I do not think it is customary.

Senator Bone. I am not clear on one thing: Did the Bath Iron Works get two of these destroyers?

Mr. LaRouche. Yes, sir; it did.

Senator Bone. And the Federal Shipbuilding got two?

Mr. LaRouche. That is right.

Senator Bone. And the United Dry Dock got two?

Mr. LaRouche. Yes.

Senator Bone. So there were two each to this group known as the "little three" that you have designated in that manner?

Mr. LaRouche. Yes, sir.

Senator Bone. Those were all destroyers?

Mr. LaRouche. Yes, sir; all 1,500-ton destroyers.

Senator Vandenberg. And the two to Bath were on bids which had been, let us say, informally rejected by the Navy Department in the first instance?

Mr. LaRouche. According to Mr. Homer's statement here.

Senator Vandenberg. Yes.

Mr. LaRouche (reading):

> September 7 and 17, 1933: Either Mr. Newell or Mr. Thebeau was in daily conference with either Mr.——

Then there is nothing——

> or Mr. Perkins relative to the contract and bond on the destroyers.

There is a name left out. I do not know whose it is; I think probably Mr. Homer's.

> September 18, 1933: Mr. Newell wrote a letter in the office of Mr. Homer to the Secretary of the Navy asking for an extension of time for the securing of bond. The Navy Department said that the time had expired and they did not care to hold the matter up or to have any publicity by granting a further extension of time, but that they would hold the matter in abeyance.

I think at this point I can answer Mr. Raushenbush's question of a few moments ago. Mr. Homer told me that never before in the history of the Navy, that he knew of, had a bond been held up so long, or had a contract been held up so long for lack of a bond and then the contract awarded. He said that as far as he knew, that had never happened before, but that he had been able to do it.

Senator VANDENBERG. As I understand this entry, the Navy Department is declining to extend the time for submitting the bond, apparently for fear of unfortunate publicity, but they are willing to leave the matter open for the time being. Is that the situation?

Mr. LAROUCHE. That is what Mr. Homer is apparently attempting to say.

Senator VANDENBERG. All right.

Mr. LAROUCHE (reading):

> September 19, 1933: Mr. Homer was given a full power of attorney covering these destroyers, copy of which is herewith attached.
>
> Contract was finally signed and bond secured on or about September 22, 1933, and the work was completed.

The bids were opened July 26, 1933. That is about 2 months [reading]:

> Mr. Howell—

I do not know who Mr. Howell is—

> before leaving for Bath made the statement that the fee he figured to pay Mr. Homer for this work was so large that he would have to spread it over the life of the contract. Mr. Homer agreed to that, and asked what figure he had in mind. To this question, Mr. Newell replied that they would discuss it later, but that he was sure Mr. Homer would be perfectly satisfied.
>
> Mr. Newell also stated, on being asked what he expected the profit to be on naval work in the Bath yards, that the profit on the *Dewey* would be about $450,000, and the profit on the other two destroyers would be a little over a million dollars.

Senator VANDENBERG. Are those the two destroyers that they got in this distribution in 1933?

Mr. LAROUCHE. Yes, sir.

Senator BONE. What was the *Dewey?*

Mr. LAROUCHE. The *Dewey* was awarded in 1931, in the latter part of 1931, on the design of Bethlehem, and was the particular award or one of the awards that aroused United Dry Dock to make the protest to the Comptroller General which was discussed here a few days ago.

Senator BONE. A destroyer?

Mr. LAROUCHE. Yes, sir. United at that time protested that award, and the Comptroller General made a ruling on it.

Senator BONE. Can you identify these companies as to the interests that owned them? I now refer to the so-called "Little Three." You indicated in a general way while I was here the ownership of the Bath Iron Works. What interests own or control Federal Shipbuilding?

Mr. LAROUCHE. That is owned outright by United States Steel, as I understand.

Senator BONE. United States Steel?

Mr. LAROUCHE. Yes, sir.

Senator BONE. What interests control the United Dry Dock?

Mr. LAROUCHE. I would a little rather not go into that at this time, Senator. It is quite involved. They are ostensibly privately owned. That is a separate industry.

Senator BONE. They have no affiliation with any of the big companies?

Mr. LAROUCHE. That is correct.

Senator BONE. That is the situation with respect to the Bath Iron Works?

Mr. LAROUCHE. Yes, sir.

Senator BARBOUR. When you speak of a profit there on two 1,500-ton cruisers as being a million dollars, is that per cruiser or for the two?

Mr. LAROUCHE. I take it to mean on the two, but I am not positive [reading]:

> The total amount of contracts awarded to the Bath Iron Works Corporation as a result of Mr. Homer's efforts, as outlined above, is about 9 million dollars.

That is the end of the statement.

Senator BONE. What was the average bid price on these destroyers?

Mr. LAROUCHE. We have them all. We have the exact bid prices.

Senator VANDENBERG. I will put that in the record for you, Senator Bone. The United Dry Dock adjusted price bid was $3,400,000. The Bath Iron Works Corporation adjusted price was $3,429,000. The adjusted price for the Federal Shipbuilding & Dry Dock Co. was $3,410,800.

Mr. RAUSHENBUSH. That is for each of two ships, is it not?

Senator VANDENBERG. That is for each of two ships.

That concludes, Mr. LaRouche, the statement taken from Mr. Homer's files?

Mr. LAROUCHE. Yes, sir. I think I might explain it a little by saying that Mr. Homer, at that time and subsequently, told me that he had prepared this thing as part of his general preparation for a suit against the Bath Iron Works, that he was so convinced of the justice of his fee that he intended to and was then negotiating to being a suit.

Senator VANDENBERG. I think, Mr. Chairman, that it would be unfair to attempt to cross-examine Mr. LaRouche with respect to other phases of Mr. Homer's matter, so long as there is any chance that we can deal with him subsequently. But in fairness to Mr. Homer, so far as this day's proceedings are concerned, I do think that Mr. LaRouche should state what Mr. Homer has said regarding his relations with Mr. Gravem.

Mr. LAROUCHE. We had a great deal of discussion about that. Mr. Homer made it clear that Gravem came to see him often, and discussed numerous business deals. Homer said that he had always had an interest in Gravem's family and was interested in Gravem and tried on numerous occasions to help him out, and that they had talked over a good many matters at one time or another.

Just in that connection, in order to establish and to find out what that connection was, we ran across a diary that had been kept in Mr. Homer's office very faithfully day by day over a long period of time. It had been kept by Mr. Homer's secretary. In that diary were noted a great many visits by Mr. Gravem. Sometimes the matter that they discussed was entered in the diary. On one or two occasions the notations were quite complete—that is, quite extended—but we were unable to find in that diary the period in which we are most interested. Mr. Homer explained that by saying that they had not started to keep it at that time. In other words, we wanted to know exactly who had conferred with whom.

The CHAIRMAN. Mr. Homer said they had not started to keep the diary at that time?

Mr. LAROUCHE. Yes, sir.

The CHAIRMAN. Were there any entries prior to that time?

Mr. LAROUCHE. We were unable to find any.

Senator VANDENBERG. That will be subsequently introduced as an exhibit in connection with Mr. Homer's subsequent testimony. The particular thing that I thought we should indicate this afternoon, Mr. LaRouche, is whether or not Mr. Homer had stated to you or to members of the committee in your presence that he ever authorized Mr. Gravem to make any representations to Mr. Wilder.

Mr. LAROUCHE. He did discuss that both in the presence of others and to me alone. Mr. Homer's story was that he had told Gravem that if Mr. Wilder did certain things, if Mr. Wilder would get his company in such and such a condition, and so forth, they would be able to do something for him, and that anything that was obtained as a result of that service would be divided equally between Mr. Homer and Mr. Gravem. Mr. Homer said, "We will split it 50–50."

Senator VANDENBERG. Did he or did he not deny the discussion of any such specific figures as Mr. Gravem is charged with having suggested to Mr. Wilder?

Mr. LAROUCHE. Mr. Homer's figures were much bigger than any I have heard here.

Senator VANDENBERG. Do you recall any statements that Mr. Homer made in that connection?

Mr. LAROUCHE. My recollection is that the fee would be $350,000, but I am drawing entirely on memory.

Senator VANDENBERG. This was in connection with the conversation between Mr. Gravem and Mr. Wilder after Mr. Gravem had had his first interview with Mr. Wilder; is that correct?

Mr. LAROUCHE. That is my memory.

Senator VANDENBERG. I think that is all until Mr. Homer is available.

The CHAIRMAN. Mr. LaRouche, just one thing more: What was Mr. Homer's background prior to his activities here? What have you ascertained concerning his activities?

Mr. LAROUCHE. We have a little sketch of his life that he drew up himself. He told me that for 33 years he had been associated in one way or another with shipbuilders and the shipbuilding business.

The CHAIRMAN. Were his activities exclusively in the shipbuilding business?

Mr. LAROUCHE. No. He sold paint.

The CHAIRMAN. He sold what?

Mr. LAROUCHE. He sold paint.

Senator BARBOUR. Is that marine paint used by shipbuilders?

Mr. LAROUCHE. I do not exactly know. He represented various firms in various capacities. He now represents several. He represented a revolving-door corporation for a while here.

Senator VANDENBERG. He was in the lobster business at one time, was he not?

Mr. LaRouche. So he told me.

The Chairman. In the lobster business?

Mr. LaRouche. Yes, sir. He said it did not turn out very well.

The Chairman. Was he alone in that business?

Mr. LaRouche. No. He said he was a partner of Franklin D. Roosevelt.

Senator Bone. In what business?

Mr. LaRouche. In the lobster business.

Senator Bone. So it may be in the record, would you indicate the type of destroyer that is involved in the awards to these small companies? I will ask if they were 1,500-ton.

Mr. LaRouche. You mean the 6 destroyers awarded to the 3 companies?

Senator Bone. Yes; awarded to the "little three."

Mr. LaRouche. They were 1,500-ton destroyers, usually referred to as "light destroyers."

The Chairman. Mr. LaRouche, the Homer of whom we have been speaking is A. P. Homer?

Mr. LaRouche. Yes; that is correct.

The Chairman. Is there an A. B. Homer in the shipbuilding business?

Mr. LaRouche. Yes. He is an official of the Bethlehem Shipbuilding Corporation.

The Chairman. Are they at all related?

Mr. LaRouche. In no way.

The Chairman. That will be all, Mr. LaRouche.

TESTIMONY OF W. A. CALVIN

(The witness was previously sworn by the chairman.)

Senator Vandenberg. Mr. Calvin, did you hear the testimony of Mr. Gravem this morning?

Mr. Calvin. I did.

Senator Vandenberg. Mr. Gravem indicated that you might have some special reason for cooperating with Mr. Wilder in the preparation of this report upon the Gravem-Wilder interview. Is there any truth to any such statement as that?

Mr. Calvin. The only interest I would have in Mr. Wilder would be the same interest I would have in any other shipbuilder. My only interest is putting men to work. I represent organized workers.

Senator Vandenberg. Your relationship with this entire shipbuilding situation, whether with Mr. Wilder or anyone else, has been exclusively in that phase?

Mr. Calvin. Entirely so.

Senator Vandenberg. You have no other connections with Mr. Wilder of any nature?

Mr. Calvin. None whatever, sir.

Senator Vandenberg. That is all.

TESTIMONY OF JOHN P. FREY—Resumed

Senator Vandenberg. In the course of Mr. Gravem's testimony this morning, he suggested that you had some sort of relationship with

Mr. Wilder which would make you readily amenable to cooperate with him in matters relating to shipbuilding. Is there any truth to that?

Mr. Frey. Absolutely none, Senator.

Senator Vandenberg. You have no relationship with Mr. Wilder whatever?

Mr. Frey. I have no relationship, no association with him. I have never met Mr. Wilder outside of this room and my own office. I have had an interest in Mr. Wilder because when I first met him in June 1933 the Metal Trades Department was tremendously disturbed over the 300,000 or 400,000 skilled metal workers who were out of employment. I thought that if we could get more yards opened up it would more quickly place some of these unemployed at work. That was my only interest.

Senator Vandenberg. That is all so far as I am concerned.

Mr. Raushenbush. Mr. Frey, while you are on the stand, did you ever retract any statement you have made before this committee to the press or anywhere else concerning the matter of that letter you were testifying about at your first appearance.

Mr. Frey. No; I have not, and I would like an opportunity of reaffirming my testimony on that point.

Senator Vandenberg. I think, Mr. Frey, you are entitled to that opportunity. I understand that you are reasserting that you showed this envelop to General Johnson and told him that it purported to contain a prophecy respecting the allocation of naval vessels under the bid letting which was to occur subsequently?

Mr. Frey. Yes. I am reaffirming, reasserting that I offered a sealed envelop to General Johnson approximately 3 days before the bids were opened; that I told him that my information was that the envelop contained the names of the shipyards who would be the lowest bidders for the entire category of ships; that General Johnson refused to accept the envelop; and that he said at the time, "This is too hot for me. I will not take it. I have troubles enough of my own."

The Chairman. That is all, Mr. Frey.

Let it be noted in the record that the committee means to name at once a physician to confer with Mr. Homer's physician and possibly to examine Mr. Homer, and to indicate to the committee when the committee might hope to have Mr. Homer personally before it for examination.

The committee will be in recess until 10 o'clock tomorrow morning.

(Whereupon, the committee recessed at 3:40 p.m. until tomorrow, Friday, Feb. 1, at 10 a.m.)

This concludes the first part of New York Shipbuilding Company's Hearings. See Hearings, Part XIX, for conclusion of this company's testimony.)

APPENDIX

("Exhibit No. 1412" appears in Hearings, Part XIII, appendix, p. 3154.)

EXHIBIT No. 1415

[Copy]

AMERICAN INTERNATIONAL CORP.,
120 Broadway, New York, Feb. 15, 1918.

MR. CHESTER W. CUTHELL,
Asst. Genl. Counsel,
U. S. Shipping Board Emergency Fleet Corp.,
Washington, D. C.

DEAR SIR: We have your letter of the 12th inst., enclosing copy of Mr. Mellon's statement of the 11th instant concerning the sale by the New York Shipbuilding Co. to the New York Shipbuilding Corporation and requesting our comment.

The second, third, and fourth paragraphs are substantially correct.

When negotiations looking to a reconsideration of the proposition (after we had on Oct. 5th declined the first option) had been so promptly reopened by Mr. Mellon on the basis of my letter of Oct. 5th, in which I spoke of a material reduction, I naturally felt that the possibilities were very great of a substantial reduction in the first purchase price of $12,900,000.

In the negotiations which were so resumed at the conference of Oct. 18th, I presented very few arguments towards securing a reduction. My figure of $10,000,000 was based on $1,500,000 annual earnings and was eventually met by Mr. Mellon's suggestion that "we split the difference at $11,500,000", which I promptly agreed to, provided he would take $7,500,000 in bonds.

My position during the negotiations was based upon the reports following the investigations we had had made of the properties under the first option. My recollection is that at no time were we so very far apart upon the question of realized and prospective earnings, so far as such earnings were based on contracts in hand. My recollection, borne out by a memorandum made by me at the time, is that I told Mr. Mellon that I estimated the profit of his then contracts to be only at about the rate of $1,500,000 per annum, assuming the costs of materials and wages to remain the same, and that possibly we could not count on more than $1,250,000. Mr. Knox, who then was with Mr. Mellon's company, stated that he was entirely protected by steel purchases on all vessels and that he could safely count on $1,500,000. It may very well be that in the course of negotiations I may have advanced the trading argument that such a rate of earnings did not justify the price of $12,900,000, but it is also true that to obtain a reduction I advanced some other arguments, and principally the one that we had found we would have to put into the proposition $800,000 more than we had expected, if we were to retire the old first-mortgage bonds so that the new bonds that Mr. Mellon was to receive would have a first lien.

Another matter that had entered into the discussion was the necessity of making provision for immediate additional construction to take care of prospective Government contracts. I estimated such provision as $1,500,000. Mr. Knox stated that only $550,000 would be required at once, but it might or it might not be advisable to go on with other expenditure for such Government work.

Our estimate of the shipyard's earnings, based on examinations by our experts of the company's books, etc., showed a profit earned or to be earned of nearly $2,400,000 on the contracts in hand, of which approximately $700,000 had already been entered up as earnings. A normal profit was indicated on every one of the contracts. We therefore went into the trade on the basis of net profits at the rate of $1,500,000 per year (with a possible shrinkage due to threatened labor advances limited to $250,000). In this we had the assurances of both Mr. Mellon and Mr. Knox.

We also had in mind the possibility of further profits from new Government work and new merchant construction. The latter possibility was particularly attractive by reason of the unusual profits then current in new merchant construction.

To no extent whatever was the trade on the basis of losses incurred or to be incurred in the contracts on hand; that is to say, Mr. Mellon did not make his price, nor did we ask him to make his price, lower by reason of claimed losses already or to be incurred in the contracts on hand. Nor did we make any argument to that effect. The trade was made, so far as we were concerned with earnings, on the basis of profits in hand and to be earned, and we have not since learned of anything then existing which would have changed our estimates of profits.

What really induced Mr. Mellon to reduce his price we have never known, as he never confided in us. We suppose he was anxious to make a sale.

Nor did we ask him to make his price in any way based on any argument that there were "unfavorable prospects of earnings."

I absolutely deny the statement that my chief, or any, argument was to that effect (even after I make all allowances for the claims that a purchaser may be expected to advance in his endeavor to have a seller lower his price). Mr. Mellon is also in error as to the claim that any agreement was made between him and myself that the sale was not to be allowed in any way to interfere with the Gulf Refining Co. receiving their ships according to the contracts that covered them. There was no such agreement. The only agreement in the transaction (as stated in my letter to you of the 8th inst.) was the usual one, made as a part of the entire transfer, by the New York Shipbuilding Corporation that the new company was to assume all liabilities and to complete all contracts, except certain specified guaranteed liabilities on bonds which the old company had guaranteed.

Even as Mr. Mellon puts it, his statement is no stronger than that the new company, in the ordering of its work, should not discriminate against the Gulf Refining Company ships.

There was no thought on our part that the profits, in reliance upon which we had made the purchase, had by reason of subsequent events sustained any shrinkage until we made a reestimate, at the end of March 1917. The two Gulf Refining boats continued each to show a profit at that date.

The contracts for such two boats were cost plus 10% with a maximum and the maximum had not then been reached.

It was not until still further changes in labor conditions in the summer and fall of 1917 that the cost on such two boats went well beyond the maximum and produced a loss, but of the exact amount we were not aware until the later reestimate of October 1917.

The Gulf Refining Co. situation should not be confused, either, by the fact that in May 1917 the new company made a claim (subsequently withdrawn) against the old company for upwards of $400,000 on the ground that certain liabilities were undisclosed at the time of the sale. Such liabilities were exclusively liabilities on Government contracts, in the nature of penalties, failure to come up to speed requirements, income tax, etc., etc. The claim as initiated was directed against the $1,000,000 bond deposit provided for under paragraph "second" of the November 10, 1916, agreement.

As to that part of your letter relating to Standard Transportation Company:

Prior to Aug. 3, 1917, the Shipbuilding Corp. and the Standard Company had been considering a supplementary contract whereby the Standard Company would pay cost plus 10% as to Hulls 174 and 175, not to exceed an increase of $100,000 additional as to each vessel. Such contract failed of consummation.

After the requisition of Aug. 3, it is true that Mr. Veit of the Standard Co., and Mr. Knox, then President of the New York Corp., went to Washington and on or about Aug. 15th submitted to Admiral Capps a proposed arrangement which contemplated the completion of Hulls 174 and 175 by the New York Corporation on the basis of the proposed supplementary contract to which the Standard people were then ready to agree, *provided the boats were released from requisition.* Admiral Capps refused to approve such an arrangement, and insisted that the boats continue under requisition.

By the supplementary contract, the New York Corporation hoped to wipe out a loss of $51,255 as to both such boats, as shown by the reestimate of April 1, 1917 (the August 31, 1917, estimate having shown a profit of $186,440.)

Later developments proved that the figures considered in such supplementary contract were no criterion of what was necessary to properly adjust the situation at the time of the December 14, 1917, agreement with the Fleet Corporation, which developments were forecasted by the reestimate of October 1917.

Inasmuch as I saw Mr. Carey and Mr. Fitzgerald at your office on Wednesday, the 13th inst., I assume that they will not now desire to discuss the matter with me as intimated in your letter.

We shall be interested to receive a copy of the statement which you say that they propose to file with you so that we can make our comments upon it, if you should still think our comments necessary.

As requested by you, the New York Shipbuilding Corporation already has communicated to the Standard Transportation Company, Gulf Refining Co., and the so-called owners of the Darrow-Mann boats, your instructions for a further extension, which we have fixed as of Feb. 20, 1918.

The Petroleum Transport Company's extension as now fixed expires March 4, 1918.

Very truly yours,

(Sgd.) GEO. J. BALDWIN,
Senior Vice President.

EXHIBIT NO. 1416

A. W. MELLON,
514 SMITHFIELD STREET,
Pittsburgh, Pa., February 11, 1918.

DEAR MR. CUTHELL: Pursuant to promise, I am sending you the following statement concerning negotiations and sale of the New York Shipbuilding Company's property to the American International Corporation as they related to the concession in price made on account of the unfavorable aspect of the contract work then under construction.

Negotiations resulted in an optional contract signed by myself and dated September 11th, 1916, upon behalf of myself and associates owning more than two-thirds in amount of the New York Shipbuilding Company stock, and the American International Corporation, in which we gave to the corporation the exclusive right to purchase for the option period (until noon of October 9th, 1916) the property of every kind and character of the New York Shipbuilding Company, at the price or sum of $12,900,000, payable upon terms set forth in the optional contract. We agreed to furnish to the corporation the right to examine all of the properties, assets, books, records, contracts, papers, and accounts of the Shipbuilding Company. Pursuant to this, the American International Corporation made a complete examination of the books and records, including the contracts for ships.

The option provided that the properties of the Shipbuilding Company were to be purchased as a going concern and the purchaser should agree to assume and pay all the liabilities of the Shipbuilding Company and agree to perform all contracts and obligations of the Shipbuilding Company.

On October 5th, 1916, Mr. Baldwin, vice president of the American International Corporation, wrote to me stating that—

"We are compelled to notify you that we are unwilling to purchase the property on the terms hitherto discussed, as set forth in the option of September 11th, 1916.

"We are still deeply interested in the subject, and if you are now disposed to continue the discussion based upon a materially lower price, we should be most glad to consider the purchaser."

Later, at a conference following this letter, Mr. Baldwin stated that his people were desirous of acquiring the property, but that it appeared to them from their examination, taking into consideration the nature of the contracts on hand, the available space for future contracts, that the prospective earnings would not be sufficient to justify the option price. This was the chief objection to the price, although the amount of funds required for the cash portion of the purchase price he will be willing to recommend to his board. After further discussion the negotiations finally resulted in a compromise as to price, and $11,500,000 was agreed upon. The sale contract was finally concluded dated November 10th, 1916, in which the assets and properties of the Shipbuilding Company were purchased as a going concern and the corporation or its nominee assumed all liabilities and agreed to perform all contracts and obligations of the Shipbuilding Company. As stated, Mr. Baldwin's chief argument in the discussion, which resulted in a reduction of $1,400,000 from the option price, was based upon the unfavorable prospects of earnings from the contracts on hand.

As stated to you at the time of making this sale, knowing the importance to our Gulf Refining Company of getting their ships completed as contracted for, I was particularly careful about the matter, and it was distinctly understood and agreed between Mr. Baldwin and myself that the making of the sale would not be allowed in any way to interfere with our receiving these ships according to contracts for the same.

It may seem to you that my present statement is not as explicit as I made my oral statement at the time of our conference at Washington; and if so, the reason is this: Since my return I find from examination of papers and correspondence the matter of the loss to the New York Shipbuilding Corporation on the contracts existing at the time of the sale was a matter of discussion between Mr. Baldwin and myself in the summer of 1917 in connection with certain claims which the American International Corporation made under the guarantee given in connection with the sale of the shipyard. At the time of my conference with you I did not distinguish between the different conversations and, in fact, did not have in mind the bearing upon the points in the question of the difference in dates.

I think I have fully covered the matters about which you asked me to write you. If I have not, and you will kindly advise me, I shall be pleased to comply with your wishes.

Very truly yours,

(Signed) A. W. Mellon.

Mr. Chester W. Cuthell,
Emergency Fleet Corporation Shipping Board,
Washington, D. C.

Exhibit No. 1417

[Copy]

White & Case,
14 Wall Street,
New York, May 25, 1923.

CJF/R.
New York Ship.

James W. Talbert, Esq.,
Emergency Fleet Corporation, Washington, D. C.

My Dear Mr. Talbert: This is to confirm the appointment you gave Mr. Neeland and myself for Thurdsay morning, the 31st inst. Mr. Neeland and I will endeavor to be on hand promptly, and my thought is to be there at 9:45 a. m. (standard time). If you cannot see us at that time we can wait until you are free.

I enclose a memorandum re this plant acquisition matter by the New York Ship of the improvements made at the cost of the fleet.

As the situation now stands, the acquisition arrangement (which was formulated in 1918 to avoid a possible war (gift tax*) cash liability for the "Ways" and "Shop" improvements which Director General Schwab intended and proposed should be acquired by N. Y. Ship without specific payment therefor but in the nature of a gift or added fee or compensation) was, and is, based on the improvements themselves, proving their valuation through earnings. The probability of earnings both for the north yard and south yard has been largely, if not entirely, removed by causes occurring since 1918, and some since the appraisal dates (January 1, 1922). The proposed new arrangement has the plant improvement acquisition based on the present realizable value, or that within the next 5 years, proportioned to N. Y. Ship's present and probable cash resources, available for this acquisition.

N. Y. Ship cannot make a present immediate cash outlay which the E. F. C. can justify for two reasons. N.Y. Ship must conserve its cash and postpone, for local tax reasons, taking title as late as possible.

The only arrangement N.Y. Ship can consider is one which permits if necessary of producing, over a period, the cash through a liquidation of the items acquired.

With best wishes,

Yours very truly,

Enclosure.

(Signed) Charles J. Fay.

Exhibit No. 1418

[Memorandum]

Dec. 2, 1929.

IT:C.
FBR.

Mr. David Burnet,
Deputy Commissioner:

In re: New York Shipbuilding Company, Camden, New Jersey.
Period: 3 months ended November 30, 1916.
Collection barred: $58,435.91.

The return for the three months' period ended November 30, 1916, was filed by the above-named taxpayer on March 30, 1917. The additional assessment of $58,435.91 was made on the March 30, 1922, list. No waiver extending the statutory period of limitations on assessment and collection was ever filed. It appears that the account was transferred back and forth between the Camden, New Jersey, district and the Pittsburgh, Pennsylvania, district several times, and it is now outstanding on the books of the collector at Camden, New Jersey. The Accounts and Collections Unit has taken the matter up with this office and requested that a certificate of overassessment be prepared, stating that it was the opinion of the taxpayer that the assessment was made after the expiration of the statutory period of limitations on assessment. No forms 53 and 843 have been filed.

It is apparent that the assessment was timely made, but since the collection has not been enforced the outstanding amount cannot now be collected. No abatement claim, bond, or collection waiver was ever filed.

Inasmuch as the assessment was made on the last day of the statutory period, it does not appear that the collector of internal revenue may be charged with the responsibility for failure to collect the amount in question. Neither should any member of the unit be so charged, for the reason that the time the assessment was made, the unit was holding that where an assessment was properly made within the statutory period applicable thereto, collection by distraint could be made at any time in accordance with the provisions of IT–1446, Cumulative Bulletin I–2, page 218. The Bureau did not change its position with respect to the statutory period until September 1, 1925, at which time collection of the tax was barred, the statutory period having expired five years from the date the return was made, or March 30, 1923.

(Signed) Chas. P. Suman,
Head of Division.

---

Exhibit No. 1419

EXCERPT FROM COMPANY'S PROTEST AGAINST 1917–21 TAXES, FILED NOVEMBER 1927

(P. 16)

The adjustment in the report whereby the depreciable assets were reduced $2,929,573.34 and the amount set up as " good will " is entirely arbitrary and in utter disregard of the bona fide acts of the board of directors and of the officers of the corporation at the time the opening entries were made upon its books. No justification is given in the report for this unwarranted adjustment. The sum was not paid for good will. The earnings of the predecessor company for the five-year period prior to the purchase would not justify any computation of good will. The fact that one corporation may be able to sell its tangible assets for more than their book value (but less than the cost of reproduction) merely shows the then market value of the properties and is no basis for computation of good will of the selling corporation.

Exhibit No. 1420

October 24, 1934.

Mr. Robert F. Muir,
Investigator, Special Committee Investigating the Munitions Industry, United States Senate.

In re: American Brown Boveri Electric Corporation (formerly the New York Shipbuilding Corporation), Camden, N. J.

Sir: You have requested that you be advised of the taxable net income, invested capital, and income and profits tax liability of the above-named taxpayer for the years 1917 to 1925. inclusive, as determined by the Bureau of Internal Revenue.

The information requested is being furnished to you herein in your capacity as a duly authorized representative of the Special Committee Investigating the Munitions Industry, bearing credentials signed by Senator Gerald P. Nye, chairman of the committee. Inspection of income-tax returns by the committee is authorized by Executive order dated June 15, 1934, and the chairman has requested in writing that the returns of this taxpayer be made available for inspection by the committee.

The question of the correct tax liability of this taxpayer for most of the years in question was in dispute for a period of several years following filing of returns and payment of the taxes originally shown to be due thereon. Several additional assessments were made against the taxpayer by the Bureau which were unpaid during the period when the matter was in controversy. The Bureau claimed additional taxes of $2,296,442.95 were due, together with interest, for the years 1918 to 1921, inclusive, whereas the taxpayer admitted liability for additional taxes for such years of only $861,809.09, with interest. The difference between the amount charged by the Government for such years and the amount admitted by the taxpayer to be due for those years, inclusive of interest, was approximately $1,700,000.00. The liability for the later years was also in dispute. The issues involved were difficult and debatable.

While the question of correct tax liability was in controversy, the taxpayer's representatives advised the Bureau that only a certain amount of money could be raised to meet the tax obligations, that if attempts were made to enforce payment of a larger sum the company would be forced into liquidation and, in that event, it was doubtful if any greater amount of tax could be realized. The amount stated as the limit which the corporation could make arrangements to pay at that time was $1,088,397.56. The Bureau thereupon turned its attention to the financial condition of the corporation and its ability to meet the demands made for taxes. Following investigation along these lines, the taxpayer filed an offer in compromise, pursuant to section 3229 of the Revised Statutes, tendering the sum of $2,350,000.00 in full settlement of its liability for all income, excess- and war-profits taxes, penalties and interest for the taxable years 1918 to 1925, inclusive. It was stated in the offer that there was a difference in opinion as to interpretation of the laws and regulations and the reasons submitted as grounds for acceptance of the offer were:

(1) The taxpayer denied liability for the alleged deficiency.
(2) The taxpayer was financially unable to pay the deficiency asserted.

The taxpayer further agreed to waive all demands for refund or credit of tax paid for the years prior to 1918.

After due consideration of the evidence of record, including that filed in support of the offer, the Commissioner of Internal Revenue on May 8, 1928, with the advice and consent of the Secretary of the Treasury, accepted the offer in compromise and the case was thus closed.

At the time the case was closed in this manner, the Bureau and the taxpayer were not in agreement as to the correct taxable net income, correct invested capital and consequent correct tax liability for each year. Under such circumstances, I am sure you will appreciate that the figures furnished below in no way represent figures conceded by the taxpayer to be correct. They are the figures tentatively determined by the Bureau before acceptance of the offer in compromise and it is most probable that had the Bureau and the taxpayer proceeded to a final determination of taxable net income, invested capital and tax liability, such figures would be materially altered.

The corporation sustained a net loss for the year 1917, consequently, no determination of invested capital was made for that year. There was no liability under the law for excess- or war-profits taxes for years subsequent to 1921, therefore, invested capital for such years is not indicated herein. The work papers covering computations of taxable net incomes and tax liabilities for the years 1922 to 1925, inclusive, are not available at the present time and, in order to furnish you with figures indicating taxable net incomes for such years, it has been necessary to compute assumed incomes arrived at by use of the amount known to have been tentatively determined as the tax liability for each such year and the known rate of tax for each such year.

Prior to acceptance of the offer in compromise, the invested capital, taxable net income, tax liability and unpaid balances on the basis of the Bureau's determinations which had not been conceded as correct by the taxpayer, as aforestated, were as follows:

Taxable year	Invested capital	Taxable net income	Tax liability	Unpaid balances
1917	(1)	($1, 096,862.15)	------------	------------
1918	$7, 197, 649. 82	$2, 984, 621. 08	$1, 949, 744. 95	$234, 424. 92
1919	7, 741, 951. 50	3, 852, 183. 13	1, 812, 224. 21	1, 233, 927. 26
1920	9, 123, 887. 24	4, 270, 500. 12	1, 503, 203. 69	437, 954. 64
1921	10, 835, 685. 12	2, 133, 651. 74	440, 136. 13	390, 136. 13
1922	(1)	1, 895, 994. 08	236, 999. 26	110, 492. 06
1923	(1)	1, 260, 030. 08	157, 503. 76	155, 826. 41
1924	(1)	588, 686. 40	73, 585. 80	73, 585. 80
1925	(1)	1, 371, 562. 85	178, 303. 17	65, 316. 09
Total	------------	------------	6, 351, 700. 97	2, 701, 663. 31

[1] Not involved.

The above figures do not include interest.

Upon acceptance of the offer in compromise, all unpaid additional assessments were abated since the Government had agreed to accept, in lieu of payment thereof, the total sum of $2,350,000.00. After the case had been closed in such manner, no attempt was made to recompute invested capital and taxable net income in such manner as would reflect a total tax liability equivalent to the total sum which had been received from the taxpayer for the years in question. Such a computation would be meaningless under the circumstances and would serve no useful purpose.

I trust that the above furnishes fully the information desired by the committee.

In the event that further correspondence relative to this matter is necessary, reference should be made to IT:E:RRR.

Very truly yours,

GUY T. HELVERING, *Commissioner.*

CWC/her

Mr. TILDEN ADAMSON, *Comptroller.*

NEW YORK SHIPBUILDING CORPORATION—DEPRECIATION

No one would contenance the revaluation of a plant at various intervals in order to ascertain the replaceable value at the respective periods upon which to place a fair valuation of depreciation of such plant and equipment. We contend that depreciation when rate is once set, has to be applied against the original cost of the equipment.

6. If, in order for a corporation to affect the purchase of a plant, it is necessary to make payment on any other basis than that of cost to the owner, we cannot see how that affects the plant appreciation. It might be an interesting field for thought as to what would have been the result if the plant was acquired at less than the original valuation. In the present case, where they paid more than the actual cost, we must view this excess as the element of good will for "good will" it is.

7. In the above arguments, we have considered the appraisal as correct. This we know is not the case. The writer was informed by Assistant Treasurer Parker of the New York Shipbuilding Corporation, about 15 months ago, that Stone & Webster's appraisal was nothing but the acceptance of a list of plant and equipment items made up by Mr. Parker, and revalued by him. This assertion of Mr. Parker seems to be fully corroborated by the facts, for regardless of the life of the machine or item of equipment or any other condition which might affect its value, an almost uniform percentage of increase was applied.

8. We further wish to point that an appraisal, unless made by disinterested party, cannot be regarded as being unbiased. The president of Stone & Webster, the appraising company, was at that time one of the directors of the New York Shipbuilding Corporation. Further, Stone & Webster is a subsidiary of the same parent company, as that of the New York Shipbuilding Corporation. For these reasons we do not regard the appraisal in any event to be a proper basis of revaluation of the plant and equipment.

9. One point, altho, not necessarily an argument in this case, is that one Government body, namely the United States Navy, thru Admiral Capps has ruled against allowing depreciation on these inflated values, and we feel it would be unwise for two Government bodies to be inconsistent on any item of this importance.

10. To summarize the entire proposition:

The New York Shipbuilding Corporation claims—

(1st*) That inasmuch as the replaceable value, at the time of their purchase, was in excess of their cost, such cost is a proper basis for depreciation calculation.

(2nd) Since the Fleet Corporation made contracts subsequent to the time at which the plant values were inflated on the books of the corporation, and the Fleet Corporation not having made specific mention and provisions thereon, the Fleet thereby became estopped from further discussion in this connection.

UNITED STATES SENATE,
COMMITTEE ON INTEROCEANIC CANALS,
Ventnor, N. J., August 27, 1927.

Hon. D. H. BLAIR,
Commissioner of Internal Revenue,
Washington, D. C.

MY DEAR MR. COMMISSIONER: I trust before any final action is taken in the matter of the reexamination of the returns of the New York Ship Building Corporation, of Camden, N. J., for the years 1917, 1918, and 1919, that you will personally review the situation.

This corporation changed hands recently, as you know, and from all the information I have the reassessments are based upon conditions which could in no way be visited on the present corporation. I have already presented briefs in connection with the whole transaction so I will not attempt to review them by letter, but I don't want to see the present corporation unfairly embarrassed and would personally appreciate it if you would give it your own careful attention.

With kindest personal regards, I am,

Sincerely,

(Signed) WALTER E. EDGE.

Mr. L. R. WILDER.
Mr. C. L. BARDO.

"SARATOGA" & "LEXINGTON" COSTS—PROPOSED CONGRESSIONAL INVESTIGATION

I have just received copy of House Resolution No. 55, introduced by Congressman McClintic December 13, copy of which is attached hereto. I had a short talk this morning with Judge Parker, who stated that on your return from Washington you had requested that certain information be developed by Mr. Parker with the thought of inviting the investigation referred to.

Publicly, of course, we could not say other than that we welcome an investigation. Privately, we want to use every honorable means to see that the investigation is not started and that the resolution referred to dies a natural death in the Committee on Rules, to which it has been referred.

There is altogether too much dynamite in a congressional investigation, and we are altogether too vulnerable from the standpoint of political attack to leave anything undone which will forestall the investigation. We have troubles enough with our tax situation and our new high-speed line development without having the waters muddied up by a congressional investigation, the effect of which would be harmful either to ourselves or to the industry as a whole.

Who can say what statements Admiral Capps, for instance, if he were called before a congressional investigation, might make with respect as to what he regards as inefficiency and the lack of proper administration of the yard? He made these charges in one of our conferences. If he made them before a congressional committee, we never could catch up with the story, and it may well be that we would be confronted not only with our tax situation but in addition by a resolution from Congress directing somebody to investigate all of these things which obviously would be dragged out in an investigation of this kind.

I expect to have a conference with Congressman Wolverton on Wednesday next.

The names of the House Naval Affairs Committee and the House Rules Committee are shown on the attached list.

Personally, I am strongly opposed to any encouragement of this investigation, for the reasons which I have generally outlined.

C. L. B.

HOUSE NAVAL AFFAIRS COMMITTEE

Majority: Thos. S. Butler (Pa.), chairman; Fred A. Britten, Ill.; Geo. P. Darrow, Pa.; Clark Burdick, R. I.; A. Piatt Andrew, Mass.; John F. Miller, Wash.; Roy O. Woodruff, Mich.; Ralph E. Updike, Sr., Ind.; Fletcher Hale, New Hampshire; W. E. Evans, Calif.; Chas. Tatgenhorst, Jr., Ohio; Chas. A. Wolverton, N. J.; Clarence E. Hancock, New York; Victor K. Houston, Hawaii,

Minority: Carl Vinson, Georgia; Jim McClintic, Oklahoma; Herbert J. Drane, Fla.; Patrick Henry Drewry, Virginia; Morgan G. Sanders, Texas; John F. Quayle, New York; Stephen W. Gambrill, Md.; Claude Williams, Missouri.

HOUSE RULES COMMITTEE

Majority: Bertrand H. Snell (N. Y.), chairman; Theodore E. Burton, Ohio; Thos. S. Williams, Illinois; Fred S. Purnell, Indiana; Earl C. Michener, Mich. igan; Harry G. Ransley, Pa.; C. William Ramseyer, Iowa; Louis A. Frothingham, Mass.

Minority: Edward W. Pou, North Carolina; Finis J. Garrett, Tennessee; Wm. B. Bankhead, Alabama; John J. O'Connor, New York.

EXCERPTS FROM "AUDITOR'S COMMENTS ON ITEMS AT ISSUE IN 1926"

IT: AR: G-1
ECE

Issue #9. Loss on contract #199.

At the time of the examination of the books and records of account was made for the taxable year under discussion no attempt was made to examine the subsequent years as the order requesting the investigation was limited to the taxable year under discussion. The taxpayer willingly furnished the examiners with a photostat copy of the material, labor, and expenses (which is now in the possession of the auditor making the investigation for the taxable year 1927) applicable to contracts under construction as at December 31, 1927, and it is from this schedule that the total profit to be realized on contract number 199 was determined.

The Bureau was without information to the fact that an adjustment in the amount of $884,204.76 was reflected therein.

It is now contended that it realized a profit in the amount of $2,456,508.07 on this contract.

Assuming that the alleged profit is correct no such loss as now claimed was sustained during the taxable year under discussion. The earned profit as reflected in the balance sheet (copy attached and marked "Exhibit-4") furnished the taxpayer at its request is the basis upon which this issue is protested. That balance sheet is adjusted in accordance with the information then before the unit and not upon information to be furnished at some subsequent date. It was assumed that the information furnished by the taxpayer was correct, that the photostat copy was in accord with the books and records of account and the total profit to be realized from the contract was determined accordingly.

The taxable years ended December 31, 1922 to 1925, inclusive, were not closed by a proper audit, but upon the basis of an estimated tax liability to be determined within one-half hour and assessed so that such years might be included in the total tax to be considered in the acceptance of an offer in compromise, covering the taxable years 1917 to 1925, inclusive.

EXHIBIT NO. 1426

MARINE ENGINEERING CORPORATION,
Philadelphia, Pa., August 6, 1927.

Subject: Plans for light cruisers building at navy yards.

Mr. S. W. WAKEMAN,
Vice President, Bethlehem Shipbuilding Corporation, Ltd.
Mr. F. P. PALEN,
Vice President, Newport News Shipbuilding & Dry Dock Company.
Mr. C. L. BARDO,
Vice President, American Brown Boveri Electric Corporation.

DEAR SIRS: I enclose herewith copy of joint letter dated August 5, from the Bureau of Construction and Repair and Bureau of Engineering, in reference to the above subject.

My inclination is to stand pat on the $400,000, as, entirely aside from obtaining plans and schedules, the Bureaus expect the navy yards to participate in the saving through joint purchasing to an extent that from present indications will probably pay for the plans. I think we might as well recognize the fact that the navy yards are competitors in the present program and expect to be competitors in the future programs. However, there are matters of policy involved that representatives of the three yards should consider and I would like to have an expression of opinion at the earliest possible date in order to reply to the Bureaus' letter in such a way as will meet your views.

Yours very truly,

J. F. METTEN, *President.*

JFM–d.
Enclosure.

EXHIBIT NO. 1427

NOVEMBER 21, 1927.

Mr. J. F. METTEN,
President Marine Engineering Corporation,
Philadelphia.

DEAR MR. METTEN: Your joint letter of November 15 having reference to turbine changes and spares proposed by Newport News.

The general matter of loose correspondence such as referred to was discussed at one of the recent meetings of the board of directors of Marine Engineering Corporation, and my recollection is that it was quite clearly understood and agreed upon by all concerned that matters of this kind where the interest of all the yards would be affected would not be originated as a matter of correspondence by the individual yards but would be handled in conference between themselves and the Marine Engineering Corporation from time to time as necessity arose. The thought, I think, was further expressed that in order to provide a definite clearing house arrangement for the handling of these matters, that you would arrange with the yards for such conferences as would be necessary to dispose of these questions promptly and in the most satisfactory way. Instructions were then issued to our organization accordingly.

The contract between the three shipyards which brought the Marine Engineering Corporation into existence contemplates if it means anything, that Marine Engineering Corporation is to be the official mouthpiece of the three yards insofar as their relations with the Department for the cruiser construction are concerned. Any departure from this understanding will, I am sure, have the effect of gradually repudiating the standing of Marine Engineering Corporation with the Department and result in serious embarrassment in many directions later on. Personally, I am strongly opposed to the practice complained of.

We put ourselves in a very embarrassing and inconsistent position when we voluntarily propose to do something the effect of which is going to materially increase the cost. The margin between the cost of producing these ships and the selling price is narrow enough without further reducing it by a voluntary action which, so far as we can now see, will not improve either the efficiency of the particular units nor have the assurance that it will prolong their lives.

I hope the situation from now on can be handled in accordance with the understanding reached at the recent meeting above referred to.

Very truly yours,

C. L. Bardo, *Vice President.*

Copies to:

Mr. S. W. Wakeman.
Mr. F. P. Palen.

cc/ Mr. E. I. Cornbrooks: Please pass this correspondence around to Mr. Torbet, and if necessary to the heads of other departments so that they may understand fully just what the plan is.

The arrangement I have described is outlined in a memorandum to Mr. Newell immediately following the directors' meeting referred to.

C. L. B.

Return for our files.

Exhibit No. 1428

MEMORANDUM

December 9, 1926.

Mr. H. B. Robinson,
Head, Consolidated Returns Audit Division.

(In re: New York Shipbuilding Corporation, Now named American Brown Boveri Electric Corporation, Camden, New Jersey.)

A brief history of the above-named case, prior to our present assignment for field examination of the years 1918 to 1921, inclusive, follows:

A field examination was made by representatives of the Trenton, New Jersey office, covering the years 1918 to 1921, inclusive, which resulted in a recommendation of a net overassessment of $181,820.33 for the four years. A second field examination was made out of Trenton, New Jersey, covering the years 1919 to 1921, inclusive, which resulted in a recommendation of a net additional tax of $99,057.55. The taxpayer agreed to the results of both examinations at the times of their completion.

An office audit of the last revenue agent's report reflected adjustments that resulted in a net overassessment for the years 1919 and 1920, of $836,964.64 and a deficiency for 1921 of $487,763.34.

The case then went forward to the Solicitor of Internal Revenue Claims Section, where objections were raised with reference to certain of the allowances applying against gross expense applicable to Government contracts. A copy of the Solicitor's memorandum returning the case to the unit is attached.

After the receipt of the file in the case from the Solicitor, investigation was made with reference to the points raised, and visits were made by the resident auditor and an engineering representative of the Appraisal Section of the Bureau to the United States Navy and the Emergency Fleet Corporation offices in Washington, and developments occurred through such visits that indicated that a thorough examination should be made of the taxpayer's books and of the records of the cost inspector of the United States Navy, located at the plant of the taxpayer at Camden, New Jersey.

A recommendation for field audit was prepared by the resident auditor, a copy of which is attached.

A field examination was ordered and the resident auditor assigned with a member of the travel unit to make such investigation.

The undersigned proceeded to Camden, New Jersey, and first visited the office of the cost inspector of the United States Navy at the plant of the taxpayer, and spent considerable time examining his records of transactions with the taxpayer; and many things were developed through such examination that indicated a further field examination of the taxpayer's books and records to be a good judgment. Many leads were obtained through examination of the cost inspector's records that proved beneficial in the examination thus far of the taxpayer's books, and have resulted in the determination of considerable additional income.

The taxpayer, during the period under review, had contracts on several bases—flat price, cost plus fixed fee, cost plus stated profit per dead weight ton and cost plus 10%.

"Estimated earned profit" as reported on the return and as reflected by the books, forms the heart of the taxpayer's income.

"Estimated earned profit" is computed on certain schedules by the taxpayer, monthly, apart from the books, and determinations journalized and then transferred in total to the ledger, the figure transferred reflecting the aggregate of income for all contracts. The single amount for each month is credited into the profit and loss account.

To verify the correctness of the taxpayer's returns, or books, it is most essential to procure the schedules referred to and to examine the computations of earned profit on each contract that were made by the taxpayer and appear thereon. Such schedules have been requested of the taxpayer, first over three weeks ago, and photostats thereof were promised by Mr. Norman F. Parker, Assistant Treasurer, almost daily after the first request.

Last Saturday, on request again for the schedules, Mr. Parker informed us that he had been "stalling" and that we knew it, but that the corporation's counsel had advised him to delay giving the schedules to us. He called his counsel by telephone, a Mr. O r, connected with White and Case, attorneys, while we were present and explained the situation, and stated to Mr. Orr that he believed we were entitled to the schedules and should get them. Mr. Orr's advice, we were informed, was not to deliver them.

To date, the situation remains the same, the schedules have been refused on the advice of counsel, so we are informed by Mr. Parker and Mr. J. T. Wickersham, the treasurer.

The points raised by the Solicitor have developed other points that make it imperative, in the opinion of your examiners, after their investigation thus far, that a reexamination be made of the taxpayer's books for the period extending from 1918 to 1921, inclusive.

Their investigation thus far, with the information we have been able to gather, results in an increase in income over income as determined by the revenue agent from Trenton, who made the last examination for the period 1918 to 1921, inclusive, of approximately $8,000,000.00.

It is the positive opinion of your examiners, with the information gained thus far, that there should be recommended to the Commissioner that a reexamination be made of all of the taxpayer's books *and records* for the years 1918 to 1921, inclusive; and that the taxpayer should be duly notified under the provisions of section 1105, of the Revenue Act of 1926 that such investigation has been ordered.

(Signed) L. K.
(Signed) E. C. E.

Exhibit No. 1429

Oct. 23, 1925.

IT:CR:G—
WTC

Collector of Internal Revenue,
Camden, New Jersey.
Attention: IT:CCG:HK.

(In re: New York Shipbuilding Corporation, Camden, New Jersey.)

Reference is made to your letter dated October 13, 1926, which is in reply to office letter to you dated October 11, 1926, wherein your were advised that the six-year statutory period for collection under the provisions of section 278 (d) of the Revenue Act of 1926, in the case of a claim for abatement of $322,197.56, filed by the above-named taxpayer in connection with the income tax liability for the year 1920 would expire in March 1927.

From your letter referred to above, it appears that your effort to obtain from the taxpayer a collection waiver as provided under A. & C. Col. Mimeograph #3459 was met with a statement from the taxpayer to the effect that properly executed waivers covering the years 1919, 1920, and 1921, were forwarded to the Bureau under date of October 11, 1926.

Your attention is called to the fact that the waivers submitted to this office provide for an extension of the statutory period within which additional taxes may be *assessed* against the taxpayer, but do not provide for an extension of the statutory period for *collection* of taxes already assessed. It is suggested that the difference in forms of waiver be pointed out to the taxpayer and that proper collection waiver be obtained as provided in A. & C. Mimeograph #3459.

In this connection you are advised that this office now has under consideration in this case the question of the application of the provisions of section 280 of the Revenue Act of 1926. Bureau travel auditors now are engaged upon an examination of the taxpayer's books of account and records as a result of which the application of section 280 will be determined. In the event section 280 applies to the case of this taxpayer you will be advised promptly of the action taken by this office to protect the interests of the Government as provided therein.

(Signed) C. R. NASH,
Assistant to the Commissioner.

EXHIBIT NO. 1430

GEORGE W. JESSUP & SON,
JESSUP BUILDING, 531 & 533 FEDERAL ST.,
Camden, N. J., August 19, 1927.

AMERICAN BROWN BOVERI ELECTRIC CO.,
Camden, N. J.
(Attention: Mr. Wilder.)

DEAR SIR: In accordance with your instructions we have carefully inspected your Camden plant with a view to determining the present market value of land, buildings, machinery, and equipment.

The firm of Geo. W. Jessup & Son has specialized during the past thirty-seven years in the sale of industrial plants and sites in Camden County and has been particularly active in the sale of river-front property. We do, however, appreciate the value of joint appraisals and in valuing the real estate we have employed Mr. Ralph G. Van Hart to collaborate with us. Mr. Van Hart has been in the real-estate business in Camden during the past seventeen years, and is generally accepted by the courts and institutions of this section as an able real-estate appraiser. He was appointed as one of the three appraisers of the Joint Bridge Commission of Pennsylvania and New Jersey, and both firms are regularly employed as appraisers for the Camden County real-estate board.

In valuing machinery, power plant, equipment, ways, etc., we have employed the services of Samuel T. Freeman & Co. and we are attaching hereto the result of their findings. It is our opinion that this firm is as well equipped as any firm in the country to appraise this class of property. They have sold plants, equipment, machinery, tools, etc., averaging over $7,000,000.00 per year for the past ten years. These sales include at least fifteen automobile plants as well as resale for speculators of machinery purchased at sales of the Downey Shipbuilding Company, National Ship Supply Company, Pusey & Jones, etc. Their Army & Navy wool sales total $300,000,000.00 and they have also successfully sold for the Army Ordnance, Quartermasters Department, Navy Department, Post Office Department, and U. S. Shipping Board.

We appraise the property of your company as follows:

Real estate:		
Ground	$1, 850, 000. 00	
Buildings	650, 000. 00	
		$2, 500, 000. 00
Machinery, power plant, equipment, cranes, locomotives, ways, etc		1, 750, 000. 00
Total		4, 250, 000. 00

In making this appraisal we are giving the ground and buildings actual market value, based on the highest prices paid by industries in the purchase of property for their own needs, and prices which could only be obtained through piecemeal sales over a term of years. We are convinced that your market would not be a large industry which could use the whole tract, and even if such a purchaser were procured, it would not be a shipbuilding concern, and any other industry would scrap most of the buildings and build according to their needs.

The history of other shipbuilding concerns during recent years should prove conclusively that there is no market for your property as a shipbuilding plant. Cramps, Pusey & Jones, Neafy & Levy, Dialogue, Bristol and the Merchants Shipbuilding Company of Chester have all gone out of business and your plant is the only large shipbuilding plant still operating on the Delaware.

In a carefully planned and well handled liquidation we are convinced that the ground and buildings would be interesting only to a syndicate of speculators and according to past experience they would pay not over 50¢ on the dollar of valuation, and it would then take them a term of years to retail the property to ultimate users. It is our opinion that such a liquidation would net your company $1,250,000.00 for the ground and buildings and $1,750,000.00 for machinery, equipment, etc., or a total of not over $3,000,000.00.

In this connection we refer you to the sale of the Pusey & Jones property in Gloucester. This property had one-half as much Riparian frontage as your property, with a greater depth and the group of speculators who were high bidders paid $516,000.00 for ground, buildings, machinery, and equipment which were valued at well over $1,500,000.00. Most of this property is still on the market.

In case you desire our detailed figures for arriving at values of different portions of your property and information on sales of comparable property we will gladly furnish them.

Very truly yours,

Geo. W. Jessup & Son,
By Geo. W. Jessup.
Ralph G. Van Hart,
R. G. Van Hart.

Samuel T. Freeman and Co.,
1808–1810 Chestnut St., Philadelphia, Pa., August 17, 1927.

George W. Jessup & Son,
531 Federal St., Camden, N. J.

Dear Sir: Complying with your instructions we have made a careful and detailed examination of the machinery, equipment, and buildings of the plant of the American Brown Boveri Electric Corporation in Camden, New Jersey, having in mind the amount which could be realized at a widely advertised liquidation.

It is our opinion, based on many years experience in liquidating plants throughout the eastern part of the United States and Canada for the United States Government as well as private individuals and fiduciaries, that this plant could by careful and widespread publicity be liquidated in the course of several months on the following basis:

Machinery, tools, and power plant	$1, 000, 000
Equipment, cranes, locomotives, etc	675, 000
Ways, etc., which could be sold apart from the ground	75, 000
Total	1, 750, 000

This valuation is based on price we have realized for similar equipment in other large plants, but consideration has been given to the fact that at a liquidation of this plant higher prices would undoubtedly rule on account of the quantity and condition of the equipment.

Trusting this meets with your approval, we are

Yours respectfully,

Samuel T. Freeman & Co.

CCF:EW

Exhibit No. 1431

(Attached to 151, 151 Supplement 418, 420, 419 and 453)

Settlement Agreement Supplementing Contracts Nos. 151, 151 Supplement 418, 420, 419 and 453, and Relating to "Requisitioned Ships"

This agreement made this 27th day of July 1920 by and between New York Shipbuilding Corporation, a New York corporation, having a place of business in the city of Camden, State of New Jersey (hereinafter called the "shipbuilder"), party of the first part, and the United States Shipping Board Emergency Fleet Corporation, a corporation of the District of Columbia (hereinafter called the "owner"), representing the United States of America, party of the second part.

Whereas the shipbuilder and the owner have heretofore entered into certain contracts providing for the construction by the shipbuilder of ships for the owner, and which contracts may be briefly described as follows:

Contract dated the 14th day of December 1917 by which the owner employed the shipbuilder to construct three transports.

Contract dated July 1st, 1918, by which the owner employed the shipbuilder to construct seven transports.

Contract dated August 5th, 1918, by which the owner employed the shipbuilder to construct four transports.

Contract dated August 10th, 1918, by which the owner employed the shipbuilder to construct two transports.

Contract dated October 18th, 1918, by which the owner employed the shipbuilder to construct one steel cargo ship; and

Whereas, on or about August 3, 1917, the shipbuilder was directed to complete for the owner nine (9) ships requisitioned by the owner, which the shipbuilder had theretofore undertaken to construct for private owners upon a basis of cost plus ten (10) percent for profit; and

Whereas by another agreement, dated December 14th, 1917, to which the American International Corporation was also a party, the shipbuilder agreed to complete for the owner certain boats therein scheduled, which originally and prior to August 3, 1917, were in process of construction by the shipbuilder for various private corporations, partnerships or individuals; and

Whereas by instrument dated January 21, 1918, the owner directed the shipbuilder to complete two certain ships (shipbuilders' hull nos. 202 and 203), the construction of which the owner had theretofore and in the transport agreement of December 14, 1917, directed to be terminated; and

Whereas all of the said contracts numbered by the owner, respectively 151, 151 supplement, 418, 420, 419 and 453, and the said communication of January 21, 1918, provided for the payment to the shipbuilder of the cost of such construction as defined in said contracts and, in addition to such cost, compensation or profit to the shipbuilder; and

Whereas, with respect to contract "No. 151", dated December 14, 1917, it was provided that the compensation or profit to be paid shipbuilder by the owner should be equal to ten (10) percent of the cost of the transport ships, as cost is defined in that contract, and the compensation or profit in the other contracts hereinabove mentioned was provided to be a fixed sum in addition to the cost as defined in each of said contracts, except that with respect to the "requisitioned" vessels (including those referred to in the communication of January 21, 1918), which the shipbuilder prior to August 3, 1917, was constructing for private owners on a cost and percentage basis, it was provided that the compensation or profit to the shipbuilder should be equal to ten (10) percent of the actual cost, as defined in the agreement of December 14, 1917; and

Whereas from time to time various questions have arisen between the owner and the shipbuilder as to the application of "actual cost", as defined in said contracts, and numerous questions have arisen, particularly with reference to whether or not various items claimed as repairs, maintenance, etc., are properly to be included as items of cost as defined in said contracts; and

Whereas the character and original general type and design of the vessels referred to in all or some of the contracts have been changed from time to time by the owner, during the war, and *because of the termination of hostilities incident to the war existing with Germany* at the time said contracts were entered into, and the shipbuilder claims to be entitled to compensation upon the contracts, other than contract no. 151 (December 14, 1917), in excess of the amounts stated in said contracts, because of the very considerable amount of additional work required by said changes and the necessity for occupying its yard and ways with the construction of said ships for a much longer period of time than would have been necessary if the vessels had been completed in accordance with the original specifications; and

Whereas *the shipbuilder claims to have expended very large sums in the erection of special plants or structures for the construction of the work covered by the contracts* and *therefore to be entitled in accordance with the express provisions of said contracts to exceptional allowances for depreciation and excess war depreciation upon the special plants and structures erected by the shipbuilder;* and

Whereas some or all of the claims of the shipbuilder are disputed by the owner; and

Whereas both parties recognize that to determine the actual cost of the said vessels, as defined in the contracts, and to determine the correctness of the claims made by the shipbuilder against the owner would necessitate long negotiations and expense to both parties, and possibly complicated litigation and delays to the owners in the delivery of the ships with the consequent loss to the owner; and

Whereas both parties are desirous of setting, adjusting, or compromising all questions that have arisen in connection with the operation of said contracts to this date, and of effecting a method by which all questions of the character which have been heretofore raised may be obviated in the future construction of the ships by the shipbuilder and in the settlement of all accounts for the said ships:

Now, therefore, in consideration of the conditions hereinabove set forth and of the mutual covenants and agreements herein expressed, it is covenanted and agreed by and between the parties hereto as follows:

A. The actual cost of the ships to be paid by the owner to the shipbuilder for work heretofore performed or hereafter to be done in their construction and completion, in lieu of, and to make more certain, the definition thereof appearing in the said contracts and to facilitate computation thereof, shall be made up of the cost of labor, the cost of material, and a percentage allowance for overhead and all other charges, as herein defined, and no other amounts, as follows:

1. The cost to the shipbuilder of the direct or apportioned labor entering into the construction of said vessels. The cost of direct or apportioned labor is hereby defined to be the cost to the shipbuilder of all direct labor as distributed under the shipbuilder's present method of accounting employed in the construction of the vessels for the owner, including gang foremen, quartermen, and leadermen for such time as they may be employed exclusively upon work in connection with any of said vessels, respectively, but not including any other labor of an indirect or supervisory nature.

2. The cost to the shipbuilder of the direct material entering into the construction of such vessels for the owner. Direct material cost is hereby defined to be the cost to the shipbuilder of all direct material, machinery, and equipment incorporated into or required to be furnished in order to build such vessels for the owner, respectively, which said costs are to be the net cost to the shipbuilder, f. o. b. shipbuilder's yard, including freight and other transportation charges actually paid by the shipbuilder, after deducting any and all rebates, commissions and discounts actually obtained.

3. A fixed charge with respect to each of such vessels constructed under said agreements for the owner at fifty (50) percent of said direct or apportioned labor cost for each of such vessels. For this purpose the direct and apportioned labor costs, as they now appear and shall appear upon the books and records of the shipbuilder shall be used for work already performed so far as those items fall within the definition of direct and apportioned labor herein contained, and for work still to be performed under the said several contracts the direct and apportioned labor costs shall include items of a nature similar to those now appearing upon such books and records, so far as they shall fall within the said definition herein contained. *Said fixed charge shall cover all other costs and charges of every nature whatsoever, for such respective vessels, including all overhead charges of the shipbuilder with respect to the construction of such vessels for the owner, bond interest, taxes, all costs of administration, all maintenance, all repairs, all depreciation* and all insurance (but not including insurance on hulls of vessels during construction, which insurance is a material charge).

4. Nothing herein contained shall be construed as depriving the shipbuilder of the right to receive from the owner, and it shall receive compensation or shipbuilder's profit of ten (10) percent above actual cost specified in the transport contract of December 14, 1917 (151), and upon the "requisitioned ships" (including those referred to in the communication of January 21, 1918), or the fixed sum per ton or per vessel agreed to be paid as compensation in connection with the other contracts.

5. From the final amounts otherwise due from the owner to the shipbuilder, with respect to the seventeen vessels constructed under contracts (owner's nos. 151 (for three transports), 418, 419, 420, and 453), *there shall be deducted* the net proceeds of the sale of scrap or any other *salvage produced from* direct materials, *machinery and/or equipment charged to cost of direct materials*, such net proceeds to be apportioned annually among such respective vessels and the vessels constructed during that year by the shipbuilder other than those covered by said contracts in proportion to the direct labor expended respectively thereon. This provision

with respect to deducting the net proceeds of the sale of scrap or other salvage from the amounts otherwise due shipbuilder shall not be applicable to the remaining vessels constructed by the shipbuilder, namely, all the so-called "requisitioned vessels" (including those vessels referred to in the said communication of January 21, 1918).

B. The shipbuilder has heretofore completed and delivered to the owner vessels which prior to August 3, 1917, were under contract for delivery to private persons, firms, or individuals, some of which are referred to in the said agreement of December 14, 1917, and in the communication of January 21, 1918, and it is agreed by and between shipbuilder and owner that final settlements for the said vessels (sometimes referred to as "requisitioned vessels"), shall be effected on the basis of the actual cost as in this agreement defined and the settlements upon such basis shall be promptly made between the parties, and after such actual cost, as herein in this instrument defined, has been determined, the said amount shall be deemed for all purposes the actual cost, and the shipbuilder shall be entitled to receive for profit, in addition thereto, the respective amounts in each of the said contracts provided to be paid as above set forth, it being understood that where such profit is provided to be determined with reference to the cost of the respective ships, such cost shall be calculated in the manner herein provided.

C. The shipbuilder agrees and covenants to and with the owner that in consideration of the definition of actual cost, as hereinabove provided, the shipbuilder will and does hereby release, remise and discharge the owner from any and all claims of every kind and character whatsoever, including claims for increased compensation, for depreciation of any kind, including depreciation on special plants or structures, or any other matter or thing whatsoever, except as expressly herein agreed to be paid, and in consideration of the release and discharge by said shipbuilder, the owner hereby releases and discharges the shipbuilder from any and all claims, causes of action, debts, or any matter or thing whatsoever which it may have against the said shipbuilder, except the faithful performance of the said contracts as hereby modified and hereby adjusted, and the delivery of the vessels agreed to be constructed thereunder.

D. "*Except only as herein expressly modified and adjusted, each and all of the said contracts of December 14, 1917, July 1st, 1918, August 5th, 1918, August 10th, 1918, and October 18, 1918, and the said letter of instructions dated January 21, 1918, and the provisions for the completion of the said "requisitioned ships", are hereby continued in full force and effect.*

In witness whereof the parties have caused these presents to be executed in duplicate by their respective proper corporate officers and their corporate seals to be hereto affixed on the day and year above written.

SEPTEMBER 14, 1920.

S. F. COSGROVE, Esq.,
Chief of Investigation, Emergency Fleet Corporation,
Philadelphia, Pennsylvania.

DEAR SIR: (1) It is our understanding that your department bears to the Fleet Corporation the same relationship as a doctor or lawyer bears towards his patient or client and in order to get the best service we could not too freely advise.

(2) We are sending you herewith a report showing certain conditions regarding a yard in your district, which facts disclosed leads us to believe that this yard either through accident or design appears to be securing advances which we believe is not the intention of the Fleet Corporation. Should this information be of any use, you are authorized to use same, should it, on the other hand, be proven on investigation that there is nothing in it, this department will feel that at least it has done its duty and advised you of the facts as we know of for such action and investigation as your department may deem advisable.

(3) In the meantime from the nature of this report it must of necessity be considered as confidential as it is not the desire of this department to stir up a tempest in a teapot in order to make a mountain out of a molehill. It is our firm belief, however, that the yard referred to is preparing to take advantage of the Fleet Corporation and we earnestly trust that you will give the facts we have presented earnest thought and investigation, bearing in mind that these facts are those which we have ascertained without special effort and they may be only indications of large and more important facts which have not been presented to us but which nevertheless may exist.

Very truly yours,

(Signed) ARTHUR C. FREEMAN, Jr.,
District Plant Engineer.

GENERAL DISCUSSION OF THE NEW YORK SHIPBUILDING COMPANY METHODS AND PRESENT ATTITUDE TOWARDS ME AS VIEWED BY THE WRITER

(1) When the district plant engineer's office of the Delaware River district was created in the fall of 1918 there was no representative at the plant in this district. The appointee of district plant engineer was Arthur C. Freeman, Jr., formerly connected with the Delaware River district, first as assistant engineer, executive assistant, and assistant district officer on ship construction and served in that department, taking an active interest in the work of the district as second in authority until his appointment as district plant engineer. Mr. Freeman reported at that time to Mr. F. W. Grogan, district officer.

(2) The records show that he was very actively engaged in the work of the Emergency Fleet Corporation in the Delaware River district from the creation of said district then known as "District No. 10", and he should have been in a position to have acquired considerable knowledge of the district, its workings and its personnel.

(3) Mr. Freeman reports that upon his assuming the duties of the district plant engineer having charge of ship construction reporting directly to the division of ship yards plant head, Admiral Roussear, the affairs of the Emergency Fleet Corporation expenditures at the New York Shipbuilding Corporation were turned over to him in the form of three contracts "Emergency ways, emergency shop, and equipment contracts" and that he found large charges to the yard on the pay roll of the Emergency Fleet Corporation but found that proper records were not being kept of the work; that the expenditure fund was not properly checked and that the New York Shipbuilding Corporation appeared to run things their own way without any check and as far as he could see with little restriction. In fact, it appeared that the work was practically run by the New York Shipbuilding Corporation, as they willed and desired, all of which is substantiated by the records. In one special case, that of the emergency shop, an estimate was made to complete same by the New York Shipbuilding Corporation which apparently was a safe estimate and an appropriation was asked for a certain amount. Subsequent events show that at the date of this letter there was an actual overdraft of $110,000.00, this showing the difficulty of doing work under the conditions which the New York Shipbuilding Corporation presented matters.

(4) Mr. Freeman cut down the force from thirty-five to ten at the New York Shipbuilding Corporation and also discovered that there was no check on maintenance at this yard, the cost of which was a cost against the ships in general overhead and on some contracts an additional 10% profit was allowed. This matter was pointed out by Mr. Freeman and he was allowed to place four engineers on maintenance, a record of maintenance, month by month, by the New York Shipbuilding Corporation was kept in regular schedule and at the date of Mr. Freeman starting activities, had reached an amount of $448,805.00 per month which was charged against ship construction at a time when only the north yard was in operation as the south yard had just gotten started. By the untiring efforts of Mr. Freeman's department, maintenance was brought down to as low as a figure of $91,756.00 for the month of July 1920, this being for full operation of both the north and south yards. As this maintenance was brought down attention was given to see that it was not placed and paid for through other channels, in other words this saving was a direct saving to the Emergency Fleet Corporation not only for the amount per month as given but on some contracts 10% was added and it represents a saving to the Fleet Corporation by a less payment to the New York Shipbuilding Corporation and it was to be expected that this showing would cause considerable alarm on the part of the New York Shipbuilding Corporation and much activity on their part to stop the activities of this department.

(5) Matters were brought somewhat to a head by the New York Shipbuilding Corporation receiving a letter dated February 20, 1920, from our resident engineer in which their attention was called to the fact that they were doing considerable work in the yard and charging same to maintenance which was an improper charge as it was being done without authority and eleven items were cited on which the work was going on at that time and the said corporation was advised that we were requesting our resident auditors to withhold payment on these jobs until some were approved if they were proper charges. On Wednesday, February 25, 1920, we were advised that Mr. Magoon, senior vice president of the New York Shipbuilding Corporation was in conference in the home office of the Fleet Corporation and one of the officers of the New York Shipbuilding Corporation at the yard, stated that he was afraid to call him up as he Mr. Magoon, was in an awful temper about maintenance resulting from our letter.

(6) On the same day Mr. Magoon replied to our letter stating that he was unable to find any ruling which required him to submit regular application for doing maintenance work for approval and that it was his present purpose to proceed with maintenance work under his usual procedure. On the same day the New York Shipbuilding Corporation wrote to Mr. Frick, manager of construction, Emergency Fleet Corporation, in which they state that the jurisdiction of the plant maintenance by the district engineer's department had been assumed as an extension of its duties in connection with plant construction and that they ask the Fleet Corporation in said letter to issue instructions that will relieve the New York Shipbuilding Corporation from all question of such supervision. It is to be noted that these letters were written the same day as the conference above referred to in the home office. *Under date of February 28, Mr. Frick issued instructions to Mr. Miller to remove all engineers in his district whose work was confined strictly to maintenance.* At the same time when this letter was shown to the district plant engineer by Mr. Miller, he was also shown a general order that had been prepared to eliminate all engineers on maintenance. Mr. Freeman at once interviewed Mr. Pitts, district manager, Emergency Fleet Corporation, Mr. Frick and Mr. Miller at which conference was present Major McCloud of the plant protection section. It has pointed out to Mr. Frick that the issuing of that general order was detrimental to the interest of the Fleet Corporation and that we should properly check maintenance as it was an admitted cost on ships which was paid out of the Treasury funds, which finally resulted in the order not being issued and a letter was prepared by Mr. Pitts, for Mr. Frick's signature, dated February 28, 1920, to the New York Shipbuilding Corporation stating that we would continue our work on maintenance.

(7) *This department pointed out to various departments further irregulatities that the New York Shipbuilding Corporation made in the matter of plant construction and charged to ships.* In one case we discovered one of the old ways that had been there for twenty years had been remodeled from wooden construction to concrete construction at an expense of approximately $126,000.00, same had been charged to ship construction and apparently had been paid as a ship cost. This was brought very forcibly before the auditing department and said department on their own initiative made an estimate of the improper cost that had already

been paid the New York Shipbuilding Corporation. An estimate of our share amounting to $750,000.00 had been improperly paid and this amount was held up by the auditing department as made to the New York Shipbuilding Corporation. The Navy Department hearing of this action called a meeting and stated that inasmuch as they were paying 50% of the overhead, that they be allowed to see the list, as they also desired to hold up funds for improper payments, resulting in a similar amount being held up by the Navy Department on March 3. The Fleet Corporation notified the New York Shipbuilding Corporation that $750,000.00 was held up from their payments, and following this they received a like notice from the Navy Department. So that we find *in the spring of 1920, we, the Fleet Corporation did know that the books of the New York Shipbuilding Corporation showed many charges as ship cost which were improper.*

(8) There is no doubt that this department is held responsible by the New York Shipbuilding Corporation due to the fact that we stopped them from getting away with improper cost in large sums; that we have brought out the fact that neither the Navy nor the Fleet Corporation were paying proper attention to ship costs. Admiral Capps, chief of cost compensation board in Washington, sent for Mr. Freeman and asked him regarding the work he was doing, complimenting him upon same and stating he was glad the Fleet Corporation had somebody who had backbone enough to stick up for what is right and did say that he could not understand where his own cost compensation board had been at the plant of the New York Shipbuilding Corporation for the last 5 years.

(9) The feeling that the New York Shipbuilding Corporation had that they were being checked up in a manner that they were not used to; that their freehand in construction work was in a measure restrained, did we imagine, after considerable bearing on their efforts to eliminate our activities from that yard, but due to the fact that Mr. Freeman succeeded in pointing out the value of checking maintenance, checking the interest of the Emergency Fleet Corporation, matters remained the same as usual until date of July 27, 1920, when a new arrangement was entered into between the shipbuilder and the Emergency Fleet Corporation in which a fixed percentage of direct labor was allowed, said yard requiring no longer any efforts of the organization until at the date of this report, there is practically no supervision as no control is required by this arrangement of the money that is allowed the New York Shipbuilding Corporation for maintenance.

Commenting on this report for the benefit of all concerned, attention is called to the following facts:

Mr. Freeman, district plant engineer and Mr. Eason, district manager, visited the plant of the New York Shipbuilding Corporation on or about July 13, 1920, in order for Mr. Eason, the new district manager, to pay his respects to the yard and visit same. At a meeting in Mr. Neeland's office (those present being Mr. Neeland, Mr. Eason and Mr. Freeman), Mr. Eason stated to Mr. Neeland that it was considered advisable to allow a fixed percentage for maintenance and Mr. Neeland replied that that was just what they were working on and stated that Mr. Gillan of the Shipping Board was expected to visit the yard the next Saturday, at the launching of the *Bay State*, that he, Mr. Neeland had a very dear friend, who was also a friend of Mr. Gillan, and that this friend had come to him and stated that if he had anything to put through, he had better arrange to do so in the next week as the President expected to make some new appointees to the Board, and that his friend, Mr. Gillan would probably resign; that as matters now stood, Mr. Gillan could get through anything he wanted to, *as it was a one-man board*, that *whatever he said was accepted;* that any delay over a week might cause them not to get it through. Mr. Neeland then stated, that for this reason he would like to have this matter brought up as soon as possible so as to get it through by Mr. Gillan while still on the Board. Luncheon was then announced, Mr. Neeland asked Mr. Eason and Mr. Freeman to meet him after lunch as he could not have luncheon with them, because he had to make a talk to his superintendents. The meeting was then adjourned and on the way out Mr. Freeman called Mr. Eason aside and told him that he did not like the way Mr. Neeland talked and that while he agreed with the principle of a certain percentage being allowed the New York Shipbuilding Corporation, he did not think it possible to think of doing within a week, and he also advised Mr. Eason not to be a party to railroading anything like that through in that time as it was a proposition that required a long time to work up. Mr. Eason replied that he would not and was just drawing Mr. Neeland out, or words to that effect.

Mr. Freeman then asked to be excused from the afternoon meeting (as he did not desire to become a party to same). At the end of the same week Mr. Freeman went on his vacation and on his return he found that the agreement had already been entered into.

(10) In connection with said agreement your attention is called to the fact, that the auditors under date of August 2, 1920, (Mr. George W. Willbrock, resident auditor), submitted a report to the District Controller A. J. Paynter, in which he states referring to the report, "it consists of as many facts as could be gotten together within a few days in connection with the proposition of a flat overhead of 50%, contract for which I understand has since been signed, no official notification, however, having been received at this office to date." He also stated in the same letter of transmittal of report *all of the elements that entered into the proper consideration of this proposition, have not been thoroughly weighed,*" this because of the limited time given the writer. It will be noted that this letter of transmittal in which the resident auditor tells the Emergency Fleet Corporation that all elements have not been properly considered, under date of August 2, 1920, several days after the actual signing of the agreement which was July 27, 1920, showing that agreement was prematurely entered into, if the knowledge that is secured from the auditors who have been constantly on the work is of any value. Your attention is also called to the fact, that the plant engineering department which has had more to do with plant maintenance which forms a large part of the overhead at this yard, was not asked for any recommendation, nor consulted. Especially is this very pointed in view of the fact that this agreement appears to have been drawn up to avoid maintenance control or of accounts which at the date of the contract were improperly on the books of the New York Shipbuilding Corporation and on which a million and one-half dollars was withheld. It is to be noted that the agreement on page 5, sets forth that "for this purpose, the direct and proportionate labor, cost, as they now appear and shall appear upon the books and records of the shipbuilder shall be used for work already performed, etc.," and which back cost appears to have been used as a basis for the agreement when same were known to be improper and not correctly recorded.

(11) You are advised that at the launching of the "*Bay State*" which was July 17, 1920, Mr. Gillan of the Shipping Board attended same and made an address, those present being New York Shipbuilding officials and their guests. Extracts from said speech by Mr. Gillan as noted by one of my engineers is attached hereto, marked "Exhibit A". Your attention is called to the fact that Mr. Gillan stated that Admiral Benson is a square man and would do the right thing when it was explained to him, that he needed lots of advice in the way of business, and that he also stated that the men of the Fleet Corporation who had to do with many settlements seemed to lose sight of the honor of the United States in carrying out the intent of their contracts with the shipbuilders, and have quibbled over technicalities, citing a case of the yard at Alexandria, that receivers were about to be appointed by the Fleet Corporation when the Board took steps to have the matter stopped *and that the claims of the shipbuilder had been paid in full and he stated that the same method would be used in handling the matters of the different corporations that had dealings with the Government.*

(12) An examination of the facts of this agreement of July 27, which is made retroactive from the beginning of these contracts, in the opinion of the writer is manifestly wrong to the interests of the Fleet Corporation for it was drawn up apparently to ease the situation under which as set forth by the agreement both parties recognized that the determination of the actual cost of the said vessels as defined in the contract would necessitate long negotiations and expense to both parties and possible conflict and both parties are, therefore, desirous of settling, adjusting or compromising all questions and so for these reasons they have drawn up an agreement on which there is apprently no compromise as all of the cost as shown by the books of the corporation for direct and apportionate labor cost is used without question, which is combated by certain claims that are presented by the Shipbuilder to offset all irregularities in said accounts.

(13) It will be noted that the claims that the New York Shipbuilding Corporation have presented as made would apparently show a loss of 1¾% to the New York Shipbuilding Corporation. This combated by figures from the auditing department which is made up mainly on plant figures about which the Plant Department was not consulted. This agreement is based upon a list of work estimated by the auditing department on a strictly engineering proposition and in many cases lies deep in the ground, yet this estimate has been allowed which affects the Emergency Fleet Corporation's interest retroactive to the beginning of the Emergency Fleet Corporation's interest at this plant and also applies on all future work. This is absolutely wrong, improper and unbusinesslike and

something that would not be countenanced by any private corporation and yet we find that it has been thought to spend Government money in a way that cannot possibly be right. It was made without use of data that had been collected by our representatives and used all data which was wrong and which was known to be wrong by the records as indicated above and which was vital to the formation of a proper agreement to protect the Government's interest. It is to be regretted that the Fleet Corporation representing the Government allowed this agreement to be made with a corporation that has been under observation by the District plant engineer and the auditing department with the knowledge of the departments above, substantiated by proof that they had to be recognized to the extent of taking from this corporation funds that had been improperly paid out. All this occurred before the agreement was signed and was known before said agreement was signed.

(14) An examination to the effect of the agreement as far back as six months which is as far as it was carried by the auditing department showed from January to June 1920, that the New York Shipbuilding Corporation by its new agreement made an excess in what they would have made under their other contract which is binding an amount of $867,014.50 as "velvet." The details by months is as shown in statement attached marked "Exhibit B." There will be other profits to accrue by this agreement which have not been gone into. We believe from conservative estimate that the entire benefits of this new contract by the Fleet Corporation will amount to between $2,000,000.00 and $3,000,000.00 profit as "velvet." It seems to be the impression with some that when direct labor becomes low in comparison with overhead, that the Fleet Corporation will make by this contract. This should not be a deciding element in the consideration of same as it is entirely problematical and should we have continued under the original contracts it was a very proper duty that we should look after cost and not pass same unless they were correct and when overhead became excessive, we were perfectly within your rights to order same to be cut down.

(15) In connection with the purchase of the South Yard by the New York Shipbuilding Corporation, you are advised that unless the Fleet Corporation is vigilant, the South Yard will be turned into an outfitting yard to outfit ships on which we would be allowed only 5% on the costs as the contract states that the profit we shall receive from ships will be construed from that yard in which ships are launched. By agreement we received 5% profits in the North Yard and 50% in the South Yard, in payment of certain Emergency Fleet Corporation expenditures, and should the ship be launched in the North Yard it would be outfitted in the South Yard without restriction so that we may find ourselves in a position of using the South Yard as an outfitting basin with 5% profit only.

(16) Your attention is also called to the fact that in the figures presented by the New York Shipbuilding Corporation on which this agreement was based, they carried a war depreciation retroactively and also in the future which would make same effective as long as we have any contracts with the New York Shipbuilding Corporation.

(17) The effect of this agreement which the New York Shipbuilding Corporation has, is to relieve the plant engineering department of all supervision of actual cost of plant maintenance. The interest of the Fleet Corporation is thus manifestly turned to the examination of direct labor costs which forms cost of the ships and which at the present time is running over a $1,000,000.00 a month. By letter of the district plant engineer to the district manager, dated September 11, 1920, he is advised by the district plant engineer that there is not at present, nor has there been at any time in the past, an adequate check on direct labor, it was this fact alone when allowing the New York Shipbuilding Corporation to inject into the cost of ships the money for plant improvements for which the million and one-half dollars was withheld as having been improperly paid, which makes it appear that the Emergency Fleet Corporation has jumped from the frying pan into the fire, due to the fact that the New York Shipbuilding Corporation have succeeded in removing from their plant the only department that has been helpful to the Fleet Corporation. Our force at the New York Shipbuilding Corporation is reduced 71% at the present time. There is no doubt that this reduction was brought about by the apparent sinister influence of the New York Shipbuilding Corporation.

Respectfully,

ARTHUR J. FREEMAN, JR.

(Ex. #4 P. 27)

(12) An examination of the facts of this agreement of July 27, 1920, which is made retroactive from the beginning of these contracts, in the opinion of the writer is manifestly wrong to the interests of the Fleet Corporation for it was drawn up apparently to ease the situation under which as set forth by the agreement both parties recognized that the determination of the actual cost of the said vessels as defined in the contract would necessitate long negotiations and expense to both parties and possible conflict and both parties are, therefore, desirous of settling, adjusting or compromising all questions and so for these reasons they have drawn up an agreement on which there is apparently no compromise as all of the cost as shown by the books of the corporation for direct and apportionate labor cost issued without question, which is combated by certain claims that are presented by the shipbuilder to offset all irregularities in said account.

* * * * * * *

(Ex. #4 P. 29)

(14) An examination to the effect of the agreement as far back as six months which is as far as it was carried by the auditing department showed from January to June 1920, that the New York Shipbuilding Corporation by its new agreement made an excess in what they would have made under their other contract which is binding an amount of $867,014.50 as "velvet." The details by months is as shown in statement attached marked "Exhibit B." There will be other profits to accrue by this agreement which have not been gone into. We believe from conservative estimate that the entire benefits of this new contract by the Fleet Corporation will amount to between $2,000,000.00 and $3,000,000.00 profit as "velvet." It seems to be the impression with some that when direct labor becomes low in comparison with overhead, that the Fleet Corporation will make by this contract. This should not be a deciding element in the consideration of same as it is entirely problematical and should we have continued under the original contracts it was a very proper duty that we should look after cost and not pass same unless they were correct and when overhead became excessive, we were perfectly within your rights to order same to be cut down.

* * * * * * *

(Ex. #4 P. 30)

(17) The effect of this agreement which the New York Shipbuilding Corporation has, is to relieve the plant engineering department of all supervision of actual cost of plant maintenance. The interest of the Fleet Corporation is thus manifestly turned to the examination of direct labor costs which forms cost of the ships and which at the present time is running over a $1,000,000.00 a month. By letter of the district plant engineer to the district manager, dated September 11, 1920, he is advised by the district plant engineer that there is not at present, nor has there been at any time in the past, an adequate check on direct labor, it was this fact alone when allowing the New York Shipbuilding Corporation to inject into the the cost of ships the money for plant improvements for which the million and one-half dollars was withheld as having been improperly paid, which makes it appear that the Emergency Fleet Corporation has jumped from the frying pan into the fire, due to the fact that the New York Shipbuilding Corporation have succeeded in removing from their plant the only department that has been helpful to the Fleet Corporation. Our force at the New York Shipbuilding Corporation is reduced 71% at the present time. There is no doubt that this reduction was brought about by the apparent sinster influence of the New York Shipbuilding Corporation.

Arthur J. Freeman, Jr.

Exhibit No. 1434

January 14, 1920.

From: George W. Wellbrook, resident auditor, The New York Shipbuilding Corporation.
To: A. J. Paynter, district auditor, via F. E. H. Hamell, District Comptroller, Delaware River District, Philadelphia, Pennsylvania.
Subject: Selling and building rights of Diesel type engine.

(1) Your attention is called to a charge that is being absorbed into the Emergency Fleet Corporation hulls monthly which covers a payment by The New

York Shipbuilding Corporation to the Nederlandsche Fabrick Van Wesktingen en Spoorweg-Materiell, Genaamd-"Werkspoor" of Amsterdam, Holland, of the sum of $10,000.00.

(2) The New York Shipbuilding Corporation showed the writer the agreement in connection with this payment. This agreement provides for the right by The New York Shipbuilding Corporation to build and sell marine heavy oil Diesel type internal combustion engines. The total duration of the contract is to be seven (7) years from January 25, 1916.

(3) In view of the fact that The New York Shipbuilding Corporation has never constructed an engine under the above agreement for either the Emergency Fleet Corporation, the Navy Department, or outside parties, it would appear to the writer that the Emergency Fleet Corporation should not absorb any part of the cost of entering into this agreement. It should be mentioned that the agreement also provides that a royalty shall be paid on each and every engine manufactured.

(4) We would request that you instruct this office as to whether or not you consider the above charge a proper item chargeable to cost of Emergency Fleet Corporation hulls under construction.

(5) The method of charging off this $10,000.00 has been to include it under patents and royalties on the depreciation schedule. The New York Shipbuilding Corporation has been writing it off on a basis of 20% per annum, which, in the opinion of the writer, is entirely incorrect inasmuch as the agreement covers a period that is specifically stated to be seven years. Regardless of what decision is made as to whether or not the Emergency Fleet Corporation should assume any part of this case the rate would have to be adjusted.

George W. Wellbrook, *Resident Auditor.*

Exhibit No. 1435

U. S. S. "Idaho"

(Contract #160)

The contract for the construction of the above vessel was let during 1914, and the delivery of the vessel occurred on March 24, 1919, when it was conditionally accepted by the Secretary of the U. S. Navy. On August 9, 1921 final acceptance of the vessel by the U. S. Navy occurred.

The contract for the construction of the vessel was let on a flat-price basis, the sum being $7,250,000.00.

During the war emergency, and prior to the completion of the vessel, the price of labor advanced materially; labor wage adjustments of workmen employed in shipyards were made by the Macey Board on at least two occasions that were applicable to workmen employed at the New York Shipbuilding Company's plant; and much "overtime" occurred in connection with ship construction work.

It appears that authority was requested of Government officials (the contract of the *Idaho* being on a flat-price basis and the price being determined on the basis of conditions existent at the time the contract was let) to make adjustments of wages of workmen employed in constructing the vessel in accord with the wages paid other workmen in the shipyard on other vessels (in conformity with the Macey Board decisions); and also authority to put in "overtime" on the *Idaho.*

It is indicated that authority that the taxpayer believed to be suitable and ample was received from Government officials for these purposes, and adjustments of wages occurred and "overtime" was put in on the vessel.

After the completion of the vessel, and its delivery to the Secretary of the Navy, controversy arose as to the amounts that were billed in excess of the flat price, and which covered the items of wage adjustments and "overtime", and it appears that the excess over the flat price was not paid by the U. S. Navy—was eithert emporarily suspended or refused to be paid.

On March 4, 1925 a public bill was passed by Congress entitled "An act for the relief of the New York Shipbuilding Company for losses incurred by reasons of Government orders in the construction of Battleship 42"(*Idaho*).

On March 19, 1925, the N. Y. Shipbuilding *Company* filed a petition in the Court of Claims, E No. 201, which recites among other things, that the *company* was then existent, and that it held the original contract the benefits from which were to be kept in trust for the New York Shipbuilding *Corporation* (its successor).

The petition sets forth the basis of the claim of the company, in amount $1,239,358.74, which in summary or digest form is—

1. Increase in contract price by the requirement to pay more rates of wages from time to time as fixed by the shipbuilding labor adjustment board	$871. 808. 95
2. Overtime work	314, 639. 86
3. Balance in reserve fund	52, 909. 93
Total	1, 239, 358. 74

The *authorities* for the above alleged expenditures, or/and balance of reserve, are set forth in detail in the taxpayer's petition [1] to the Court of Claims, which was inspected by your examiners in the Department of Justice on Vermont Avenue, Washington, D. C. The authorities comprise telegrams, letters, etc. from the Secretary of the Navy and other Government officials.

A hearing has occurred in the Court of Claims in connection with the claim of the company, which we are informed was suspended, temporarily; and our information is that to date, on two or more occasions, testimony of witnesses was taken at the office of the New York Shipbuilding Corporation at Camden, N. J., by a commissioner designated by the Court of Claims, so to do. The matter of claim of the taxpayer, to date, has not been adjudicated.

During the year 1918, $1,500,000.00 was charged against profits by the taxpayer for alleged loss on the U. S. S. *Idaho,* the books of the corporation disclose; and during 1919, $1,350,000.00 was charged against profits for alleged loss on this vessel. It is further indicated by the books that on December 31, 1923, $700,000.00 additional was charged to "profit & loss" for alleged loss on this vessel and the "U. S. S. *Washington*". The entry covering the $700,000.00 appears in the private journal of the corporation, page 229, and follows:

"Dec. 31, 1923:

"Profit and loss	$700, 000
"Reserve for suspense	700, 000

"While the claims of the corporation growing out of the construction of the *Idaho* and for the construction of the *Washington* have been set up on the books with regard to the minimum amounts that have been so far mentioned as due the corporation in all fairness, the figures allocated thereto also have the protection of adequate reserves by reason of some claims not yet having been adjusted. It is believed that a fair final adjustment and liquidation of such claims will result in the allowance of by far much larger amounts in line with the claims as filed (see C. I. Fay's letter 2/4/24)."

The C. I. Fay referred to is an attorney handling the *Idaho* case before the Court of Claims, and is connected with White & Case, attorneys, #14 Wall St., New York, N. Y.

During the war period and for several years thereafter, when the taxpayer was constructing vessels for the U. S. Navy and the U. S. Shipping Board Emergency Fleet Corporation, on cost-plus 10%, cost plus a stipulated profit per deadweight ton, and cost plus a fixed fee bases, it was the admitted practice of the taxpayer to most liberally interpret "cost" inasmuch as the contracts entered into did not clearly define it. Many, many items such as capital items, Federal income taxes, gifts and donations of the corporation, increases in salaries of corporate executives, salaries of foreign representatives, additions to plant, etc. were included in the charges to Government vessels on the books, and were included in the periodical (monthly) billings in connection with ship construction made to the U. S. Navy and the Emergency Fleet Corporation. The officials of the corporation state in defense that most of their plant was devoted to construction of Government vessels and practically all expenditures resulted directly or indirectly in a beneficial way to the ships being constructed; and that their billings were the subject of audit and scrutiny by agents of the Government located at the plant, employed in the Cost Inspection Department of the U. S. Navy and of the Emergency Fleet Corporation.

The auditors for the Government departments *did* recommend, and many of the recommendations were followed, the disallowance of many of the charges included in the billings of the contractor. The disallowances of charges were reflected in *payments* to the contractor by the Government. The taxpayer did not change its *records* (books), still averring, that regardless of the interpretation of "cost" made by the U. S. Navy or Emergency Fleet Corporation, its (the corporation's) interpretation of "cost" as reflected by its original charges *in the books* was the correct interpretation of "cost"; and the corporation left its records as they were. Certain adjustments were made many years later with reference to some of the items that were questioned.

---

[1] Copy now made a record of the case and filed herewith, secured from the Department of Justice.

The U. S. S. *Idaho* contract, as has been previously stated was a flat-price contract.

Transcripts of the ledger accounts, from the taxpayer's books, have been made. The accounts comprise the construction account (no. 160), the earned profit account, and the U. S. Government (no. 160) account. The latter account is the "payment account" and reflects actual amounts received from the Government. The transcripts referred to are included in the exhibits forming a part of your examiners report.

For ready reference, there has been prepared from the schedules (photostats thereof) of computation of earned profit on all contracts, the computations of "profit" or "loss" (mostly the latter) during the period under investigation on the U. S. S. *Idaho*. The schedule prepared carries down to the time when a receivable in the amount $926,803.28 is set up on the books of the taxpayer as being due from the U. S. Government; though its petition in the court of claims recites $1,239,358.74 as being due. As far as is known no further claim on the *Idaho* is made against the Government. *The books reflect charges against profits for 1918 and 1919 of $2,850,000.00 for loss in connection with the construction of this vessel.* The receivable of $926,803.28 was set up on December 31, *1923*, the account being kept open and numerous charges and credits made thereto after the losses of 1918 and 1919 were charged off.

The schedule which has been referred to, showing the computation by the taxpayer of losses on the U. S. S. *Idaho*, if carefully studied indicates that "loss" if any, properly would relate *to 1918;* and its study in connection with the transcripts of the construction, earned profit and U. S. Government (payment) accounts appears to indicate that "loss" in the aggregate amount claimed was not in fact suffered.

It is believed probable that "cost" in the case of the *Idaho* as in the case of cost-plus contracts includes improper items such as capital items relating to other than ship construction, etc., and the inclusion of such items has produced an aggregate when applied to the flat price together with "extras" appears to result in a loss having been suffered which may be much in excess of the actual loss if such a loss was in fact suffered. Even if loss was in fact suffered, a study of the papers referred to indicates that no such loss as is claimed *was* suffered.

There follows a résumé from information disclosed by the books and from information gathered elsewhere with reference to the matter:

Cost to 12/31/21—per taxpayer's schedule of "estimated earned profit"		$10, 509, 759. 31
Paid by U. S. Gov't	$7, 844, 784. 43	
"Receivable" due from U. S. Gov.'t (per taxpayer's petition to the court of claims)	1, 239, 358. 74	
		9, 084, 143. 17
Loss as indicated by books, and by taxpayer's petition in court of claims		1, 425, 616. 14

Year	Claimed	Loss as above	Excess
1918	$1, 500, 000	$1, 425, 616. 14	$74, 383. 86
1919	1, 350, 000	None	1, 350, 000. 00
Total	2, 850, 000	1, 425, 616. 14	1, 424, 383. 86

At the present time, the records appear to indicate, after all the adjustments made by the taxpayer in connection with the contract for the *Idaho*, a receivable due from the U. S. Government of $926,803.28. It would indeed be most difficult to see that loss of $1,500,000, in 1918, plus 1,350,000 in 1919, plus a portion of $700,000 in 1923, less $926,803.28 was actually suffered, when a claim of but $1,239,358.74 is made upon the U. S. Government as representing the total unpaid amount in connection with the settlement of the contract for the construction of the vessel.

It is recommended by your examiners, that in no event there be allowed for "loss" in excess of $1,425,616.14 *for 1918;* and that no "loss" be allowed in 1919. This would result in the disallowance of $74,383.86 of the $1,500,000 claimed in 1918; *and all* of the $1,350,000.00 claimed in 1919.

The computations by the taxpayer of "estimated earned profit" on Government contracts (fixed fee or flat price) will be discussed under another heading.

After a very careful study of conditions, viz: the system of bookkeeping and record keeping, the practices of the corporation, etc., it is the opinion of your examiners that it is an utterly impossible task to attempt to determine *correct* "costs" in connection with each contract. It is our unqualified opinion that even a large corps of men working for an indefinite time could not even approach accuracy. Thousands and probably hundreds of thousands of vouchers, labor tickets, store requisitions, etc., would have to be examined and reanalyzed, and the books all recast. During the war emergency the plant employed in the neighborhood of 22,000 men.

The set-up of loss, on another basis, follows:

Cost, per books, 12/31/19		$10, 557, 376. 96
Pay'ts to U. S. Gov't to 12/31/19	$7, 707, 376. 96	
Acct. receivable U. S. G	1, 239, 358. 74	
Total	8, 946, 735. 70	
Plus credit to P. & L. 1921, applicable to prior period	185, 025. 12	
		9, 131, 760. 82
Actual loss, per books		1, 425, 616. 14

CAPITAL ITEMS CHARGED IN COSTS OF CONSTRUCTION OF VESSELS DISALLOWED IN CONNECTION WITH BILLINGS BY CONTRACTOR TO U. S. NAVY

During the period extending from June 1917 to and including September 1921 items aggregating $1,037,882.14 were included in the "overhead" billed to the U. S. Navy. These items were disallowed by the cost inspector of the U. S. N.

A list was prepared of the items, and the months and years to which they relate, by your examiners, from the records of the cost inspector of the U. S. Navy located at the plant of the taxpayer at Camden N. J. The schedule forms a part of this report.

No change was made on the books of the taxpayer with reference to the disallowed items *until March 31, 1926,* when the following journal entry appeared on folio 308 of the private journal:

"Mar. 31, 1926:

Real estate & bldgs., 2007	$214, 103. 24
Machy. & tools, 2012	418, 227. 27
Furniture & fixtures, 2032	99, 832. 41
Other equipment, 2055	305, 719. 22
To reserve for suspense	1, 037, 882. 14

"To place upon the books capital assets originally charged to operating expense and disallowed on various cost-plus contracts."

It will be noted that the taxpayer by the above entry is not including the items in P. & L. account, but in a reserve account. On his books he has had the benefit of a deduction against P. & L. through "expense."

The amount $1,037,882.14 was, in effect, left on memorandum with the Navy, and represented a "reserve" of the taxpayer until 1926.

The taxpayer demanded of the Navy "depreciation" on the items disallowed, and depreciation has, retroactively, been allowed by the Navy on the disallowed items.

The amounts of the items in the periods to which they relate have been capitalized by your examiners, and disallowed as "expense"; and reasonable rates of depreciation will be allowed thereon; and the amounts received from the U. S. Navy for "depreciation" will be considered in the nature of contractual amortization.

EXHIBIT NO. 1436

OCTOBER 23, 1926.

In re: N. Y. Shipbuilding Corporation.

Mr. H. B. ROBINSON,
Head Consolidated Returns Audit Division.

We were still working on the records of the cost inspector of the Navy Department.

During the current week we were informed that the treasurer of the corporation, Mr. Wickersham, was in Washington on corporation business; and that Mr. Parker, the comptroller, was confined to his home through illness. These officials are the ones with whom it will be necessary to interview in connection with our investigation.

Under the circumstances, we were unable to check the records of the corporation in connection with the amortization claim of the taxpayer.

Accordingly, we continued our examination of the records of the cost inspector of the Navy, in connection with which there is endless detail in preparing schedules relating to depreciation paid by the Navy Department to the New York Shipbuilding Corporation in connection with the construction of vessels.

In the course of our examination of the records of the cost inspector of the Navy we have noted that it has been the continued practice of the taxpayer to include everything possible in "expenses" (cost of construction of ships), regardless of whether or not they represented correct costs. We have also noted that approximately $1,037,000.00 has been disallowed as expense by the Navy Department on billings to it by the taxpayer; and the items composing this amount capitalized and depreciation allowed thereon. This necessitates the computation of voluminous detailed schedules of depreciation, spread over the years 1918 to 1921, inclusive. Of necessity, in connection with the Navy dealings with the taxpayer, separate schedules of depreciation have to be prepared *for every month of every year.*

We have also noted during the course of our investigation thus far, that notwithstanding the fact that amortization was claimed by the taxpayer in excess of $4,000,000.00 for facilities used for war purposes, the corporation has charged, and still continued to charge, the Navy Department with depreciation on these facilities. On the basis of the tentative allowance for amortization determined by the Bureau, the excess sum paid by the Navy Department to the taxpayer on account of depreciation, to date, amounts to approximately $264,000.00. The attention of the commanding officer of the Navy at the plant of the taxpayer at Camden, N. J., was directed to this matter, and it is the present plan to have Commander Jennings of the Navy Compensation Board at Washington, D. C., to shortly visit the cost inspector's office at Camden, to settle the question of whether or not this depreciation is to be considered as an allowable item of "cost" in connection with Navy contracts.

There is also a question now pending before the Navy Compensation Board, Washington, D.C., in connection with Navy contracts with the taxpayer, relative to interest on bonded indebtedness of the corporation, which has been charged by the contractor, pro rata, to the Navy in costs of construction of ships, and tentatively allowed in "costs."

Both of these items are spread over the years 1918 to 1921, inclusive.

Decisions by the Navy Department on both questions will have a direct bearing on the computation of correct taxable income.

Before leaving Washington for Camden, your examiners were in conference with Mr. J. A. Honsick, claims and construction auditor of the Emergency Fleet Corporation, the result of which was that Mr. Honsick promised to detail one of his men to collect the data we would need of the dealings of the Emergency Fleet Corporation with the New York Shipbuilding Corporation. Mr. Honsick stated at the time we conferred with him that it was his belief that the preparation of the data necessary would consume four or five weeks, probably longer. Since arriving in Camden, N. J., we have been in communication with Mr. Honsick, and expect to receive the data relative to the Emergency Fleet Corporation in due course.

In view of the varied complications existent in this case, it is not possible at this time to even approximate a date when the investigation will be completed.

It is the opinion of your examiners that when the examination is completed a large additional tax will result.

Respectfully,

——— ———.

Exhibit No. 1437

October 14, 1926.

In re: New York Shipbuilding Corporation, Camden, New Jersey.

Mr. H. B. Robinson,
Head, Consolidated Returns Audit Division.

Dear Sir: Our examination of the above-named corporation to date has been restricted to the records of the cost inspector of the United States Navy, which discloses that various *adjustments* have been, from time to time, made by the Navy Department for depreciation sustained on assets used in the construction of "war" vessels. The Navy Department has reimbursed the taxpayer for depreciation sustained on such assets. These adjustments by the Navy Department for depreciation on assets used in constructing war vessels *are retroactive* adjustments affecting all prior years under investigation, and have a bearing of moment on correct taxable income. The adjustments have been made *by the Navy Department* on annual, semiannual, and monthly bases, and necessitate the compilation by your examiners of considerable data to determine the correct amount of depreciation applicable to each year, which in turn affects the taxable income of each year; and further adjustment will be required when the correct amount of amortization is finally determined by the Government engineers collaborating with your examiners.

It is also noted from the records available at the cost inspector's office that amortization has previously been allowed upon assets the cost of which has been returned to the taxpayer by the Navy Department.

The administration building included in the plant of the taxpayer and known as "D–1", upon which amortization in the amount $82,329.71 was claimed and allowed *is now in use.* Sidewalks, lawns, and fences upon which amortization was claimed and allowed are also in use; and a building containing a lunch room and locker rooms on which amortization was allowed is in use at the present time by the taxpayer. These assets appear to be still carried on the corporate books.

Owing to the fact that the amortization allowance, as finally determined, will affect the depreciation allowances in the costs of construction of ships for which the Navy Department has reimbursed the corporation, it is our intention to proceed, starting Monday, October 18, to make an exhaustive examination of the amortizable assets and prepare analyses thereof for the use of the engineers of the amortization section, with whom arrangement will be made when the data are collected to visit the plant for the purpose of determining the correct amount of allowance for amortization. Conference was had with the engineers in connection with this matter before leaving Washington, and the Engineering Division has promised to send representatives to the plant on notice from us that necessary data for their use have been collected.

It appears, from the face of the return, that it has been the practice of the corporation to include in the cost of construction of ships *all* expenses, regardless of their nature, and included in which are expenses for which the Navy Department has reimbursed the taxpayer for its (the Navy's) proportionate part (these items of expense therefor being no longer expense items of the corporation). Some of such items have also been deducted again as items of expense against gross income.

Owing to the methods apparently pursued by the taxpayer, and the frequent retroactive adjustments made by the Navy Department, considerable time must be spent in determining the correct amount of expense items for which the corporation has been reimbursed. It is our opinion, at this juncture, that virtually a detailed audit will be necessary.

We have been informed by the commander in charge of the Navy cost inspection office that the corporation included in one month in the *cost of construction of ships* a dividend in the amount $35,000.

It is our belief from the facts gathered thus far, in view of the complications attending this case and the fact that it develops through investigation from day to day, and to stop at a point would result in the threads of evidence being lost, and also that the Navy cost inspection department at this plant will soon be abandoned (the Navy's final contract with the taxpayer nearing completion); that this investigation should be carried down to 1925 when the corporation name was changed to the American Brown Boveri Electric Corporation, and immediately thereafter we are informed subsidiaries were acquired, and we will proceed with the intent to carry our investigation to that point unless advised to the contrary.

For your information and guidance, we are of the opinion that it will not be necessary to furnish additional help; that the case, on account of its peculiar nature, can best be worked by two men, and that additional help might prove rather a hindrance than help.

On a visit to the corporation's office during the current week, Mr. Wickersham, the treasurer, and Mr. Parker, an assistant secretary, informed us that extended waivers were received from the Bureau covering 1919 to 1921, inclusive, but that it was the present intent of the corporation not to execute these waivers at once, but to await the progress of the present examination. Your examiners recommended to Messrs. Wickersham and Parker that the waivers be executed at once and forwarded to the Bureau. What action will be taken by the corporation we do not know. *It is therefore recommended that the waiver question be watched by the Bureau and that we be kept informed whether or not the waivers are received.*

It would appear that outstanding tax on the collector's lists in excess of $700,000 should be protected, i. e., either collected or protected by suitable bond, for the indication is that *additional tax* of appreciable amount will be found to be due when the investigation is completed.

It is suggested that this communication be also read by Mr. W. C. Tungate, Chief of section G.

Respectfully,

——— ———.

EXHIBIT No. 1438

GRAND HOTEL NATIONAL,
Lucerne.

DEAR MR. BARDO: I cabled you from Baden. Everything satisfactorily arranged. I meant I saw the consul and he said for Mrs. Looser to come in and he personally would take care of her. All she needed was a letter from Brown Boveri saying her husband was in America on their business and she and the children wanted to join him. He personally told the man in charge of the details in my presence that when she came in the case was to receive the consul's personal attention. I told them at Baden what to do and asked them to advise me through you when their case needed attention. Thought you might like to keep some control of this. I didn't commit the Am. W at all. My personal relationship to a U. S. Senator did the trick absolutely for until they learned that I was being sent to a club for a regular routine. My message asked you to please telephone my family at Atlantic City. I thought they might like to hear from me. I will be in Paris. Morgan Haiy's, if you wish to communicate with me. The Baden people asked me about a deal for Diesel engines you were thinking of closing in Germany. Of course I knew nothing of it. Let me know if I can assist while here. They also spoke about you buying Bruch Seltzer. I presume you know I found out for Mr. Neeland two years ago there was no chance of U. S. Gov. using their engines for submarines.

Sincerely yours,

HARRY R. HUMPHREYS.

("EXHIBIT No. 1439" appears in text on p. 4610.)

EXHIBIT No. 1440

MAY 21ST, 1926.

BROWN BOVERI & CO., LTD.,
Baden, Aargau, Switzerland.
Attention: Mr. A. von Schulthess Rechberg and Mr. E. Weber

DEAR SIRS: This will introduce to you Mr. Harry R. Humphreys who for many years has been connected with the New York Shipbuilding Corporation and has attended to its legislative matters in Washington. Mr. Humphreys has lately investigated in Washington the question of the families of our Swiss employees entering this country.

As Mr. Humphreys was making a trip to Europe we asked him to go to see you in Baden and also see the American consul general in Zurich. Since Mr. Humphreys is well acquainted with the rulings regarding aliens entering this country, as well as the treaty of 1850 between the United States and Switzerland, he will certainly be of great assistance to us in settling this question which has been pending for so long.

As Mr. Humphreys will explain to you, it will probably be possible without trouble to obtain the necessary permits for the families of Baden men to enter this country; but the matter has become somewhat complicated as apparently the American consul general in Zurich has told you that he refused to grant vises to Mr. Looser's family. Mr. Humphreys is of the opinion, and we quite agree with him, that the best thing will be to take the case of Mr. Looser's family first and try to settle it, after which a precedent will have been established which will make it simpler for future families to come across. I have informed Mr. Humphreys of the whole history that lies behind this question of vises, and I would be obliged to you if you will give him such further information as he may need before he visits the consul general in Zurich.

On the occasion of Mr. Humphreys visit in Baden, he would like to obtain a bird's eye view of our factory, and I would be obliged to you if you will kindly show him around and also lend him any further service that he may require.

Very truly yours,

——— ———.

INTER-OFFICE CORRESPONDENCE

Date *December 10, 1926.*

To Mr. W. G. Groesback.
From Mr. C. L. Bardo.
Subject________________________

For the benefit of Mr. Humphreys and for his use, will you be good enough to prepare a memorandum stating in brief terms all of the reasons in your mind in favor of the allotment of scout cruisers and other types of vessels to private shipyards vs. navy yards.

C. L. BARDO.

Mailed H. R. Humphreys 12/16/26.

Exhibit No. 1442

[Personal—W. S. Newell—Note and return—C. H. B.—Noted 12/21/26, W. S. Newell]

THE WILLARD,
Washington, 12/26/26.

DEAR MR. BARDO: Enclosed is H. R. 15415 (10 cruisers).

It will be reported unchanged from the committee today and an accompanying report and a resolution for the Rules Committee to enable the House to pass on H. R. 15415 this session will be printed so I can send them to you tomorrow. Nothing will be done, as they adjourn on Wed., until after Jan. 3rd. The Naval Appropriation bill will not be reported until after the recess. It will carry appropriation to enable the work to be started on the three cruisers for which bids will shortly be asked. I had a talk at the Capitol with Admiral Campbell, Judge Advocate General, today. He says proposals are on his desk & he expects them to go out shortly. There is some money for new construction—outside of the Navy—which will be available for new large ships for the Coast Guard as soon as bill which has passed both Houses comes from conference and is signed by the President as it will be shortly. I have the details if you wish them.

The request for increase of cost of the *Saratoga* is now in the President's hands & as soon as it comes to Congress I will send you a copy of the message. I will aid in the passage of all above which I believe can be done before March 4th. Report satisfactory progress in several directions toward work being done in private yards not only repair work—but cruisers—new Merchant Marine work & Coast Guard.

Very truly yours,

HARRY R. HUMPHREYS.

12/20/26.

EXHIBIT No. 1444

THE WILLARD, *Washington.*

DEAR MR. BARDO: I shall be here over the week end in case you want me for anything as Mrs. Humphreys is entertaining on Saturday the wives of Senators Oddie, Jones, Watson, Reed, Willis, Edge, Edwards, and Representatives Kelly, Ransley, Fenn, Gaus, Hull, Wyatt, Ackerman, McFadden among quite a list.

The Gloucester assessment is only increased $10,000 and that with all your improvements & activity there seemed to me a wise plan to adopt as your assessment there is only a nominal one which I secured for you a couple of years ago.

Very truly yours,

HARRY R. HUMPHREYS.

I think I told you about this Gloucester assessment a couple of months ago but it is unofficial.

1/15/27.

EXHIBIT No. 1445

THE WILLARD,
1/17/27 Washington.

DEAR MR. BARDO: I telegraphed you this morning that the Senate Appropriation Com. had reported the naval appropriation bill from the com. to the Senate, including $1,200,000 for commencing the last three of the eight cruisers authorized.

There was some opposition in the com. but it was reported out without a record vote, but of course by a majority vote. It remains for the Senate to pass it and then to get the House and Senate conferees to agree on keeping it in the bill, and then for the House to agree to their conferees action. And for all this to be done & bill passed and ready for the President's signature on or before March 4th and to get him to sign it with the money therein provided for.

So you see while progressing favorably the fight is not won yet, but I believe the bill will be a law by March 4 with something in it to commence these last three of the eight cruisers. If the money is made available the contracts will have to be let before June 30, 1927, unless present law is extended for time.

From the copy of the Navy ap. bill I sent you, you know that sufficient money is surely included, as it is retained by the Senate, for the three cruisers for which bids have been asked recently.

Things will probably be quiet here in our line for a week on account of several other matters taking up the time of the House and the Senate. I shall keep you posted whenever there are developments again.

Very truly yours,

HARRY R. HUMPHREYS.

EXHIBIT No. 1448

THE WILLARD,
Washington, 2/4/27.

DEAR MR. BARDO: The Navy Dept. are moving with extreme caution on account of the Harriman-Cramp-bondholders combination, so as not to enable those interested to put the blame for a breach of contract on the Government, I am informed today by most reliable and informed source.

Also Navy people are at Cramp yard today, and from a telephone conversation I overheard I believe the N. Y. Navy Yard representatives are with them.

Also that the forfeiture clause in Cramp's contract is like the one in our original *Colorado* contract.

Very truly yours,

H. R. HUMPHREYS.

EXHIBIT No. 1450

115 SOUTH BERKLEY SQUARE,
Atlantic City, New Jersey, Sunday the 9th.

DEAR MR. BARDO: I warned Congressman Begg, whip of the House, on Wed. after Black of N. Y., Democrat, in speaking in favor of appropriation for the 3 cruisers, tried to make a monkey out of Coolidge, that if such policy was not stopped and something done to off-set that speech by some prominent Democrat we would lose the fight in the House. He assured me no one paid any attention to Black.

The enclosed article by that great reporter, Gen. Rockwell Brown, hits the nail square on the head.

Had a talk with Sen. Edwards this Sunday morning. He was attending a banquet at Atlantic last night. I suggested to him that he not only not make Coolidge the issue, sticking straight to the necessity for the appropriation for 3 more cruisers now for purpose of national defense, but also try to keep all the other Democratic Senators from making Coolidge the issue, in all of which he heartily concurred.

The bill will come up tomorrow at 10:30 before the Senate Appropriation Com. & will be reported to the Senate later in the week at a time not yet determined.

Very truly yours,

HARRY R. HUMPHREYS.

way.

* * * *

The vainglorious cackling of Finis Garrett makes a party issue and a family affair out of the nonpolitical question of the national defense, and the President is sustained by the House in the matter of more cruisers for the Navy. Reminds one of the bird in the fairy book which went about saying, "I'm a goose! I'm a goose!"

EXHIBIT No. 1453

[Copied from handwritten letter-photostat]

115 SOUTH BERKLEY SQUARE,
ATLANTIC CITY, N. J.

DEAR MR. BARDO: What I tried to say over the telephone today follows. I couldn't understand one word from you. Just could recognize your voice.

The paragraph the Sect. of the Navy refers to in his letter to our men, contained in the appropriation bill, we beat in the House, and could have beaten in the Senate, but when it was learned I was going to do so, Sen. Hale, Chairman of the Senate Naval Affairs Committee, and Mr. Rowser (?) the representative of the Navy Department, told Senator Edge, "to do so would beat the bill entirely and to eliminate it except to apply to repair work done would cause the Senators who favored the navy yards, to kill the bill, and as it is a practical impossibility to make definite and binding bids on the part of the navy yards, we need have no cause to be alarmed on these cruisers." Both Senators Edge and Edwards appealed to me to let it go, and I then went to Sen. Hale in the presence of Mr. Rowser and told him I wouldn't keep up the fight, with the understanding we would be protected. We had other things besides the cruisers, to not fight the Navy Department uselessly, and just had to take our chances. I didn't tell anyone that of course I wanted to keep everyone under obligation to us. You will note Senator Edge in his letter of yesterday to you, copy of which he sent to me, refers to these informal bids by navy yards in his second paragraph referring to his letter to Sec. Wilbur. No other of the shipyards protested so far as I have been able to learn against the paragraph referred to by the Sec. of the Navy. I was not depending on either Edge or Edwards for the one Senator who would have killed the amendment.

Very truly yours,

(S) HARRY R. HUMPHREYS.

[Outgoing telegram]

AMERICAN BROWN BOVERI ELECTRIC CORPORATION,
Camden, N. J., April 15, 1927.

To: A. W. MELLON,
Secretary of the Treasury,
Washington, D. C.

(Copy to 18 St. & Massachusetts Ave., Washington.)

On April fifth we submitted bid for two scout cruisers out of six to be constructed the understanding was that this construction would be done by three remaining private yards. Acting in good faith and on this assumption we expended large sums of money in preparation for this work. Very unexpectedly the Department announced after opening bids that Mare Island and Puget Sound Navy Yards had submitted estimate for one each of these cruisers. These estimates are much below their actual cost. Navy engineering Bureau admits neither navy yard or Navy Department are now or ever were equipped or manned to engineer these jobs for themselves but must depend entirely on engineering skill of the private yards. Chairman Bulter vigorously protested as did others without avail. Today Department announced awards giving two cruisers to Pacific coast navy yards and only one to Bethlehem and ourselves. As you know all private yards for last four years show an operating loss and we will continue such loss with but one cruiser contract awarded us. The navy yards have more than sufficient repair and rebuilding work to keep their forces fully occupied. It is very poor policy for our Government thus to discourage private yards which admittedly are an indispensable asset to our national security at the time of greatest need. The recent default of Cramps and the elimination of their engineering talent from shipbuilding is a clear indicant of what we remaining shipbuilders will be forced to do if the Navy Department does not support us at this time.

NEW YORK SHIPBLDG. CORP.,

Form of contract for scout cruisers.

Messrs. Groesbeck & Newell,

Mr. C. L. Bardo.

A meeting has been arranged with the legal representatives of the three shipbuilding companies in New York, at ten o'clock on Wednesday morning next, the 23d instant, in the office of Vice President Wakeman of the Bethlehem Shipbuilding Corporation, 25 Broadway, to go over again and undertake to reach an agreement regarding the new scout cruiser contracts.

Will appreciate if you will return to me the draft of contract recently sent you, on or before that time with any comments which you have to make.

C. L. Bardo.

Exhibit No. 1463

April 12, 1927.

Mr. L. R. Wilder,
Mr. C. L. Bardo,
Scout cruisers:

The following telegram was received from the Bureau of Engineering, Bureau of Construction and Repair, at 2:45 Saturday afternoon:

"Request representatives your company confer on Monday morning April eleventh on ability your organization to undertake construction of cruiser necessary adjustment of bid as regards cost and type of main propelling machinery."

Pursuant to this request, Messrs. Newell, Workman, and myself went to Washington yesterday and met with the Bureaus in the Board room at 11 a. m. There were present at the conference, Admirals Halligan and Rock; Captains Jones, Robert, Robinson, and Cox, and one other representing the Department; Messrs. Newell, Workman, and myself representing our company.

Admiral Halligan presided and first brought up the matter of ability of our company to undertake the construction of the cruisers. His inquiry was directed at our engineering organization, which he said was without experience in the building of ships of this type, and because of their unsatisfactory contact relations with our engineering department, particularly from the standpoint of design, he questioned our ability to proceed. I outlined to him what had been arranged to strengthen our engineering organization in connection with the Cramp contract and that we expected to take over, in the event that we were awarded some of this new work, some of the Cramp personnel, including Vice President Metten; or, in the event that a central drafting room was organized for the handling of engineering matters, that we had substantially agreed to contribute Mr. Metten to head up this organization. This explanation satisfied him as to our engineering ability and capacity to undertake the work, either upon one or the other of two bases.

Second, he raised a question regarding the shipyard organization, stating that in their opinion satisfactory work could not be carried on with any division of authority or responsibility, as between the shipyard and electro-mechanical production division, and that he had had some complaints because of the inability of their local forces to get satisfactory contacts with Works Manager Jenks. This was also commented upon by Admiral Rock as a result of his visit here to the *Saratoga* several months ago. We told him that this matter was under way and that an order was being issued yesterday subdividing for operating reasons the production activities here.

His next question was that in connection with the bid, stating that while upon a valuation basis our bid for one ship because of its guaranties was attractive, yet they could not under the law award us a contract at that price, namely, $10,815,000, because of the fact that in addition to this amount the Department would have to spend approximately $400,000, which would exceed the limit of the appropriation, namely, $11,100,000. He then asked if we were agreeable to accepting one of these ships on the basis of Bethlehem one-ship price with 100 degrees of superheating, the Bethlehem price being for one ship saturated, $10,675,000, to which was added $75,000, making a total of $10,750,000, with, of course, a modification of our oil guaranties accordingly. We advised him that we would accept one of these ships at that price.

His next question related to that of propelling machinery, our reply being that we had bid upon and intended to use in this cruiser the same machinery as designed and approved for the scout cruisers now being built by Cramps. His next question was that if a central drawing room was organized and that if this drawing room and the Department agreed upon some other type of propelling machinery, namely, General Electric, whether or not we would agree to use this machinery in our boat, to which we replied that if the central drawing room was organized we were a party to it and had a voice in deciding these questions, we obviously would comply with the recommendations of the drawing room as approved by the Bureaus.

The technical staffs of the Bureaus who were represented at the conference were decidedly outspoken regarding the lack of ability on the part of our engineering organization, one of them going so far as to say that they had not had real engineering from New York Ship for the past twelve years; and another modifying it, saying that at least for the last six years our engineering has been of a decidedly poor quality.

You will recall our discussion last year with respect to our present chief engineer, who at that time was attached to the staff of Mr. Groesbeck as assistant. Mr. Groesbeck and Mr. Magoun, while he was active, both assumed more or less direct responsibility for engineering, and therefore it has been to some extent understood why the Department felt about this situation as they do.

In discussing with the Bureaus at this conference both the matter of the Cramp cruiser or a single one of the new cruisers, I stated and repeated as opportunity afforded, that it would be the height of business folly in the present state of the shipbuilding industry with respect to work other than that of the Navy, to undertake a contract for either one of these cruisers or for the Cramp cruiser alone, as it would substantially commit the stockholders to the absorption of $2,000,000 of overhead in one case and of $4,000,000 in another over the three-year period, and that I hoped they would give consideration to this phase of the matter in making their recommendations.

I later had a short conference with Secretary Wilbur and repeated this general statement to him. He stated that insofar as the award of the new cruisers was concerned that his mind had been made up and that he was simply awaiting final or further reports from the Bureaus. It was his intention to award the new cruisers first and so arrange the bids for the Cramp cruiser that they would close after these awards had been made. It was first decided to close the Cramp bid on Friday but request was made for further time, which I think came from Bethlehem, and the feeling last night was that additional time of ten days or two weeks might be granted. In the meantime I had a conference with the Harriman and the Cramp interests, and they arranged to file with the Secretary a very urgent telegram to be followed by a letter this morning calling his attention to the fact that unless this matter was closed this week it might result in very serious consequences to many interests. The fact is that they do not have the funds to continue their pay rolls on Navy work, and therefore they want to be relieved of any other obligation in this respect forthwith.

After lunch I went back to see Admiral Halligan and had a very frank talk with him regarding our personnel. In response to an inquiry as to whether or not Wetherbee, the former vice president in charge of engineering of the Bath Iron Works, would in his opinion satisfy the Bureaus as to our engineering organization. His reply was that it would not only satisfy the Bureau of Engineering but that he would regard it from the standpoint of industry and of our situation as a real "ten-strike."

C. L. Bardo.
[1] C. C. Newell-Workman.

Exhibit No. 1464

]Inter-office correspondence]

American Brown Boveri Electric Corporation,
New York, N. Y., April 21, 1927.

To: Mr. C. L. Bardo.
From: Mr. L. R. Wilder.

I had a very interesting discussion with Mr. Grace this afternoon, although very difficult to begin with.

Wylie, I think, is guilty of having put us in rather a nasty and utenable position with Mr. Grace as regards the outcome of our understanding at a meeting which I attended some time ago. I wish you would send back to me the chart which I gave you on cross-section paper, as well as the details, particularly as to oil consumption guarantees, which were finally presented by all three of us. I am afraid when you talked to Wylie you were not well informed, as he has used what you said, i. e., that you had made a mistake and that you had correspondingly raised the price, as a serious argument not only against you but against the good faith of this company. The center field figure for oil consumption at cruising speed was to have been within plus or minus 1 percent of 494. From report of your telephone conversation from Washington of April 5th I understand the figures submitted by the center field was 475 instead of this 494. If these facts are correct, you should have attacked rather than been on the defensive.

I want to go over this matter with Mr. Grace and should, therefore, appreciate full detail.

L. R. Wilder.

LRW/HWS

Exhibit No. 1465

April 22, 1927.

Scout cruisers.

Mr. L. R. Wilder.
Mr. C. L. Bardo.

Your confidential memorandum from New York:

The oil guarantees as submitted in the bids for the three companies were as follows:

Estimate X–2040, Scout Cruisers Nos. 26–31.

Guaranteed fuel consumptions, lbs. per knot, submitted by bidders:

Trial	ABBEC	Beth.	Newport News
b	3,015	3,133	3,113
c	1,836	1,950	1,859
d	1,095	1,117	1,150
e	643	726	756
f	449	475	486

You are correct regarding the cruising radius guarantee of 494 as discussed in our meeting in New York. This was later changed by a conversation which I had with Mr. Wakeman, to 475. There were one of two other changes in the upper parts of the scale.

The guarantee as submitted by Newport News was above the guarantee specified by the Department's general board, and it was my understanding that the guarantees in the new contract with the News will be modified downward.

As a matter of fact, the guarantees as submitted by the three companies in their proposal for these new cruisers has had no bearing whatever on the decision of the Department in making the award, since the Navy Yards were without information as to the matter of guarantees the Department could not evaluate price and guarantees. The award of the cruisers has therefore been made first, as a matter of price to Newport News and to Bethlehem for one ship, and the award to us, in my opinion, has been made in order that all of the yards might have some support in this cruiser-building program and that their organizations might be kept together for the benefit of future Navy work.

---

[1] Pencil marking.

There was no disposition on our part to take any advantage. As a matter of fact, upon a basis of evaluation, Bethlehem and ourselves were on a par as between one and two ships insofar as evaluated value applied.

C. L. Bardo.

1. The bids and estimates received are tablulated on the sheet enclosed herewith, enclosure (A).

2. In considering costs it is necessary to bear in mind that class 1 represents a ship complete, class 2 represents a ship less turbines and gears, and class 3 represents the turbines and gears; therefore the sum of amounts bid for classes 2 and 3 should be compared with the amounts bid for class 1 to determine the cost of the complete ship. It will at once be seen that the bids for class 1 are in all cases less than the sums of the corresponding bids for classes 2 and 3. This statement does not apply in the case of the estimates from navy yards as the yard's class 1 estimates for one and for two ships equal the sum of its estimates on classes 2 and 3 for one and for two ships respectively. If an order is placed for one or more vessels at a navy yard the exact type of machinery and gears to be furnished will be subject to later determination after considering the engineering features and the best means for securing uniformity, which can only be determined after the machinery for the vessels to be built by private shipbuilders is determined upon. With regard to navy yard construction it only becomes necessary for the immediate present to determine whether a vessel or vessels should be built in navy yards.

3. It will be seen from enclosure (A) that the navy yard estimates are far below the lowest bid. The opinion of the Bureaus in regard to the building of vessels in navy yards is fully set forth in the Bureaus' joint memorandum, reference (b). A comparison of the estimates of the Mare Island Navy Yard and the Puget Sound Navy Yard with the estimates of the New York Navy Yard for the *Pensacola* (as modified by the unofficial statements of the latter yard to the effect that its estimates for the *Pensacola* were much below the probable cost of that vessel) leads the Bureaus to believe that the estimates now received from Mare Island and Puget Sound are far below what the actual costs of the vessels will be. In view, however, of the fact that these are the deliberate estimates of the Navy Department's responsible representatives at these yards and that

there is a very large margin between the estimates themselves and the lowest bid from any private shipbuilder, and in view of the requirement of the appropriation act approved March 2, 1927, directing that construction be placed in navy yards "when time and facilities permit, and when, in the judgment of the Secretary of the Navy, such * * * production would not involve an appreciable increase in cost to the Government", the Bureaus are constrained to recommend that one of these vessels be built at the Navy Yard, Mare Island, and one at the Navy Yard, Puget Sound. Although the yards submit estimates for one each and two each, the Bureaus recommend against more than one being built in either of these two yards, as time and facilities do not permit either of these yards to undertake more than one vessel.

4. The lowest bid received from a private shipbuilder under class 1 is that of the Newport News Shipbuilding and Dry Dock Company which offers to build two vessels complete of the 26/28 type, using saturated steam, for $10,480,000 each, or to build these vessels of the 29/31 type at an increased cost of $87,000 each over and above the figure named for the 26/28 type. The guarantees are satisfactory subject to minor modifications which the bidder agrees to make without additional cost to the Government. This bid for the 29/31 type if evaluated on the basis of the bonuses and penalties specified in the form of contract, will still be less than any other bid on the same basis. The Bureaus accordingly recommend that contract be placed with the Newport News Shipbuilding and Dry Dock Company for two vessels under class 1, of the 29/31 type to be built for the use of saturated steam, one vessel to be completed in 36 months and one in 45 months, for the sum of $10,567,000 each.

5. In comparing the bids of the two remaining bidders, namely, the Bethlehem Shipbuilding Corporation and the American Brown Boveri Electric Corporation, it is noted that the Bethlehem Shipbuilding Corporation, bids for two ships using saturated steam at $10,540,000 each, and the American Brown Boveri Electric Corporation at $10,708,000 each, a difference of $168,000 each in favor of the Bethlehem Shipbuilding Corporation. Evaluations of these bids in accordance with the guarantees submitted and the bonus and penalty rates specified show that the American Brown Boveri Electric Corporation guarantees are better than the Bethlehem Shipbuilding Corporation guarantees by $186,375. Basing the bids therefore on the guarantees of the Bethlehem Shipbuilding Corporation, it is found that if the American Brown Boveri Electric Corporation should receive contracts and should fail to attain any better guarantees than those specified by the Bethlehem Shipbuilding Corporation, they would be penalized $186,375. This amount is greater than the difference in bid prices and on this basis the American Brown Boveri Electric Corporation bid is the lower of the two. However, if the contract should be awarded to the Bethlehem Shipbuilding Corporation and that corporation should exceed its guarantees and attain to the guarantees of the American Brown Boveri Electric Corporation bid it would receive a limited bonus of $50,000, which is less than the difference between its bid and the bid of the American Brown Boveri Electric Corporation. On this basis the Bethlehem Shipbuilding Corporation bid is lower than that of the American Brown Boveri Electric Corporation. It is manifestly impossible in advance of the building and trials of these vessels to state whether the low bidder with the poorer guarantees would better its guarantees or whether the higher bidder with its better guarantees would fail to meet these guarantees. The question as to which is in effect the lower of the two bids can only be answered by evaluating the bids on the common basis of the bonuses and penalties specified in the contract. A consideration of penalties in the case of the high bidder (American Brown Boveri Electric Corporation) with better guarantees would make this bidder virtually lower than the low bidder (Bethlehem Shipbuilding Corporation) whereas a consideration of bonuses in the case of the low bidder (Bethlehem Shipbuilding Corporation) with poorer guarantees would make this bidder still the lower of the two. In view of all the circumstances the Bureaus are of opinion that these two bids merit equal consideration, the bid prices being virtually equal in amount when based on the same guarantees. On this basis it is recommended that one vessel be awarded to each of these two shipbuilders; the award to be made on the basis of the 26/28 type, using saturated steam; period of construction 36 months. The bid of the Bethlehem Shipbuilding Corporation for one vessel is $10,675,000 and the bid of the American Brown Boveri Electric Corporation is $10,815,000, the higher bid carrying better guarantees.

6. Summing up the foregoing, the Bureaus recommend as follows:

One vessel to the navy yard, Mare Island, of the 29/31 type, using saturated steam (adjustment in estimate to be made on account of the change from 26/28 type to this type).

One vessel to the navy yard, Puget Sound, of the 26/28 type, using saturated steam.

Two vessels complete to the Newport News Shipbuilding and Dry Dock Company, of the 29/31 type, using saturated steam; one vessel in 36 months and one vessel in 45 months; for $10,567,000 each.

One vessel complete to the Bethlehem Shipbuilding Corporation, of the 26/28 type using saturated steam; in 36 months, for $10,675,000.

One vessel complete to the American Brown Boveri Electric Corporation, of the 26/28 type, using saturated steam; in 36 months, for $10,815,000.

7. With regard to the class 3 bids, the Westinghouse bids are in all cases higher than those of the General Electric Company, whether evaluated or not. While the bids of the General Electric Company are lower, the Bureaus are unable to state at the present time whether it will be in the Government's interest to purchase any of the sets bid upon. Recommendation relative thereto will be made at a later date.

John Halligan, Jr.,
Chief of Bureau.
Geo. H. Rock,
Acting Chief of Bureau.

To: The Judge Advocate General.

* * * It will be noted that the low bidder of the three private shipbuilding companies was the Newport News Shipbuilding and Dry Dock Company, to whom award was made for Cruisers *Nos. 30* and *31*. Detailed comment relative to the bids submitted by the Bethlehem Shipbuilding Corporation and the American Brown Boveri Electric Corporation is contained in paragraph 5 of the enclosure. From this comment it will be noted that while the actual amounts named in the bids of the two companies were different there were certain differences as to the guarantees submitted. The variation of the bids, considering possible penalties and possible bonuses, led the Bureaus to the opinion that the two bids merited equal consideration, and that the bid prices were virtually equal in amount when based on the same guarantees. The Bureaus, therefore, recommended an award for the two remaining vessels be made, one to each of the two companies in question.

* * * * * * *

The question of the maximum number of vessels it would be to the interest of the Government to allot to any one contractor was very thoroughly discussed with representatives of all the shipyards which were equipped for building vessels of this kind. After full consideration of the facilities available, the time required to build up the depleted organizations in the different yards so as to enable them to handle work of this magnitude, and the necessity for having the ships completed within a reasonable time, it was decided that two cruisers were the most that could be built by any one of the shipyards.

Exhibit No. 1467

May 28, 1927.

Mr. C. L. Bardo,
Mr. E. W. Payne.

I have notified Mr. Palen's home, and wired Wakeman that you would meet them at nine Tuesday morning at the Biltmore. Mr. Palen's request was for nine o'clock and I have therefore reserved your tickets for seven o'clock daylight time, held in your name at Broad St. Station. Seats 12 and 14 car 1.

Mr. Palen further stated, but asked me not to mention it in my wire, that he had some information for you on the Chesapeake steamer that you should have before the bid was presented; I have therefore asked Bob Workman to await instructions from you before putting in his bid.

Mr. Hines has been advised that you will be there after your conference with Wakeman and Palen. He says Berdeau has all the information together and they will wait in readiness for you.

We have assigned Geo. Barr and the Cadillac for your use Sunday and Monday, reporting to your home at 8:30 Sunday morning.

E. W. Payne.

DEPARTMENT OF THE NAVY,
Washington, D.C., June 9, 1928.

The COMPTROLLER GENERAL OF THE UNITED STATES,
Washington, D.C.

SIR: Your letter, A-21498, of April 17, 1928, requested certain information relative to the award of contracts for the construction of scout cruisers nos. 26 to 31, inclusive, particularly as to why awards were made to other than the lowest bidder and why bidders were limited to submitting bids on only two vessels.

The lowest bid received from a private shipbuilder was that of the Newport News Shipbuilding and Dry Dock Company and contract was awarded to that concern for two vessels.

The next lowest bidder as to price was the Bethlehem Shipbuilding Corporation. On a comparison of the bid of that company, however, with the American Brown Boveri Electric Corporation, the third lowest bidder, the difference in the guarantees offered by these two bidders when considered in connection with possible penalties and bonuses led the Navy Department to believe that the two bids merited equal consideration in that the prices were virtually equal in amount when based on the same guarantees. A detailed explanation as to these differences is contained in the joint endorsement of April 15, 1927, of the Bureaus of Construction and Repair and Engineering to the Secretary of the Navy, recommending award of contracts, a copy of which endorsement is enclosed for your information, together with inclosure (A) of said endorsement.

With regard to your inquiry as to why proposals limited the number of any vessels to be constructed by any one bidder to two, you are advised that the question as to the maximum number of vessels that it would be to the interest of the Government to allot to any one contractor was very thoroughly discussed with representatives of all the shipyards that were equipped for building vessels of this character.

After full consideration of the facilities available, the time required to build up depleted organizations in the different yards so as to enable them to handle work of this magnitude, and the necessity for having the ships completed within a reasonable time, the decision was reached that two cruisers were the most that could be built by any one of the ship yards.

Very respectfully,

(s) CURTIS D. WILBUR,
Secretary of the Navy.

Inclosures (2).

EXHIBIT No. 1476

(In reply address the Bureau of Yards and Docks and refer to no. A1–1)

NAVY DEPARTMENT,
BUREAU OF YARDS AND DOCKS,
Washington, D. C., Aug. 28, 1934.

MY DEAR COMMANDER SAUNDERS: Your telephonic inquiry of August 23, to Captain W. G. DuBose, of the Bureau of Construction and Repair, for a report as to the shipbuilding ways and shipbuilding dry docks of the Navy, has been referred to the Bureau of Yards and Docks as a matter coming under its cognizance.

I am forwarding herewith to you a list showing the various shipbuilding ways located at the navy yards and also have included in the list the shipbuilding drydock at the Navy Yard, Puget Sound.

You will note in the remarks column, statement as to the condition of shipbuilding ways, together with a statement as to the amounts estimated to be required for reconstruction of those ways which are not now in a good state of repair.

Very truly yours,

NORMAN M. SMITH,
Chief of Bureau.

Lt. Comdr. JAMES A. SAUNDERS, U. S. N.,
Senate Naval Affairs Committee,
Senate Office Building, Washington, D.C.
Room 402, A.F. of L. Bldg. (penciled notation).

Navy yard shipbuilding facilities

Location	Total number of ways	Takes ship		Remarks
		Length, feet	Beam, feet	
Navy Yard, Portsmouth, N.H.	3	340	38	One ways.
		350	40	Two ways.
Navy Yard, Boston, Mass.	[1] 1	[1] 375	38	(Repaired for destroyers.) $75,000 needed to increase length to 490′.
Navy Yard, New York, N.Y.	2	825	106	$25,350 needed for cranes, etc.
		825	106	$109,900 needed to make it same as no. 1 fc capital ships. Now used for destroyers.
Navy Yard, Philadelphia, Pa.	3	464	49	Now unserviceable. $180,000 needed to rebuild.

"National Industrial Recovery Act" approved June 16, 1933. No. 43
CL43/L4–3(330901)

CONTRACT FOR THE CONSTRUCTION OF LIGHT CRUISER NO. 43, OF NOT EXCEEDING 10,000 TONS STANDARD DISPLACEMENT

Contract, of two parts, made and concluded this 3d day of August, A.D. 1933, by and between the New York Shipbuilding Corporation, a corporation organized under the laws of the State of New York, and doing business at Camden, in the State of New Jersey, represented by the president of the said corporation, party of the first part (hereinafter called the contractor), and the United States of America, represented by the Secretary of the Navy, party of the second part (hereinafter called the Department).

Whereas the act entitled "An act to encourage national industrial recovery, to foster fair competition, and to provide for the construction of certain useful public works, and for other purposes," approved June 16, 1933, authorizes the President of the United States, if in his opinion it seems desirable, to undertake "the construction of naval vessels within the terms and/or limits established by the London Naval Treaty of 1930"; and

Whereas under the authority of said act the President of the United States, by Executive Order No. 6174, entitled "Administration of Public Work", on June 16, 1933, allotted "the sum of not to exceed $238,000,000 to the Department of the Navy for the construction of certain vessels, the construction whereof conforms to the London Naval Treaty and has heretofore been approved by me"; and

Whereas the said act provides "That in the event of an international agreement for the further limitation of armament, to which the United States is signatory, the President is hereby authorized and empowered to suspend, in whole or in part, any such naval -------------- construction"; and

Whereas after due advertisement the Department has accepted the proposal of the contractor for the construction of said vessel, complete in all respects, with the exceptions stated in the specifications, which vessel is for the purposes of this contract designated and known as "light cruiser no. 43"; and

Whereas preliminary drawings, plans, circular defining chief characteristics accompanied by partial detail hull specifications and by special specifications for machinery and electric plant, for said vessel have been duly provided, adopted, and approved:

Now, therefore, this contract witnesseth, that in consideration of the premises, and of the agreements hereinafter contained the parties hereto hereby mutually agree as follows; that is to say:

ARTICLE 1. The contractor, subject to the provisions hereinafter set forth, will at his own risk and expense: (*a*) Develop and prepare contract and type plans, and detail hull specifications, for one light cruiser of not exceeding 10,000 tons standard displacement, in conformity with the preliminary drawings, plans, circular defining chief characteristics, and Special Specifications for Machinery and Electric Plant, including duly authorized changes therein, which said preliminary drawings, plans, circular, and specifications are hereto annexed and shall be deemed and taken as forming a part of this contract with the like operation and effect as if the same were incorporated herein; and (*b*) after approval by the Navy Department of said contract and type plans and detail hull specifications to construct said light cruiser, complete in all respects, both hull and machinery, including the installation of ordnance and ordnance outfit and of other articles furnished by the Government, all in strict accordance therewith, and with the Special Specifications for Machinery and Electric Plant. The contract and type plans and detail hull specifications prepared and submitted by the contractor shall, upon approval by the Navy Department, be annexed hereto and shall be deemed and taken as forming a part of this contract with the like operation and effect as if the same were incorporated herein. In the preparation of the contract plans and specifications adequate margins in calculated weights and strength will be provided, such margins to be satisfactory to the Department.

Owing to the national emergency existing making it imperative that the maximum number of men be returned to gainful employment without delay, and to effectuate the purpose of the National Industrial Recovery Act, approved June 16, 1933, the contractor hereby expressly agrees that from the beginning he will prosecute the work with the utmost vigor and despatch and will make every possible effort, without reference to the otherwise normal rate of progress, to accomplish the maximum amount of work within the first and second year thereof.

The vessel shall after completion be delivered at the navy yard, Philadelphia, Pa., to the commandant of that yard.

Art. 2. No inadvertent omission in the drawings, plans, or specifications of any detail, object, or provision necessary to carry this contract into full and complete effect, in accordance with the object and intent of the plans and specifications relating thereto, shall operate to the disadvantage of the Government, and any such omission shall be satisfactorily supplied, performed, and observed by the contractor, and all claims for extra compensation by reason of, or for, or on account of such extra performance are hereby and in consideration of the premises expressly waived. Similarly, no inadvertent inclusion in the drawings, plans, and specifications of any detail, object, or provision not necessary to carry this contract into full and complete effect shall operate to the disadvantage of the contractor. The plans and specifications contain information of a confidential character that cannot be made public without detriment to the Government's interests, and they are to be treated as confidential by the parties to this contract

Art. 3. The contract and type plans, and detail hull specifications, prepared by the contractor in accordance with article 1 (*a*) herein and approved by the Navy Department shall upon such approval become the property of the Navy Department for whatever use it may determine.

Art. 4. The contractor will, at its own expense, prepare such plans or drawings as may be necessary during the progress of the work, and will submit the same to the Department for its approval as required by the specifications, before the work covered thereby is begun, and in addition furnish such working plans and finished plans as are required by the specifications to be furnished.

Time being of the essence of this contract, it is agreed that plans submitted to the Department will be acted on and returned to the contractor as promptly as practicable. In case the contractor considers that a plan is being held by the Department an undue length of time and that an actual delay in the prosecution of the work covered by the plan will result such as to cause a delay in completion of the vessel, the contractor may make request for an extension of the contract time, giving reasons therefor and the extent of the resulting delay. Such request shall be acted on as provided in article 12 hereof for action in other cases of delays.

The Department reserves the right to require the contractor to perform any one or more of the following services, all such requirements to be in addition to those relating to the working and finished plans, booklets, etc., otherwise required to be furnished by the specifications:

(A) Furnish to such other contractor as may be designated by the Navy Department such copies of each of the following as may be necessary to enable said designated contractor to construct a vessel similar in all respect to the vessel described in this contract: working and finished plans and booklets, material schedules and material orders for hull, boilers and machinery, and all auxiliary machinery, fittings and appurtenances; said plans, booklets, schedules, and orders to be furnished as a matter of arrangement between the contractors and at the cost of reproduction solely; and/or

(B) Furnish to the superintending constructor or the inspector of machinery, for such use by the Navy Department as it may desire, any part or all of the following items:

(*a*) One or more blueprints of each plan applicable to this vessel submitted by the contractor for approval.

(*b*) One "See-B" process tracing of each approved plan prepared by the contractor for this vessel, to be furnished promptly after approval has been given.

(*c*) One blueprint of each plan required in (*b*).

(*d*) One "See-B" process tracing of each approved plan purchased by the contractor for this vessel, to be furnished promptly after approval has been given.

(*e*) One blueprint of each plan required in (*d*).

(*f*) If alterations are made on an approved plan, of which a "See-B" process tracing has already been furnished, a new modified "See-B" process tracing, or a blueprint of the plan as modified, or a description of the modification in writing, as determined preferable by the superintending constructor or inspector of machinery, will be furnished by the contractor promptly after approval of the alteration.

(*g*) One copy of each material schedule and order, exclusive of prices, that is prepared by the contractor for this vessel, to be furnished promptly after preparation of the schedule or order.

All such blueprints, "See-B" process tracings, material schedules, and orders, if required in accordance with this subparagraph (B), will be furnished as an item of increased cost at the cost of reproduction only, to which shall be added 10 percent, to be handled as a change in the contract, as provided in article 7 (*a*) hereof; and/or

(C) Assemble and deliver to the Navy Department when the vessel is completed any part or all of the following, which are for use in reproducing the vessel in the event of a national emergency:

(*a*) *Plans.*—A reproduced tracing of each working plan, corrected to show all changes made during construction. An index in convenient form, showing approximately the order in which the plans were required, shall be furnished separately. The faired mold loft offsets shall be included in the plans.

(*b*) *Allowance list.*—A corrected copy of the allowance list, in form suitable for duplicating.

(*c*) *Steel schedule sheets.*—One copy, showing all changes and corrections made, sufficiently legible to permit blueprinting. Under this heading shall be included all plates and shapes entering into the vessel, whether on mill or yard schedules.

(*d*) *Lists of material.*—All material (other than covered by (*b*) and (*c*) above) used in the construction, equipping, and outfitting of the vessel. There shall be shown the item, quantity, name of manufacturer, time interval from date ordered to date received, and date material was installed or construction had advanced to where it could have been installed. While it is desirable that the list be as inclusive as possible, covering material whether specially ordered, taken from stock, included in requisitions for services, etc., it shall not be so complicated as to defeat its purpose of expediting the work of a building yard. Copies of yard stubs are not required, but one copy of each requisition and specification for material of special requirements shall be furnished in addition to the master list.

(*e*) *Labor load.*—A curve or tabulation by months of the total working force employed in the shops and on the ship, showing the distribution by trades and the split between mechanics and helpers.

(*f*) *Chronology of building.*—A brief chronology of such principal events during construction as, in the opinion of the yard, would be of assistance to an inexperienced organization in planning similar work.

All such plans, lists, schedules, etc., if required in accordance with this subparagraph (C), will be furnished as an item of increased cost at the cost of reproduction only, and/or the cost of preparation in the case of data not otherwise required to be prepared in the prosecution of this contract, to which costs shall be added 10 percent, to be handled otherwise as a change in the contract, as provided in article 7 (*a*) hereof.

All such copies of plans, booklets, material schedules, material orders, lists, etc., required by subparagraphs (A), (B), or (C) of this article, will be transmitted without guarantee or warranty expressed or implied, by the contractor, except that they are correct copies of the plans, booklets, schedules, orders, lists, etc., for the vessel constructed hereunder, and no implied license for the use of any patented article or invention therein shown or listed shall result from the delivery of such copies of plans, booklets, schedules, orders, lists, etc. Acceptance of this contract does, however, give the right to the Government to use such plans, booklets, schedules, orders, lists, etc., for the purpose of constructing similar vessels.

ART. 5. The Secretary of the Navy may at any time and without notice to the sureties, make changes in this contract, the drawings and/or specifications of this contract within the general scope thereof. No change shall be made in the contract except on the written order of the Secretary of the Navy, and no changes shall be made in the drawings, plans, and specifications unless approved in writing by the Secretary of the Navy or his duly authorized representative.

But nothing provided in this article, or in article 6, shall excuse the contractor from proceeding with the prosecution of the work under this contract.

ART. 6. Except as otherwise herein provided, no charge for extra work or material will be allowed unless the same is ordered in writing by the Secretary of the Navy or his duly authorized representative.

ART. 7. (*a*) If changes or extras are ordered in accordance with articles 5 and/or 6 the cost thereof, to which shall be added 10 percent in the case of changes or extras resulting in an increased cost, the change in weight, and the damage, if any, caused thereby, shall be ascertained, estimated, and determined by a board of naval officers appointed by the Secretary of the Navy, but no requests for adjustments hereunder shall be submitted to the board or considered by the Secretary of the Navy unless the contractor shall within 10 days after receipt of the order for such change or extra notify the Secretary of the Navy in writing of the estimated extent of any delay, and the estimated amount of cost involved. The Secretary of the Navy may, however, in his discretion extend such time of submitting requests.

(*b*) Should any change or extra necessarily delay the general completion of the vessel the continuing of the work beyond the prescribed period shall be treated as a part of the change or extra and the increased cost thereof to the contractor shall also be determined by the board on changes. In no case shall the sum allowed as cost for any day because of delay in completion attributed by the Secretary of the Navy to the Government, by reason of changes or extras, exceed an amount equal to the sum prescribed in article 12 hereof as deduction per day for delay by the contractor for a corresponding period in completing the vessel.

(*c*) The parties hereto shall be bound by the determination of said board or a majority thereof as to the amount of increase or reduction in the compensation to be allowed the contractor on account of matters determined by the board as above provided.

Art. 8. (*a*) All material and workmanship (if not otherwise provided by the specifications) shall be subject to inspection, examination, and test by Government inspectors at any and all times during manufacture and/or construction, and at any and all places where such manufacture and/or construction are carried on.

(*b*) The Department shall promptly pass all work and material conforming to the requirements of this contract, and may reject all work and material not conforming to the requirements of this contract. Rejected workmanship shall be satisfactorily corrected and rejected material shall be satisfactorily replaced with proper material without charge therefor, and the contractor shall promptly segregate and remove the rejected material.

(*c*) The contractor shall furnish promptly, without additional charge, all reasonable facilities, labor, and materials necessary for the safe and convenient inspection and test that may be required by the inspectors. All inspection and tests by the Department shall be performed in such manner as not to unnecessarily delay the work. Special, full-size, and performance tests shall be as described in the specifications.

(*d*) Inspection of material and finished articles to be incorporated in the work at the site shall be made at the place of production, manufacture, or shipment whenever the quantity justifies it, unless otherwise stated in the specifications; and such inspection and acceptance, unless otherwise provided in this contract, shall be final, except as regards latent defects, departures from specific requirements of the contract and the specifications and drawings made a part thereof, and damage or loss in transit. Subject to the requirements contained in the preceding sentence, the inspection of material and workmanship for final acceptance as a whole or in part shall be made at the site.

(*e*) The provisions of this article are subject to the provisions of the other articles of this contract relative to the trials and the preliminary and the final acceptance of the vessel.

Art. 9. (*a*) Unless otherwise specifically provided for in the specifications, all workmanship, equipment, materials, and articles incorporated in the work covered by this contract are to be of the best grade of their respective kinds for the purpose. Where equipment, materials, or articles are referred to in the specifications as "equal to" any particular standard, the Secretary of the Navy shall decide the question of equality. The contractor shall furnish to the Department for its approval the name of the manufacturer of machinery, mechanical and other equipment which he contemplates installing, together with their performance capacities and other pertinent information. When required by the specifications, or when called for by the Department, the contractor shall furnish the Department for approval full information concerning the materials or articles that it contemplates incorporating in the work. Samples of materials shall be submitted for approval when so directed. Machinery, equipment, materials, and articles installed or used without such approval shall be at the risk of subsequent rejection.

(*b*) This contract covers a public work within the meaning of the act of March 3, 1933 (Public, No. 428), and the following provision is hereby inserted and made part of this contract as required by the said act:

"Every contract for the construction, alteration, or repair of any public building or public work in the United States growing out of an appropriation heretofore made or hereafter to be made shall contain a provision that in the performance of the work the contractor, subcontractors, material men, or suppliers, shall use only such unmanufactured articles, materials, and supplies as have been mined or produced in the United States, and only such manufactured articles, materials, and supplies as have been manufactured in the United States substantially all from articles, materials, or supplies mined, produced, or manufactured, as the case may be, in the United States except as provided in section 2: *Provided, however,* That if the head of the department or independent establishment making the contract shall find that in respect to some particular articles, materials, or supplies it is impracticable to make such requirements or that it would unreasonably increase the cost, an exception shall be noted in the specifications as to that particular article, material, or supply, and a public record made of the findings which justified the exception.

"If the head of a department, bureau, agency, or independent establishment which has made any contract containing the provision required by subsection (a) finds that in the performance of such contract there has been a failure to comply with such provisions, he shall make public his findings, including therein the name of the contractor obligated under such contract, and no other contract for the construction, alterations, or repair of any public building or public work in the United States or elsewhere shall be awarded to such contractor, subcontractors, material men, or suppliers with which such contractor is associated or affiliated, within a period of 3 years after such finding is made public."

ART. 10. (*a*) Said vessel and all materials and appliances provided by either the contractor or the Department for and used or to be used in the construction thereof shall, at the expense of the contractor, be kept duly insured in the names of the United States of America and the contractor against the usual fire and marine risks. The insurance shall be written on the builder's risk-insurance certificate, Navy form syndicate. Prekeel-laying insurance shall amount to not less than the aggregate of all applications for payment made by the contractor to and including the date of the laying of the keel. Postkeel-laying insurance shall amount to but not exceed five million dollars ($5,000,000). The insurance shall be effected with such underwriters as may be approved by the Secretary of the Navy, and loss thereunder shall be payable to the Secretary of the Navy for the use of the United States to the extent of payments made to the contractor plus the amount of loss of and/or damage to material and appliances furnished by the Department and for the use of the contractor to the extent of any remaining balance.

(*b*) In case of loss, damage, and/or expense of the kinds covered by the policies of insurance as hereinbefore provided, the Department will make no demand on the contractor for or on account of any value of the vessel, her apparel, tackle, ordnance, furniture, and appurtenances beyond the amount of insurance the contractor is required to carry hereunder. In the event of loss and/or damage to the vessel and/or materials and appliances therefor in excess of the amount required to be covered by insurance, the Secretary of the Navy may, in his discretion, order the contractor to proceed with the work of repair or replacement, the cost thereof, to the extent of the insurance required, to be borne by the contractor and/or the underwriters on payment orders duly endorsed by the Secretary of the Navy, and the cost of said work over and above the amount of insurance required to be borne by the Government and determined in the manner provided in article 7 of this contract for determining the increased cost of changes and paid to the contractor as a change, or order the contractor to discontinue all work on the vessel, on receipt of which order the contractor's obligation to construct the vessel under this contract shall cease and determine, and the Department will be entitled to all sums payable under the insurance required to be placed up to the amount of its loss, and the Department will pay to the contractor all sums theretofore earned under this contract and not previously paid and in addition thereto all extra costs and expenses to the contractor, by reason of the ceasing and determination of such obligation, which extra costs and expenses shall include (1) the cost of care of the damaged vessel and/or work and of the disposition thereof as the Secretary of the Navy shall direct; (2) any amounts for which the contractor shall be liable by reason of the cancellation of orders for material or work that may be rendered necessary because of the ceasing and determination of such obligation; (3) reasonable compensation for the use of property of the contractor occupied or required by the damaged vessel or such work until disposition thereof; and (4) any other reasonable expense to the contractor caused by the ceasing and determination of such obligation and by such disposition. The contractor will also be entitled to ten (10) percent of such extra costs and expenses as profit. The amount of such extra costs and expenses shall be determined in the same manner as in article 7 of this contract is provided for the determination of increased compensation to which the contractor is entitled thereunder.

(*c*) Where loss and/or damage occurs amounting in value to less than the extent of the insurance required, such loss and/or damage shall be replaced and/or remedied by the contractor, who will be reimbursed therefor by the underwriters on payment orders duly endorsed by the Secretary of the Navy.

ART. 11. The contractor shall hold and save the Department, its officers, agents, servants, and employees harmless from liability of any nature or kind including costs and expenses for or on account of the use or manufacture of any patented invention, article, or appliance furnished or used in the performance of this contract: *Provided, however,* That this requirement shall not be construed to extend to anything supplied by the Department.

ART. 12. (*a*) Said vessel shall be completed in accordance with the drawings, plans, and specifications, and duly approved changes therein, and ready for delivery within 40 months from the date hereof. In case the completion of the vessel as aforesaid shall be delayed beyond the period herein fixed therefor, plus any extension thereof approved by the Secretary of the Navy, deductions on account thereof shall be made from the price stipulated in this contract, as for liquidated and ascertained damages for each and every day (excepting Sundays) during the continuance of such delay, and until the vessel shall be completed as aforesaid and ready for delivery to the Department, as follows, viz, $300 a day during the first month next succeeding the expiration of said period as extended as aforesaid, and $600 a day thereafter; such amounts to be provisionally withheld from time to time at the discretion of the Secretary of the Navy, from any payment or payments falling due under this contract after such liquidated damages shall have begun to accrue: *Provided*, That in the judgment of the Secretary of the Navy, such delay shall not have been due to fire or to unforeseeable causes beyond the control and without the fault or negligence of the contractor, including, but not restricted to, acts of God or of the public enemy, acts of the Government, fires, floods, epidemics, quarantine restrictions, strikes, freight embargoes, and unusually severe weather, and delays of subcontractors due to such causes: *Provided also*, That if it shall appear to the satisfaction of the Secretary of the Navy that the contractor ordered all necessary materials at the proper times and used every reasonable effort to obtain delivery of such materials at the time and in the order required to carry on this work properly, but that nondelivery of such materials delayed the completion of the vessel, he may, in his discretion, grant such extension of time for the fulfillment of the contract as he may deem proper under the circumstances.

(*b*) In case any question shall arise under this contract concerning delay, such question, with all the facts relating thereto, shall be submitted to the Secretary of the Navy for determination; and for all delays that he shall find to be properly attributable to any cause contemplated by the foregoing provisions of this article, and to have been delays affecting the completion of the vessel, the Secretary of the Navy shall grant the contractor a corresponding extension of the period prescribed for the completion of the vessel: *Provided*, That no delay in the completion of the vessel, or the alleged cause or causes thereof, shall be considered by the Secretary of the Navy unless the contractor shall, within 10 days from the time of the occurrence thereof, notify the Department in writing of the facts and circumstances in each case, and where possible of the extent to which the contractor claims that the completion of the vessel is thereby delayed: *And provided further*, That the said Secretary may, without prejudice to the rights of the contractor, reserve his decision on any or all requests for extension until such time as he may consider desirable, and if deemed expedient until after the completion of the vessel, the work on her in the meantime, in accordance with the contract, plans, and specifications, not to be discontinued or delayed on account thereof.

ART. 13. (*a*) The construction of the vessel may be suspended by the Secretary of the Navy in pursuance of authority given the President in the National Industrial Recovery Act approved June 16, 1933, and the contractor on receipt of notice of such suspension shall immediately take steps to stop and shall stop all work in connection with the construction of the vessel, except such work as the Secretary of the Navy may decide is necessary to place the vessel in proper condition for laying up, and shall care for the vessel during the period of the suspension and for all material and equipment on hand for her construction, and the contractor shall immediately furnish to the Secretary of the Navy copies of all outstanding orders for material or work placed with other parties, and shall take such action relative to these orders as may be directed by the Secretary of the Navy. If work is thus suspended, the contractor will be entitled to be reimbursed for all additional expense as determined by the Secretary of the Navy incurred by reason of such suspension; this additional expense to include (1) the cost of any special work directed by the Secretary of the Navy that would not have been necessary had the construction of the vessel not been suspended; (2) the cost of care and preservation of the vessel during the period of suspension; (3) the proportion of fixed overhead charges the vessel would properly have borne during the period of suspension if work thereon had not been suspended; (4) any additional payments for which the contractor is liable by reason of the suspension or cancellation of orders for material or work that may be directed by the Secretary of the Navy; (5) the increased cost, if any, due to the resumption of work after its suspension; (6) any other reasonable expense the contractor shall have incurred on account of the suspension. The contractor will also be entitled to ten (10) percent of such additional expense incurred by reason of such suspension as profit. The Department will allow an increase in the contract period of construction equal to the delay that shall be caused by the suspension, which increase in the contract period of construction will not in any case be less than the period of the suspension.

(*b*) The increased compensation to which the contractor will be entitled by reason of the suspension and the extension of the contract period of construction will be ascertained, estimated, and determined by a board of naval officers appointed for the purpose by the Secretary of the Navy. As soon as practicable after the suspension is ordered, the board shall determine the amount to be allowed the contractor as ad interim monthly payments, and after the suspension is terminated the board shall determine the amount in addition to the ad interim payments due the contractor on account of the suspension. The amounts so determined, when approved by the Secretary of the Navy, shall be the amounts to which the contractor will be entitled in full settlement of the costs of suspension: *Provided,* That this contract shall not be construed as obligating the Government to make any payments in excess of the limit of cost fixed by law for the vessel: *Provided further,* That if and when it shall appear that the amounts to which the contractor will be entitled under this article 13, together with the amounts theretofore paid to the contractor, will equal or exceed the limit of cost fixed by law for the vessel, the Department will at its own expense promptly remove the vessel from the premises of the contractor, and the contractor shall thereafter be under no further liability with respect to the vessel.

ART. 14. (*a*) In case of the failure or omission of the contractor, at any stage of the work prior to its completion, from any cause or causes other than those provided for in article 12 hereof, to go forward with the work and make satisfactory progress toward its completion within the period prescribed, the Secretary of the Navy may by written notice to the contractor terminate its right to proceed with the work. In case the contractor's right to proceed is so terminated, the Department may immediately enter the works and premises of the contractor and take possession of said vessel and the materials for its construction. The Secretary of the Navy shall thereupon cause to be taken and filed a full and complete statement and inventory of all work done or begun in, upon, or about said vessel and of all materials on hand or on order applicable thereto, or intended therefor, by a board consisting of not less than five persons, qualified by knowledge and experience for the discharge of their duties, to be appointed by the Secretary of the Navy, which board shall proceed without unnecessary delay to examine such work and materials, and upon such examination the contractor may attend, by representative and, if it so desires, by counsel, and submit evidence.

(*b*) Upon receipt of the report and inventory of said board and its approval thereof by the Secretary of the Navy, the Department may proceed with the completion of said vessel in accordance with this contract, including changes that may be authorized in accordance with the provisions of article 5 hereof, either at the works of the contractor or elsewhere, by contract or otherwise, in its discretion, using for that purpose all suitable materials on hand or on order and included in the inventory aforesaid, and may remove said vessel and materials to such other place or places as may be requisite to the exercise of such discretion, and the contractor on receiving notice of the intention of the Department to proceed with the completion of the work, will surrender said vessel and all materials on hand, together with the use, so far as required, of the yard or plant, and all machinery, tools, and appliances appertaining thereto and theretofore used, or necessarily to be used, in and about the finishing of the work. The completing of the vessel shall be carried on without unnecessary delay, and shall be at the risk and expense of the contractor, who shall be chargeable with any increase in the cost of materials or labor incurred by reason of its failure to perform this contract, and with the cost of making good any improper or defective work discovered in such parts of the vessel as may have been constructed by it, or replacing any defective material furnished by it.

(*c*) On the final settlement of the liability of the contractor an account shall be stated substantially as follows—

The contractor shall be charged—

1. With all payments made to it under this contract less such payments, if any, as may have been refunded.
2. With the cost of materials and labor and all other expenses incurred by or on behalf of the Department, in finishing the work in accordance with the contract and specifications, and changes duly authorized at the time the contractor's right to proceed with the work was terminated.
3. With such deductions for delay in completion, for overweight, and for failure to develop the contract guarantees as the Secretary of the Navy shall deem proper under all the circumstances, giving due consideration to the degree of completion of the vessel at the time of termination as aforesaid.

(*d*) If the total amount thus charged against the contractor shall exceed the contract price, plus net extras and premiums at the date of termination, the contractor hereby covenants and agrees to pay such excess on demand. Should said amount, however, be less than the price of the vessel, plus the net extras and premiums earned, if any, at the date of termination, the difference shall be paid to and accepted by the contractor in full discharge of all claims under this contract: *Provided, however*, Said difference shall not exceed the value of the materials delivered and work done by the contractor less previous payments made to it.

ART. 15. The contractor will notify the Department 30 days beforehand of the date of launching so that a sponsor for the vessel may be selected, but this stipulation does not impose on either party any obligation to provide entertainment or to incur any similar expenses in connection with the launching.

ART. 16. The following items to be installed on this vessel will, unless otherwise directed by the Department, be made from the same plans as the corresponding items installed or to be installed on Light Cruiser *No. 42*, and all items of the same type and size shall be duplicates and strictly interchangeable on each vessel and between both vessels of the class:

Main propelling turbines and connected accessories
Main reduction gears, and connected accessories including thrust bearings
Boilers and superheaters and connected accessories
Fuel-oil service pumps
Fuel-oil booster and transfer pumps
Port fuel-oil pumps
Fuel-oil heaters
Fuel-oil burning equipment
Main feed pumps
Cruising feed pumps
Emergency feed pumps
Feed water heaters
Drain booster pumps
Forced draft blowers
Main condensate pumps
Main air ejectors
Main circulating pumps
Lubricating oil pumps
Lubricating oil coolers and purifiers
Fire and bilge pumps
Flushing pumps
Ship's service generators
Auxiliary Diesel engines and generators
Dynamo condenser condensate and circulating pumps and air ejectors
Air compressors, high and intermediate pressures
Distilling plant complete with auxiliaries
All main shafting
Line shaft bearings
Propellers
Motor generators for all purposes
Machine tools
Generator switchboards
Distribution switchboards
Bus transfer panels
All searchlights and controls
Battle telephone equipment (electrical)
Sound powered telephone equipment
Ship's service telephone equipment
General announcing telephone equipment
Ship's speed indicating system (electric log)
Chronometric shaft revolution indicator equipment
Rudder angle indicator systems
Synchronous clock system

Steering telegraph system
Engine order system
Engine revolution system
Remote control systems for fire control and searchlights
General alarm system
Fireroom emergency signal system
Fireroom feed signal system
Fire alarm system
Key and sounder system
Steering emergency signal system
Oil-burner telegraph system
Air-lock indicator system
Smoke telegraph system
Salinity indicator system
Whistle operating system
Lubricating oil-low pressure alarm.
Boat cranes
Hangar curtains
Incinerator compressor and incinerator
Airplane cranes
Windlass
Winches
Steering gear
Turret turning equipment
Turret auxiliary projectile hoists
Broadside ammunition hoists
Portable electric hoists for ammunition
Fresh water pumps
Secondary drainage pump
Welding sets
Sterilizers
Water heaters
Galley machinery, including ranges and ovens
Electrically operated valves
Laundry equipment
Shop machine tools
Submersible pumps
Refrigerators and drinking fountains
Clear vision devices
Ventilating sets
Oil and water separators
Automatic stop valves
Chemical fire extinguishers
Gasoline pumps
Ventilation heaters
Air-conditioning equipment
Gages

ART. 17. Said vessel shall be sufficiently strong to carry safely the personnel and the armament, ammunition, equipment, fuel oil, stores, and machinery prescribed by the Department and indicated in the drawings, plans, and specifications, and said vessel shall be accepted only on condition that she shall, after the trials prescribed in article 19 hereof, be found to be strong and well built as defined in this article 17 and in strict conformity with this contract.

ART. 18. (*a*) The contract weight is defined as the total weight of the vessel complete, fully equipped and ready for sea, less the weight of officers, crew, and their effects, armament, ammunition,[4] provisions, potable water, fuel, reserve feed water, and such items of armor, equipment, stores, and outfit as are furnished by the Government, and less the increased weight of all approved changes that result in an increase in weight, and plus the decreased weight caused by such approved changes involving decreases as may have been proposed by the Department or its representatives. No correction will be made for the decreased weight resulting from any changes that may have been proposed by the contractor and approved by the Department.

(*b*) The weight of the vessel complete, fully equipped, and ready for sea, is to be determined from actual draft-mark readings and the displacement curve, with corrections for density of water, trim, hog, or sag, and with additions to account for those weights that were not on board at the time the drafts were taken, but are required to be on board to bring the vessel to a fully equipped condition ready for sea, and with subtractions to account for those weights that were on board at the time the drafts were taken, but are not required to be on board to bring the vessel to a fully equipped condition ready for sea.

ART. 19. When the vessel is substantially complete, as required by the contract, except minor items of work that may, in the discretion of the Secretary of the Navy, be left unfinished until after the trial trip, and when the contractor shall have made sufficient trials at dock and in free route to be reasonably sure of satisfactory performance under the requirements of this contract, she shall be subjected to trials to test her and her speed; such trials to be as prescribed by the Secretary of the Navy and to include the following, viz:

(*a*) A progressive trial over a measured mile course at Rockland, Me., for standaridzing the screws, extending from maximum speed down to a speed of 10 knots; about 32 runs to be made over the course in order to adequately cover the range of speed desired. This progressive trial is to be made with the vessel weighted as specified hereinafter.

Five consecutive runs must be made at the highest speed attainable and the mean speed and revolutions for these runs carefully ascertained, and three consecutive runs must be made at each of 9 speeds covering the range of speeds from this highest speed down to about 10 knots, as required by the trial board; the mean-speed revolutions and shaft horsepower for the several groups of runs to be carefully ascertained by the trial board, in order to determine the curve of speed and revolutions and the curve of speed and shaft horsepower; the vessel to be so weighted that the middle run at the maximum speed will take place as nearly as may be at the mean-trial displacement specified hereinafter.

In addition to the above-required standardization trial there shall be a backing standardization trial to determine the revolutions corresponding to a sternway of 16¼ knots.

(*b*) A full-power endurance and fuel-oil consumption and water-rate trial of four hours' duration in the open sea in deep water, with the main engines developing the contract shaft horsepower as defined in the machinery specifications as nearly as may be possible. This 4-hour trial is herein designated as trial (*b*).

The speed attained shall be determined by the average revolutions of the main shafts, according to the official standardization curve, but should the average revolutions on a trial exceed the mean revolutions of the five highest speed runs on the measured mile, the speed that will be considered as attained on the trial shall be only that attained as the mean speed of the five highest speed runs as determined by the progressive measured-mile trial (*a*), as aforesaid.

(*c*) An endurance and fuel-oil consumption and water-rate trial of four hours' duration in the open sea in deep water, at a speed of 30 knots as nearly as possible.

(*d*) An endurance and fuel-oil consumption and water-rate trial of four hours' duration in the open sea in deep water, at a speed of 25 knots as nearly as possible.

(*e*) An endurance and fuel-oil consumption and water-rate trial of four hours' duration in the open sea in deep water, at a speed of 20 knots as nearly as possible.

(*f*) An endurance and fuel-oil consumption and water-rate trial of four hours' duration in the open sea in deep water, at a speed of 15 knots as nearly as possible.

(*g*) An endurance and fuel-oil consumption and water-rate trial of four hours' duration in the open sea in deep water, at a speed of 10 knots as nearly as possible.

During trials (*e*), (*f*), and (*g*) the propelling machinery shall be operated under the cruising combination. Speed during trials (*c*), (*d*), (*e*), (*f*), and (*g*) will be taken from the speed revolution curve made from the results of progressive trial (*a*).

(*h*) Trials will be conducted to determine the maximum backing power that the machinery will develop, and the ability of the vessel when going ahead at full speed to back satisfactorily at full backing power. The time to bring the vessel dead in the water from full speed ahead; also the head reach will be determined.

(*i*) Trials to determine the ability of the vessel to go ahead satisfactorily at full power ahead when under full sternway. The time and stern reach will be observed.

(*j*) Trials, as necessary, to test the operation of the devices for shifting from high power to the cruising combination of turbines, and vice versa, at speeds up to and including twenty (20) knots.

(*k*) Such other trials as considered necessary to determine the ability to back promptly when steaming ahead at speeds up to twenty (20) knots when operating under the cruising combination of turbines.

(*l*) The steering gear shall be tested as required by the detail specifications and by the general specifications, both at full speed ahead and at the required speed astern, to show satisfactory operation, strength, and power. The diameter of turning circles and the drift angles will be observed for the trials at full speed ahead.

(*m*) The anchor gear will be tested with the vessel in water of greater depth than 60 fathoms to determine its ability to meet the requirements of the detail specifications and of the general specifications.

If the vessel covered by this contract is the second of two vessels of the same class (light cruisers nos. 42 to 45), built by this contractor, trial (*a*) and trial (*g*) of the aforesaid trials will be omitted on the authority of the Department if in its opinion the hull and its appendages, the boilers, main propelling plant, and all auxiliary machinery necessary to the main propelling plant in the two vessels are essentially alike in design, material, and workmanship. If trial (*a*) is authorized to be omitted, the speeds attained on the trials which are held shall be ascertained from the official standardization curve of the first vessel of the aforesaid class built by this contractor.

The trial board will arrange the above trials to obtain the data specifically required to determine compliance with the contract, and also to obtain, as far as practicable, any useful data desired by the board. Additional runs or tests may be required by the board, if necessary, to determine compliance with the contract.

On all of the above trials there shall be observed and recorded, by representatives of the trial board, such data as may be considered by the board to be of professional interest, including the amount of water required to be used for making up feed on trials (*b*) to (*g*), both inclusive.

On trials (*c*), (*d*), (*e*), (*f*), and (*g*) the following auxiliaries shall be in operation:

(1) All auxiliary machinery necessary to the main propelling plant in operation during the prescribed trial.

(2) Evaporating plant: One-half of the evaporating plant will be in operation, making fresh water of less than 0.25 grain of chlorine per gallon at not less than the rate of 500 gallons per hour.

(3) Refrigerating plant: At half rated capacity.

(4) Electric generating plant: Not less than 300 kilowatts.

(5) Heating system shall be in use throughout the vessel. If, on account of weather conditions, the heating system is not used, 250 pounds of fuel oil will be added to that actually used for each hour of the trial during which the heating system is not in use.

On trial (*b*) the auxiliaries in operation shall be the same as for other trials except that the evaporators shall not be in operation.

The shaft horsepower during the above trials shall be determined by approved torsion meters connected to the shafting abaft the reduction gears.

The water rate or steam consumption shall be determined in a manner satisfactory to the Department. The determination shall include the steam used by the turbines, the portion extracted and/or added and the water fed to the boilers. The determination for the turbines shall be made on each of the two shafts on one side of the vessel and the values ascertained will establish the rates for the entire ship.

All meters, gauges, tanks, and special equipment required for determination of the steam consumption shall be furnished by the contractors and shall be tested or calibrated in such manner or at such Navy laboratory as the Department may direct. After the trials, all equipment not required for the normal operation of the vessel shall be removed by the contractors but meters shall remain the property of the Government.

The average shaft horsepower as actually measured on the turbine units under test, together with the steam and water consumption determinations during each of the trials, will be used for determining the water rates for each condition. The units to be used for measuring purposes will be designated by the Department prior to the trials.

During all trials on which water consumption rates are to be determined, the main turbines only, of the units designated to be measured, shall exhaust into the main condenser. The amount of steam extracted and/or added shall be regulated so as to be equal as possible on all turbines.

The actual steam conditions shall be determined by means of accurately calibrated pressure gauges and thermometers on the boiler side of the main throttle valves and on the low pressure side of valves controlling the extraction or addition of steam from or to the turbines. Absolute pressure gauges shall be provided at the turbine exhaust flange of each unit. Readings of these instruments and the revolution counters and water and torsion meters shall be taken at least every half hour during the trials, and the average of readings so taken for the entire four hours shall be considered as the actual measured conditions for the determination of water rates.

Fuel-oil meters of approved design shall be furnished and installed by the contractor in the discharge from the fuel-oil service pumps for measuring fuel-oil consumption. These meters shall be calibrated before and after trials at the naval engineering experiment station, Annapolis, Md.: *Provided*, That the contractor may, if he so desires, install and use temporary measuring tanks for measuring the fuel-oil consumption on the trials. The measuring tanks, if used, will be calibrated before the trials and will be removed after the trials.

The Department will supply special revolution counters and torsion meters of the outside type, and the contractor will condition and calibrate torsion meters with the main shafting, and fit same so as to be able to determine the shaft horsepower on each trial, furnishing all labor and material required other than the torsion meters themselves. The contractor will, as required by the Department, provide and install such temporary tanks, piping, connections, and other appliances and apparatus as are necessary to ascertain the horsepower, water rates, fuel oil, and make-up feed consumptions required on each of the trials: *Provided*, That the fuel oil and lubricating oil used on all trials shall be in accordance with the United States Navy specifications for such oils; the fuel oil used shall correspond to the requirements of bunker fuel oil B with a minimum viscosity of 75 seconds at 122° F. (Saybolt Furol).

The mean trial displacement shall be 11,570 tons. Should the vessel not be provided at the time of the trials with all the actual parts or objects forming the total weight of the vessel in trial condition as herein defined, the contractor shall put suitable fixed ballast, solid, and confined liquid, as may be necessary to make up the weights to the total amount required to be carried by the vessel as aforesaid; this ballast to be located in such positions as to give the ship on trials approximately the stability and trim of the completed vessel. The weights of all temporary installations for purposes of trials including tanks, piping, etc., for determining the fuel-oil consumption will be considered as part of the ballast weights. Should the displacements of the vessel as prepared for trials exceed the displacements specified herein for the trials, the contractor will be required to run the trials at such increased displacements.

The mean trial displacement having been defined above, on trials (*b*), (*c*), (*d*), (*e*), (*f*), and (*g*), the displacement at the beginning of each trial shall be the above-defined mean trial displacement, plus one-half of the estimated weight of fuel oil, water, and other consumables necessary for the trial.

If, at, and upon said trails there shall be any failure of the vessel to meet fully the requirements of this contract, the contractor shall be entitled to make further trials, sufficient in number to reasonably demonstrate her capabilities: *Provided*, That the number of trials shall be determined and limited by the Secretary of the Navy and that all the costs of all trials prior to the preliminary acceptance of the vessel, including the subsistence of all persons ordered by the Department to proceed on the vessel for the purpose of the trials, shall be at the contractor's expense.

After the above-mentioned trials have been completed, the vessel shall be returned to the works of the contractor, and the machinery shall be opened up for such post-trial examination as the trial board may direct. Any defects or deficiencies that appear will be corrected by and at the expense of the contractor, as directed by the Department, after which the machinery shall be closed and connected ready for service.

ART. 20. If, at, and upon the trials before mentioned the foregoing requirements and conditions shall be fulfilled, and if the various guarantees of the contract shall be fully met, the vessel shall be preliminarily accepted and payments made to the contractor of an amount hereinafter specified. If, however, the requirements, conditions, and guarantees of the contract shall be met, except for deficiencies for which money penalties have been provided herein, then and in such case the vessel shall be preliminarily accepted subject to deductions from the contract price of the vessel, as follows:

On trial (*b*) at the rate of one hundred and fifty dollars ($150) a pound for each pound the corrected fuel oil per knot exceeds 2,090 pounds.

On trial (*c*) at the rate of two hundred dollars ($200) a pound for each pound the corrected fuel oil per knot exceeds 1,380 pounds.

On trial (*d*) at the rate of three hundred and seventy-five dollars ($375) a pound for each pound the corrected fuel oil per knot exceeds 922 pounds.

On trial (*e*) at the rate of one thousand dollars ($1,000) a pound for each pound the corrected fuel oil per knot exceeds 586 pounds.

On trial (*f*) at the rate of two thousand one hundred dollars ($2,100) a pound for each pound the corrected fuel oil per knot exceeds 360 pounds.

The actual fuel oil per knot, as measured on the above trials, will be corrected to a standard of 18,500 b. t. u. per pound of fuel oil and these corrected fuel-oil rates will be used in computing the deductions and premiums for fuel-oil rates.

Provided, however, That should the corrected fuel-oil rate under any of the above conditions be less than the corresponding guaranteed fuel-oil rate, premiums shall be paid by the Department at exactly the same rates as are specified herein for penalty purposes: *Provided, however*, That the amount allowed for the sum of all the premiums earned for improving the fuel-oil guarantees less the sum of all the deductions sustained for failure to attain the fuel-oil guarantees shall not be greater than fifty thousand dollars ($50,000).

On trial (*b*), if the vessel shall fail to develop the contract shaft horsepower as defined in the machinery specifications, there shall be a deduction from the contract price at the rate of twenty thousand dollars ($20,000) for each 1,000 shaft horsepower below said contract shaft horsepower.

If the contract weight of the vessel, as defined herein, shall exceed 7,055 tons, but shall not exceed 7,155 tons, a deduction on account of such excess weight shall be made from the contract price of the vessel at the rate of five hundred dollars ($500) for each ton of such contract weight above 7,055 tons, to and including a contract weight of 7,155 tons; but such excess weight shall not be considered as casue for rejection of the vessel. If the contract weight shall exceed 7,155 tons, it shall be optional with the Secretary of the Navy to reject the vessel or to accept it at a reduced price and upon conditions to be agreed upon between the said Secretary and the contractor.

If the contract weight of the vessel, as defined herein, shall fall below 7,030 tons, a premium shall be paid by the Department to the contractor at the rate of five hundred dollars ($500) a ton for each ton and said contract weight shall fall below 7,030 tons: *Provided, however,* That no premium shall be paid for any portion of the contract weight thus saved below the weight of 6,930 tons: *Provided, also,* That payment of any weight premium earned shall be made in the manner and at the time prescribed below.

On preliminary acceptance of the vessel, payment to the contractor shall be made of an amount that shall be determined as follows: From the amount remaining unpaid of the contract price shall be deducted the estimated cost of uncompleted work under the contract and of defects and deficiencies then known to exist and the cost of changes involving decreased cost (and, if the actual cost of such changes be not then known, the estimated cost of same shall be used pending determination of actual costs); also there shall be deducted a special reserve of two hundred and fifty thousand dollars ($250,000); *Provided, however,* That if the sum of all the premiums earned for weight and trial performances shall exceed the sum of all deductions assessed for liquidated damages for delay and all deductions for the breach of guarantees as to weight, and trial performances then and in that case the excess of such premiums over such deductions shall also be paid to the contractor at the time of preliminary acceptance.

The special reserve of two hundred and fifty thousand dollars ($250,000) shall be held for a period of 6 months from date of preliminary acceptance: *Provided,* That during said period the vessel may be finally tried, after being fully equipped and armed and in all respects complete and ready for sea, under conditions prescribed by the Secretary of the Navy; the expenses of such final trial to be borne by the Government.

If at any time within 6 months after the preliminary acceptance of said vessel any weakness, deficiency, defect, failure, breaking down, or deterioration in the vessel, other than that due to fair wear and tear, shall appear, the same shall be corrected and repaired to the satisfaction of the Secretary of the Navy at the expense of the contractor; and the contractor may, if it so desires, have an engineer of its own selection on board said vessel at any time during said period, who shall have full opportunity to observe and inspect the working of the machinery in all its parts, but without any directing or controlling power over the same: *Provided,* That in computing said period of 6 months from date of preliminary acceptance the time, if any, but only such time, shall be excluded during which said vessel is not available for unrestricted cruising service on account of any weakness, deficiency, defect, failure, breaking down, or deterioration of the vessel for which the contractor is responsible.

Upon expiration of the period of 6 months after preliminary acceptance, determined as specified above, the vessel shall be finally accepted, and the said special reserve, less any deductions from the price of the vessel that are chargeable under the provisions of this contract, shall be paid.

The contractor shall be informed of all defects and deficiencies discovered during said period for which it is held responsible, and wherever practicable, shall be given an opportunity to inspect the same before the defects and deficiencies are remedied; and the decision of the Secretary of the Navy as to the responsibility of the contractor for such defects and deficiencies shall be final and binding on the parties to this contract. The actual cost of making good all defects and deficiencies for which the contractor is held responsible shall be deducted from the payment to be made in final settlement under this contract: *Provided,* That in order to expedite such final settlement, if the work of remedying any of the reported defects and deficiencies shall not have been undertaken when final settlement is to be made, the cost of making good such defects and deficiencies shall be ascertained, estimated, and determined as a change under article 7 and deducted in lieu of the actual cost of such items in final settlement.

ART. 21. (*a*) No laborer or mechanic doing any part of the work contemplated by this contract, in the employ of the contractors or any subcontractor contracting for any part of said work contemplated, shall be required or permitted to work more than 8 hours in any 1 calendar day upon such work at the site thereof. For each violation of the requirements of this article a penalty of $5 shall be imposed upon the contractor for each laborer or mechanic for every calendar day in which such employee is required or permitted to labor more than 8 hours upon said work, and all penalties thus imposed shall be withheld for the use and benefit of the Government: *Provided*, That this stipulation shall be subject in all respects to the exceptions and provisions of the act of June 19, 1912 (37 Stat. 137), relating to hours of labor.

(*b*) This contract covers a construction project within the meaning and intent of the "National Industrial Recovery Act" approved June 16, 1933, and the contractor expressly agrees that, in carrying out the terms and conditions of this contract, he will be governed by the provisions of the said act and such rules and regulations as may be promulgated thereunder by the President or his duly authorized representative, and he will upon request of the Department furnish such evidence as may, in the opinion of the Department, be necessary to show compliance with this requirement.[1]

ART. 22. This contract shall not, nor shall any interest therein, be transferred by the contractor to any other person or persons except as permitted under section 207 (*a*), (*b*), and (*c*), of title II of the "National Industrial Recovery Act," approved June 16, 1933.

ART. 23. The contractor warrants that he has not employed any person to solicit or secure this contract upon any agreement for a commission, percentage, brokerage or contingent fee. Breach of this warranty shall give the Department the right to terminate the contract, or, in its discretion, to deduct from the contract price or consideration the amount of such commission, percentage, brokerage, or contingent fees. This warranty shall not apply to commissions payable by contractors upon contracts or sales secured or made through bona fide established commercial or selling agencies maintained by the contractor for the purpose of securing business.

ART. 24. No Member of or Delegate to Congress, or Resident Commissioner, shall be admitted to any share or part of this contract or to any benefit that may arise therefrom, but this provision shall not be construed to extend to this contract if made with a corporation for its general benefit.

ART. 25. Except as otherwise specifically provided in this contract, if any doubts or disputes arise concerning any question under this contract or as to anything in the drawings, plans, or specifications, or if any discrepancy appear between said drawings, plans, or specifications and this contract, the matter shall be referred at once to the Secretary of the Navy for determination; and his decision in the premises shall be conclusive and binding upon the parties hereto.

ART. 26. The collective liability assessable against the contractor under the terms of this contract shall not be greater than two hundred fifty thousand dollars ($250,000). The collective liability shall be determined as follows: To the amount to be deducted for liquidated damages for delays in completion of the vessel shall be added the sum of all deductions for the breach of guarantees as to weight and trial performances and all deductions for defects and deficiencies developing during the period of 6 months after preliminary acceptance but not discovered prior to such acceptance, and from this aggregate amount of deductions shall be subtracted the sum of the weight and performance premiums that shall have been earned under this contract:

Provided, however, That the limit of collective liability that may be assessed against the contractor under the provisions of this article shall not apply in case of termination of the contractor's right to proceed with the work as provided in article 14 hereof, or in the event of rejection of the vessel as provided in article 20 hereof.

ART. 27. (*a*) The Department will pay for the vessel to be constructed and furnished in accordance with this contract, eleven million, six hundred seventy-seven thousand ($11,677,000) dollars.

(*b*) Payments shall be made by the Department in 40 equal installments of the contract price as the work progresses.

(*c*) Payments shall be made from time to time for changes involving increased costs as the work is completed and the costs determined as hereinbefore provided; deductions for changes involving decreased cost shall be made as prescribed in article 20 hereof.

---

[1] ART. 21 (*c*) All material and equipment used in the construction of this vessel, except material heretofore processed and except foreign-made material within the restrictions imposed by article 9 (*b*) hereof shall be manufactured in accordance with all provisions of the applicable approved code of fair competition for the trade or industry or subdivision thereof concerned, or if there be no code of fair competition for the trade or industry or subdivision thereof concerned, then with the President's reemployment agreement.

(*d*) As payments are made hereunder of the contract price and of the cost of changes, the parts of the vessel on account of which payments have been so made shall immediately become the sole property of the United States. As payments are made on account of materials on hand, but not incorporated in the vessel as a part thereof, a lien in favor of the United States shall immediately attach to said materials and shall be discharged on the completion and delivery of the vessel as to any materials not then incorporated as a part thereof. Said lien is, pursuant to the provisions of the act of August 22, 1911, paramount.

(*e*) No payments shall be made except on bills in septuplicate, certified by the inspectors of hull and machinery of the vessel, in such manner as shall be directed by the Secretary of the Navy, whose final approval of all bills, thus certified shall be necessary before payment thereof.

(*f*) All warrants for payments under this contract shall be made payable to the contractor or its order.

(*g*) Payment of the last two installments shall not be made except as provided for in article 20 hereof.

(*h*) When payment is to be made under this contract, as a condition precedent thereto, the Secretary of the Navy may, in his discretion, require evidence satisfactory to him, to be furnished by the contractor, showing what, if any, liens or rights in rem of any kind against said vessel, or her machinery, fittings, or equipment, or the materials on hand for use in the construction thereof, have been or can be acquired for or on account of any work done, or any machinery, fittings, equipment, or material already incorporated as a part of said vessel, or on hand for that purpose; but it is hereby further stipulated, covenanted, and agreed by the contractor, for itself and on its own account and for and on account of all persons, firms, associations, and corporations furnishing labor and material for said vessel, and this contract is upon the express condition that no liens or rights in rem of any kind shall lie or attach upon or against said vessel or her machinery, fittings, or equipment, or the materials therefor, or any part thereof, or of either, for or on account of any work done upon or about said vessel, machinery, fittings, equipment, or materials, or of any materials furnished therefor or in connection therewith, nor for or on account of any other cause or thing or of any claims or demands of any kind, except the claims of the Department.

(*i*) When all the conditions, covenants, and provisions of this contract shall have been performed and fulfilled by and on the part of the contractor it shall be entitled within 10 days after the filing and acceptance of its request therefor to receive the said special reserve, or so much thereof as it may be entitled to, on the execution of a release, in such form and containing such terms and conditions as shall be prescribed by the Secretary of the Navy, of claims against the United States arising under or by virtue of this contract: *Provided, however*, That the Secretary of the Navy may, in his discretion, make partial payments on account of said special reserve, in advance of final settlement.

ART. 28. Should any surety upon the bond for the performance of this contract become unacceptable to the Department, the contractor must promptly furnish such additional security as may be required from time to time to protect the interests of the Department and of persons supplying labor or materials in the prosecution of the work contemplated by the contract.

In witness whereof, the parties hereto have executed this contract as of the day and year first above written.

THE UNITED STATES OF AMERICA,
By CLAUDE A. SWANSON, *Secretary of the Navy.*
NEW YORK SHIPBUILDING CORPORATION,
Contractor.
By C. L. BARDO, *President, Camden, N. J.*

——— ———,
Judge Advocate General.
CLAUDE A. SWANSON,
Secretary of the Navy.

I, N. R. Parker, certify that I am the secretary of the corporation named as contractor herein; that C. L. Bardo, who signed this contract on behalf of the contractor, was then president of said corporation; that said contract was duly signed for and in behalf of said corporation by authority of its governing body, and is within the scope of its corporate powers.

[INCORPORATE SEAL] N. R. PARKER.
N. Y. S. B. Corp.

The following changes were made in this contract before it was signed by the parties hereto: Article 21 (*c*) added; article 29 deleted.

Exhibit No. 1479

[FS/L4-3(340922-1)]

Department of the Navy,
Office of the Secretary,
Washington, September 22, 1934.

Subject: Maximum amount of work within first and second year under naval contracts.

References: (*a*) My letter of September 1, 1933.
(*b*) Colonel Roosevelt's letter of February 12, 1934, No. FS/L4-3 (340212).

My Dear Mr. Bardo: In connection with the naval vessels now building at your plant (1933 program and 1934 program), your special attention is invited to the following clause in the contracts:

"Owing to the national emergency existing making it imperative that the maximum number of men be returned to gainful employment without delay, and to effectuate the purpose of the 'National Industrial Recovery Act', approved June 16, 1933, the contractor hereby expressly agrees that from the beginning he will prosecute the work with the utmost vigor and despatch and will make every possible effort, without reference to the otherwise normal rate of progress, to accomplish the maximum amount of work within the first and second year thereof."

It hardly appears necessary for me to invite your attention to the importance of carrying out this clause not only with regard to the 1933 program but also the 1934 program. At the same time, I should like to stress its importance with the hope that you will do everything practicable to carry out both the letter and the spirit of the clause.

The conditions with regard to the 1934 building program are generally more satisfactory, with particular reference to the question of plans than existed in the beginning with the 1933 building program. It should therefore, be practicable or you to make more rapid progress than was made a year ago.

The Department appraciates the efforts you have made along the lines indicated and trusts that these efforts will be renewed and extended.

The Department has not been satisfied with the progress made at your plant with particular reference to the light cruisers. The situation with regard to plans is clearly understood but it is a matter of vital importance that all practicable pressure be brought to bear on this plan situation in order that it may be practicable to put men to work not only in your plant but also in the two navy yards which are building cruisers from the plans prepared by your company.

A resurvey of the situation will undoubtedly indicate to you ways and means for more thoroughly carrying out the spirit and letter of the contract requirements, and it is hoped that you will see your way clear to make this resurvey in order that the 1933 program may be more rapidly advanced as well as making as rapid progress as possible on the light cruiser awarded to you under the 1934 program.

Should you agree with the spirit of this letter, and be guided by it, I know it will be appreciated by the President, and by the Navy Department in furthering the President's great desire to put men back to work just as soon as possible.

Sincerely yours,

Claude A. Swanson.

Mr. C. L. Bardo,
President New York Shipbuilding Corporation,
Camden, N. J.

Exhibit No. 1480

EMPLOYMENT IN NAVY YARDS JUNE 30, 1933, TO DECEMBER 31, 1934

Number of employees in east coast navy yards, including Philadelphia Aircraft Factory and Newport, Rhode Island, Torpedo Station:

June 30, 1933	22, 287
December 31, 1934	29, 406

Total number of employees in navy yards on both coasts:

June 30, 1933	30, 224
December 31, 1934	37, 294

EXHIBIT NO. 1481

[Finished file, Siphron, 12-11-31]

A39095.

COMPTROLLER GENERAL OF THE UNITED STATES,

Washington, December 10, 1931.

DD348/L4-2 (310916)

The honorable the SECRETARY OF THE NAVY.

SIR: There was received in response to my letter of October 19, 1931, forwarding for your information photostatic copies of letters dated October 13 and 14, 1931, from the United Dry Docks, Incorporated, protesting against your action in rejecting its proposal for the construction of torpedo-boat destroyers, your letter of October 26, 1931, transmitting a copy of your letter of October 12, 1931, to the protesting bidder, wherein it was urged, in substance, that the action taken was the most advantageous to the United States.

It appears that on July 15, 1931, the Navy Department advertised for proposals for constructing certain torpedo-boat destroyers, specifying on page 2 thereof the general characteristics of the vessels it was desired to have constructed. Under dates of July 31, 1931, and August 6, 1931, the Secretary of the Navy informed the companies to which had been sent the original specifications that the Navy Department had reached the decision to permit alternate bids to be submitted upon the bidders' designs of hulls, boilers, and machinery, and that at an early date there would be forwarded a revised form of proposal, a supplement to the invitation for bids and a statement of the changes to be made in the form of contract in the event of contract being awarded on the basis of an alternate proposal.

The Navy Department's own design of the vessels covered by the advertisement July 15, 1931, was designated as class I, while the alternate designs which bidders were requested to submit were designated "class II." There were received a number of proposals under both class I and class II, the bid of the Bath Iron Works under class I being $2,626,000; that of the United Dry Docks, Incorporated, $2,645,000; and that of the Bethlehem Shipbuilding Corporation, $2,928,500. These three companies and a number of others also submitted bids under class II, based on their own designs; that of the Bath Iron Works being $3,166,000; that of the Bethlehem Shipbuilding Corporation, $3,070,000; and that of the United Dry Docks, $3,720,000. As stated in your letter of October 12, 1931, the advertised specifications provided that:

"INVITATION FOR BIDS

(Page 2)

"*Specifications, plans, etc.*—Under class II all bids must be accompanied by detail plans and specifications covering fully the design of hull, boilers, and machinery submitted, with full description of all auxiliary machinery, fittings, appurtenances, and special features, in order that the Department may have before it definite information upon which to base its decision as to the relative merits of the various designs of torpedo-boat destroyers proposed, and to determine whether they provide the type of vessels contemplated by the Department and fulfill the characteristics hereinafter mentioned.

(Page 3)

"*Evaluation of bids.*—In comparing bids for the purpose of making the award, the bids will be evaluated on the basis of the penalties and premiums provided in the form of contract, but this does not affect the right of the Department to reject any bid not considered advantageous to the Government.

(Page 4)

"The right is reserved, as the interest of the Government may require, to reject any and all bids, to waive any informality in bids received, and to accept or reject any items of any bid, unless such bid is qualified by specific limitation.

"INSTRUCTIONS TO BIDDERS

(Page 3, paragraph 16)

"*Award or rejection of bids.*—The contract will be awarded to the lowest responsible bidder complying with conditions of the invitation for bids, provided his bid is reasonable and it is to the interest of the United States to accept it. The bidder to whom the award is made will be notified at the earliest possible date. The United States, however, reserves the right to reject any and all bids and to waive any informality in bids received whenever such rejection or waiver is in the interest of the United States. It also reserves the right to reject the bid of a bidder who has previously failed to perform properly or complete on time contracts of a similar nature, or a bid of a bidder who is not in a position to perform the contract."

It is reported the design submitted by the Bethlehem Shipbuilding Corporation under class II was so superior to the Navy Department's own design under class I and the design submitted by the other bidders that it was concluded to accept the alternate bid of the Bethlehem Shipbuilding Corporation under class II for construction of one of the vessels, to have two vessels constructed in accordance with said design at two of the navy yards, and to award a contract under the Navy Department's own design to the Bath Company for the fourth vessel. This action has led to a protest by the United Dry Docks, Incorporated, which was brought to your attention in my letter of October 19, 1931, and which had theretofore been submitted to the Navy Department and discussed in your letter of October 12, 1931.

The basis of the protest has been summarized by the United Dry Docks, incorporated, in its letter of October 14, 1931, as follows:

"(1) Can the Navy Department call for 'competitive bids' where different bidders are not bidding on the same thing and where the final award of contract is not upon a definite money value but is dependent on the judgment of officers in the Department as to the relative merits of more or less intangible properties in different designs? And

"(2) If such bidding is permissible and if the Department instructs bidders as to the method of evaluating their bids on a money basis, can it thereafter depart from the principles that it establishes for such evaluation and award a contract on the basis of other intangible benefits accruing from one design as against another"?

Attention in this connection is invited to *Hannan* v. *Board of Education* (30 L.R.A., N.S. 214,231), where the court declared invalid a contract which had been let on the basis of the principal designs being submitted by the bidders. The court in the course of its opinion referred to a number of cases, and there has been collected in a note to the decision a number of other cases which are generally to the effect that under a lwaw requiring advertisement for bids and the letting of contracts to the lowest responsible bidders, there must be offered to all bidders a definite basis for competition. The court referred to a cited Wisconsin case where the supreme court of that State had held that such specifications required "a plunge in the dark", and it was stated in the *Hannan case* that public contracting must be on the basis of definite specifications offered to all bidders, the contract awarded to the lowest responsible bidder, and that:

"* * * The boards and public agencies intrusted with the important and responsible duties of selecting the materials, deciding upon the character of the work, letting the contracts, and spending this money, should be surrounded by every reasonable safeguard possible. This should be done not only for the safety of the funds and the public welfare, but for their own protection. They are seldom engaged because of any peculiar training or fitness they possess over that common to all, and their compensation is frequently wholly inadequate to cover the time and energy they are required to bring to their labor. Under these circumstances a requirement that shall fix in advance upon certain definite plans and specifications or propositions to be considered, and then submit these for open competition upon sealed proposals, the contract then to be awarded in an impartial way to the lowest responsible bidder, will tend to remove them from temptation and opportunity for fraud or favoritism. It will do more; it will materially assist in removing suspicion of unfairness and favoritism, and relieve honest men upon whom these duties devolve of unjust charges."

A careful study of the specifications in this case, the applicable decisions of the courts, as well as the purposes to be served by section 3709, Revised Statutes, requiring advertising preliminary to the letting of contracts on behalf of the United States, and to the lowest responsible bidder meeting the specifications, justifies the conclusion that the alternate bid specifications in this case are open to question, tested by the principles stated in the decisions with respect to advertisements preliminary to contracting on behalf of the public as well as the purposes which led to the requirement that contracts on behalf of the United States must be let as the result of advertising, to the lowest responsible bidder.

It is realized, of course, that the United States should obtain the best possible vessels for the money expended, and that in connection with construction work of this character the Navy Department has its problems and would find it advantageous to utilize the best skill of the country in designing hull, machinery, etc. The results reported as obtained in the instant matter suggest the benefits possible through obtaining the views and suggestions of experts not in the Government service—but the procedure followed not only fails in fully meeting the requirements of section 3709, Revised Statutes, but will invariably breed dissatisfaction among bidders. Each bidder submitting an alternate design will doubtless believe, and honestly, that his is superior to all other designs submitted—and it would seem most difficult if not quite impossible to work out in advance and without intimate knowledge of the details of designs to be submitted, an evaluating formula that would be considered fair by any bidder whose design was not accepted—and charges of favoritism and even fraud may too frequently follow, with protests raising questions going to the availability of the appropriation proposed to be charged.

The law requires that specifications state the actual need of the Government and that award be made to the low responsible bidder proposing to supply such need. Considering the administrative problem to be as stated in matters of this character there is suggested for your consideration and as a means to enable the Navy Department to lawfully obtain the assistance of the skill in private industry when new vessels are to be designed and constructed, the advisability of acquainting the Congress with the situation and need with a view to securing authority to employ a reasonable amount of the appropriation to secure from competent sources outside of the Government a limited number of designs of hulls, machinery, etc., to supplement or for purposes of comparison with plans and specifications drafted by the engineers of the Navy Department, to the end that there may be worked out in every detail the best possible design and the final result submitted for competitive bids and construction by the low responsible bidder.

It is understood that on the assumption the procedure followed was sufficient compliance with the applicable law there has been adopted for building in two navy yards the design submitted by the Bethlehem Shipbuilding Corporation, and award made to said corporation for the construction of a vessel of such design. In such circumstances and in view of the apparent good faith of the Navy Department in following the procedure herein discussed and which should hereafter be otherwise, this office will make no further objection thereto.

Respectfully,

(s) J. R. McCarl,
Comptroller General of the United States.

Finished file—Siphron.

Exhibit No. 1482

U. S. Naval Air Station,
Pensacola, Florida, July 13, 1933.

[1st Endorsement]

From: Commandant.
To: The Secretary of the Navy.
Subject: Torpedo Boat Destroyers *Nos. 356* to *359*, *360* to *363* and *364* to *379*, inclusive—Bids for the construction of—Examination of facilities of the Gulf Industries, Inc.
Reference:
(*a*) Secretary of the Navy's letter DD356/L4–2 (330628) P of 28 June 1933.
(*b*) Commandant's 1st End. Ro–B/QM–G1, of 30 June 1933.
Enclosures: (7).

1. Forwarded herewith is a report of Commander G. A. Duncan (C.E.C.) U. S. Navy, who was directed by me to make the inspection of the plant of the

Gulf Industries, Inc., of Pensacola, Florida, in compliance with the Secretary of Navy's letter, reference (*a*).

2. The Commandant is of the opinion that so far as material conditions are concerned, the plant is capable of constructing destroyers provided the reconditioning of this plant as recommended in the attached report is carried out.

3. As for personnel conditions, it seems that such does not exist at present. It is possible, however, to obtain the necessary personnel as was done in the case of the Emergency Fleet construction during the war.

F. R. McCRARY.

A true copy from the records of the Navy Department.

F. S. CURTIS, *Chief Clerk.*

U. S. NAVAL AIR STATION,
Pensacola, Florida, July 12, 1933.

From: Commander G. A. Duncan (C.E.C.) U. S. Navy.
To: Commandant.
Subject: Torpedo Boat Destroyers *Nos. 356* to *359*, *360* to *363* and *364* to *379*, inclusive—Bids for the construction of—Examination of facilities of the Gulf Industries, Inc.
Reference:
(*a*) Secretary of the Navy's letter DD356/L4–2 (330628) P of June 28, 1933.
(*b*) Commandant's 1st End. Ro–B. QM–G1 of June 30, 1933.
Enclosures:
(A) Ten blueprints of Pensacola Shipbuilding Company's drawings.
(B) Inventory dated September 22, 1931, of the equipment of the Pensacola Shipbuilding Company.
(C) Option given by George P. Wentworth, trustee, to Gulf Industries, Inc., dated March 18, 1933.
(D) Copy of extension of enclosure (C) dated June 12, 1933.
(E) Copy of letter of Pensacola Tool & Supply Corporation to George P. Wentworth, trustee, dated July 7, 1933.
(F) Memorandum of inspection trip to Pensacola, Fla., May 25 to June 1, 1933, by John Ayer, dated June 28, 1933.
(G) List of floating equipment construction record at Pensacola Shipbuilding Company's plant, Pensacola, Fla.

1. In obedience to references (*a*) and (*b*) I have consulted with Mr. Lawrence R. Wilder, the president of Gulf Industries, Inc., and Mr. Harry T. Newcomb, the secretary of that organization. I was informed by these gentelmen that they intended to use the plant of the Pensacola Shipbuilding Company in the construction of such destroyers as might be awarded to them. Accordingly, I visited the plant of the Pensacola Shipbuilding Company. Enclosure (A) is ten blueprints which give the general features and arrangement of tools, buildings, ways, cranes, etc., for the construction of ships. The plant is in a very bad condition of repair and, in my opinion, at least $500,000.00 will be needed to place it in such condition as to make it economically usable for the building of destroyers. This is rather a hurried estimate, but it is believed that in detailing it the figure given will not be exceeded. Enclosure (F) is a report made by Mr. John Ayer of an inspection made by him in company with Mr. T. N. Cornbrooks, a naval architect, who, it is understood, is in the employ of the Gulf Industries, Inc.

2. I am informed by the trustee of the plant that the condition described in paragraph 3 of enclosure (F)—that part of the property is leased to a contracting company who uses it for tieing up floating plant and repairs to same—no longer exists. Very little dredging would have to be done to be able to get the ships away from the plant, and none is believed necessary for launching ships.

3. No plans are available of the ships it is proposed now to build at this plant, but the Department can readily determine from the pile plans, enclosure (A), whether or not their spacing is properly arranged to provide for a new building ways top structure suitable for the construction of destroyers. In my inspection I found that these piles were in particularly good condition and will not have to be cut off at as low an elevation as mean tide level as described in paragraphs 5 and 11 of enclosure (F). Such a cut-off would, of course, be advantageous. The only case that I know of the launching of destroyers from side launching ways were the launchings which took place at the works of the William R. Trigg Company, in Richmond, Va., of the *Dale* and *Decatur*, on July 24, 1900, and September 26, 1900, respectively. The torpedo boats *Shubrick*, *Stockton*, and *Thornton* had been launched in this same manner from this same yard on October 30, 1899,

December 27, 1899, and May 15, 1900, respectively. In all of these launchings the launching ways were carried under water so that these ships were floated off the ways in side launching rather than being dropped off as is the usual case with side launchings, and as was done at the Pensacola Shipbuilding Company's plant in all of its launchings and as shown to be the arrangements made for this work in enclosure (A). Room does not exist to extend these ways under water unless considerable dredging is done. The Department can readily determine the feasibility of launchings destroyers of the type to be constructed from ways of the type available. It would be possible to lower the outer end of the Pensacola Shipbuilding Company's ways about six inches by cutting off the protruding sheet piling, and the structure of the ways behind the bulkhead can be reconstructed at any inclination desired. The railroad tracks of the yard are in better condition than is indicated by paragraph 6 of enclosure (F) and can be rebuilt at relatively small expense. The storehouse at present being used for the storage of cotton is understood to be on a monthly rental basis, and this storage can be discontinued at any time on short notice. I found only one of the boilers in operating condition, and considerable repairs are necessary to all three of the boilers at present installed. This is at variance with report made in paragraph 13 of enclosure (F). The estimates given in paragraphs 14, 15, 16, and 17 of enclosure (F) are almost as rough as the estimate made by me in the foregoing part of this letter. I desire to emphasize the fact that $500,000.00 should be considered as the minimum required to recondition this plant; but I believe that the work can be done within that figure.

4. As to enclosure (B), I have not personally checked the entire list, but have been given to understand by apparently responsible parties connected with both the Pensacola Shipbuilding Company and the Pensacola Tool & Supply Corporation, that the items listed thereon are still in operating condition at the plant.

5. Enclosures (C), (D), and (E) indicate the arrangements which have been made by the Gulf Industries, Inc., for obtaining the use of the Pensacola Shipbuilding Company's plant, together with the possibility of expediting the gaining control of same by the cooperation of the Pensacola Tool and Supply Corporation.

6. Enclosure (G) indicates the construction record of floating equipment by the Pensacola Shipbuilding Company's plant from 1920 to date. It is noted that the Department has only requested this information for the past 10 years; but, in view of the inactivity of this plant for a great portion of this time, it was thought wise to include the complete record. I was informed during the course of my inspection that the cost of construction vessels at this plant toward the latter part of the program of building the Shipping Board's vessels *Escambia* to *Bayou Chico,* inclusive, was lower than at any shipbuilding yard in the United States. This can be verified from the records of the Emergency Fleet Corporation.

7. The plant of the Pensacola Shipbuilding Company was built for the purpose of constructing cargo carriers on what was known during the World War and immediately thereafter as the "fabricated-ship system"; that is, about 90 percent of the plates, framework, etc., of the ship were fabricated elsewhere than at the erecting plant, and only about 10 percent of the fabricating was done at the plant where the erection was accomplished. In the evaluation of the possibility of building destroyers at this plant, this point should be given due consideration. Undoubtedly additional steel rolls and gang drills will have to be purchased and installed, but it appears to be entirely feasible within the estimate above given. It is believed that the plant can be reconditioned as the construction of the ships proceeds as was frequently done in war-time plants, and there should be no delay in the construction of these destroyers at this plant on account of the necessity of rehabilitating the plant.

8. The only shipbuilding man that I could find at present employed at this plant was Mr. R. V. Cowley, the present superintendent of the Pensacola Tool & Supply Corporation. From conversation with him I am convinced that he is a capable shipbuilder. Any other technical organization will necessarily have to be brought into the plant from outside sources.

9. There appears to have been no such thing as a balanced ledger sheet with profit-and-loss accounts as of January 1, 1933, for the Gulf Industries, Inc.

G. A. Duncan.

A true copy from the records of the Navy Department.

F. S. Curtis, *Chief Clerk.*

Exhibit No. 1483

(Gulf Industries, Incorporated, Pensacola, Florida)

Hotel Washington,
Washington, D. C., August 4, 1933.

The honorable the Secretary of the Navy,
Washington, D. C.

Sir: To our utter astonishment our responsible bids submitted July 26th for constructing one, two, or three 1,500-ton destroyer on both the fixed and adjusted price bases, which were apparently low from every point of view, have, it seems, been rejected without consultation with us.

We protest such 1,500-ton destroyer awards made by the Navy Department today.

Very respectfully yours,

Laurence R. Wilder,
Chairman Executive Committee.

Certified to be a true copy.

F. S. Curtis,
Chief Clerk, Navy Department.

Exhibit No. 1484

Mr. Homer, talking with Captain Ormond L. Cox of the Navy, discovered that a rumor had been started around the Navy Department that the Bath Iron Works Corporation was not an equipped ship yard, had no machinery or facilities for the building of destroyers, and that, therefore, their bid would not be considered. Checked on this rumor with Captain Oberlin, technical advisor to the Secretary of the Navy, and Captain Stark, aide to the Secretary of the Navy, and found that this rumor was general. Called Mr. Newell at Bath and explained this situation to him. He asked for suggestions as to how to overcome it. Mr. Homer suggested that a series of photographs of the shops be taken showing the workmen, tools, etc. These pictures were taken, and on a Sunday in November 1932, at 144 East 24th Street, New York City, Mr. Newell brought the pictures in, and Mr. Homer laid out a plan for their presentation to the Navy Department. The suggestions made were carried out on the following Monday. Mr. Homer left New York for Washington Monday night, and on Tuesday checked around the Navy Department and found that the rumor had been killed, and that the Bath bid would be considered. Result: On December 11, 1932, contract was awarded to Bath Iron Works Corporation for the destroyer *Dewey*, contract price about three millions dollars.

April 6, 1933: Mr. Homer, having conceived an idea for allotment of work for relief of unemployment, called Mr. Newell at Bath and asked him to come to Washington for a conference.

April 7, 1933: Mr. Newell arrived and spent two days at Mr. Homer's office going over the labor situation, the relief of unemployment, etc., and a plan was prepared, including charts, etc., for presentation to the President.

April 13, 1933: This plan was submitted to the White House by Mr. Homer, who delivered same to Mr. Marvin H. McIntyre personally, who, in turn, submitted it to the President.

April 16, 1933: This plan was returned by Mr. McIntyre with the approval of the President, who asked that the matter be taken up with Assistant Secretary of the Navy Henry Roosevelt, and the idea sold to him.

April 17, 1933: Mr. Homer talked with Mr. Newell at Bath and told him what had happened, and that he had arranged for a conference with Assistant Secretary Roosevelt on the morning of April 18.

April 18, 1933: At 9:30 a.m. Mr. Homer had a conference with Assistant Secretary of the Navy Henry Roosevelt; Admiral Land, Chief of the Bureau of Construction and Repair; Admiral Robinson, Chief of the Bureau of Engineering; Admiral Brinser, in charge of navy yards; and Admiral M. Lurfin, Judge Advocate General of the Navy. This conference lasted for several hours, and, at the end, it was agreed that the plan was practical, and it was turned over to the Navy Department without obligation, to be used as they saw fit.

Early in July, a rumor having started around the Navy Department that the Bath Iron Works wished that they did not have the *Dewey* to build, as they found that it was a large job to handle and were having difficulty in financing it, and felt that they should not go in for any further work of this kind, Mr. Homer immediately called Mr. Newell by telephone, and he came to Washington and succeeded in refuting these rumors.

July 24, 1933: Mr. Newell conferred at Mr. Homer's office with Mr. L. C. Rosenkrans of the Fidelity and Deposit Company of Maryland. While in Mr. Homer's office on this date, Mr. Newell told Mr. Homer that he had figured Mr. Homer in on the bid for the destroyers, and that he was deeply appreciative of what Mr. Homer had done not only on the new bid but also on the *Dewey*.

July 26, 1933: Bids for the naval program destroyers were opened; and Admiral Murfin, Judge Advocate General of the Navy, rejected the Bath Iron Works bid as being illegal, on the grounds that they had not presented fixed-price bid as well as adjusted-price bid. Mr. Newell said that afternoon that he was going home and that he hoped he would have better luck next time, that he had felt that he was doing the right thing and that it was unfortunate that the matter had come out that way. At Mr. Homer's urging, Mr. Newell stayed here to confer as to what could be done to overcome the situation.

July 27, 1933: Mr. Homer called Admiral C. J. Peoples, Paymaster General of the Navy, who is the President's closest friend in the Navy Department, to luncheon and they conferred with him as to the best method to be followed in overcoming this awkward situation. Admiral Peoples concurred in the suggestions of Mr. Homer, and made further suggestions which were immediately carried out: Ten telegrams were prepared in Mr. Homer's office and they were transmitted to Bath by Mr. L. E. Thebeau to his secretary, who, in turn, transmitted them to the parties who were to send them to the President. At 6:30 p. m. Mr. Homer called Mr. Marvin McIntyre in the presence of Mr. Thebeau and asked that these telegrams be segregated from the mass of telegrams and delivered to the President at breakfast. This was done.

July 28, 1933: At 2 p. m. the President called to the White House, Admiral Stanley, Chief of Operations; Admiral Murfin, Judge Advocate General of the Navy; Admiral Robinson, Chief of the Bureau of Engineering; Admiral Land, Chief of the Bureau of Construction and Repair; and Admiral Peoples, Paymaster General of the Navy, for a conference.

July 29, 1933: Mr. Newell, acting under the advice of Mr. Homer went to the Navy Department, where he was told to call to a conference Mr. J. W. Powell, president of the United Drydocks Company, and Mr. L. I. Korndorff, President of the Federal Shipbuilding and Dry Dock Company. Mr. Newell called these gentlemen and asked them to come to Washington and confer with him and insisted that they do so. (It will be noted at this point, that Mr Newell's situation is completely reversed, that he is now in command of the situation, instead of being out.

July 30, 1933: Mr. Powell, Mr. Korndorff, and Mr. Newell spent the entire day until 6:30 at night in Mr. Homer's apartment, #722 of the Hay Adams House, and reached a definite agreement as to procedure and that each would have two destroyers to build. Mr. Homer this day took Admiral Peoples, Mr. Thebeau Treasurer of the Bath Iron Works, and Mr. Nugent of the Public Works Administration to Harper's Ferry for an all-day trip.

July 31, 1933: Mr. Newell, Mr. Powell, and Mr. Korndorff went to the Navy Department at 9 o'clock and saw Captain Claude Jones, of the Bureau of Engineering; there they met Admiral Robinson and Admiral Land and offered to work together, building from one set of designs.

August 3, 1933: The Navy Board went to see the President at Hyde Park for his decision in regard to the contracts, which came out exactly as planned regarding the three above-mentioned yards.

August 4, 1933: Mr. Homer went to Captain Stark's office and secured for Mr. Newell word of the award of the contracts and got an advance copy of the News Release and delivered same to him.

Between August 4 and August 26, Mr. Newell and Mr. Thebeau were working in New York endeavoring to get bond.

August 26, 1933: Mr. Newell returned to Washington with Mr. Homer.

September 5 and 6, 1933: Mr. Newell and Mr. Thebeau here in regard to bond. Constantly in conference with Mr. Homer's partner, Mr. Perkins, and with Mr. Homer by long distance telephone.

September 7 and 17, 1933: Either Mr. Newell or Mr. Thebeau was in daily conference with either Mr. ——— or Mr. Perkins relative to the contract and bond on the destroyers.

September 18, 1933: Mr. Newell wrote a letter in the office of Mr. Homer to the Secretary of the Navy asking for an extension of time for the securing of bond. The Navy Department said that the time had expired and they did not care to hold the matter up or to have any publicity by granting a further extension of time, but that they would hold the matter in abeyance.

September 19, 1933: Mr. Homer was given a full power of attorney covering these destroyers, copy of which is herewith attached.

Contract was finally signed and bond secured on or about Sept. 22, 1933, and the work was completed.

Mr. Howell, before leaving for Bath, made the statement that the fee he figured to pay Mr. Homer for this work was so large that he would have to spread it over the life of the contract. Mr. Homer agreed to that, and asked what figure he had in mind. To this question, Mr. Newell replied that they would discuss it later, but that he was sure Mr. Homer would be perfectly satisfied.

Mr. Newell also stated, on being asked what he expected the profit to be on naval work in the Bath yards, that the profit on the *Dewey* would be about $450,000, and the profit on the other two destroyers would be a little over a million dollars.

The total amount of contract awarded to the Bath Iron Works Corporation as a result of Mr. Homer's efforts, as outlined above, is about $9,000,000.

The following information was made a part of the record pursuant to instructions of the chairman. (See text, p. 4746.)

Bids and evaluations

LIGHT CRUISERS NOS. 26 TO 31—1927

Bidder:	*Bid*
Newport News:	
1 ship	$10,642,000
2 ships	10,450,000
Bethlehem Ship:	
1 ship	10,675,000
2 ships	10,540,000
American Brown Boveri (New York Ship):

BIDS AND EVALUATIONS

(Attached to letter by C. & R. No. 348 to 358/L4–(c), Eng. No. DD348/L4 (9–29–Dd), dated Sept. 29, 1931, addressed to Judge Advocate General)

NAVY DEPARTMENT,
Washington, D. C., September 16, 1931.

PROPOSALS FOR THE CONSTRUCTION OF TORPEDO BOAT DESTROYERS OF THE 348 TO 358 CLASS

The bids for the construction of torpedo boat destroyers of the 348 to 358 class were opened shortly after noon, September 16, 1931, at the Navy Department in the presence of the Secretary of the Navy and the Assistant Secretary of the Navy.

BATH IRON WORKS CORPORATION, BATH, MAINE

(Bid in duplicate; bond for $75,000)

	Each
Class I:	
1 destroyer to be constructed at Bath, Maine, and delivered at the Navy Yard, Boston, Mass., within 30 months from date of contract for	$2, 626, 000
2 destroyers, 1 within 30 months and the other within 33 months from the dates of contracts for	2, 380, 000
Class II (*a*):	
1 destroyer within 30 months from date of contract for	3, 166, 000
2 destroyers, 1 within 30 months and the other within 33 months from date of contracts for	2, 931, 000

BETHLEHEM SHIPBUILDING CORPORATION, NEW YORK, N. Y.

(Bid in duplicate; bond for $75,000)

Class I:	
1 destroyer to be constructed at Quincy, Mass., and delivered at the Navy Yard, Boston, Mass., within 24 months from date of contract for	2, 893, 000
2 destroyers, 1 within 24 months and the other within 26 months from date of contracts for	2, 615, 000
Class II:	
1 destroyer within 26 months from date of contract for	3, 044, 000
2 destroyers, 1 within 26 months and the other within 28 months from date of contract for	2, 738, 000

MARYLAND DRY DOCK CO., BALTIMORE, MD.

(Bid in duplicate; bond for $75,000)

Class I:	
1 destroyer to be constructed at Baltimore, Md., and delivered at the Navy Yard, Norfolk, Va., within 30 months from date of contract for	3, 804, 982
2 destroyers, 1 within 30 months and the other within 33 months from date of contract for	3, 664, 433
Class II: No bid.	

NEWPORT NEWS SHIPBUILDING & DRY DOCK CO., NEWPORT NEWS, VA.

(Bid in duplicate; bond for $75,000)

Class I:	
1 destroyer to be constructed at Newport News, Va., and delivered at the Navy Yard, Norfolk, Va., within 27 months from date of contract for	$3,040,000
2 destroyers, 1 within 27 months and the other within 30 months from date of contract for	2,660,000
Class II (1):	
1 destroyer for delivery within 27 months from date of contract for	3,080,000
2 destroyers, 1 within 27 months and the other within 30 months from date of contract for	2,700,000
Class II (2):	
1 destroyer to be delivered within 27 months from date of contract for	3,460,000
2 destroyers, 1 within 27 months and the other within 30 months from date of contract for	3,080,000

NEW YORK SHIPBUILDING CO., CAMDEN, N. J.

(Bid in duplicate; bond for $75,000)

Class I:	
1 destroyer to be constructed at Camden, N. J., and delivered at the Navy Yard, Philadelphia, Pa., within 25 months from date of contract for	$2,925,000
2 destroyers, 1 within 25 months and the other within 28 months from date of contract for	2,675,000
Class II: No bid.	

PUSEY & JONES CORPORATION, WILMINGTON, DEL.

(Bid in duplicate; bond for $50,000)

Class I:	
1 destroyer to be delivered at Wilmington, Del., and delivered at the Navy Yard, Philadelphia, Pa., within 26 months from date of contract for	2,895,000
No bid submitted for 2 destroyers.	
Class II: No bid.	

UNITED DRY DOCKS, INC., NEW YORK, N. Y.

(Bid in duplicate; bond for $75,000)

Class I:	
1 destroyer to be constructed at Mariners Harbor, Staten Island, N. Y., and delivered at the Navy Yard, New York, within 30 months from date of contract for	2,645,000
2 destroyers, 1 within 30 months and the other within 22 months from date of contract for	2,500,000
Class II (*a*):	
1 destroyer within 20 months from date of contract for	2,720,000
2 destroyers, 1 within 20 months and the other within 22 months from date of contract for	2,570,000
Class II (*b*):	
1 destroyer within 20 months from date of contract for	3,020,000
2 destroyers, 1 within 20 months and the other within 22 months from date of contract for	2,680,000
Class II (*c*):	
1 destroyer within 20 months from date of contract for	2,900,000
2 destroyers, 1 within 20 months and the other within 22 months from date of contract for	2,630,000

The following cost-plus contract is included in the record at the request of Senator Bone. See page 4551.

Nos. 1 to 5.

[Acts of August 29, 1916, and March 4, 1917]

CONTRACT FOR THE CONSTRUCTION OF BATTLE CRUISER OF ABOUT 35,000 TONS TRIAL DISPLACEMENT, NO. 3

CONTRACT, of two parts, made and concluded this Fifth day of May A. D. 1917, by and between the New York Shipbuilding Corporation, a Corporation formed under the Laws of the State of New York and doing business at Camden, in the State of New Jersey, represented by the president of said corporation, party of the first part (hereinafter called the contractor), and the United States, represented by the Secretary of the Navy, party of the second part (hereinafter called the department).

Whereas the acts making appropriations for the Naval Service for the fiscal years ending June 30, 1917 and 1918, approved, respectively, August 29, 1916, and March 4, 1917, authorized the construction of five battle cruisers; and

Whereas the drawings, plans, and specifications for such battle cruisers have been duly provided, adopted, and approved by the department; and

Whereas the Congress having declared by joint resolution, approved April 6, 1917, that war exists, between the United States and Germany, the President hereby places with the New York Shipbuilding Corporation, as an order under the provisions of said act of March 4, 1917, the requirement that it comply with the contract hereinafter set forth, to construct one of said vessels, complete in all respects, with the exceptions stated in the specifications, which vessel is for the purposes of this contract designated and known as Battle Cruiser No. 3.

NOW, THEREFORE, THIS CONTRACT WITNESSETH, That, in consideration of the premises and for and in consideration of the payments to be made as hereinafter provided, the contractor hereby covenants and agrees to and with the department as follows—that is to say:

First.—The contractor will make the necessary outlays in advance and construct, in accordance with the provisions of the acts of Congress above mentioned, and in conformity with the aforesaid drawings, plans, and specifications, including duly authorized changes therein, one first-class battle cruiser of about 35,000 tons trial displacement, and will deliver the vessel to an officer designated by the department at the contractor's works.

Second.—The construction of said vessel (the word vessel as used throughout this contract being intended to include everything covered by the drawings, plans, and specifications above referred to) shall conform in all respects to and with said drawings, plans, and specifications, including duly authorized changes therein, which are hereto annexed, and shall be deemed and taken as forming a part of this contract with the like operation and effect as if the same were incorporated herein. They contain information of a confidential character that can not be made public without detriment to the Government's interests and they are to be treated as confidential by the parties to this contract. No omission in the drawings, plans, and specifications of any detail, object, or provision necessary to carry this contract into full and complete effect, in accordance with the object and intent of the acts of Congress above referred to, shall operate to the disadvantage of the department, but the same shall be staisfactorily supplied, performed, and observed by the contractor, and compensation by reason of, or for, or on account of, such extra performance, shall be made to the contractor on the same basis as for the work performed in general under this contract; and it is hereby further provided, and this contract is upon the express condition, that the provisions of this contract, and the drawings, plans, and specifications aforesaid may be changed by the department, but no such changes shall be made when the cost thereof shall, in the execution of the work, exceed five hundred dollars ($500), except on the written order of the Secretary of the Navy.

Third.—The contractor shall furnish all the special-treatment and nickel-steel material and the bolts, rivets, butt straps, and accessories required in the construction of the vessel as shown and described in detail in the plans and specifications. The department shall furnish all the armor plates and armor bolts to be used in the construction of the vessel, including such as may be required in the construction of the side and athwartship armor, turrets, barbettes, casemates, uptakes, fire-control tower, conning tower, and armored tube. The contractor shall, as rapidly as possible, and within the periods of time prescribed by the specifications, furnish working drawings and templates, subject to the approval of the Secretary of the Navy, showing the dimensions and shape necessary for the proper manufacture of each and every armor plate herein agreed to be furnished by the department; the armor plates furnished by the department shall be trimmed to the drawing and template sizes and shapes, within reasonable manufacturing limits, as set forth in the armor specifications, and drilled and tapped for all armor bolt holes therein, as shown by the said approved drawings and templates; each group of the armor will be delivered with the armor bolts at the shipyard of the contractor within the time prescribed for such group in the specifications, the contractor to receive all armor and other material to be delivered by the department whenever delivered and whether or not the work is ready for its installation; and the contractor shall furnish all rivets and other fastenings, and drill, tap, and fit all holes for rivets and other fastenings used to connect any part of the hull framing to the armor for constructive purposes, except as hereinbefore mentioned, and properly fit, fix, place, and secure to the vessel all the armor, as required by the aforesaid drawings, plans, and specifications, and the standard practice in vogue at the date of this contract.

The armament and ordnance outfit complete will be supplied by the department, but will be installed by the contractor in accordance with the specifications.

The department does not guarantee to deliver the armor in advance of the times stated in the specifications, nor the ordnance and other articles furnished by it in advance of such times as are necessary to permit the orderly completion of the vessel as a whole; but should the contractor advance the general progress the department will use its best endeavers to expedite the delivery of the armor and ordnance correspondingly: *Provided*, That it shall be optional with the department to omit the installation of any parts of the turret armor or the ordnance in other parts supplied by the department but required to be installed by the contractor and the vessel shall then be completed in all respects not involved in the omission of such installations.

Fourth.—The materials to be used in the construction of the vessel shall be of the quality and characteristics best adapted to the various purposes for which they may be used and shall conform to the specifications for inspection of material for use in the construction of the hulls and the machinery of vessels for the United States Navy, approved by the Secretary of the Navy, which specifications are annexed to and form a part of this contract. The materials and workmanship used and applied in the construction of the vessel in details and finish in all their parts shall be first class and of the very best quality and shall, from the beginning to the end of the work, be subject to the inspection of the Secretary of the Navy, who may appoint suitable inspectors to whom the contractor shall furnish such samples of said materials, and such information as to the quality thereof and the manner of using the same as may be required, and also any assistance such inspectors may require in determining the character of workmanship applied and the weight and quality of steel and other metals, and of wood and other materials, either used or intended for use in the construction of the vessel, its fittings, equipments, machinery, devices, appliances, or appurtenances, and that the inspectors may with the approval of the said Secretary, peremptorily reject any unfit workmanship or material, or forbid the use thereof. The inspectors shall at all times during the progress of the work have full access thereto, and the contractor shall furnish them with full facilities for the inspection and superintendence of the same

Fifth.—The contractor will prepare such plans or drawings as may be necessary during the progress of the work, and will submit the same to the department for its approval as required by the specifications before the work is begun. In addition, such finished plans as are required by the specifications are to be furnished. If required by the department, the contractor shall furnish Vandyke and other prints of plans and schedules of the vessel for use in the construction of a similar vessel in a navy yard, the contractor to be reimbursed on the same basis as for other work performed in general under this contract.

Sixth.—Said vessel and all materials and appliances provided, by either the contractor or the department, for and used, or to be used, in the construction thereof shall be kept duly insured against fire and marine risks, settling of stocks, breakage of ways, and risks of launching, which insurance shall be renewed and increased, from time to time, by the contractor, until the delivery of the vessel, the loss, if any, to be stated in the policies as payable to the Secretary of the Navy; the insurance to be effected in such manner and in such companies as shall be approved by him, and in an amount to be fixed, from time to time, by him, not exceeding the sum of the payments made under this contract plus the sum of $500,000 to cover the materials and appliances supplied by the department: *Provided*, That the amount of insurance required shall at no time exceed the amount available in the insurance market.

Seventh.—Unless prevented by strikes, the work under this contract shall be prosecuted at all times with the utmost vigor and dispatch, without interruption for any cause within the control of the contractor, and the number and class of men engaged on the contract, and the hours of work, subject to the limitations in the fourteenth clause shall be subject to the approval and direction of the department, provided that not more than 70 percent of the force of the plant distributed in a normal way and engaged on new construction shall be required to work on this and other naval vessels building. It is understood that the contractor proposes to extend its present plant and to add to its present facilities especially for the purpose of carrying out this contract, and that it is to be specially compensated therefor as hereinafter provided for, but the contractor will not be required to build a dry dock capable of accommodating this vessel.

Eighth.—The contractor will notify the department thirty days beforehand of the date of launching, so that a sponsor for the vessel may be selected, but this stipulation does not impose on the contractor any obligation to provide entertainment or to incur any similar expense in connection with the launching.

Ninth.—Said vessel shall be sufficiently strong to carry safely her personnel and the armor, armament, ammunition (including torpedoes and their appendages), equipment, fuel oil, stores, and machinery prescribed by the Secretary of the Navy and indicated in the drawings, plans, and specifications, but the contractor is not hereby required to accept responsibility for the general strength of the vessel necessarily involved in the general design and specifications. The total weight of said machinery, including engines, boilers, and appurtenances, all fixtures in engine and boiler rooms, smoke pipes, distilling apparatus, spare parts, heating apparatus, tools in workshops, etc., and water in boilers, condensers, evaporators, feed tanks filled to two-thirds their full capacity, pumps, pipes, and stern tubes—that is to say, all weights under cognizance of the Bureau of Steam Engineering, as set forth in the weight instructions, Navy Department, Bureau of Steam Engineering, 1903, modified as may be required for the type of machinery finally adopted, except supplies furnished by the Government (but not including the reserve feed water in double bottoms or tanks or spare parts of the machinery not usually carried on board, as enumerated in the specifications)—also including electric plant complete, with all spare parts, shall not exceed 6,500 tons; this total weight to be determined from the certified records of the actual weights of the parts of the machinery as they are sent on board the vessel to be connected up, except the weight of the contained water, which shall be calculated from the actual volumes in steaming condition, as shown on the certified drawings of the completed machinery; the weight to be calculated for salt water, except for those parts where fresh water only is used. If said total weight be exceeded, a deduction of two hundred dollars ($200) a ton shall be made from the reserve to be held by the department as hereinafter provided for each ton in excess of that stipulated and if said total weight be exceeded by 5 per cent a further deduction of ten thousand dollars ($10,000) shall be made from the said reserve. If said total weight is less than 6,100 tons, a bonus of two hundred dollars ($200) a ton shall be paid by the department for each ton of weight below that stipulated, and if said total weight be less by 5 per cent a further bonus of ten thousand dollars ($10,000) shall be paid to the department, all subject to the limitation in amount given in Clause eleventh.

The total weight of auxiliary machinery covered by the plans and specifications of hull shall not exceed five hundred and eight-five (585) tons, said machinery including the following: Steering gear, including hydraulic rams, connecting rods, pins, stern tubes, motors, pumps, speed gears, motor attachments, transmission shafting, bearings, and bedplates; anchor windlass and bedplate, with electric-motor attachments; electric machinery for boat cranes, including motors, controllers, pinions, shafting, drums, and gears, but excluding turning rack; ammunition-handling machinery (exclusive of turret hoists), with motors, their bedplates, controlling panels, sprockets, chains, shafting, and gears, but excluding fixtures permanently attached to the hull structure; winches complete, with their bedplates and controllers; electric capstan complete, with bedplate and controller; ventilating motors, fans, and bedplates (including turret fans), with accessories complete; all electrically operated laundry appliances; electric pumps and bedplates, with their accessories; turret-turning machinery, including motors, bedplates, worms, variable-speed and other gears, shafting and accessories, but excluding racks on turret foundations. All the foregoing auxiliary machinery is to include bedplates, stands, controllers, attachments, also all accessories usually supplied by subcontractors therefor and electrical and other spare parts in accordance with the requirements of the specifications and allowances. If said total weight be exceeded, a deduction of two hundred dollars ($200) a ton shall be made from the said reserve for each ton in excess of that stipulated. If said total weight is less than 560 tons a bonus of two hundred dollars ($200) a ton shall be paid by the department for each ton of weight less than that stipulated; all subject to the limitation in amount given in Clause 11.

Tenth.—When the machinery is substantially complete, except minor items of work that may, in the discretion of the Secretary of the Navy, be left unfinished, the contractor shall make trials at partial power at dock to demonstrate such reasonable performance as may be required by the Secretary of the Navy.

After these dock trials have been completed the machinery shall be opened for such examination as the Secretary of the Navy may direct. Any defects or deficiencies that appear will be corrected as directed by the department, after which the machinery shall be closed and reconnected ready for service.

The contractor shall be compensated for these trials and for all work required therefor and consequent thereupon on the same basis as herein provided for the work generally to be performed under this contract.

After delivery, as herein provided for, and prior to the expiration of six months therefrom, the vessel (with clean bottom, clean boilers, and machinery in good adjustment) shall be subjected to trials by and at the expense of the department to test her and her speed, such trials to be as prescribed by the Secretary of the Navy and to include the following, viz:

(*a*) A progressive trial over a measured mile course in water not less than 100 fathoms deep for standardizing the screws, extending from maximum speed down to a speed of nine (9) knots; about twenty-nine runs to be made over the course in order to adequately cover the range of speed desired. This progressive trial is to be made with the vessel weighted as specified hereinafter.

Five consecutive runs must be made at the highest speed attainable and the mean speed and revolutions for these runs carefully ascertained, and three consecutive runs must be made at each of the following speeds, as nearly as possible: Thirty-two and one-half (32½) knots, thirty (30) knots, twenty-eight (28) knots, twenty-six (26) knots, twenty-two (22) knots, seventeen (17) knots, twelve (12) knots, and nine (9) knots; the mean speed and revolutions for the several groups of runs to be carefully ascertained by the trial board, in order to determine the curve of speed and revolutions, the vessel to be so weighted that the middle run at the maximum speed will take place, as nearly as may be, at the mean trial displacement specified hereinafter.

(*b*) A full speed endurance and fuel-oil consumption trial of four hours' duration in the open sea in deep water at the highest speed attainable, the power developed by the propelling machinery of the vessel upon this trial, is estimated to be not less than an average of 180,000 shaft horsepower, to be determined by approved torsion meters connected to the shafting abaft the propelling motors and thrust bearings. The torsion meter readings shall be compared and checked with the electrical input and motor characteristics and constants. During this trial the steam pressures in the boilers, piping, and generator turbine steam chests shall not exceed those stated in the machinery specifications. This full-speed trial is to be made with the vessel weighted as specified hereinafter.

(*c*) An endurance and fuel-oil consumption trial of four hours in the open sea in deep water at an average uniform speed of thirty (30) knots as nearly as possible; the vessel to be weighted as specified hereinafter.

(*d*) An endurance and fuel-oil consumption trial of four hours in the open sea in deep water at an average uniform speed of about twenty-five or about twenty-six knots, at the option of the contractor; the vessel to be weighted as specified hereinafter.

(*e*) An endurance and fuel-oil consumption trial of four hours in the open sea in deep water at a speed of about nineteen (19) knots as nearly uniform as possible; the vessel to be weighted as specified hereinafter.

(*f*) An endurance and fuel-oil consumption trial of four hours in the open sea in deep water at an average uniform speed of sixteen (16) knots as nearly as possible; the vessel to be weighted as specified hereinafter. This trial shall be made as nearly as possible under service cruising conditions.

(*g*) A fuel-oil consumption trial of four hours in the open sea at an average uniform speed of ten (10) knots as nearly as possible; the vessel to be weighted as specified hereinafter. This trial should be made as nearly as possible under service cruising conditions.

(*h*) Trials will be conducted to determine the ability of the vessel when going ahead at full speed to back satisfactorily, the minimum torque of the motors during reversal shall be at least equal to that required to obtain full speed ahead; to determine the time required to bring the vessel dead in the water, and the distance ahead reached when steaming at full speed; to test the steering gear, both when going ahead at full speed and when backing at progressively increasing speeds until the rudder torque for backing equals the go-ahead torque under full speed; and to test the anchor gear.

On trials *b*, *c*, *d*, *e*, *f*, and *g*, there shall be carefully determined and recorded the fuel-oil consumption for all purposes and the amounts of water required to be used for make-up feed and the amount of steam consumed by the main turbines. All necessary auxiliaries shall be in operation, including all those usually required under service cruising conditions, and especially such dynamos as may be necessary for efficiently lighting the vessel and operating at their normal speed the hull ventilating fans; the evaporating and distilling plant will be in operation on each trial, except trial *b*, to produce 1,050 gallons of fresh water per hour. The pumping system and forced-draft air system will be operated as required. The steam consumption of the main turbines will be ascertained in the following manner: On all trials one main turbine shall be operated on live steam only—that is, without any auxiliary exhaust steam being admitted to its casing—and its steam consumption will be measured for one hour.

During the last three hours of all trials part of the auxiliary exhaust may be used in the main turbine casings and the fuel-oil consumption will be measured.

On all the above trials there shall be observed and recorded by representatives of the trial board such additional data as may be considered by the board to be of professional interest.

The department will supply special revolution counters and will test the torsion apparatus provided by the contractor at its works on the shafts before installation on the ship, as necessary for the purpose of determining the accuracy of the torsion apparatus and the shaft horsepower on each trial, but the contractor will furnish the torsion apparatus and all labor and material necessary for the installation of all apparatus furnished by the department, and for the tests of the shafts. The contractor will provide, and install, if required, temporary tanks, piping, and all connections in such manner as may be prescribed by the Secretary of the Navy for ascertaining the fuel-oil and water consumptions, and all other appliances and apparatus necessary to ascertain the horsepower on each trial and the fuel-oil, make-up feed, and water consumptions on each of trials *b*, *c*, *d*, *e*, *f*, and *g*.

On trial *b* the horsepower developed by the propelling machinery shall not be less than an average of 165,000 shaft horsepower.

The fuel oil and lubricating oil used on all trials shall be in accordance with the United States Navy specifications for such oils. The consumption of fuel oil for all purposes on trials *c*, *d*, *e*, and *f*, including that necessary for all auxiliaries in use on the trials, shall not exceed for each nautical mile run 3,300 pounds at 30 knots; 2,765 pounds at 26 knots, or 2,600 pounds at 25 knots; 1,555 pounds at 19 knots; 1,410 pounds at 16 knots; the consumption of fuel at these speeds to be determined by the trial board from a curve based on the rate of fuel oil consumed on trials *b*, *c*, *d*, *e*, *f*, and *g*, and corrected to a standard of 19,500 B. T. U. per pound of fuel oil. Samples of the fuel oil used on each of these trials shall be taken by the trial board, who shall have such analysis and determinations of calorific value of a composite thereof made as are necessary in reducing the fuel-oil consumptions to a basis of 19,500 B. T. U. per pound.

The mean trial displacement of the vessel shall be that corresponding to the vessel complete with all permanent and portable fittings of every kind, with all machinery and all auxiliaries, both steam and electric, piping, tools, spare parts, etc., complete, as usually carried on board in service; with outfits of all kinds complete and two-thirds of the full supply of all stores, as furnished by the contractor under the contract and specifications, with 2,133 tons of fuel oil; with 500 tons of reserve feed water for steaming purposes; with 120 tons of fresh water for drinking purposes, and with the following items furnished by the department: Battery, complete, including torpedo tubes, guns, mounts, etc., 1,650 tons; ammunition, including torpedoes, designed full supply, 1,221 tons; electrical outfits furnished by the department (Bureau of Steam Engineering), 172 tons; equipment furnished by the department, including anchors, chains, hawsers, canvas outfit, galley and mess equipment, navigation instruments, etc., 274 tons; outfits furnished by the department, including boats, aeroplanes and launching machinery, furniture, blocks, etc., 134 tons; supplies and stores furnished by the department, 354 tons; officers, crew, and effects, 168 tons. Should the vessel not be provided at the time of the trials with all the actual parts or objects forming the total weight as above enumerated, suitable ballast shall be put by the department in such positions as may be directed to make up the weights to the total amount required to be carried by the vessel as aforesaid. Should any part of the vessel, her outfit, and stores to be furnished by the contractor be not completed at the time of the trials, ballast will be placed on board in suitable positions to represent the weight of such unfinished parts as have hot been placed on board the vessel. The weights of all temporary installations for purposes of trials, including tanks, piping, etc., for determining the fuel-oil and water consumptions will be considered as part of the ballast weights. Should the vessel as prepared for trial with the above-enumerated weights exceed the designed displacement, on trial, of the department's design, the department will run the trials at such increased displacement: *Provided*, That if any changes in the plans or specifications are proposed and executed by the department, resulting in a net increased weight, deduction from the amount of ballast or fuel oil required to be carried on trial shall be made equivalent to the net increased weight of such changes.

The displacement at the beginning of each trial shall be the above-defined mean trial displacement, plus one-half of the estimated fuel oil, water, and other consumables necessary for the trial.

If at and upon said trials there shall be any failure of the vessel to meet fully the requirements of this contract, the department will make further trials at its expense, sufficient in number to reasonably demonstrate her capacilities: *Provided*, That the number of trials shall be determined and limited by the Secretary of the Navy.

Provided that all the foregoing guaranties and each and every other guaranty contained in any section of this contract relating to the performance of machinery are dependent upon the complete performance by the manufacturers of the electric-propelling machinery of each and every one of their written undertakings, understandings, guaranties, and assurances to the department: *And provided further*, That the above guaranties of fuel-oil consumption are based upon an evaporative efficiency of the boilers as follows: When burning oil at the rate of one pound of oil per square foot of heating surface per hour, the equivalent evaporation from and at 212 degrees Fahrenheit, per pound of oil, shall equal or exceed 14.0 pounds of water per pound of oil; when burning oil at the rate of 0.5 of a pound of oil per square foot of heating surface per hour, the equivalent evaporation from and at 212 degrees Fahrenheit, per pound of oil, shall equal or exceed 15.2 pounds of water per pound of oil; when burning oil at the rate of 0.4 of a pound of oil per square foot of heating surface per hour, the equivalent evaporation from and at 212 degrees Fahrenheit, shall equal or exceed 15.4 pounds of water per pound of oil. The evaporative efficiency shall be determined by tests on an 8,250 square foot total heating and superheating surface White-Forster boiler to be installed and tested at the navy yard, League Island. Should the tests of this boiler show an evaporation less than that given above, the guaranties of furl-oil consumption will be changed proportionately to the actual evaporative efficiency on test. The performance will be reduced to a basis of oil having 19,500 B. T. U. per pound.

Eleventh.—If, at and upon the trials beforementioned, the guaranties specified be not fulfilled there shall be deductions from the reserve as follows: On trial *b*, at a rate of ten dollars ($10) per horsepower for each shaft horsepower below one hundred and sixty-five thousand (165,000). On trial *c*, at a rate of sixty dollars ($60) a pound for the amount of excess on trial *c;* on trial *d*, at a rate of one hundred dollars ($100) a pound for the amount of excess on trial *d;* on trial *e*, at a rate of one hundred and fifty dollars ($150) a pound for the excess on trial *e;* on trial *f*, at a rate of one hundred and fifty dollars ($150) a pound for the amount of excess on trial *f: Provided, however*, That the total deductions for all trials shall not exceed one hundred and fifty thousand dollars ($150,000).

If, at and upon the trials beforementioned, the guaranties specified be more than fulfilled there shall be a bonus added to the reserve as follows: On trial *b*, at a rate of ten dollars ($10) per horsepower for each shaft horsepower in excess of one hundred and eighty thousand (180,000). On trial *c*, at a rate of sixty dollars ($60) a pound for each pound of oil less than 3,020 pounds per knot; on trial *d*, at a rate of one hundred dollars ($100) a pound for each pound of oil less than 2,440 pounds per knot at 26 knots, or at a rate of one hundred dollars ($100) a pound for each pound of oil less than 2,300 pounds per knot at 25 knots; on trial *e*, at a rate of one hundred and fifty dollars ($150) a pound for each pound of oil less than 1,322 pounds per knot; on trial *f*, at a rate of one hundred and fifty dollars ($150) a pound for each pound of oil less than 1,146 pounds per knot: *Provided, however*, That the total bonus for all trials shall not exceed one hundred and fifty thousand dollars ($150,000).

In case of failure to fulfill the guaranties on certain trials and the earning of a bonus on other trials, the final amount of penalty or bonus to be awarded will be the difference between the total penalty of all trials and the total bonus of all trials, and neither of these totals shall be taken as more than one hundred and fifty thousand dollars ($150,000): *And provided also*, That the aggregate penalty, or bonus, for either overweight or underweight of main propelling machinery and hull auxiliaries, taken together, shall be limited to fifty thousand dollars ($50,000): *And provided also*, That if failure to attain the contract speed on any of the trials is clearly due to displacement in excess of 35,000 tons, the Secretary of the Navy shall have discretionary authority to make remission of penalties therefor that may be definitely attributable to such excess weights of hull and fittings as may be shown to have been entirely beyond the control of the contractor after exercising all practicable care and diligence in constructing the vessel in conformity with the plans and specifications, but such remission of penalty shall not be construed as giving any claim for bonus on trial performances.

On completion of the dock trials above mentioned, and when the vessel is substantially completed, except minor items of work that may, in the discretion of the Secretary of the Navy be left unfinished until after delivery, the vessel shall be delivered and shall thereupon be conditionally accepted, and the Department shall take possession of the vessel and shall be responsible for the safety thereof, and payment of all money due under this contract shall be made, subject, however, to a special reserve therefrom of $200,000, as provided for under paragraph 3 of the seventeenth clause of this contract.

In case of conditional acceptance of said vessel, the said special reserve of two hundred thousand dollars ($200,000) shall be held for a period of six months from the date such acceptance takes effect, provided that during said period the vessel may be tried, after being fully equipped, armed, or weighted correspondingly, and in all respects complete and ready for sea, under conditions prescribed or approved by the Secretary of the Navy, the expenses of such trials to be borne by the department.

If, at any time within six months after the conditional acceptance of said vessel any weakness, deficiency, defect, failure, breaking down, or deterioration in the vessel, other than that due to general design, vibration due to the propelling machinery, propellers or rudder, or to fair wear and tear, shall appear, the same shall be corrected and repaired to the satisfaction of the Secretary of the Navy, at the expense of the contractor: *Provided*, That the department may postpone such trials until after the expiration of said period, or may thereafter subject the vessel to other similar trials, if such course shall be advisable on account of the exigencies of service in war or on account of repairs or alterations, required by defects or deficiencies for which the contractor is responsible, developed within said period, and the settlement of penalties and bonuses dependent on such trials shall be correspondingly postponed, but such balance of the special reserve of two hundred thousand dollars ($200,000) as may be found due the contractor by the Secretary of the Navy shall be paid. The contractor may, if it so desires, have representatives of its own selection on board said vessel at any time during said period, or during subsequent trials, who shall have full opportunity to observe and inspect the working of the vessel in all its parts, but without any directing or controling power over the same, and in case such representatives shall be civilians, their compensation and expenses shall be paid by the contractor and reimbursed by the department.

If, on the expiration of six months from the date of conditional acceptance of the vessel or on the conclusion of all trials the department may deem it advisable to make after the expiration of said period, there shall appear no weakness, deficiency, defect, failure, breaking down, or deterioration, in her, other than that due to general design, vibration due to the propelling machinery, propellers or rudder, or to fair wear and tear, then she shall be finally accepted, and the said special reserve and net bonuses or penalties earned paid, less such deductions as may be made under the provisions of this contract: *Provided, however*, That the collective liability of the contractor for the breach of guaranties and agreements as to material, workmanship, and performance contained anywhere in this contract shall be limited to one hundred and fifty thousand dollars ($150,000), and penalties and deductions provided for in this contract shall not in the aggregate exceed this amount.

The total bonus for trial performances and weight of machinery shall not exceed, in the aggregate, one hundred and fifty thousand dollars ($150,000). Bonus shall be payable as soon as practicable after completion of trials.

The contractor shall be informed of all defects and deficiencies discovered during said period for which it is held responsible, and the decision of the Secretary of the Navy as to the responsibility of the contractor for such defects and deficiencies shall be final and binding on the parties to this contract. The actual cost of making good all defects and deficiencies for which the contractor is held responsible shall be deducted from the payment to be made in final settlement under this contract: *Provided*, That in order to expedite such final settlement, if the work of remedying any of the reported defects shall not have been undertaken within six months from the conditional acceptance of the vessel, the estimated cost of making good such defects shall be ascertained and determined by the compensation board and deducted in lieu of the actual cost of such items in final settlement, as aforesaid.

The department having received designs, plans, specifications, assurances, and guaranties of the electric propelling machinery direct from the manufacturers, which it finds satisfactory, has communicated the same to the contractor and has required the contractor to purchase the same and to install it: *Provided, however,* That, notwithstanding the language of any section of this contract to the contrary, the obligation of the contractor shall not extend further with respect thereto than to properly install the same and run satisfactory dock trials.

Twelfth.—In case of the failure or omission of the contractor at any stage of the work prior to its completion, not due to strikes or any other cause or causes beyond its control, to go forward with the work and make satisfactory progress toward its completion, the department may declare this contract forfeited. In case such forfeiture shall be declared, the title to said vessel, or so much thereof as shall have been completed, and to all materials on hand applicable thereto, shall forthwith vest in the department; and the department may immediately enter the works and premises of the contractor and take possession of said vessel and materials. The Secretary of the Navy shall thereupon cause to be taken and filed a full and complete statement and inventory of all work done or begun in, upon, or about said vessel, and of all materials purchased therefor by a board consisting of not less than five persons, qualified by knowledge and experience for the discharge of their duties, to be appointed by the Secretary of the Navy which board shall proceed without unnececssary delay to examine such work and materials, and upon such examination the contractor may attend, by representative, and if it so desires, by counsel, and submit such evidence as the board may deem proper.

Thirteenth.—On receipt of the report and inventory of said board, and on its approval thereof, the department may proceed with the completion of said vessel in accordance with this contract, either at the works of the contractor or elsewhere, by contract or otherwise, in its discretion, using for that purpose all suitable materials on hand, and included in the inventory aforesaid, and may remove said vessel and materials to such other place or places as may be requisite to the exercise of such discretion, and the contractor, on receiving notice of the intention of the department to proceed with the completion of the work, will surrender said vessel and all materials on hand, together with the use, if required, of the yard or plant, and all machinery, tools, and appliances appertaining thereto and theretofore used, or necessarily to be used, in and about the finishing of the work.

Upon final settlement of the liability of the contractor under this contract it shall be charged with such penalties or credited with such bonuses as may be earned under the various clauses providing for such penalties or bonuses and shall be paid such amounts for accrued but unpaid parts of item (*a*), and under items (*b*), (*c*), (*d*), and (*e*) of paragraph 1 of the seventeenth clause of this contract together with such allowances for adjustment of special rental provided for under paragraph 7 of the seventeenth clause as shall be determined by the compensation board.

Fourteenth.—Subject to the conditions enumerated in section 2 of the eight-hour law of June 19, 1912, no laborer or mechanic doing any part of the work contemplated by this contract, in the employ of the contractor or any subcontractor contracting for any part of said work contemplated, shall be required or permitted to work more than eight (8) hours in any one calendar day upon such work. For each violation of this provision a penalty of five dollars ($5) shall be imposed for each laborer or mechanic for every calendar day in which he shall be required or permitted to labor more than eight (8) hours upon said work, and the amount of any such penalties shall be withheld for the use and benefit of the United States from any moneys becoming due under this contract, whether the violation of this provision is by the contractor or any subcontractor: *Provided, however,* That if Executive Order No. 2554, of March 22, 1917, wherein the President declares as follows, viz:

"In order to enable the Navy Department to meet the requirements of law to secure the more expeditious construction of ships and procurement of munitions authorized, and by virtue of the authority vested in me by the provisions of the act of Congress approved March 4, 1917, entitled 'An act making appropriations for the naval service for the fiscal year ending June thirtieth, nineteen hundred and eighteen, and for other purposes,' whereby it is provided 'That in case of national emergency the President is authorized to suspend provisions of law prohibiting more than eight hours labor in any one day of persons engaged upon work covered by contracts with the United States: *Provided further,* That the wages of persons employed upon such contracts shall be computed on a basic day rate of eight hours, with overtime rates to be paid for at not less than time and one-half for all hours work in excess of eight hours,' I do hereby authorize the suspension of the provisions of law prohibiting more than eight hours of labor in any one day of persons engaged in such work under contract with the Navy Department in all navy yards and private establishments where such suspension of the provisions of the law will result in hastening preparation to meet present emergency conditions." Shall be made applicable to work under this contract and that if overtime work is authorized under the terms of this or other act, the hours of such overtime shall be subject to the approval and direction of the department.

Fifteenth.—This contract shall not, nor shall any interest therein, be transferred by the contractor to any other person or persons, and in the performance of this contract, no person shall be employed that is under sentence of imprisonment at hard labor.

Sixteenth.—No Member of or Delegate to Congress, officer of the Navy, nor any person holding any office or appointment under the Navy Department, is or shall be admitted to any share or part of this contract, or to any benefit to arise therefrom; but this stipulation, so far as it relates to Members of or Delegates to Congress, shall not be construed to extend to this contract, it being made with an incorporated company.

Seventeenth.—The department in consideration of the premises does hereby contract, promise, and engage to and with the contractors as follows:

1. The price to be paid for the vessel to be constructed and furnished in accordance with this contract, including authorized changes therein, shall be the actual cost, plus 10 percent for profit. For the purpose of this contract actual cost shall be generally as defined in the revenue bill approved September 8, 1916, section 302, in so far as the requirements of said revenue bill are applicable to and not inconsistent herewith. The accounts and records of the contracts appertaining to this work shall be open at all times to the department and its representatives, and such statements and returns relative to the expenditures shall be made as are directed by the department. No change shall be required in the present methods and principles of keeping costs, provided the department finds them adequate for the determination of actual costs. All information obtained from the contractors' accounts and records shall be treated as confidential.

The actual cost shall include the following, and items similar thereto in principle:

(*a*) The cost of labor and materials, machinery, equipment, and supplies entering into or expended in the manufacture, building, or construction of the vessel, and other direct charges, such as insurance on the vessel, etc.

(*b*) A proper proportion of running expenses, including ordinary rentals, cost of repairs and maintenance, light, heat, power, insurance, management, salaries, and other indirect charges.

(*c*) A proper proportion of interest accrued within the taxable year on bonds or other debts or loans, contracted to meet the needs of the business and the proceeds of which have been actually used to meet such needs.

(*d*) A proper proportion of taxes of all kinds accrued during the taxable year with respect to the business or property.

(*e*) A proper proportion of physical losses actually sustained within the taxable year in connection with the business, including losses from fire, flood, storm, riot, vandalism, any acts of God, acts of war, or other casualties, and not compensated for by insurance or otherwise, and a proper proportion of a reasonable allowance for losses and damages resulting from displacement of or delay in work contracted for prior to the date of this contract caused by or contributed to by work under emergency conditions performed by the contractor for the department.

(*f*) A reasonable allowance, according to the conditions, for depreciation of values of plant and property. Exceptional depreciation of extensions, increases, and additions to plant and property specially acquired for or devoted to the manufacture or erection of the work or the construction of the vessel under this contract will be accounted for in payments under the item special rentals provided for in paragraphs 3 and 7 of this clause.

2. The contractor shall use every endeavor to obtain the materials, machinery, equipment, appurtenances, supplies, etc., under this contract at the lowest possible prices, and shall in no case pay higher prices than required by the existing market conditions nor higher prices than are or would be paid for similar materials, etc., purchased at the same time and under like circumstances and conditions for other work in progress in the yard. Specifications and guaranties of all materials, machinery and equipment, and the agreements under which such are purchased

shall be subject to the approval of the department, and orders, prices, and awards shall be subject to the approval of the compensation board.

3. Higher rates of pay for day's labor shall not be allowed under this contract than are paid for similar work in progress in the contractor's yard: *Provided*, That nothing herein shall be construed to prevent the contractor from assigning work in divisions or pieces at prices or rates considered reasonable according to its present practice. Payments shall be made by the department monthly within fifteen (15) days after submission of bills to cover the approved actual cost for the previous month, as defined under items (*a*) to (*f*); inclusive, together with a sum equal to ten percent thereof, and the special rentals for additional plant and equipment provided for in paragraph 7 of this clause. The reservation of $200,000 called for under the eleventh clause of this contract shall be withheld from the last of said monthly payments as shall be determined by the compensation board. The parts of the vessel paid for under the system of partial payments above specified become thereby the sole property of the United States.

In the event that for any cause not due to the default of the contractor, the partial payments herein provided for shall cease, the contractor shall have the right to discontinue work upon the said vessel and shall be relieved of its liability for such discontinuance of work under the contract without prejudice to any of its rights hereunder.

4. No payments shall be made except upon bills in quadruplicate certified by the proper inspectors of the vessel, in such manner as shall be directed by the Secretary of the Navy, whose final approval of all bills thus certified shall be necessary before payment thereof.

5. All warrants for payments under this contract shall be made payable to the contractor or its order.

6. When a payment is to be made under this contract, as a condition precedent thereto, the Secretary of the Navy may, in his discretion, require evidence satisfactory to him, to be furnished by the contractor, showing what, if any, liens or rights in rem of any kind against said vessel, or her machinery, fittings, or equipment, or the material on hand for use in the construction thereof, have been or can be acquired for or on account of any work done, or any machinery, fittings, equipment, or material already incorporated as a part of said vessel, or on hand for that purpose; but it is whereby further stipulated, convenanted, and agreed, by the contractor for itself and on its own account and for and on account of all persons, firms, associations, and corporations furnishing labor and materials for said vessel, and this contract is upon the express condition that no lien or rights in rem of any kind shall lie or attach upon or against said vessel or her machinery, fittings, or equipment, or the materials therefor, or any part thereof, or of either, for or on account of any work done upon or about said vessel, machinery, fittings, equipment, or materials, or of any materials furnished therefor or in connection therewith, nor for or on account of any other cause or thing or of any claim or demand of any kind, except the claims of the department.

7. For the determination of the actual cost as defined above a "compensation board" composed of not more than six nor less than three officers of the Navy shall be appointed by the Secretary of the Navy. This board shall ascertain, estimate, and determine the actual cost in accordance with the seventeenth clause hereof, and the decision of said board or a majority thereof shall be binding on both parties to the contract, subject to the approval of the department. Wherever possible it will lay down in advance the methods to be followed in estimating and determining the actual cost, and where this cannot be done it will act within three months of the date of the receipt thereof on any claim submitted by the contractor. It will determine the methods to be followed by the contractor in preparing bills and by the inspectors in certifying to them, and will determine the items which must be referred for its decision.

It will determine a fair special rental to be allowed the contractor for the use of such additional plant and equipment as must be provided for and used in the carrying out of this contract, such rental to be determined monthly, so nearly as may be to recompense the contractor not to exceed fifty percent of the actual cost of such additional plant and equipment, when and as the expenditures therefor are made: *Provided*, That at the close of the contract the compensation board will then estimate, ascertain and determine the value to the contractors of such additional plant and equipment at that time, taking account of all the circumstances, such as additional use made of said additional plant and equipment during the period of the contract, the condition of the shipbuilding business, the desirability of such equipment at that time in carrying on the business, its first cost as compared with the first cost in a normal material and labor market, its replacement value at the time when said determination is being made.

In cash the special rental that has been allowed from time to time during the period of the contract does not equal the difference between the first cost of said additional plant and equipment and the value as ascertained at the close of the contract for said additional plant and equipment, the department will pay to the contractor a sum equal to said difference. In case the special rental that has been allowed from time to time during the period of the contract is in excess of the difference between the first cost of said additional plant and equipment and the value as ascertained at the close of the contract, the department will deduct from the final payments and reserve due the contractor a sum equal to said difference: *Provided,* That no special rental shall be paid for any such additional plant and equipment whose installation shall not have been passed upon and approved by the compensation board.

8. When all the conditions, convenants, and provisions of this contract shall have been performed and fulfilled by and on the part of the contractor, it shall be entitled, within 10 days after the filing and acceptance of its claim, to receive the said special reserve or so much thereof as it may be entitled to, together with the net bonuses or penalties earned, on the execution of a final release to the department, in such form and containing such provisions as shall be approved by the Secretary of the Navy, of claims against the United States arising under or by virtue of this contract. But it is understood that matters forming elements of price or cost under this contract, when in dispute between the contractor and third persons, shall be excepted from the operation of said release: *Provided, however,* That the contractor may at any time be required by the Secretary of the Navy to settle any such demands upon a decision of the compensation board on the matters in dispute.

Eighteenth.—If any doubts or disputes arise as to the meaning of anything in the contract, drawings, plans, or specifications, or if any discrepancy appear between said drawings, plans, or specifications and this contract, the matter shall be referred at once to the Secretary of the Navy for determination; and his decision in the premises shall be conclusive and binding upon the parties hereto: *Provided,* That both parties hereto shall have the right of appeal to the President of the United States.

IN WITNESS WHEREOF the respective parties hereto have hereunto set their hands and seals the day and year first above written.

SIGNED AND SEALED IN THE PRESENCE OF—

NEW YORK SHIPBUILDING CORPORATION,
SAML M. KNOX, *President,*
THE UNITED STATES, by F. D. ROOSEVELT,
As Acting Secretary of the Navy.

Attest:

J. T. WICKERSHAM, *Secretary.*
D. W. T.
R. S. G.
GRAHAM EGERTON, *Solicitor,*
As to F. D. Roosevelt, Acting Secretary of the Navy.

[COPY]

OCTOBER 11, 1920.

Subject: Battle Cruiser No. 3, U. S. S. *Saratoga;* changes under the contract.

NEW YORK SHIPBUILDING CORPORATION,
Camden, New Jersey.

GENTLEMEN: 1. The Department has received your letter of October 7, 1920, proposing as changes under the contract for Battle Cruiser No. 3, U. S. S. *Saratoga,* the following:

"(*a*) Changes set forth in the revised plans and specifications which have now been received.

"(*b*) A change in the seventeenth section of such contract by which the price to be paid for such vessel, including authorized changes therein, shall be the actual cost, as defined in such contract, from the beginning, plus a fixed fee for profit of two million dollars ($2,000,000) instead of actual cost, as therein defined, plus ten percent (10%) for profit. Such fixed fee shall include all profits heretofore paid under such contract. Payment of the fixed fee shall be made monthly at the rate of ten percent (10%) of the cost, until such payments shall equal one million eight hundred thousand dollars ($1,800,000). The balance, two hundred thousand dollars ($200,000) of such fixed fee as to such vessel shall constitute the special reserve of two hundred thousand dollars ($200,000) provided in such contract.

"(c) In case changes in such vessel involving increased costs are authorized after this date, the definite compensation, above fixed, shall be increased in the same proportion as the cost of the changes bears to the cost of the vessel, exclusive of such changes.

2. The Department hereby accepts your proposal and approves the changes set forth in paragraph one above as changes under its contract #352, dated May 5, 1917, for the construction of Battle Cruiser No. 3, U. S. S. *Saratoga.*

3. The Department will, by separate correspondence, communicate with you relative to changes as to the trial requirements.

Very respectfully,

GORDON WOODBURY,
Acting Secretary of the Navy.

The following information was supplied by the Navy Department in connection with Mr. Parker's testimony. (See text, p. 4598.)

DEPARTMENT OF THE NAVY,
OFFICE OF THE SECRETARY,
Washington, February 2, 1935.

Hon. W. WARREN BARBOUR,
United States Senate, Washington, D. C.

MY DEAR SENATOR BARBOUR: This is to acknowledge receipt of your letter of January 24, 1935, and to supply you with the information which you requested therein.

It is noted in the transcript of testimony which you forwarded to me that mention is made of the sum of $377,000, which is, as I understand it, a sum of money which was included as a part of the cost of battle cruiser *No. 3*, this cost being income taxes.

The Navy Department has no knowledge of this sum of money, for the records here appear to indicate that income and excess-profits taxes were never allowed to be included as elements of cost for vessels building for the Navy Department under cost-plus contracts.

The contract for battle cruiser *No. 3* was signed as of date May 5, 1917, and included therein a provision of the items which would be permitted to be charged as part of the cost of the vessel; the essential features of title III, section 302, of the Revenue Act of September 8, 1916, were used as a basis for establishment of these elements.

The contract for this vessel was made pursuant to congressional authority given in the Naval Appropriation Act approved August 29, 1916.

With particular reference to Mr. Parker's statement that it was absolutely necessary that his company charge all taxes to cost, I do not believe that much weight should be given to this, as it is obvious that the Navy Department would not want anything charged as a cost unless it was thought to be right.

On the date of May 5, 1917, the date of the signing of the contract for battle cruiser no. 3, the Navy Department issued a letter defining the duties of the Compensation Board which was set up for the administration of this and other contracts of a similar nature

This Board is still in existence and under date of February 31, 1935, it has reported to me as follows:

"Subject: Inquiry concerning income and excess-profits taxes—inclusion in costs of cost-plus contracts—New York Shipbuilding Co.

"Reference: Letter from Hon. W. Warren Barbour, dated January 24, 1935, to the Secretary of the Navy.

"Enclosures:

"A. List of contracts with New York Shipbuilding Co. for naval vessels, determination of cost of which was under the cognizance of the Compensation Board.

"B. Copy of Compensation Board's letter, no. 407–14,407, dated September 26, 1917, to Secretary of the Navy.

"C. Copy of Secretary of the Navy's letter, no 26529–80:2, dated January 24, 1918, to Compensation Board.

"D. Copy of letter of Bethlehem Shipbuilding Corporation, Ltd., to Secretary of the Navy, dated March 14, 1918.

"E. Copy of Compensation Board's letter, no. 407, dated April 13, 1918, to Secretary of the Navy via Office of the Solicitor, Bureau of Construction and Repair, Bureau of Steam Engineering.

"F. Copy of Acting Secretary of the Navy's letter, no. 26529:80 S/N/Ep, dated May 8, 1918, to the William Cramp & Sons Ship and Engine Building Co., New York Shipbuilding Corporation, et al.

"G. Copy of Newport News Shipbuilding & Dry Dock Co.'s letter dated July 9, 1918, to the Secretary of the Navy.

"H. Copy of Compensation Board's first endorsement, no. N–407,407, dated September 7, 1918, to Secretary of the Navy via Office of the Solicitor, Bureau of Construction and Repair, Bureau of Steam Engineering.

"I. Copy of New York Shipbuilding Corporation's letter to Compensation Board, dated August 15, 1918.

"J. Copy of Secretary of the Navy's letter to the president and general manager, Newport News Shipbuilding & Dry Dock Co., dated February 12, 1921.

"1. Reference requests certain information concerning the inclusion of income and excess-profits taxes in costs of cost-plus contracts for the vessels built by the New York Shipbuilding Co. for the Navy Department. It also requests certain other information concerning the preparation of the contracts for such vessels. This information, as far as obtainable from the files of the Compensation Board, is given below.

"2. The Compensation Board did not prepare or negotiate any of the contracts with the New York Shipbuilding Co. or other shipbuilders. The duties of the Compensation Board were confined to the administration of the contracts and are strictly defined by Department's letter under date of May 5, 1917, as follows:

"'Subject: Assignment of duties of Compensation Board.

"'Reference: (*a*) Department order March 22, 1917.

"'1. The Compensation Board created by the Department's order, reference (*a*), will be charged with the following and such other specific duties as may be assigned to it hereafter:

"'(*a*) To ascertain, estimate, and determine, in accordance with the terms of contracts, the actual costs of vessels building or about to be built under contract with the Navy Department on a "cost-plus-profit" basis.

"'(*b*) To decide upon, control, and supervise the execution of all methods necessary to be established to carry out its duties, especially those defined in the contracts for vessels building or to be built upon the "cost-plus-profit" basis.

"'(*c*) The Board is authorized to call upon the bureaus and offices of the Department for such information and assistance as may be necessary in the execution of the work assigned to it, and it will be furnished with copies of contracts and such other data as may be necessary in the proper performance of its duties.'

"3. The contracts which the Navy Department executed with the New York Shipbuilding Co. at this time were for the construction of two battleships, one of which contracts, however, was subsequently canceled as a result of the Treaty Limiting Naval Armament, concluded February 6, 1922. This contract, dated January 17, 1917, Department, no. 167–A, was originally on a fixed-price basis, but was changed by supplementary contract to a cost-plus basis under date of July 17, 1917, Department, no. 167–B. All of the other contracts executed with the New York Shipbuilding Co. during this period were also on a cost-plus basis and were for the following vessels: 1 battle cruiser, construction of which was held up by the Treaty Limiting Naval Armament and subsequently converted into an airplane carrier; also 3 contracts covering altogether 30 torpedo-boat destroyers. A memorandum (enclosure A) indicating the different contracts executed by the Navy Department about this time with the New York Shipbuilding Corporation is enclosed for your further information.

"4. As noted in paragraph 2 above, the duties of the Compensation Board were confined solely to the determination of actual cost as defined by the provisions of the several contracts. At the time of the execution by the Navy Department of the cost-plus contracts made during the year 1917 and prior to October 3 of that year, the conditions governing the application of the Federal income tax were definitely set forth in the Revenue Act of September 8, 1916. The Revenue Act of October 3, 1917, enacted by the Congress, made radical changes in the rates of income taxes imposed upon corporations, the method of their computation, and the period during which the tax should be paid. Section 200 of title II of the act of October 3, 1917, defines the term 'taxable year' for the purposes of that act as follows:

"'The term "taxable year" means the twelve months ending December thirty-first, excepting in the case of a corporation or partnership which has fixed its own fiscal year, in which case it means such fiscal year. The first taxable year shall be the year ending December thirty-first, nineteen hundred and seventeen, except that in the case of a corporation or partnership which has fixed its own fiscal year, it shall be the fiscal year ending during the calendar year nineteen hundred and seventeen.'

"5. This act made provisions specifically excluding 'income and excess-profits taxes' from the authorized deductions in determining net income. (See sec. 1207 of said act of Oct. 3, 1917.)

"6. Prior to the passage of the act of October 3, 1917, in considering the provisions of the cost-plus contracts executed with the different shipbuilders, the question arose with the Compensation Board as to whether it was proper to allow income and excess-profits taxes as elements of cost and hence to be reimbursed to the contractor as ordinary costs are reimbursable, i. e., the full value thereof plus 10 percent.

"7. After fully considering the matter, the Compensation Board addressed a letter to the Department under date of September 26, 1917 (enclosure B), stating that the Compensation Board was of the opinion 'that no part of income taxes, munitions taxes, excess-profits taxes, or similar taxes is allowable as part of the costs of naval vessels under construction at private shipyards', and requesting the decision of the Navy Department in this regard. Under date of January 24, 1918, the Acting Secretary of the Navy rendered a decision in this matter, stating:

"'As a contract must, if possible, be construed to effect a lawful purpose, these contracts are not to be construed to exempt contractors from the payment of these taxes by including them as a part of the costs to be paid by the Department' (enclosure C).

"Under date of January 25, 1918, all cost-inspection boards were supplied with a copy of the Department's decision as regards the exclusion of 'income and excess-profits taxes' from costs, although the cost-inspection boards had previously been instructed by the Compensation Board under date of November 7, 1917, that no part of income and excess-profits taxes were to be allowed as elements of cost.

"8. Subsequent to the decision of the Department, a number of the larger shipbuilding companies requested the Department to enter into a friendly suit before the Court of Claims in order that the interpretation of the clause of the contracts concerning income and excess-profits taxes might be speedily and definitely settled (enclosure D). This request of the shipbuilding companies was by the Department referred to the Compensation Board for comment (enclosure E), and as a result was denied by the Department (enclosure F). Subsequent to the original decision of the Department (enclosure C), the Newport News Shipbuilding & Dry Dock Co., under date of July 9, took up the matter of the allowance of income and excess-profits taxes as an allowable element of cost (enclosure G). This correspondence was again referred to the Compensation Board for comment. (See enclosure H.) The Newport News Shipbuilding & Dry Dock Co., in taking up the question of income and excess-profits taxes for their own account, were joined in the matter by the New York Shipbuilding Corporation. (See enclosure I.) After the decision of the Department, there followed a voluminous correspondence between the shipbuilders and the Department concerning the income and excess-profits taxes, which resulted in the Department reaffirming its former decisions and advising the contractors as follows:

"'If, under the provisions of the contract, you desire to submit an appeal to the President, it is suggested that this appeal be submitted as promptly as possible.' (See enclosure J.)

"9. Two of the shipbuilders—Newport News Shipbuilding & Dry Dock Co. and the Bath Iron Works—appealed to the President of the United States in accordance with the provisions of the contract. The President submitted the appeal of the contractors to the Attorney General of the United States for review and a decision. The decision of the Attorney General was adverse to the contractors, and under date of August 22, 1923, the President of the United States affirmed the decision of the Secretary of the Navy and directed that the contractors be informed of the action taken by him.

"10. The foregoing is a brief résumé concerning 'income and excess-profits taxes' to show that such taxes were never allowed by the Compensation Board to be included as elements of costs of vessels building for the Navy Department under cost-plus contracts.

"11. It may be pertinent to note that one shipbuilder, in his accumulated costs prior to the passage of the act of October 3, 1917, had included income taxes to the amount of $1,695.14. Credit for this amount, however, was taken by the Cost Inspection Board in April 1918 by direction of the Compensation Board; later the contractor, in his July 1918 bills, included this amount, which, however, was promptly deducted from his bill and disallowed by the Compensation Board.

"12. Concerning that portion of Senator Barbour's letter referring to the preparation and negotiation of cost-plus contracts and all papers and correspondence pertinent thereto, reference is suggested to the Secretary's office and files, since the Compensation Board had nothing to do with the preparation of the contracts in question.

"W. L. Capps,
"*Rear Admiral, Construction Corps,*
"*United States Navy (retired),*
"*Senior Member.*"

The enclosures referred to in this communication are attached herewith as being those which you desired to have.

Your particular attention is invited to the insistence shown by the shipbuilders in this correspondence to have income taxes and excess-profits taxes permitted as a part of the cost, and your particular attention is further invited to the fact that the Navy Department never would allow the inclusion of such taxes; this seems to nullify the testimony of Mr. Parker in this respect.

Sincerely yours,

Claude A. Swanson.

Enclosures A to J.

Enclosure A

List of Contracts With the New York Shipbuilding Co. for Naval Vessels, Determination of Cost of Which Was Under the Cognizance of the Compensation Board

BATTLESHIPS—"COLORADO", NO. 45, AND "WASHINGTON",[1] NO. 47

Original contract: Fixed price, Dept. No. 167–A, dated January 17, 1917.

Supplementary contract: Changing from fixed price to cost plus, Dept. No. 167–B, July 17, 1917.

BATTLE CRUISER NO. 3—"SARATOGA"

Original contract: Cost plus, Dept. No. 352, dated May 5, 1917.

Supplementary contract: Converted into an airplane carrier, price changed from cost plus to cost and a fixed fee, Dept. No. 352–A, dated October 3, 1922.

Supplementary contract: Changing to a fixed price, Dept. No. N.O.D. No. 61, dated May 18, 1927.

TORPEDO BOAT DESTROYERS

Nos. 125/130 (6): Cost plus, Dept. No. 540/545, dated July 11, 1917.
Nos. 157/160 (4): Cost plus, Dept. No. 893/896, dated September 28, 1917.
Nos. 231/250 (20): Cost plus, Dept. No. 899, dated December 29, 1917.

---

[1] The contract for this vessel was canceled as a result of the Treaty Limiting Naval Armament, concluded Feb. 6, 1922, between United States of America, British Empire, France, Italy, and Japan.

COMPENSATION BOARD,
NAVY DEPARTMENT,
Washington, D.C., September 26, 1917.

407-14
407

To: The Secretary of the Navy.

Subject: Question as to whether income tax, excess-profits tax, and munitions tax should be treated as elements of cost in cost-plus-profit contracts.

References: (*a*) Seventeenth clause of standard contracts for construction of naval vessels.
(*b*) Twenty-first clause of standard contracts for construction of submarines.

1. The seventeenth clause of the standard contracts covering naval vessels being constructed at private shipyards on the basis of cost plus profit, reference (*a*), provides that the actual cost shall include the following and items similar thereto in principle:

"A proper proportion of taxes of all kinds accrued during the taxable year with respect to the business or the property."

The twenty-first clause of the standard contracts covering submarine torpedo boats being constructed at private shipyards on the basis of cost plus profit, reference (*b*), provides that the actual cost shall include the following and items similar thereto in principle:

"A proper proportion of taxes of all kinds, including munitions tax, accrued during the taxable year with respect to the business or property."

The seventeenth and the twenty-first clauses, respectively, in the above-quoted contracts state in paragraph 1, fourth sentence:

"No change shall be required in the present methods and principles of keeping costs, provided the Department finds them adequate for the determination of actual costs."

2. The question has arisen as to whether it is proper to allow income taxes and excess-profits taxes as elements of cost, and hence to be reimbursed to the contractor, as ordinary costs are reimbursable; i.e., the full value thereof plus 10 percent. Particular attention is invited to the fact that this question has no relation to the matter of personal-property taxes, real-estate taxes, or capital-stock taxes.

3. In view of the following considerations, it would appear that income taxes and excess-profits taxes cannot be regarded as costs of naval vessels under construction on the cost-plus-profit basis. It would seem that the true interpretation should depend upon the meaning and the purpose of the laws levying the income taxes or excess-profits taxes, since the contracts themselves must be held to have been made in view of said laws, or else must be set aside as illegal. The obvious purpose of the law is that the Government should be empowered to appropriate a portion of the profits of the corporation—that the profits, having been determined only after all the elements of cost have been taken into consideration, are to be distributed between the corporation and the Government. It seems unquestionable, therefore, that income taxes and excess-profits taxes are not elements of cost but are assessments made against the profits of the corporations involved, such assessments representing a share of those profits to which the Government is entitled.

4. The nature of income taxes and excess-profits taxes is made clearer by contrasting them with real-estate taxes and personal-property taxes. Real-estate taxes and personal-property taxes bear no relation to the profits of the corporation; they are assessed even although there be no profits, and therefore they must be considered as expenses or as elements of cost. In the case of income tax, ther is no tax in case there is no profit; and in the case of the excess-profits tax, there is no tax even although there is a profit, unless that profit has exceeded a certain fixed or determinable amount.

5. It would not seem proper for the Compensation Board to hold that any portion of such income taxes or excess-profits taxes can be made to revert to the corporation through an interpretation of a contract such as would have the effect not only of defeating the purpose of the law to the extent of the taxes

but also to the further extent of allowing the contractors to build up additional profits based thereon.

6. In order that the full effect of such procedure may be clearly seen, consideration should be given to the consequences of allowing income taxes and excess-profits taxes as elements of cost. In this case, the contractors would not only profit to the extent of having the taxes refunded to them but also to the extent of an additional 10 percent thereon. If this increment of 10-percent profit were subject to income taxes and excess-profits taxes, the Government would recover a part thereof. This part might be allowed, in turn, as an additional profit on Government contracts, and so on ad infinitum. In other words, such procedure would result in a reductio ad absurdum. Obviously the procedure is not proper.

7. Although in reference (*b*) it is specifically stated that the munitions tax shall be included as an element of cost, it would seem that the true interpretation should depend upon the meaning and purpose of the law levying the munitions tax, since the contract itself must be held to have been made in view of the law, or else must be set aside as illegal. The obvious purpose of the law is that the Government shall be entitled to a share of the profits of the corporations coming under the jurisdiction of the munitions-tax law. The munitions tax is considered, therefore, as an assessment made against the profits of the corporations involved, such assessment representing the share of those profits to which the Government is entitled. It would seem, therefore, that the munitions tax is not an element of cost and cannot, with propriety, be made the subject of reimbursement by the Government either with or without the addition of 10-percent profit. To consider it otherwise would be to nullify what seems to be the true purpose and intent of the munitions-tax law.

8. In view of the above, therefore, the Compensation Board is of the opinion that no part of income taxes, munitions taxes, excess-profits taxes, or similar taxes is allowable as part of the costs of naval vessels under construction at private shipyards. The decision of the Navy Department is requested.

David Potter,
For the Compensation Board.

Enclosure C

[Copy]

26529–80 : 2
S/W/Dr
Navy Department,
Washington, January 24, 1918.

From: The Secretary of the Navy.
To: Compensation Board.
Subject: Bonuses, income tax, excess-profits tax, and munition tax—whether they should be treated as elements of cost in cost-plus contracts.

The proceeds of manufacturing at a manufacturing plant are divisible into "cost" and "profits."

The bonuses contemplated in the case of the Fore River Shipbuilding Corporation are derived from and are a part of the profits; and in the Department's cost-plus-profit contracts the 10 percent of the cost payable to the contractor represents such profits.

The right of the officials of the corporation to such a bonus from profits is, therefore, limited to a share of said 10 percent.

It is plain, therefore, that these bonuses cannot be considered as a part of the costs.

The mandate of the statute is that the income, corporation, and excess-profits taxes shall be levied, assessed, collected, and paid; and that certain manufacturers shall pay the munitions tax.

To construe the contract clauses submitted by the Compensation Board as including the payment of these taxes as a part of the cost in the cost-plus-profit contracts would ascribe to the Secretary the intention to remit taxes which the statute commands the contractor to pay.

As a contract must, if possible, be construed to effect a lawful purpose, these contracts are not to be construed to exempt contractors from the payment of these taxes by including them as a part of the costs to be paid by the Department.

F. D. Roosevelt, *Acting.*

Enclosure D

[Copy]

Washington, D. C., *March 14, 1918.*

Hon. Josephus Daniels,
Secretary of the Navy, Navy Department, Washington, D. C.

Dear Sir: The following shipbuilding companies were represented in a conference with the Secretary of Navy on the morning of Thursday, March 14, 1918, and discussed with the Secretary the allowance of income and excess-profit taxes as part of cost in connection with cost and percentage contracts:

New York Shipbuilding Co., Camden, N. J.
William Cramp Ship & Engine Building Co., Philadelphia, Pa.
The Todd Shipbuilding Co., New York, N. Y.
The Bath Iron Works Corporation, Bath, Maine.
The Newport News Shipbuilding & Dry Dock Co., Newport News.
The Bethlehem Shipbuilding Corporation, Ltd., Bethlehem, Pa.

Each of the above companies is forwarding the solicitor a list showing the cost and percentage contracts under discussion at this conference.

In March and April 1917 certain cost and percentage contracts were negotiated between the Department and shipbuilders. In these contracts the various elements of cost are defined, one of which is as follows:

"(*d*) A proper proportion of taxes of all kinds accrued during the taxable year with respect to the business or property."

Similar contracts were executed for various groups of vessels throughout the spring and summer of 1917. In the case of certain submarine contracts the definition of cost was amplified by the addition of certain words as follows:

"A proper proportion of taxes of all kinds, including munition taxes, accrued during the taxable year with respect to the business or property."

All of these contracts provide for a profit of 10 percent on the cost, including the proper proportion of taxes as above defined.

At a later date a variation in the form of contract for vessels subsequently contracted for was made by which, for the cost and percentage contracts, there was substituted a cost-plus-fixed-fee contract.

In this form of contract, which is not in question, the definition of cost was changed to read as follows:

"A proper proportion of taxes of all kinds accrued during the taxable year with respect to the business or property, but such taxes shall not be held to include Federal income or excess-profit taxes."

From the first payment made by the Navy Department on the cost and percentage contracts the shipbuilders claimed a proportion of income and excess-profit taxes. These were allowed in some instances (but have since been disallowed), while in other cases the claim was held for further consideration. Finally, reference was made to the Department which, in its letter, 26,529–80:2, dated January 24, 1918, decides that "these contracts are not to be construed to exempt contractors from the payment of these taxes by including them as part of the cost to be paid by the Department."

It is the belief of all the contracting companies joining in this memorandum that it was the intention of both parties to these contracts at the time of their execution that a net 10-percent profit was to be allowed for the construction of these vessels. Because of the uncertainty that existed as to the extent and amount of income and excess-profit taxes, it is the understanding of these companies that the Department agreed to accept as part of cost a proper proportion of these taxes levied against these companies insofar as these particular contracts were concerned.

That this is a fact is borne out by the definite inclusion in the submarine contracts of the munition tax which was actually on the statute books as referring to profits on the construction of submarines as part of the cost of these vessels.

in order that the interpretation of this clause of the cost-plus contracts may be speedily and definitely settled, the companies represented by this memorandum request the Secretary to authorize the Navy Department to join them in a friendly suit before the Court of Claims with a view of legally determining at an early date the intention and meaning of this item of the cost-plus contracts.

Very respectfully,

Bethlehem Shipbuilding Corporation, Ltd.,
J. W. Powell, *Vice President.*

COMPENSATION BOARD,
April 13, 1918.

To: Secretary of the Navy.
Via: Office of the Solicitor.
Bureau of Construction and Repair.
Bureau of Steam Engineering.

Subject: Request of shipbuilding companies for reconsideration of Department's decision in relation to "Federal income and excess-profit taxes", and their inclusion as an element of cost in naval vessels.

Reference: (*a*) Letter of March 14, 1918, from Bethlehem Shipbuilding Corporation.
(*b*) Department's previous decision contained in letter to Compensation Board dated January 24, 1918.
(*c*) Compensation Board's letter of September 26, 1917, in relation to exclusion of "Income and excess-profit taxes" as elements of cost.

1. As directed orally by the Secretary of the Navy, the Compensation Board has given careful consideration to the accompanying communication from the Bethlehem Shipbuilding Corporation, reference (*a*), and has also reviewed the evidence and communications upon which the Department's decision of January 24, 1918, reference (*b*) was based, and submits the following:

2. At the time of the execution by the Navy Department of the "cost-plus" contracts made during the year 1917 and prior to October 3, of that year the conditions governing the application of the Federal income tax were set forth in the act of September 8, 1916.

3. Section 11, part 2, of title I of the above-noted act of September 8, 1916, made specific statement of the income which would be exempt from the provisions of the income-tax law, and section 12 of the same act, paragraph (a), fourth heading, made the following specific statement of tax deductions which would be allowed:

"Fourth. Taxes paid within the year imposed by the authority of the United States, or its Territories, or possessions, or any foreign country, or under the authority of any State, county, school district, or municipality, or other taxing subdivision of any State, not including those assessed against local benefits."

4. Under title III, section 302, of this same act of September 8, 1916, provision was also made for items which could be deducted in computing the "net profits" which would be made the basis of assessment of the "munitions manufacturers' tax." The essential features of this section relating to the computation of "net profits" were embodied in the "cost-plus" contracts of the Navy, so far as applicable thereto, for the guidance of all concerned in determining the actual cost of such vessels.

5. In this connection and with special reference to the "munitions tax" alluded to by the shipbuilders in their letter of March 14, 1918 (reference (*a*)), attention is invited to section 301 of title III of the act of September 8, 1916. In the list of articles therein enumerated as subject to a "munitions manufacturers' tax" appears the following:

"(*e*) electric motor boats, submarines or submersible vessels or boats: or (*f*) any part of any of the articles mentioned in (*b*), (*c*), (*d*), or (*e*)."

It is obvious that it was on account of this specific inclusion of submarine boats in the list of items subject to a "munitions tax" under the terms of the act of September 8, 1916, that the contracts for submarine boats executed during the year 1917 and prior to the act of October 3, 1917, included the "munitions tax" among the taxes which might be considered as a part of the cost of vessels. This inclusion of the term "munition taxes" in those contracts manifestly has the effect of placing the computation of the cost of submarine vessels on substantially the same basis as that employed in computing the cost of other naval vessels which are not subject to a "munitions manufacturers' tax."

6. A few months after the execution of the above-noted contracts for naval vessels legislation was enacted by the Congress which made radical changes in the rate of income taxes imposed upon corporations, the method of their com-

putation, and the period during which the tax should be paid. This act made provision specifically excluding "income and excess-profit taxes" from the authorized deductions in determining net income. This modification of the act of September 8, 1916, made by the act of October 3, 1917, appears in section 1207 of the last-named act, and is as follows:

"Fourth. Taxes paid within the year imposed by the authority of the United States (except income and excess-profits taxes), or of its Territories, or possessions, or any foreign country, or by the authority of any State, county, school district, or municipality, or other taxing subdivision of any State, not including those assessed against local benefits."

Moreover, section 200 of title II of the act of October 3, 1917, defines the term "taxable year" for the purposes of that act, as follows:

"The term 'taxable year' means the twelve months ending December thirty-first, excepting in the case of a corporation or partnership which has fixed its own fiscal year, in which case it means such fiscal year. The first taxable year shall be the year ending December thirty-first, nineteen hundred and seventeen, except that in the case of a corporation or partnership which has fixed its own fiscal year it shall be the fiscal year ending during the calendar year nineteen hundred and seventeen."

7. The two sections of the act of October 3, 1917, quoted in the preceding paragraph would appear definitely to dispose of the proper treatment of United States income and excess-profit taxes so far as relates to their inclusion in the cost of naval vessels.

8. In this general connection attention is also invited to section 201 of the act of October 3, 1917, specifying the character and extent of the "war excess-profit tax", and to section 203 and following sections relating to deductions which can be made in computing that tax.

Attention is also invited to section 214 of this act, which contains the following amendment of the "munitions-tax" section of the act of September 8, 1916:

"Subdivision (1) of section three hundred and one of such Act of September eighth, nineteen hundred and sixteen, is hereby amended so that the rate of tax for the taxable year nineteen hundred and seventeen shall be ten per centum instead of twelve and one-half per centum, as therein provided."

The same section of the act of October 3, 1917, also contains the following provision—

"Subdivision (2) of such section is hereby amended to read as follows: '(2) This section shall cease to be of effect on and after January first, nineteen hundred and eighteen.'"

which abolishes the "munition-manufacturers' tax" after January 1, 1918. The provisions of the act of October 3, 1917, just quoted, would therefore appear definitely to dispose of any question as to the bearing of the "munition-tax" item of the income-tax law so far as concerns its relation to submarine or other naval vessels.

9. In view, therefore, of the conditions herein set forth, especially the amendments of the act of September 8, 1916, contained in the act of October 3, 1917, relating to income and excess-profit taxes and the specific definitions of the term "taxable year" it would appear that the Department's previous decision of January 24, 1918, reference (*b*) was just, proper, and in strict conformity with the law.

10. It is, therefore, recommended that the Department's previous decision contained in its letter of January 24, 1918, be adhered to and the shipbuilder's plea that the Navy Department join them in a friendly suit before the Court of Claims be denied.

W. L. CAPPS,
Chief Constructor, United States Navy,
Senior Member.

NAVY DEPARTMENT,
Washington, May 8, 1918.

Same letter to New York Shipbuilding Corporation, the Bath Iron Works, Newport News, the Todd Shipbuilding Co., Bethlehem Shipbuilding Corporation.

The WILLIAM CRAMP & SONS SHIP & ENGINE BUILDING CO.,
Philadelphia, Pa.

GENTLEMEN: Referring to the conference at the Department on the 14th of March last on the question as to the allowance of income and excess-profit taxes as part of cost in connection with cost-plus percentage contracts, at which conference and in the letter of said date to the Department in behalf of the New York Shipbuilding Corporation, the William Cramp & Sons Ship & Engine Building Co., the Todd Shipbuilding Co., the Bath Iron Works Corporation, the Newport News Shipbuilding & Dry Dock Co., and the Bethlehem Shipbuilding Corporation the suggestion that the question as to the allowance of such income and excess-profit taxes be submitted to the Court of Claims by the contractors and the Department in a friendly suit for interpretation of the cost-plus contracts was discussed, I transmit herewith for your information a copy of a communication[1] to the Department by Admiral Capps, senior member of the Compensation Board, setting forth the provisions of law relating to Federal income and excess-profit taxes.

From said communication it appears that the interpretation heretofore placed on said contracts, in which the contractors do not concur, that the taxes referred to cannot be included as part of the cost is the only admissible one, and I am therefore constrained to deny the request that the Department join in a friendly suit for judicial determination of the matter.

Very respectfully,

FRANKLIN D. ROOSEVELT,
Acting Secretary.

(Enclosure.)

ENCLOSURE G

[Copy]

[Handed to C. B. by Mr. Bickford, representing Newport News Co.]

NEWPORT NEWS SHIPBUILDING & DRY DOCK CO.,
Newport News, Va., July 9, 1918.

SECRETARY OF THE NAVY,
Navy Department, Washington, D.C.

SIR: On January 31, 1918, the Compensation Board transmitted to the Newport News Shipbuilding & Dry Dock Co. four copies of a letter of the Secretary of the Navy to the Compensation Board, marked "26329–80:2SWDR." In this letter the Acting Secretary of the Navy instructed the Compensation Board, in part, as follows:

"The mandate of the statute is that the income, corporation, and excess-profits taxes shall be levied, assessed, collected, and paid; and that certain manufacturers shall pay the munitions tax.

"To construe the contract clauses submitted by the Compensation Board as including the payment of these taxes as a part of the cost in the cost-plus-profit contracts would ascribe to the Secretary an intention to remit taxes which the statute commands the contractor to pay.

"As a contract must, if possible, be construed to effect a lawful purpose, these contracts are not to be construed to exempt contractors from the payment of these taxes by including them as a part of the costs to be paid by the Department."

Upon receipt of the copies of the above letter, the undersigned company, by its letter of February 7, 1918, to the naval cost inspector stationed at these works, stated as follows:

---

[1] See enclosure E.

"We think that the decision of the Department as to taxes is in error, and we wish to express our dissent from the conclusions contained in the above-mentioned letter, reserving for later discussion in detail our grounds for this dissent."

In answer to the last-quoted letter, this company received a letter from Philip Bradley, assistant paymaster, stationed at the Newport News office of the cost inspector, Navy Department, dated February 12, 1918, in part as follows:

"At such time as you care to state definitely reasons against the decision referred to in your letter, they will be given due consideration by the Compensation Board."

It being apparent to this company and to other shipbuilding companies similarly situated that the instruction issued by the Secretary of the Navy to the Compensation Board under date of January 24, 1918, involved a pure question of law of great moment to shipbuilders, a request was made to the Secretary of the Navy to refer the question of law to the Court of Claims.

Some consideration was given to this request by the Acting Secretary of the Navy, who on May 8, 1918, informed this company that he refused to refer the matter to the Court of Claims as requested, basing his refusal upon a communication from Admiral Capps to the Secretary of the Navy dated April 13, 1918, which communication set forth certain provisions of the revenue laws relating to Federal income and excess-profits taxes and amendations thereof after the making of the contract, and sought to show that such amendatory laws supported the Secretary's instruction to the Compensation Board of January 24, 1918, above referred to.

It is and always has been the understanding of this company that a just proportion of *all taxes* should be paid as a part of cost and it feels warranted in stating that the Navy Department held the same intent. This company is convinced that the view of the Secretary, that the contract would be illegal if construed to bear its plain meaning, is due to a misconception of the law governing the contract orders.

It is the purpose of this paper to bring to the notice of the Secretary the considerations which, this company believes, will sustain the claim of the shipbuilders, that they are legally entitled to the allowance for which the contract so plainly provides. The paper is lengthy, but it is hoped that the necessity of clearly and fully stating this very important subject will justify its extent.

1. Prior to the order contracts, to which this subject relates, there had been a constantly growing demand for new private construction since the beginning of 1915. Contracts for this construction were closed by American shipbuilders for constantly increasing prices up to and including the early spring of 1917. Notwithstanding the fact that the contractor's margin of estimated profit had been steadily increased in the contracts taken within the period above mentioned, the constantly increasing cost of labor and material had reduced the shipbuilder's profit to a minimum, and in many instances had eliminated it altogether. Prudent shipbuilders were finally convinced that the only kind of construction in which they could engage with any safety was upon a basis of cost plus a profit.

2. In the winter and early spring of 1917 there was a very large amount of ship construction offered the shipbuilders of the United States, much of which was for foreign account. Any reputable shipbuilder in the United States could have contracted to its capacity, especially for foreign work, on a cost-plus percentage basis, or at a flat-price basis that would have assured or promised extraordinary profit to the shipbuilder. This fact was generally known throughout the country and it was peculiarly within the knowledge of the Navy Department.

3. It was at this juncture that the act of March 4, 1917, was passed, which act, in view of the Nation's proximity to war, vested in the President of the United States the extraordinary power of placing with the shipbuilders of the country orders for construction and to fix a reasonable price therefor, which the shipbuilders of the country were compelled to accept on pain of seizure of their respective plants.

4. It was not the intention of Congress that these emergency powers should be harshly exercised so as to cause loss to shipbuilders and disorganization to shipbuilding, but it was the intention of Congress to secure immediate ship construction. It was also the purpose of Congress that the President should

arrive at some means of fixing a reasonable price for a ship *at the time of the placing of the order, for the President was only authorized by subsection (b) of the act to seize the plant of the shipbuilder when the builder had refused to accept an order given at the reasonable price fixed by the President.*

5. It became apparent to the President and the Navy Department that in order to prevent the disruption of the shipbuilding industry or delay in the acceptance of the Presidential orders it would be necessary to devise some immediate plan by which a reasonable price might be determined at the time of the placing of the order.

6. So far as this company is aware, the only method which had been worked out up to the time of the placing of the Presidential order by which it was possible to determine a reasonable price at the contract date in an emergency of unknown extent was the cost plus a profit, or a fixed-sum method. Such contracts had been in general private use in the United States. Experience under the cost-plus forms of contract had demonstrated the necessity of clearly defining the elements of cost, with a secondary definition of profit by an application of a given percentage or by the addition of a fixed sum thereto.

7. The Secretary of the Navy, acting for the President, decided to fix the reasonable price for which the act of March 4, 1917, provides by adopting the cost plus a percentage basis. This basis was clearly recognized as an allowable basis by the authority given to the Secretary of the Navy by the Naval Appropriation Act of August 29, 1916, in the part thereof relating to cost-plus contracts for battle cruisers.

8. This company, previous to the act of March 4, 1917, had proposed to the Secretary of the Navy for the battle cruisers an outline of a cost-plus contract in which the overhead cost for the execution of the proposed contracts should be estimated at a given percentage of direct cost.

9. The Secretary of the Navy was unwilling to adopt the proposed estimate of an overhead cost, and in lieu thereof, proposed to the builder the present form of order contract, which referred to section 302 of the Revenue Act of September 8, 1916, relating to *munitions excess-profit taxes*, and generally defined the contract cost as consisting of the items therein mentioned. The "munitions manufacturers' tax", to which section 302 related, was an excise-tax law. *This company has never been subject to that law*, but the deductions allowed in the section referred to when applied to the subject matter of the contract resulted in a satisfactory cost basis. It will be noted that the section referred to bases the *excise* tax upon an amount derived by deducting all taxes "with respect to the business." All taxes on the builder's business were therefore included as cost.

10. Three tax laws were in effect at the time these contracts were executed: (*a*) The income-tax law of September 8, 1916, which was a tax on or "with respect to" business; (*b*) the munitions tax law of September 8, 1916, which was an excise tax; and (*c*) the excess-profits tax law of March 3, 1917, which was a tax on or "with respect to" business. These taxes not only imposed burdens more onerous than those imposed by any other tax law, but it was apparent that in the event of greater war needs these subjects of taxation would probably be the preferred subjects of a further and more burdensome tax. This was matter of wide-spread publicity and common knowledge several months before the date of the contract.

11. The war income tax of September 8, 1916, and the excess-profits tax approved March 3, 1917, were laid against the *net income* of the business. This income was defined by section 12 of the act of September 8, 1916, in which, as above indicated, *all taxes of whatever kind* were deducted in order to arrive at this net income.

12. *Net income* and *net profits*, as used in the several revenue laws applicable to this company in force at the time of the contracts, so far as concerns the deductions therein authorized, carry the same meaning. Both mean the same thing that "profit" is declared to mean in *Rubber Company* v. *Goodyear* (9 Wallace, 804)—

"Profit is the gain made upon any business or investment when the receipts and payments are taken into account."

The contracts under discussion clearly express the same intent.

13. The theory of the income-tax law of September 8, 1916, and the excess-profits tax law of March 3, 1917, as well as income-tax laws of previous years, was that the amount of income on the business subject to tax was to be determined for a given fiscal year by the *net income* of that year, arrived

at by deducting *all tax payments during the year*, including payments made on account of such income and excess-profits taxes. Taxes are assessed for a given fiscal year. They are actually paid after the end of that year. The year in which taxes are actually paid may be one in which less actual income accrues than in the year for which such taxes are assessed. They were, therefore, regarded as deductible payments in the business of the year in which they were actually paid, so as that the income tax for the later year may be correspondingly reduced by the fact that the later year actually bears the tax burden of the previous year. Taxes of all kinds are expressly recognized as "costs" under the revenue laws of September 8, 1916, and March 3, 1917, and the income-tax laws of previous years, and are accordingly deductible in arriving at the "net profit" upon which the tax is laid.

14. The Department understood the intent of the tax statutes, and when it became necessary to define "cost" when cost-plus contracts were adopted, it felt justified in using the same measure to ascertain cost that Congress had written into the tax statutes. If, as the parties understood, and the contract clearly provides, the Department was to pay the "cost" of construction of a ship, this necessarily involved a reimbursement to the shipbuilder of a just proportion of all taxes on the business. The most onerous of these were and are income and excess-profits taxes. Accordingly the Navy Department has actually paid income taxes to this company and, it is believed, to several other companies similarly situated. Pursuant to the same policy it has in later forms of contracts specifically provided that *munitions taxes* should be repaid to munitions boat builders—an undertaking inconsistent with any other intent than that herein attributed to the Department.

15. The Department continued in the same view as to the legal and actual meaning of the contract for more than 6 months after the adoption of cost-plus contracts and until the revenue laws relating to *income* taxes of the act of September 8, 1916, and war excess-profits taxes of March 3, 1917, were changed by the act of October 3, 1917, so as that thereafter moneys paid as income and excess-profits taxes were no longer allowed the status of deductible items in making up *the tax basis* for the year in which such payments were made. But it is proper to remark that section 302 of the act of September 8, 1916, which was specifically referred to in the contract *still remains unchanged on the statute books* and, so far as concerns the contracts, means what it always has meant. By the amendments referred to Congress has changed its measure of "cost" for the purpose of assessing taxes, and *for that purpose* the act relates back, but the amendatory statutes neither affect nor purport to affect *contract cost*, nor any contract previously made.

16. Even if section 302 had been amended after the contract, the contract would have been in no wise affected thereby. Such an amendment would only serve to accentuate the meaning of the prior law as referred to in the contract. The law of the contract is the ruling law. If the statutory amendments, upon which Admiral Capps relies, could affect a prior contract by eliminating a part of the contractor's cost, *it follows that the repeal of section 302 would result in excusing all contract payments.* We will show later that these amendments have no affect upon the contract.

17. It seems clear that in arriving at the contracts now under discussion the President, acting by the Secretary of the Navy, laid down in the order contract a perfectly reasonable rule in entire accord with the law as it then existed, from which the "reasonable price" contemplated by the act of March 4, 1917, may be easily computed. The President applied a legal measure to the ascertainment of a basis of obligation and promised the shipbuilders that they would receive the "reasonable price" so resulting.

18. In determining a 10-percent profit, the Secretary of the Navy fixed the *lowest percentage* which according to the cases is consistent with a reasonable price. In the case of *Monroe* v. *United States*, 35 Court of Claims 207, the court said:

"It is a matter of judgment what a reasonable profit is, and there have been numerous cases before the court showing that from 10 percent to 25 percent is regarded, prospectively, as the range of profits which contractors hope or expect to make."

It was not the intent of either party that the agreed profit should be diminished by charging thereto any part of the amounts covered in the agreed elements of cost.

19. The Secretary of the Navy admits that all taxes *except national income and excess-profits taxes* imposed by the authority of the Government of the

United States, or by any State, or in general are to be regarded as cost so far as the builder is concerned, but insist that income and excess-profits tax allowances cannot be made, because, if made, it would be tantamount to a remission of taxes imposed.

20. This company dissents from this reasoning and its consequences. It is clear that if allowances on account of income and excess-profits taxes constitute a remission of taxes, then on the same principle allowances on other national and State taxes likewise constitute a remission. The fact that this result follows demonstrates that there must be a flaw in the premise assumed by the Secretary.

21. The instructions to the Compensation Board, the communications of the Secretary and Admiral Capps hereinbefore referred to indicate that the considerations which influenced the Secretary to arrive at his instructions to the Compensation Board were essentially as follows:

(*a*) That the Government having imposed taxes on income and excess profits, it was not competent for the Government in the person of the Navy Department to agree to allow as cost these tax payments made by the builder, because thereby the excessive income or profit which was taxed by the Government would be made good by the funds of the Government—that such an agreement was essentially illegal from the beginning irrespective of the actual intent of the parties.

(*b*) That whatever the intent of the parties at the time of making the contract and whatever the condition of law which existed at that time, the contract became illegal, if construed to allow such payments, by reason of the amendations to sections of the revenue law which were not referred to in the contract-order, which were subsequently made by Congress. Admiral Capps holds this latter opinion.

22. We have pointed out in this paper that if the allowance of income and excess-profit taxes constitute a remission of such taxes, that an allowance of all other taxes would, in the same reasoning, amount to an equal remission of such other taxes. It must be equally clear that if the Navy Department applies the funds of the United States to cover the general taxes imposed by the United States, that it has for the same reason the right to apply the funds of the United States to cover these special taxes. The agreed compensation to the builder is not made until this is done. But, as we shall point out the *entire* compensation, when made, is the subject of all the income and excess-profit tax.

23. If a reasonable flat-price contract had been practicable such a contract would necessarily have included an estimation of existing and expected tax burdens and the purchase price would have been fixed accordingly. Such burdens have always been considered as a part of cost and were so understood by the Navy Department and by other owners.

24. To the extent of the Government work in the various shipbuilding companies in the United States, Government funds have always contributed to all taxes, because all were a part of cost,. In this way the Government has paid income taxes assessed against shipbuilders since the first Federal income-tax law went into operation. This is the case not only in flat-price contracts but in the element of overhead cost for execution of changes.

25. When the Navy Department specifically agreed to pay a proper proportion of all taxes, it did nothing more than to agree to do what, as a matter of fact, it always had done, namely, to pay as a part of the price of a ship the reasonable share of that ship in all the burdens imposed upon the builder by law or by the conditions of construction. It is immaterial whether the allowance is made in the aspect of cost or profit.

26. The " just proportion " moneys advanced by the Department to the builder to cover taxes, are not the actual taxes which are paid by the builder; they are moneys advanced on an estimation of taxes. When paid by the United States to the builder, they are paid as a part of the *builder's cost*, so far as the the builder is concerned, and as a part of the " *reasonable price* " so far as concerns the Navy Department. Such receipts are a part of the *gross income of the builder which after the statutory deductions result in the taxable net income.*

27. The order contracts for each ship must be considered separately. *The concern of the Secretary of the Navy is not to depress the general income of the builder.* It is to fix upon a reasonable price for each of the several orders placed with such builder. If the income of the builder from *all sources* results in an amount above the point which Congress considers normal, it is the function of the revenue department of the Government to apply the law to the total of the excess income.

28. It is apparent that an unprecedented volume of work made up of income from many contracts, each reasonable in itself, not only may but should result in an income exceeding the ordinary relation of income to investment.

29. The existence of an excess income or excess profit on the part of shipbuilders is not to be regarded as an untoward result, and neither the law nor the contract so regard it. The statute which taxes excess profits necessarily recognizes the legality and propriety of *earning the excess. The order-contracts not only expressly recognize that excess profits will probably result from the expected volume of business* but the contract goes further; it recognized the propriety of such profits and agrees to cover the taxes payable thereon, for all income taxes and all excess-profits taxes, with the possible exception of excise taxes on the business. The contract wisely recognizes that it is the particular business of the Treasury Department to apply the taxes. *The revenue laws do not take away the entire excess profits which the energies of the builder have accumulated.* They leave in the builder's hands a *part* of the increased profit that it has earned. It is manifest that when a reimbursement sum is paid, the amount remaining in the hands of the builder cannot, in any event, be less than the difference between the percentage of tax imposed by law and 100 percent.

30. There is no impropriety or illegality in any agreement by an individual owner of a prospective thing to reimburse the builder for all taxes incurred in the execution of the work. The courts have repeatedly recognized the validity of such agreements. *If this is the rule between man and man*, it follows that this is the rule between *the Navy Department and the builder.*

31. The assumed premise of the Secretary involves the notion that the Government, in making naval contracts, is a sovereign in the same sense that the Government imposing laws is sovereign. This conception leads to confusion. The courts have repeatedly drawn the distinction between the United States as a contractor and the United States as a sovereign. The leading case on this subject is *Jones* v. *United States*, First Court of Claims (pp. 383, 384, 385).

Judge Nott, who delivered the opinion of the court, declared:

"This position cannot be sustained. The two characters which the Government possesses as a contractor and as a sovereign cannot be thus fused; nor can the United States while sued in one character be made liable in damages for their acts done in the other. Whatever acts the Government may do, be they legislative or executive, so long as they be public and general, cannot be deemed specially to alter, modify, obstruct, or violate the particular contracts into which it enters with private persons. The laws of taxes and imposts affect preexistent executory contracts between individuals and affect those made with the Government, but only to the same extent and in the same way. In this court the United States appear simply as contractors; and they are to be held liable only within the same limits that any other defendant would be in any other court. Though their sovereign acts performed for the general good may work injury to some private contractors, such parties gain nothing by having the United States as their defendants. Wherever the public and private acts of the Government seem to commingle, a citizen or corporate body must by supposition be substituted in its place, and then the question be determined whether the action will lie against the supposed defendant. If the enactment of a law imposing duties will enable the claimant to increase the stipulated price of the goods he has sold to a citizen, then it will when the United States are defendants, but not otherwise. If the removal of troops from a district liable to invasion will give the claimant damages for unforeseen expenses, when the other party is a corporate body, then it will when the United States form the other party, but not otherwise. This distinction between the public acts and private contracts of the Government—not always strictly insisted on in the earlier days of this court, frequently misapprehended in public bodies, and constantly lost sight of by suitors who come before us—we now desire to make so broad and distinct that hereafter the two cannot be confounded; and we repeat, as a principle applicable to all cases, that the United States, as a contractor, cannot be held liable directly or indirectly for the public acts of the United States as a sovereign." (See also *Wilson* v. *United States*, 11 Court of Claims, p. 513.)

32. The quoted authority disposes of both premises of the Secretary. The case decides that the Government as contractor is bound to the same extent as between man and man. *It further decides that a preexisting contract is affected by subsequent tax laws, only as contracts between man and man are affected thereby.* It further decides that a public and general tax law of the

United States *cannot be deemed specially to alter, modify, obstruct, or violate the contract into which it enters with private persons.*

33. In the result: The builder is compelled to bear any burden that the general revenue laws impose on all citizens, whether such laws were in force at the date of the contract, or enacted at any time thereafter, and whether or not such laws result in destroying all profit, *but it has the right to receive all moneys stipulated in its contract notwithstanding any subsequent general law, whether the contract is with the Government or with an individual.* Revenue laws are not intended to prevent incomes but to tax them after they have been received.

34. The attention of the Secretary is directed to the fact that there is no real dispute between the builder and the Department as to the " meaning of anything in the contract." The contract meaning is clear. The only question between the parties is whether the contract contravenes public policy or has been modified by later law. The only question is as to the existence of any such public policy or the *meaning* of any such later law.

35. This company in good faith accepted these order-contracts on the Department's own terms. Relying upon the promise of the contract, it undertook considerable and costly plant extensions, which were not justified by any other needs but those of war. It must look to the funds arising from the construction of these ships to pay a large part of the cost of these extensions. It feels that it has the right to expect the Department to pay what the Department, acting for the President, solemnly promised to pay.

36. The obligations of the contract should not be repudiated by a department of the Government on any debatable ground. If the Navy Department regards the payment of the tax cost as contrary to public policy, it no less follows that a failure to make the payment *on the ground taken* may involve the most serious and far-reaching consequences and thus contravene a public policy of equal dignity.

37. If the contract in this cause was based upon an illegal consideration, then the contract falls, and with it all agreements under the contract, and the whole subject of the particular construction becomes chaotic. If the contract became illegal at some subsequent time, there is a change under the contract which should be treated as any other change.

This conpany contends that there was no illegality in the original contract and that no subsequent statute has changed its sense or legal effect. It believes that the matters set up in the foregoing paper clearly justifiy its conviction that the Secretary of the Navy will perceive the propriety of its position and will withdraw his previous instructions to the Compensation Board.

If in the course of the consideration of this paper, the Secretary of the Navy, or his advisors, question the accuracy of any statement of fact or position of law herein taken, this company respectfully requests that it may be made acquainted therewith, to the end that it may modify or justify the statements made herein.

Respectfully,

By H. L. Ferguson, *President.*

Enclosure H

[First endorsement]

N–407
407

September 7, 1918.

From: Compensation Board.
To: Secretary of the Navy.
Via: Office of the Solicitor.
Bureau of Construction and Repair.
Bureau of Steam Engineering.
Subject: Newport News Shipbuilding & Dry Dock Co. objects to the decision of the Navy Department declining to accept as costs Federal taxes, etc.
Reference (*a*) Newport News Shipbuilding & Dry Dock Co.'s letter to the Secretary of the Navy, July 9, 1918 (copy herewith).
(*b*) C. B.'s letter to Navy Department, April 13, 1918, 407, with Department's endorsement.

1. The Compensation Board has given careful consideration to the arguments set forth in the accompanying letter from the Newport News Shipbuilding &

Dry Dock Co. in relation to the Navy Department's decision concerning exclusion of income and excess-profits taxes from the costs of certain naval vessels.

2. The Board is of the opinion that the Department's previous decision in respect to this matter is correct and in strict conformity with the law. It is, therefore, recommended that the Department adhere to its decision previously rendered.

W. L. CAPPS,
Chief Constructor, United States Navy,
Senior Member.

ENCLOSURE I

[Copy]

NEW YORK SHIPBUILDING CORPORATION,
MAIN OFFICE AND WORKS,
Camden, N. J., August 15, 1918.

Rear Admiral CAPPS,
Compensation Board, Navy Department, Washington, D. C.

DEAR SIR: Referring to our previous communication to the Department on the subject of the allowance of income and excess-profits taxes as a part of costs in contracts providing therefor.

We wish to join in the letter of the Newport News Shipbuilding & Dry Dock Co. addressed to the Secretary of the Navy, dated July 9, 1918, relative to this subject.

This letter, in our opinion, properly presents to the Department considerations which justify a belief upon the part of this corporation that the allowance provided for in the several contracts affected thereby should be made.

We have addressed a letter of the same tenor as the above to the Secretary of the Navy.

Yours very truly,

M. A. NEELAND, *President.*

ENCLOSURE J

[Copy]

FEBRUARY 12, 1921.

Mr. H. L. FERGUSON,
President and General Manager,
Newport News Shipbuilding & Dry Dock Co., Newport News, Va.

Subject: War-profits and excess-profits taxes for the taxable year 1919 and thereafter, and their exclusion from any part of the cost of naval vessels building upon a cost-plus profit basis.

References: (*a*) Your letter, no. 3204, January 4, 1921 (*Maryland* and *West Virginia*).
(*b*) Your letter, no. 3204 (A), January 4, 1921 (*Constellation* and *Ranger*).
(*c*) Your letter, no. 3204 (B), January 4, 1921, (destroyers nos. 119–124).
(*d*) Your letter, no. 3204 (C), January 4, 1921 (destroyers nos. 181–185).
(*e*) Your letter, no. 3204 (D), January 4, 1921 (destroyers nos. 186–199).
(*f*) Your letter, no. 3204 (E), January 4, 1921 (tankers nos. 1654–1661).

Enclosure: Copy of Department's first endorsement to Compensation Board, February 12, 1921.

DEAR SIR: Referring to your several letters of January 4, 1921, to which reference is made above, the Department encloses for your information a copy of its endorsement addressed to the Compensation Board in relation to the subject of excluding from the cost of naval vessels being built on the cost-plus basis all charges for Federal income, war-profits, and excess-profits taxes.

If, under the provisions of the contract, you desire to submit an appeal to the President, it is suggested that this appeal be submitted as promptly as possible.

Respectfully,

JOSEPHUS DANIELS.

The following statement was submitted to the committee by Admiral Land in connection with his testimony (see text, p. 4716):

NAVY DEPARTMENT,
BUREAU OF CONSTRUCTION AND REPAIR,
Washington, D. C., February 21, 1935.

MEMORANDUM FOR SENATOR NYE'S MUNITIONS INVESTIGATING COMMITTEE

In connection with the $238,000,000 appropriation from Public Works Administration for the shipbuilding program of 1933, the committee is informed that this estimate was prepared by the Bureau of Construction and Repair, and that I am directly responsible to naval authorities for this estimate. There is no one in the United States more interested than I am in procuring these ships for the Government in as close accord with these estimates as is possible under existing circumstances. It therefore follows that no one is more interested than I am in obtaining the lowest satisfactory bids from the shipbuilding industry of the United States.

I am proud of every act I committed in connection with this shipbuilding program. If I had it to do over again, I would do the same things. In every case of contract award, the award was made to the lowest reliable bidder, in accordance with statute law.

The following facts are pertinent:

The number of bidders in the Navy shipbuilding program in 1931 were 7.

The number of bidders in the Navy shipbuilding program in 1932 were four.

The number of bidders in the Navy shipbuilding program in 1933 were 12.

The number of bidders in the Navy shipbuilding program in 1934 were 14.

Your particular attention is invited to the increased competition as indicated above.

The number of private yards building naval vessels has been very materially increased in the past few years. All navy yards in the continental limits of the United States are building naval vessels practically up to the limits of their capacity insofar as intelligent policy will permit.

With reference to Mr. C. L. Bardo's letter of June 22, 1933, the statement in paragraph 5 of this letter is incorrect in its entirety so far as the Navy Department is concerned. This statement is quoted, as follows:

" There was also expressed to us the desire that the builders themselves should get together and agree as far as we could upon what each would bid and then bid on nothing else."

No official in authority in the Navy Department would make such a statement, and no such statement was made to Mr. Bardo by any official in authority in the Navy Department. From a Navy point of view the idea is so illogical as to be foolish. There are other inaccuracies in this letter. It appears that Mr. Bardo either misunderstood the ideas of the Navy Department or was misinformed relative thereto. Certainly his suspicion and opinion as expressed in the latter part of the letter are quite erroneous.

It is well known (and the committee is probably aware) that the old-time shipbuilders, those familiar with combatant-ship construction, do not have to come to the Navy Department to find out what to bid on. It is equally well known that shipbuilders unfamiliar with the construction of combatant ships do come to the Navy Department, and when they do they are given the best advice that those in authority can give.

It is a reasonably well-known fact throughout the naval service that the Bath Iron Works does not need any representative or pseudo representative to work in Washington in their behalf in connection with combatant-ship construction, particularly destroyers. The reputation of this firm for excellently constructed destroyers is well known throughout the service. Personally, I am pleased when the Bath Iron Works submits a bid. However, that is a personal opinion, and my official action is based entirely on the bids submitted by this firm.

As a pertinent point in connection with this investigation and in connection with bidders in general, the committee is informed that I personally criticized the president of the Bath Iron Works for not submitting a bid, accompanied by a bid bond, on destroyers in the 1934 program. No award was made to the Bath Iron Works in 1934.

With reference to the Gulf Industries' bid in 1933 and 1934, the committee has been furnished with copies of the letters of recommendation relative to this firm. These letters are self-explanatory and amply justify the rejection of the bids.

The National Industrial Recovery Act in its declaration of policy, section 1, states: "To promote the fullest possible utilization of the *present production capacity* of industries." Particular attention is invited to the words "present production capacity of industries."

Public works are defined in Public, No. 2, Seventy-third Congress, "credit bill", approved March 20, 1933, page 7, section 4, subparagraph 2, from which the following is quoted:

"'Public works' as used in this section shall comprise all projects falling in the general classes enumerated in Budget statement no. 9, pages A177 to A182, inclusive, of the Budget for the fiscal year 1934, and shall also include the procurement of new airplanes and the construction of vessels under appropriations for 'Increase of the Navy.' The interpretation by the Director of the Bureau of the Budget, or by the President in the cases of the War Department and the Navy Department, of 'public works' as defined and designated herein shall be conclusive."

The National Industrial Recovery Act, which became law on June 15, 1933, indicates what is included in public works. Ships and aircraft are included. Reference: National Industrial Recovery Act, section 202, page 8.

In my hearings before the House Naval Affairs Committee in January 1934, the following extracts are quoted, as they are pertinent to the 1933 shipbuilding program, which has been under consideration by this committee:

"The National Industrial Recovery Act was passed by Congress on June 15, 1933, and was signed by the President the next day. On the same day, June 16, 1933, the President signed the Executive Order No. 6174 allocating $238,000,000 for building new ships for the Navy. The list of the ships to be built and bidding data had been prepared in advance by the Navy Department, and proposals were issued at once for bids to be opened July 26 for those 21 ships to be built by contract in private shipyards (including 4 destroyers to be built under the regular "Increase of the Navy" appropriation). Contracts for the construction of these vessels were awarded to the various private shipyards on August 3, 1933, and at the same time orders were issued allocating the construction of 16 ships (including 1 light cruiser to be built under the regular "Increase of the Navy" appropriation) to the various United States navy yards (37 ships in all; 32 N.R.A., 5 increase Navy).

"In allocating the construction of these vessels to the various shipyards and navy yards it was essential to give consideration to the vessels already being constructed under the regular building program, 1 aircraft carrier, 6 heavy cruisers, 2 submarines, and 8 destroyers in course of construction in various stages, and distributed between private shipyards and navy yards. In allocating the construction of the 32 vessels under the National Industrial Recovery Act program and the 5 under the regular program between the private shipyards and the navy yards, the Department gave full consideration to the requirements of the various laws on the subject and particularly to the Dallinger amendment. In each case the award of a contract to a private shipyard for the construction of one of the new vessels was made to the lowest satisfactory bidder. Allocations of ships to particular navy yards were made on the basis of capacity and ability to construct, having in mind work already in hand and in prospect, and with a view to the distribution requisite to relieve unemployment so far as possible. These allocations were made only after the most serious consideration had been given by the Department to all of the questions involved and after consultation with the administration. Every effort was made to follow out the spirit and intent of National Industrial Recovery Act, the spirit and intent of Congress, and the spirit and intent of the administration. The distribution of the vessels involved was made on the basis of numbers, on the basis of cost, and on the basis of adequate distribution of the work.

"The CHAIRMAN. You were trying to carry out the spirit of the Dallinger amendment as far as you possibly could, were you not?

"Admiral LAND. We not only tried to carry it out, Mr. Chairman, but I think we carried it out fully. As I stated Monday, the result was that out of 54 ships under construction today there are 27 in navy yards and 27 in private yards.

"SHIPBUILDING FACILITIES IN THE UNITED STATES

"Let us start from scratch.

"A. In the spring of 1933 there was exactly one private ship contract in all the private shipbuilding yards in the United States.

"B. There were only six naval vessels building in these private plants, some of them well along toward completion.

"C. The private shipyards were fast approaching the starvation point.

"D. The east coast navy yards had 2 modernization jobs (completed in September 1933), 1 modernization job under way (*Idaho* at Norfolk), and 8 new ships under construction, many of them well under way toward completion. Due to the fact that the United States Fleet was in the Pacific, the general work load condition in the east-coast yards somewhat paralleled the general work load conditions of the private yards.

"E. We told those in authority concerned with the new Navy building program that the Department would endeavor to spend efficiently $46,000,000 of the $238,000,000 during the first year of the life of the contracts. We are using our utmost endeavors and expect to meet that promise.

"F. We have placed contracts with private yards to the amount of about $113,000,000.

"I assume that the Congress is quite as much interested in retaining those who are fit in employment as it is in reemployment, as nothing is gained, generally speaking, in employing a man on the one hand and firing a man on the other. That is the great asset of the Navy shipbuilding program. We not only have retained thousands of men in employment but we have added to this by employing other thousands out of employment.

"An analysis of the situation indicates that of the $35,000,000 to $45,000,000 of our purchase orders in the private yards and in the navy yards we have kept at work or put to work 30,000 men for 1 year. This represents material orders alone. New orders are going out every day. For example, the Newport News Co. expects to place orders for 4,000 tons of steel for the carriers next week. In addition to the foregoing is the employment of labor in the navy yards and the private yards actually constructing the vessels, fabricating the equipage, building the boilers and the turbines, and so forth.

"In some cases we have only made a small beginning—in others we are well under way.

"Personally I am not satisfied with the rapidity of progress made—in fact, I never expect to be satisfied as long as unemployment exists in this country, but we are all doing the best we know how to accomplish the results desired.

"I wish I could give you accurate figures relative to those in our private yards and those in our navy yards who have been retained in employment, who have been recalled from enforced furlough, have been reemployed, and/or who have been employed from out of the ranks of the unemployed. It cannot be done, but the number runs into the thousands.

"Our building program should not only do much to stimulate industry in general but will revive the shipbuilding interest which is so necessary to the maritime and general economic welfare of the country.

"In order that the committee may have a reasonable picture of the shipbuilding facilities of the United States, we have reviewed the situation from the best information available and find that, if required, existing facilities are such that we could start the entire Navy building program to bring us up to treaty strength on July 1, 1934. The Department is not recommending such action, but the shipbuilding facilities actually exist for 110 ships. Such a program would only be undertaken in great emergency and would require reconditioning of about 13 building ways and the addition of about 7 building ways in private plants where space and other facilities now exist. From the navy-yard point of view, such a program would require the utilization of three dry docks and rebuilding four sets of ways.

"Let us omit the utilization of docks, rebuilding ways and new ways. We still have available facilities for 81 ships (110—29=81).

"Breaking this down into concrete form, we have in navy yards a maximum of 22 building ways and a minimum of 13; in private yards a maximum of 88 and a minimum of 68 building ways, which gives us a total of 110 maximum and 81 minimum."

Prior to my hearings in 1934, extracts from which have just been quoted, Admiral Rock, the then Chief Constructor, reported at length on the condition of the shipbuilding industry in 1932 before the Committee on Naval Affairs, United States Senate. His hearings will be found on pages 18, and 91 to 94 of hearings on S. 51 dated January 7, 8, and 9, 1932, and entitled "Building up of the United States Navy to the Strength Permitted by the Washington and London Naval Treaties." This hearing is an excellent treatise on the shipbuilding industry of the United States; I respectfully recommend that this hearing before the Senate Naval Affairs Committee be incorporated in the record of this committee.

It is understood that the committee has available evidence given by me at hearings before the shipbuilders' code committee in the summer of 1933. I was directed by the Navy Department to appear at these code hearings and present certain evidence relative to the Navy Department's stand in this matter. I also answered questions asked by the chairman, and the committee has available this information. It is understood that my evidence before this code committee in 1933 has been criticized in evidence submitted to your committee. Specifically, it is purported to have been stated that I was ignorant and misrepresented facts. The question of ignorance is a relative one, and I stand on my record. Any statement that I misrepresented facts is false. In this connection attention is invited to my testimony before the House Naval Affairs Committee in January 1934 relative to the shipbuilding facilities of the United States. (Some pertinent parts of this hearing are quoted in preceding paragraphs.)

The following is quoted from Army and Navy Journal relative to the ships under construction as of this year:

[Army and Navy Journal, Feb. 9, 1935, p. 494]

"CURRENT AMERICAN SHIPBUILDING

"On January 1, 1935, American shipyards were building, or under contract to build, for private shipowners, 69 vessels, aggregating 49,623 gross tons, compared with 67 vessels, aggregating 49,403 gross tons, on December 1, 1934. The tonnage was distributed as follows:

"Steam and motor, steel, seagoing, 1,000 gross tons and over, 3 vessels totaling 19,600 tons; all coasts, 100 to 999 gross tons, 4 vessels totaling 2,225 tons.

"Unrigged, steel, all coasts, 100 gross tons and over, 57 vessels totaling 26,328 tons.

"Steam and motor, wood, all coasts, 100 gross tons and over, 5 vessels of 1,470 tons."

Particular attention is invited to the fact that the above ships under construction are practically all small craft and not ships in the accepted sense of the term.

In my hearings before the House Naval Affairs Committee, in January 1935, the following extracts are quoted. They are also pertinent to the 1933 program as well as the 1934 program:

"14. In connection with the estimated expenditures, it is felt that the following will be of interest, indicating results actually attained in comparison with estimates made:

"(*a*) The actual expenditures to October 1, 1934, on 32 vessels being constructed under the $238,000,000 N.I.R.A. allotment are:

Hulls and machinery	$28, 031, 071
Armor, armament, and ammunition	15, 188, 132
Total	[1] [2] 43, 219, 203

"(*b*) The actual expenditures for the five vessels under 'Increase of the Navy', to October 1, 1934, are:

Hulls and machinery	$3, 068, 145
Armor, armament, and ammunition	1, 148, 650
Total	4, 216, 795

---

[1] Estimated expenditure made in May 1933, $43,495,000.

[2] These expenditures are also exclusive of expenditures for aircraft.

"(*c*) The total actual expenditures to October 1, 1934, on the building program of 37 vessels during the first building year, therefore, are the sum of (*a*) and (*b*), or $47,435,998.

"15. Although the foregoing estimates and actual expenditures pertain to the first building year of the 1933 program, it is interesting to note that the indicated actual expenditures for the month of October 1934 are as follows:

"(*a*) For the 32 N.I.R.A. vessels:

Hulls and machinery	$5, 635, 284
Armor, armament, and ammunition	1, 620, 263
Total	7, 255, 547

"(*b*) For the five vessels under 'Increase of the Navy':

Hulls and machinery	$398, 350
Armor, armament, and ammunition	204, 660
Total	603, 010

"(*c*) The total expenditure indicated for the entire 37 vessels for October 1934, therefore, is $7,858,557, exclusive of vouchers amounting to $745,675.50, which passed through the bureaus but will not be paid until November 1934.

"16. It is felt that the Department's actual expenditures for the first year's construction of 37 vessels, amounting to a total of over $47,400,000, and the indicated expenditure of about $8,000,000 for the month of October 1934 may be pointed to with justifiable pride as concrete evidence of actual performance in furthering the administration's plans in the relief of unemployment and industrial recovery.

"The administration and representatives of this committee were informed that the Navy Department would efficiently expend on this building program during the first year of construction $46,000,000. The figures just quoted are concrete evidence of the results that obtained.

"There has been genuine unemployment relief not only at the navy yards and private yards but also at the subcontractors' plants directly or indirectly connected with the shipbuilding industry throughout the country.

"21. The awards and allocations for the 1934 program involved greater difficulties than were encountered in 1933, but these difficulties were surmounted by the Department. Bids were opened on August 15 and awards made on August 22.

"22. There were 14 bidders on this program. Bids were required on a fixed-price basis and permitted on an adjusted-price basis. In all cases on the fixed-price basis the bids were uniformly high. After careful consideration, awards were made on the adjusted-price basis. In this connection, attention is invited to the fact that, in 1933, 13 awards were made on fixed-price basis and 8 awards on adjusted-price basis.

"23. An analysis of the distribution of awards and allocations shows that 13 vessels went to navy yards and 11 to private yards.

"24. At the present time our navy yards are very close to capacity so far as new construction is concerned, unless facilities are materially increased and/or drydocks are used for building purposes.

"25. Figures available in the Department as to number of men employed in navy yards (including gun factory and torpedo station) on the shipbuilding program include:

Appropriations N.I.R.A., I.N.E.C., new I.N. and old I.N	22, 459
In private yards	11, 090
Total	33, 549

"26. On purchased materials and equipment away from the site of shipbuilding we have various estimates. My estimate is 15,000."

In regard to the awards themselves (1933 program), they were, in every case, made to the lowest responsible bidder. The recommendations for these awards were prepared jointly by Admiral Robinson, Chief of the Bureau of Engineering, and myself. The Secretary of the Navy, after assuring himself that the recommendations were in accordance with the law, approved them without any change whatever. These recommendations were then transmitted to the President and again were approved without any change whatever.

I have had no meetings with shipbuilders or their representatives or with subcontractors or their representatives to discuss allocation of ships or method of preparing bids.

From time to time, particularly after the call for bids was issued and up to the time they were opened, shipbuilders or their representatives were in my office to discuss technical matters in connection with these bids; at no time was there any discussion of allocation of the ships, except allocation of ships to navy yards which was contemplated in accordance with law in the case of cruisers and in accordance with Navy Department policy in the case of other types.

After the bids were opened, analyzed, and evaluated so that the lowest satisfactory bidders in each class could be preliminarily determined and after preliminary discussions had taken place with the Secretary, certain technical points in connection with these bids were discussed with the shipbuilders directly concerned. The question of the method of preparation of plans so as to insure duplication of design of destroyers was discussed with the United Shipbuilding & Dry Dock Co., Federal Shipbuilding Co., and the Bath Iron Works, which three firms were to build the same type of destroyer. These discussions required several conferences before proposals and agreements satisfactory to the Navy Department were concluded.

The conferences and discussions in connection with the 1,500-ton destroyers were necessary and essential in order that the Department might be definitely assured that a proper technical and design staff would be available to prepare plans for those contractors who were to build six destroyers in accordance with these plans. There were also involved in this question the plans for 10 destroyers to be constructed at navy yards and in accordance with the terms of the contract the plans prepared by the private contractors were to be made available to the various navy yards building similar vessels.

Conferences were held with representatives of the Bethlehem Shipbuilding Co. and the New York Shipbuilding Co. in regard to similar matters covering the destroyer leaders. These conferences were necessary and essential as the Department had decided that these eight vessels should be built from New York Shipbuilding Co. plans.

In conclusion I wish to repeat that at no time have I had any agreements or understandings with any of the shipbuilders or their representatives or subcontractors or representatives of subcontractors in regard to the allocation of ships, nor have I at any time suggested or advised the shipbuilders or their representatives that they should agree among themselves as to a distribution of shipbuilding contracts.

E. S. Land,
Rear Admiral (C.C.), United States Navy,
Chief Constructor.

INVESTIGATION OF MUNITIONS INDUSTRY

FRIDAY, FEBRUARY 1, 1935

United States Senate,
Special Committee to Investigate
the Munitions Industry,
Washington, D.C.

The hearing was resumed at 10 a.m., in room 357, Senate Office Building, pursuant to recess, Senator Gerald P. Nye presiding. presiding.

Present: Senators Nye (chairman), Clark, Vandenberg, and Barbour.

Also present: Stephen Raushenbush, secretary to the committee; and F. W. La Rouche, investigator.

At this point the committee concluded that part of the testimony which is incorporated in Part XVIII of these hearings, "Naval Shipbuilding—New York Shipbuilding Corporation."

The Chairman. The committee will come to order.

Senator Vandenberg. First this morning, as a supplement to the testimony yesterday regarding Mr. A. P. Homer, I want to read into the record certain letters written by Mr. Homer and signed in his capacity as chairman of the marine committee of the finance division of the Democratic National Campaign Committee, Biltmore Hotel, New York City.

The first letter I read is dated October 17, 1932, and addressed to Mr. Charles M. Schwab, and is as follows:

> My Dear Mr. Schwab: As a result of the events of the last 3 weeks, we believe that if the shipbuilders of the United States are to get a square deal it will be necessary to make a change on November 8. I hope that you are in accord with this idea. If so, we ask that you help us with a contribution to the campaign fund of Governor Roosevelt, who, as you know, is marine-minded and hasn't the opinion that international affairs can be settled with a blueprint navy. Checks should be made to F. C. Walker, treasurer (personal checks, of course), and mailed to him in the enclosed envelop. The writer will personally acknowledge your contribution and see that the news of it reaches the Governor's ears.
>
> Thanking you for your cooperation in this matter, I am,
>
> Yours very sincerely,
>
> A. P. Homer.

I also read a letter dated October 17, 1932, addressed to Mr. Grace [reading]:

> After what the present incumbent of the White House did to the private shipyards on the destroyer matter, I am sure that you are of the opinion that a change is necessary if the shipbuilders are to get a square deal. As an old

member of the shipbuilding fraternity, I am writing to ask for a contribution to the campaign fund of Governor Roosevelt. Checks should be made to F. C. Walker, treasurer (personal checks, of course), and mailed in the enclosed envelope promptly. The writer will acknowledge this personally and see that the knowledge reaches the Governor.

Thanking you for your cooperation, I am,

Very sincerely yours,

A. P. Homer.

Another form letter which was addressed to a large number of shipbuilders contained the following:

> It is apparent that if we are to have a treaty-strength Navy we must have someone other than a pacifist in the White House, and as a treaty-strength Navy is of vital importance to you shipbuilders, we believe that the best interests of the industry will be served by the election of Governor Roosevelt, who has full knowledge of the Navy's problems, having been intimately acquainted with the troubles which came from unpreparedness in the World War.
>
> In order that we may be able to carry on the campaign successfully, funds are of vital importance, and I hope you will see your way clear to sending a contribution to us.
>
> Checks should be made to F. C. Walker, treasurer (these must be personal checks), and promptly returned in the enclosed envelop.

This letter was also signed by Mr. Homer in his capacity as chairman of the marine committee of the finance division of the Democratic National Campaign Committee, Biltmore Hotel, New York City.

Shipbuilders to whom this or a similar letter was sent include Homer L. Ferguson, president Newport News Shipbuilding & Drydock Co., Newport News, Va.; C. H. Bardo, president New York Shipbuilding Co., Camden, N. J.; S. W. Wakeman, vice president Bethlehem Shipbuilding Corporation, Quincy, Mass.; W. S. Newell, president Bath Iron Works, Bath, Me.; C. Stewart Lee, vice president Pusey & Jones Corporation, Wilmington, Del.; J. C. Pew, president Sun Shipbuilding & Drydock Co., Chester, Pa.; W. W. Smith, chief engineer Federal Shipbuilding & Drydock Co., Carney, N. J.; Charles C. West, president Manitowoc Shipbuilding Corporation, Manitowoc, Wis.; L. Y. Spear, vice president Electric Boat Co., Groton, Conn.; Joseph W. Powell, president United Dry Dock, Inc., New York City; J. Herbert Todd, vice president Todd Shipyards Corporation, New York City; and D. W. Nevins, General Electric Co., Schenectady, N. Y.

Whom do you want on the stand, Mr. Raushenbush?

Mr. Raushenbush. Mr. Charles Langell.

Senator Vandenberg. Mr. Langell, take the stand, please.

TESTIMONY OF CHARLES J. LANGELL—Resumed

"BIG THREE" ESTIMATES INCOMPLETE ON SHIPS NOT WANTED

(The witness was previously sworn by the chairman.)

Senator Vandenberg. You may proceed, Mr. Raushenbush.

Mr. Raushenbush. Mr. Langell, there are a few questions about the estimating that we would like to clear up. The other day when you were on the stand you were describing the functions of an estimator for a ship company, and I wonder if you would repeat certain portions of that testimony. When you were told to prepare an estimate on one of these naval vessels, could you tell the committee once more how you go about that?

Mr. LANGELL. When the plans and specifications come from the Government they are distributed to the hull scientific department, to the engine scientific department, and to the electrical department. They go over the specifications very carefully and take from the drawings the quantities necessary for a complete ship. They prepare—what shall I say?—get inquiries which are sent out through the purchasing department to the various people interested in supplying material for the ship.

Those inquiries come to me and are inserted in my estimate.

In the meantime the quantities that have been figured out, say for steel and all kinds of miscellaneous material, and the machinery for the ship which is built at the plant, we estimate the labor to complete same up to date of delivery.

Mr. LAROUCHE. May I interrupt just at that point?

Mr. LANGELL. Yes.

Mr. LAROUCHE. Will you tell what the purpose of the inquiries is? What purpose or purposes are served?

Mr. LANGELL. For instance, we will take the item "boilers." We write complete specifications for the boilers required for the ship, and we submit that to the B. & W. people and sometimes to the Foster-Wheeler people. They in turn submit their proposition to us.

Mr. LAROUCHE. Prices?

Mr. LANGELL. Prices and weights. That last word is very vital, "weights." In lots of cases we ask other people for the same kind of apparatus, and we generally use the one that has the lightest weight, not necessarily the cheapest price, because weight is of great importance.

Mr. RAUSHENBUSH. Then the prices quoted to you in those replies to your inquiries cover you in the event that you may get the award, and you are then in position where you can order at those prices?

Mr. LANGELL. Right.

Mr. LAROUCHE. No first-class estimator—and you are a first-class estimator, I believe——

Mr. LANGELL. I do not know.

Mr. LAROUCHE. No real good estimator would ever prepare a bid on a ship without getting coverage. And no estimator would prepare a bid on a ship without coverage?

Mr. LANGELL. I cannot quite answer "yes" to that, because sometimes we are in such a hurry that we make a jump estimate.

Mr. LAROUCHE. And you take a chance?

Mr. LANGELL. And we take a chance.

Mr. LAROUCHE. When that is the case, you shut your eyes and pray you do not get the job? Is that the idea?

Mr. LANGELL. I do not know that. It is a chance, of course.

Mr. LAROUCHE. You do take a chance, a big chance, when you make a bid without getting at least 75 percent of complete coverage. Is not that right?

Mr. LANGELL. No; I doubt if we ever get over 75 percent coverage at any stage of the game.

Mr. LAROUCHE. Roughly, then?

Mr. LANGELL. Around that.

Mr. RAUSHENBUSH. Mr. Langell, on a cruiser on which about $4,000,000 or $4,500,000 worth of material is involved, you certainly do not make it a practice to make up estimates for the company to put in bids unless they know what they are going to pay for that material?

Mr. LANGELL. True.

Mr. RAUSHENBUSH. It would be an exceptional case where they were willing to make up an estimate or put in a bid without that? Would not that be true?

Mr. LANGELL. True.

Mr. RAUSHENBUSH. Very exceptional?

Mr. LANGELL. Absolutely.

Mr. LAROUCHE. Then there are really three major purposes to be served by those inquiries: The knowledge of weight, because that means money to the shipyard——

Mr. LANGELL. Yes, sir.

Mr. LAROUCHE. If a supplier goes over weight a few hundred pounds, it may mean a good deal of loss to the shipbuilder?

Mr. LANGELL. As far as the penalties are concerned.

Mr. LAROUCHE. And possible bonuses?

Mr. LANGELL. And possible bonuses.

Mr. LAROUCHE. First of all, you send out inquiries for the purpose of knowing the weights of the materials that are going into the ship. That is one?

Mr. LANGELL. Weight and price.

Mr. LAROUCHE. Weight is one, and price is two, and coverage protection is the third?

Mr. LANGELL. Right.

Mr. LAROUCHE. Is that right?

Mr. LANGELL. That is right.

Mr. RAUSHENBUSH. I want to ask again a question I asked before: When you get your instructions from the head of the company to prepare an estimate, you prepare it and at that time turn it over to him, as I understand it, and have no more to do with the bidding?

Mr. LANGELL. Not a thing in the world.

Mr. RAUSHENBUSH. You are just a technical man on the cost, and so forth?

Mr. LANGELL. I am done.

Mr. LAROUCHE. In 1933, with the big naval program that was let, and at that time bids were requested from the New York Ship for a certain number of cruisers, aircraft carriers, and destroyers of two types. That is right, is it?

Mr. LANGELL. Yes, I think that is right.

Mr. LAROUCHE. That is July 1933?

Mr. LANGELL. Yes.

Mr. LAROUCHE. Or perhaps June; probably June.

Mr. LANGELL. June approximately.

Mr. LAROUCHE. The awards were made in August and in July—

Mr. LANGELL. Bids were opened in July.

Mr. LAROUCHE. Bids were opened the 26th of July and the contract bears the date of August 3?

Mr. LANGELL. Right.

Mr. LAROUCHE. On some of that you prepared a little more data than on some others?

Mr. LANGELL. It was on instructions from the management.

Mr. LAROUCHE. You were instructed by the management as to which ships you would gather the most data for. Is that correct?

Mr. LANGELL. I was told to concentrate on the 1,850-ton destroyers and the light cruisers.

Mr. LAROUCHE. You were told to concentrate your efforts on the 1,850-ton destroyers and the light cruisers?

Mr. LANGELL. Right.

Mr. LAROUCHE. So that you did not give much attention to the aircraft carriers, of which two were advertised?

Mr. LANGELL. Yes, sir.

Mr. LAROUCHE. Or the 1,500-ton destroyers? Is that right?

Mr. LANGELL. Right.

Mr. LAROUCHE. I think we went over pretty carefully the material on the two light cruisers, and I think you told me that this was the data, substantially, on which you based your estimates for the two light cruisers [exhibiting file of papers].

Mr. LANGELL. Right; yes, sir.

Mr. LAROUCHE. And that this is the data for the 1,850-ton destroyers [exhibiting file of papers]? That is it right here?

Mr. LANGELL. Yes, sir.

Mr. LAROUCHE. All right. And this for the two light cruisers [exhibiting file of papers]?

Mr. LANGELL. Yes, sir.

Mr. LAROUCHE. And that these two little packages contain all the data, the comparable data, for the 1,500-ton destroyers [exhibiting two packages of papers]. Is that right?

Mr. LANGELL. To the best of my knowledge.

Mr. LAROUCHE. To the best of your knowledge?

Mr. LANGELL. Yes, sir.

Mr. LAROUCHE. And this [exhibiting file of papers] contains all the data, the comparable data, for the two aircraft carriers?

Mr. LANGELL. Right.

Mr. RAUSHENBUSH. Will you describe those, Mr. LaRouche? What is it you hold in your hand?

Mr. LAROUCHE. These consist of estimate summaries—this is the estimate and the summary.

Mr. RAUSHENBUSH. That is the folder which you now hold in your hand?

Mr. LAROUCHE. The little one, the thin one, and this, which is a little thicker [exhibiting second file of papers] consists of the inquires sent out by New York Ship in connection with the aircraft carriers nos. 5 and 6, in 1933, aircraft carriers which later were given names.

In other words, the aircraft carriers were the biggest jobs of all.

Mr. RAUSHENBUSH. How much did they amount to in money?

Mr. LAROUCHE. The contract was $19,000,000 apiece plus. That means that they on an adjusted price may run about $23,000,000 apiece.

Mr. RAUSHENBUSH. Is that about right, Mr. Langell, that the two aircraft carriers run about $38,000,000 plus?

Mr. LANGEL. I have not the figures before me.

Mr. LAROUCHE. That was it. In other words, that was the biggest job of all?

Mr. LANGELL. Yes.

Mr. LAROUCHE. And this is the thinnest folder of all?

Mr. LANGELL. Yes. sir.

Mr. LAROUCHE. For the record, the material sent out by the New York Ship for light cruisers nos. 42 and 43, is this big package [exhibiting package]. It should be explained that these are the jobs the New York Ship got.

Mr. LANGELL. Right.

Mr. LAROUCHE. And this other big package on the 1,850-ton destroyers is another job that your company got?

Mr. LANGELL. Yes.

Mr. LAROUCHE. And this little folder contains material on a job you did not get?

Mr. LANGELL. Right.

Mr. LAROUCHE. Is that right?

Mr. LANGELL. That is right.

Mr. LAROUCHE. And this other little folder is a heavy cruiser in 1933?

Mr. LANGELL. Right.

Mr. LAROUCHE. Which you did not get?

Mr. LANGELL. Right.

Mr. RAUSHENBUSH. Is that 1933?

Mr. LAROUCHE. That is right.

Mr. RAUSHENBUSH. One cruiser, is that?

Mr. LAROUCHE. Heavy cruiser no. 40, which later became no. 44, and is now named the *Vincennes*.

Mr. LANGELL. Right.

Mr. LAROUCHE. And this is the cruiser upon which you did not even make an estimate. Is that right?

Mr. LANGELL. Let me see that. What is the number of that estimate [examining paper]? No; it was based on another estimate.

Mr. LAROUCHE. But you made no estimate on heavy cruiser no. 40 at any time?

Mr. LANGELL. No.

Mr. LAROUCHE. That was the one you told me that the management made itself?

Mr. LANGELL. That is right.

Mr. LAROUCHE. You had nothing to do with that?

Mr. LANGELL. Not a thing in the world.

Mr. LAROUCHE. Was not that a little unusual?

Mr. LANGELL. Well, that is up to the management and not up to me.

Mr. RAUSHENBUSH. Was it not more than unusual at a time when prices were supposedly jumping?

Mr. LANGELL. Supposedly doing what?

Mr. RAUSHENBUSH. Jumping, in the summer of 1933.

Mr. LANGELL. I just followed instructions; that is all.

Mr. RAUSHENBUSH. I know you did. You are one of the technical men and you take your orders from the management. There is no question about that. I am just raising the question whether, with all the very careful estimates that were made on some of the other jobs in 1933, the idea of shoving a bid in for a heavy cruiser, at a time prices were raising to the extent they were in 1933, was not a very dangerous proposition for the company in case they really expected to get that cruiser.

Mr. LANGELL. I do not recollect the price that the firm put in for that heavy cruiser. I do not think it is on that sheet, is it? But my recollection is that they would have been perfectly satisfied to have had the heavy cruiser at the price they quoted.

Mr. RAUSHENBUSH. $12,100,000.

Mr. LANGELL. How much was it?

Mr. RAUSHENBUSH. $12,100,000, fixed.

Mr. LANGELL. Yes; I think they would have been perfectly safe at that figure.

Mr. RAUSHENBUSH. Or they would have been safe at $15,000,000 or would have been safe at $16,000,000?

Mr. LANGELL. Of course, that would have been a ridiculous bid.

Mr. RAUSHENBUSH. In 1933.

Mr. LANGELL. Yes, sir.

Mr. RAUSHENBUSH. Those were the bids made in 1934?

Mr. LANGELL. I beg your pardon.

Mr. RAUSHENBUSH. The company did make those bids in 1934, did it not?

Mr. LANGELL. Not the $15,000,000, to my recollection.

Mr. RAUSHENBUSH. Up in that margin, somewhere?

Mr. LANGELL. Wait a minute. I have got the bids somewhere.

Mr. RAUSHENBUSH. The fixed price bid in 1934.

Mr. LANGELL. There is a fixed price of $16,000,000 there?

Mr. RAUSHENBUSH. Yes.

Mr. LANGELL. I do not know anything about that.

Mr. RAUSHENBUSH. The point I was making, Mr. Langell, was not that the company would have been pleased to have gottten a cruiser at a high price, but that at a time when prices were jumping, and if there was open free length, free arm competitive bidding, the company was out to get the prices down rather than the prices up to a safety margin.

Mr. LANGELL. Are you talking about 1933?

Mr. RAUSHENBUSH. Still talking about 1933, and the heavy cruiser.

Mr. LANGELL. When the price was made in 1933 I do not think the code had been signed at that time, and I do not think that the management had the slightest idea in the world what was going to happen in the very near future.

Mr. RAUSHENBUSH. And yet, a lot of those 1933 bids were put in on sliding prices, adjusted prices?

Mr. LANGELL. Yes; I think we put in both sliding and fixed. But, as I said before, I was told to concentrate on the 1,850's and the light cruisers, with the distinct understanding that that was what the firm would like to have.

Senator BARBOUR. You say you were told to concentrate; who told you?

Mr. LANGELL. The management, Mr. Bardo or Mr. Cornbrooks—— I have forgotten which.

Senator BARBOUR. That is all right. It was your own management?

Mr. LANGELL. Yes, sir.

Mr. LaRouche. We just want to complete this measure of the volume here. Will you roughly estimate, either of you, the probable weight of that?

Mr. Langell. The weight of which one are you talking about?

Mr. LaRouche. Not the cruiser, but the packages.

Mr. Langell. Now, look, I had already figured on the *Quincy* about a year before, I think, and this *Vincennes* was a duplicate of the *Quincy*, although I had *Quincy* all figured out for me.

Mr. LaRouche. You had the weights figured out for you, but I think you told me that the coverage was equally important, if not more important. This was 9 months later, 9 months after the *Quincy*.

Mr. Langell. The machinery for that heavy cruiser was practically identical with the machinery for the light cruiser, and we were thoroughly covered on the light cruiser, the machinery end of it.

Mr. Raushenbush. Nine months before?

Mr. Langell. No; I am talking about on the light cruiser, we were covered.

Mr. Raushenbush. At the same time?

Mr. Langell. And the heavy cruiser machinery was almost identical to that of the light. I figured at that time, and I think I told Mr. Bardo, that I could not see much difference, and why I should change the estimate for the *Vincennes* from that that I made on the *Quincy*.

Mr. LaRouche. Except this was kind of a left-handed estimate on the *Vincennes*, was it not?

Mr. Langell. I did not make any.

Mr. LaRouche. You did not make any?

Mr. Langell. I made none at all.

Mr. LaRouche. In other words, on a heavy cruiser involving roughly something like $12,000,000, you made no estimate at all?

Mr. Langell. None at all.

Mr. LaRouche. At that time?

Mr. Langell. At that time.

Mr. LaRouche. You told me, I think, at one time that on the 1,500-ton destroyers, you paid very little attention to your inquiries in your estimate on that.

Mr. Langell. Right.

Mr. LaRouche. You did not expect the company was going to get those?

Mr. Langell. I did not even expect that they were going to bid on them.

Mr. LaRouche. That is the 1,500-ton destroyers?

Mr. Langell. Yes, sir.

Mr. LaRouche. Which, Mr. Raushenbush, they did not get.

Mr. Raushenbush. Will you finish up the weight matter?

Mr. LaRouche. Here is the aircraft carrier on which you also made a sort of left-handed estimate, did you not?

Mr. Langell. Right.

Mr. LaRouche. In other words, you just took a long running leap at the estimate on the aircraft carriers nos. 5 and 6, which you did not think the company would get?

Mr. LANGELL. That is perfectly right.

Mr. LAROUCHE. And did not want?

Mr. LANGELL. I understood they did not want that.

Mr. LAROUCHE. But they made a bid?

Mr. LANGELL. I did not.

Mr. LAROUCHE. The company?

Mr. LANGELL. Yes.

Mr. LAROUCHE. They did not want them, did not want the aircraft carriers, but they made a bid. On the 1,500-ton destroyers they did not want them?

Mr. LANGELL. I do not think they did.

Mr. LAROUCHE. And they made a bid?

Mr. LANGELL. They made a bid.

Mr. LAROUCHE. And on the heavy cruiser *Vincennes* you made no estimate at all?

Mr. LANGELL. None.

Mr. LAROUCHE. And you did not get it?

Mr. LANGELL. Certainly not.

Mr. LAROUCHE. On all the other jobs which the company did get——

Mr. LANGELL. And wanted.

Mr. LAROUCHE (continuing). And wanted, you made very elaborate preparation?

Mr. LANGELL. I did.

Mr. LAROUCHE. That is all.

Senator VANDENBERG. I think the record should be very plain that these files tell their own story to a very eloquent degree.

Mr. LAROUCHE. Yes, sir.

Senator VANDENBERG. The files indicating preparation for the ships they did not get are mere casual folders.

Mr. LAROUCHE. Exactly.

Senator VANDENBERG. As compared with the very voluminous files, indicating very careful and voluminous preparation on the ships they did get.

Mr. LAROUCHE. Yes, sir.

DIFFERENCE BETWEEN ESTIMATES PREPARED AND BIDS SUBMITTED

Mr. RAUSHENBUSH. Mr. Langell, a little while ago the company, upon request, furnished us a monthly yard average labor cost per hour, which I would like to offer as an exhibit, and I ask you to identify it, if you can [handing paper to witness].

Mr. LANGELL. As far as I know, it looks all right to me. I could not swear to it at all, but from my recollection it looks perfectly all O. K.

Mr. RAUSHENBUSH. The company attached a letter signed by Mr. Parker.

Mr. LANGELL. I think you will find that is correct.

Mr. RAUSHENBUSH. I would like to offer the two as one exhibit.

(The letter and statement referred to were marked "Exhibit No. 1485" and are included in the appendix on p. 5191.)

Mr. RAUSHENBUSH. This statement, "Exhibit No. 1485" shows monthly yard average labor costs per hour from 1927 through 1934, and can we roughly summarize the situation as showing that during

1927 the average hourly rate was about 62 cents. Would that be fair? Noting the difficulty that it is impossible to weigh those figures, because we do not know the number of men employed in any one month, it would appear on the face of it that the plain arithmetical average would be about 62 cents in 1927?

Mr. LANGELL. That is right.

Mr. RAUSHENBUSH. And about 64 cents, do you think, in 1928?

Mr. LANGELL. It would be around that anyhow.

Mr. RAUSHENBUSH. Around that?

Mr. LANGELL. About 62½ cents in 1929.

Mr. RAUSHENBUSH. About 62½ cents in 1929?

Mr. LANGELL. And about the same in 1930.

Mr. RAUSHENBUSH. And 62 cents in 1930, and 61½ cents in 1931?

Mr. LANGELL. That is about right.

Mr. RAUSHENBUSH. And 58.26 cents in 1932?

Mr. LANGELL. Right.

Mr. RAUSHENBUSH. First half of 1933, 55 cents; and the second half of 1933, 66 cents, and during 1934, rising from May on; making an arithmetical average for the year of 73.1 cents?

Mr. LANGELL. And right now it is about 79 point something.

Mr. RAUSHENBUSH. In February 1935 it is about 79 cents.

Mr. LANGELL. Yes, sir.

Mr. RAUSHENBUSH. Now, may I ask you to identify a sheet prepared by yourself in connection with bids submitted on naval vessels to the United States Government, giving the date of the bid opening, the estimate for material and labor. Did you prepare this [handing paper to witness]?

Mr. LANGELL. I did; yes, sir.

Mr. RAUSHENBUSH. Is that correct?

Mr. LANGELL. Absolutely, to the best of my knowledge it is absolutely correct.

Mr. RAUSHENBUSH. That includes all bids submitted and contracts awarded to the New York Shipbuilding Corporation?

Mr. LANGELL. Right.

Mr. RAUSHENBUSH. With the bid prices?

Mr. LANGELL. Right.

Mr. RAUSHENBUSH. It also has some estimates and some supplementary data?

Mr. LANGELL. Yes, sir.

Mr. RAUSHENBUSH. May I offer that for the record as "Exhibit No. 1486"?

(The document referred to was marked "Exhibit No. 1486" and is included in the appendix on p. 5191.)

Mr. RAUSHENBUSH. You have a copy in front of you, Mr. Langell?

Mr. LANGELL. Yes, sir.

Mr. RAUSHENBUSH. The reason I want to ask about this is to explain, if we can, the great jump in the bids on the crusiers from 1927 to 1929, and 1931 on to 1933 and 1934. The jump was very considerable, and while you have testified several times, Mr. Langell, that the final bids were none of your business, and you did not determine them, I would like to ask such questions as can legitimately be asked of you in your field, about the changes in the cost and estimates as to labor and material in 1927, let us say, and in 1934. If you will look at the sheet in front of you, showing the estimates for material on the series Nos. 26 to 31, scout cruisers in 1927, the material estimate shows $4,170,065.

Mr. LANGELL. Yes, sir.

Mr. RAUSHENBUSH. Is that right?

Mr. LANGELL. Right.

Mr. RAUSHENBUSH. Now, will you turn to the estimate in 1934, in the middle of our price rises, when the bid was $15,000,000, or just about twice what the bid was in 1927, and give me the figure for material as you estimated it on these cruisers Nos. 46 to 48?

Mr. LANGELL. That would be the light cruiser. That is $4,748,225.

Mr. RAUSHENBUSH. Here we have this situation, do we not, Mr. Langell: That in 1927 your company was bidding $10,000,000, and your estimate was not quite $8,000,000. We tried to get some explanation the other day from Mr. Bardo, as to the difference there, and did not succeed in getting it. But here you were bidding $10,815,000 on the 1927 scout cruisers, with material at $4,170,000.

Now we come to 1934, on the light cruisers Nos. 46 to 48, and your material has only jumped six hundred and fifty-odd thousand dollars, not millions, but six hundred and fifty-odd thousand dollars, and yet the company's bid is something less than fifteen million.

Mr. LANGELL. Hold on.

Mr. RAUSHENBUSH. Is not that right? That is the difference we are trying to get explained.

Mr. LANGELL. We got $11,677,000 for that last cruiser, and not $15,000,000.

Mr. RAUSHENBUSH. That was on an adjusted price basis, was it not, Mr. Langell, in which case the Government did the gambling. You put in a price and let the Government gamble that it would pay back to you any further increase.

Mr. LANGELL. I think you are right. I think that it was a fixed price.

Mr. RAUSHENBUSH. Which is a fixed price?

Mr. LANGELL. That $11,677,000.

Mr. RAUSHENBUSH. That is on Nos. 46 to 48?

Mr. LANGELL. It would be No. 46.

Mr. RAUSHENBUSH. What was the fixed price bid there? You have on this sheet only the sliding bid. What was the fixed price bid?

Mr. LANGELL. I guess you are right. I think that is an adjusted price.

Mr. RAUSHENBUSH. For the benefit of the committee, the adjusted price basis was started in 1933, was it not?

Mr. LANGELL. Yes, sir.

Mr. RAUSHENBUSH. I mean the companies arranged with the Government to be able to put in two kinds of bids, one of the usual kind, when they said, "Sure, we will build the ship for this much, and if we run over, it is our bad luck."

The other one was that if they did run over, they put in a figure and said, "Well, this is our guess for what we can do it, and if we do run over, the Government will pay us the difference."

That is the sort of proposition which was involved in those sliding-scale bids, was it not?

Mr. LANGELL. I do not think you are altogether right there.

Mr. RAUSHENBUSH. I would like to be corrected there, if you can.

Mr. LANGELL. As far as the contract for *No. 46* is concerned, which we got, and to the best of my recollection, the contract calls for a sliding scale based on a quota for every 3-month period during the life of the contract for these vessels. That quota is settled by the Government. Now, for instance, the first 3 months we are supposed to buy—these are just rough figures out of my head—something like $500,000 worth of material. Now, there is a period involved there, and if the material all over the country in the steel industry—I think it is confined to that, to the metal industry—goes down, that percentage that it has gone down in those 3 months is applied against that, say $500,000, and our contract price is reduced to that amount. By the same token, if the metal industry prices go up, the price of material goes up, why we are reimbursed just that percentage. Now, the next 3 months, my recollection is, we had to buy about $1,000,000 worth of material, but it does not make a particule of difference if we did not buy but $100,000 worth, that quota is established by the Navy Department and the same thing applies to labor.

So that it is a gamble. We are liable to make or lose.

Mr. RAUSHENBUSH. Only here for the first time you have a case where the Government does the gambling, does it not, on the adjusted-price basis. If you run above what you put in as an adjusted-price bid, for either labor cost or material cost, the Government pays the difference, does it not?

Mr. LANGELL. I do not quite see that myself.

Mr. RAUSHENBUSH. If you run below, the Government is the gainer to that extent. If it runs above, why, the Government pays the difference.

Mr. LANGELL. That is, if the price of material goes up and the price of labor goes up, the Government pays.

Mr. RAUSHENBUSH. Or either one goes up.

Mr. LANGELL. Or either one goes up.

Mr. RAUSHENBUSH. And fixed above the estimate on the adjusted-price basis.

Mr. LANGELL. By the same token, if it goes down, the company loses.

Mr. LAROUCHE. There is another point there, I think. It does not make any difference what you pay, if the general level goes up and your prices go down, you still get the benefit of the increase. Is that correct?

Mr. LANGELL. I am not very familiar with that end of the game. I do not know an awful lot about it, to tell you the truth.

Mr. LAROUCHE. Do you know who was responsible for getting this adjustment price clause incorporated in the contract?

Mr. LANGELL. I have not the slightest information in the world.

Mr. LAROUCHE. It was not the Government.

Mr. LANGELL. I do not know anything about it.

Mr. RAUSHENBUSH. I want to take up the statement you made a while ago, that if the cost of labor or material goes down, the company loses. Do you not want to correct that?

Mr. LANGELL. No; that is my understanding of the matter. That is taken off the contract price at the end. That is my understanding. I may be dead wrong, but that is my understanding.

Senator VANDENBERG. The company does not lose?

Mr. LANGELL. If we contract for $11,677,000, and there is an adjustment made downwards of $500,000, we do not get $11,677,000 but we get $11,177,000.

Senator VANDENBERG. No; but if you make your contract on the basis of 50 cents an hour for labor, and labor goes down to 40 cents an hour, and you return the 10 cents to the Government, you have not lost anything, have you?

Mr. LANGELL. Of course that is an impossible condition just at present.

Senator VANDENBERG. But that is precisely the theory of the contract about which Mr. Raushenbush is talking, is it not?

Mr. LANGELL. I tell you frankly, I would much prefer he ask Mr. Parker those questions because I do not know much about it.

Mr. RAUSHENBUSH. All right. I think that is fair. Then, coming back to the original question which we were discussing on the scout cruisers of 1927 and the light cruisers of 1934, we find that material had gone up roughly $650,000 and the question was raised how that justified an increase in bid from $10,815,000 up to $15,000,000. That is a jump of $4,200,000, and a material increase of only $650,000.

Let us go into the labor estimates which you have made there. If you will turn to your labor estimate for the scout series Nos. 26 to 31, that is the *Augusta* and *Houston* series, is it not?

Mr. LANGELL. That includes the *Chester*.

Mr. RAUSHENBUSH. That would be the *Chester?*

Mr. LAROUCHE. The *Augusta* and *Houston* are in the series, but they did not build them.

Mr. RAUSHENBUSH. You estimated for labor $3,563,100. Is that right?

Mr. LANGELL. $3,780,115.

Mr. RAUSHENBUSH. That is labor on the *Chester?*

Mr. LANGELL. $3,780,115.

Mr. RAUSHENBUSH. You estimated for labor on the *Chester* $3,780,115, and your estimate for labor on the cruisers nos. 46 to 48 in 1934 was how much?

Mr. LANGELL. $3,908,775.

Mr. RAUSHENBUSH. The difference between the two estimates, Mr. Langell, is about $128,000. Is that right?

Mr. LANGELL. About that.

Mr. RAUSHENBUSH. So that labor increased, according to your estimates, $128,000 and material increased, according to your estimates, about $650,000?

Mr. LANGELL. I can explain the material very readily.

Mr. RAUSHENBUSH. I am just trying to add those up for the minute. That is an increase, according to your estimates, of less than $900,000, is it not?

Mr. LANGELL. Around that.

Mr. RAUSHENBUSH. Now, in view of that small increase in labor and materials, again, can you throw any light in this question of why the company's bid jumped from $10,800,000 plus in 1927 to $15,000,000 in 1934? That is just what we are trying to get at.

Senator VANDENBERG. Do I understand that there is a jump of some $4,000,000 in the bid and a jump of only $900,000 in the cost of labor and materials, as estimated?

Mr. RAUSHENBUSH. As estimated by the company's figures; yes, sir.

Senator VANDENBERG. And you are asking the witness what possible explanation can bridge the gap?

Mr. RAUSHENBUSH. Yes, sir.

Mr. LANGELL. Now, look, you keep saying 15 or 16 million dollars. We really got $11,975,000 for the ship.

Mr. RAUSHENBUSH. You did put in a fixed-price bid for $15,000,000, and you put in $16,000,000 on another one. I am talking about the $15,000,000.

Mr. LANGELL. Look here: I have not that data in front of me. I have got the heavy.

Mr. RAUSHENBUSH. While we are waiting for the official figures on that to be brought in, will you explain the estimate on cruiser no. 45 where the company put in a fixed-price bid of $16,000,000, according to our information?

Mr. LANGELL. I made no estimate.

Mr. RAUSHENBUSH. That is one where you made no estimate?

Mr. LANGELL. Yes, sir.

Mr. RAUSHENBUSH. I am sorry.

Senator VANDENBERG. I would like to ask Mr. Langell a question: Returning to this relative amount of labor in the preparation of these estimates, did the New York Ship get the contracts for which the voluminous preparation was made?

Mr. LANGELL. Yes, sir.

Senator VANDENBERG. Did the New York Ship get any of the contracts for which no serious preparation was made?

Mr. LANGELL. No.

Senator VANDENBERG. Did it ever occur to you in any way remarkable that the New York Ship was such a good guesser?

Mr. LANGELL. Well, as I said before, Senator, I have nothing whatever to do with the bids.

Senator VANDENBERG. What are you waiting for, Mr. Raushenbush?

Mr. RAUSHENBUSH. I was waiting for some official Navy figures to show that the New York Ship did put in a fixed price bid at $15,000,000 on light cruisers nos. 46 to 48, and a $16,000,000 fixed price bid on cruiser no. 45. I understand that is coming immediately.

But, in the meantime, I asked Mr. Langell to explain, if he could, the other bid, and we were reminded that the estimate on that had not been made.

Did the management, of the company, Mr. Bardo, take up with you, Mr. Langell, at any time, the bid they were going to put in on that cruiser no. 45 of $16,000,000?

Mr. LANGELL. Never.

Mr. RAUSHENBUSH. So, according to that, did the management have any idea of what the probable cost on that cruiser would be?

Mr. LANGELL. I think that is a fair question to ask Mr. Bardo or somebody else; not me, because I do not know.

Mr. RAUSHENBUSH. We are not asking Mr. Bardo questions about 1933 and 1934, so that we have to seek for other sources of information.

You identified earlier, I believe, or Mr. Parker did, the steel prices, on steel plates, showing that they were a good deal higher in 1927 than they were in 1934, at the time of the bidding, this high bidding; is that correct?

Mr. LANGELL. My recollection is that the price of steel was pretty near the same from 1927 to 1932. I do not think there was any great range for that.

Mr. RAUSHENBUSH. Here are the prices on steel plates, and Mr. Parker checked them through exactly with your figures.

Mr. LANGELL. I will take his word for it, but I do not recall it.

Mr. RAUSHENBUSH. The labor curve, at the same time, would show a swing, a little differently, would it not? We figured, taking 1927 as 62, it would swing down quite a bit until it was 55, the first part of 1933, and then up to 56, and up to 73 for the 1934 average. That is about right?

Mr. LANGELL. Right.

Mr. RAUSHENBUSH. So that you do have an increase in labor which seems to be higher than the figure it was at in 1927. Is that right, sir?

Mr. LANGELL. Yes, sir.

Mr. RAUSHENBUSH. And lower during the very low 55-cent average, and steel has not, however, swung up, according to these figures, to the price of 1927 or 1929. You do have a labor increase, and we found out on the cruisers there, in the first comparison, we were getting a material and labor increase together that would be under $900,000.

Mr. LANGELL. Do you want a reply? I did not get exactly what you are after.

Mr. RAUSHENBUSH. I want your assent to that. That is a correct statement, is it not?

Mr. LANGELL. Yes. You said the material was a good deal more in 1934 than what it was in 1927.

Mr. RAUSHENBUSH. $650,000, roughly.

Mr. LANGELL. That paper will explain it. [Handing paper to secretary.]

Mr. RAUSHENBUSH. You mean the character of the material was different; is that it?

Mr. LANGELL. The alterations on the ships from 1927 to 1934, probably one and a quarter million dollars more expensive.

Mr. RAUSHENBUSH. You mean you needed a better class of generators, and so forth? Is that it?

Mr. LANGELL. Improvements made on the ships.

Mr. RAUSHENBUSH. Material on the 1934 ships, if you had had to put that into the 1927 ships, would have cost more?

Mr. LANGELL. Absolutely.

Mr. RAUSHENBUSH. So that it was not due at all to an increase in price of material, but it was due to the change in the character of the material?

Mr. LANGELL. A good deal of it.

Mr. RAUSHENBUSH. A good deal of it?

Mr. LANGELL. A great deal of it; yes, sir.

Mr. RAUSHENBUSH. So that if we are really getting on a comparable basis, then a good deal of that increase of $650,000 in material would be wiped out, would it not?

Mr. LANGELL. Absolutely.

Mr. **Raushenbush.** So that it was not really on a comparable basis in that respect?

Mr. **Langell.** There is no comparison between a cruiser of 1927 and a cruiser of 1934.

Mr. **LaRouche.** Mr. Langell, is it not also a fact that between 1927 and 1934 you experimented on all these other cruisers and you got pretty good? You told me on the *Salt Lake City* and on the *Pensacola* in 1927, which you took over from Cramp, you were entirely in the dark and knew nothing about cruiser building.

Mr. **Langell.** Not a thing.

Mr. **LaRouche.** From that time until the present you did a lot of experimentation, at the cost of the Government, and which offset the difference in quality. I mean also there is a difference in quality, you also improved in skill, in performance and production. Is not that true?

Mr. **Langell.** Of course the more cruisers we build the more familiar we get with that type of work.

Mr. **LaRouche.** That is the point.

Mr. **Raushenbush.** While we are getting those figures, Mr. Langell, we have here some hotel records and things. Can you tell the committee when you were in the city of Washington, D. C., in the summer of 1933?

Mr. **Langell.** I forgot the date; I think it was the 24th of July, I think it was.

Mr. **Raushenbush.** What was the purpose of your being down here at the time, Mr. Langell?

Mr. **Langell.** I was requested to come by the management.

Mr. **Raushenbush.** We understand your position very well, Mr. Langell. You are a subordinate under the management.

Mr. **Langell.** Absolutely.

Mr. **Raushenbush.** And you have to do whatever the management wants. That is quite clear. But where did you stay when you were here?

Mr. **Langell.** At the Mayflower.

Mr. **Raushenbush.** Were there any of the others of the shipbuilding profession staying there at the time?

Mr. **Langell.** Yes. Of my company, do you mean?

Mr. **Raushenbush.** Of your company. How about any other company?

Mr. **Langell.** I do not know about any other company. I know that our company was represented there.

Mr. **Raushenbush.** Did you meet any of the members of the other companies?

Mr. **Langell.** I met Mr. Wakeman in the lobby, to shake hands with him, and I met Mr. Spiegenhalter, of Pusey & Jones, just to shake hands with him. That is all.

Mr. **LaRouche.** What day was that that you met Mr. Wakeman?

Mr. **Langell.** I think it was on a Tuesday. That would be the next day after we came there?

Mr. **LaRouche.** You came on Monday?

Mr. **Langell.** We came on Monday; yes.

Mr. **LaRouche.** Had the others been there before?

Mr. LANGELL. I could not answer that. I do not know.

Mr. RAUSHENBUSH. Do you know whether any meetings were taking place between any of your superiors at the time and the superiors of other companies?

Mr. LANGELL. I have not the slightest knowledge of it.

Mr. RAUSHENBUSH. Never heard anything about it?

Mr. LANGELL. Not the slightest knowledge of it at all.

Mr. RAUSHENBUSH. You were never in any of those meetings?

Mr. LANGELL. Never.

Mr. RAUSHENBUSH. How long did you stay in town?

Mr. LANGELL. I left I think on the 4 o'clock train, on Wednesday, for home.

Mr. RAUSHENBUSH. Was that the day the bids were opened?

Mr. LANGELL. That was the day the bids were opened.

Mr. RAUSHENBUSH. They were opened at noon?

Mr. LANGELL. Yes.

Mr. RAUSHENBUSH. Will you tell us, what was the point of coming down here just before the bids were opened, just the day before?

Mr. LANGELL. Well, I do not know. It was just customary, I guess; I was never there before or since.

Mr. RAUSHENBUSH. Was it a social custom, which would miss you?

Mr. LANGELL. Well, prohibition times.

Mr. RAUSHENBUSH. And you live in Camden?

Mr. LANGELL. No, sir; thank heaven I do not live in Camden.

Mr. RAUSHENBUSH. You said it was customary; what do you mean by that?

Mr. LANGELL. They always present the bids in person, and they have to be here to do it.

Senator VANDENBERG. But you were here, and you said you had never been here before or since. How did you happen to be here on that particular occasion?

Mr. LANGELL. Because Mr. Bardo told me to come down to Washington. That is all.

Mr. RAUSHENBUSH. What did he want you down here for? What did he consult you about?

Mr. LANGELL. To make up the sheet.

Mr. LAROUCHE. What sheets?

Mr. LANGELL. I am pretty good, fairly good at figures, and the thing was all upset, as you know, at the time, and nobody knew which way the cat was going to jump as regards prices on labor and material either.

Mr. LAROUCHE. You knew what the company wanted pretty definitely, though, and they knew?

Mr. LANGELL. I beg your pardon?

Mr. LAROUCHE. I say, they knew and you know what the company wanted in the way of business at that time. You were interested in the 1,850-ton destroyers?

Mr. LANGELL. Yes.

Mr. LAROUCHE. You were interested in the light cruisers Nos. 42 and 43 on the list. Nothing else?

Mr. LANGELL. That is all I know.

Mr. LaRouche. It was all you wanted. That is what the company wanted, and that is what the company got?

Mr. Langell. That is right.

Mr. LaRouche. I think, Mr. Raushenbush and the committee would like to know exactly why you were here. I do not mean you, but what the rest of them were here for.

Mr. Langell. I do not know why they were here. They always do come down, ever since I have been in the shipbuilding business.

Mr. LaRouche. You mean ahead of time?

Mr. Langell. A day ahead of time, as a rule.

Mr. LaRouche. All of the big shipbuilders?

Mr. Langell. I do not know. I am talking about my own.

Mr. Raushenbush. You testified a minute ago that everything was in a turmoil and nobody knew which way the cat was going to jump. What sort of thing did Mr. Bardo consult you about at the time before these bids were put in and opened?

Mr. Langell. One of the major things was how high were the wages going to go during the life of the contract. How was the material market going to go during the life of the contract. There was some discussion amongst ourselves about the code. The code, as I said before, had not been signed, and there was great difficulty at that time in getting firm prices from people that would extend over 30 to 60 days from the time of that code.

Senator Vandenberg. Was your bid changed in any way as a result of this conference?

Mr. Langell. No; I had nothing to do with the bid.

Senator Vandenberg. Do you know whether the bid was changed as a result of this conference which you had with Mr. Bardo?

Mr. Langell. No; I have no recollection of any change being made in this bid at all, because I never knew until the bids were opened what the bids were going to be.

Mr. LaRouche. Did you know whether or not any officials of New York Ship came down at that time besides the ones you have mentioned?

Mr. Langell. Mr. Miller was with me, and Mr. Parker was there, and Mr. Cornbrooks was there, Mr. Ernest Cornbrooks.

Mr. LaRouche. When did Ernest Cornbrooks come down. When did he come to Washington from Camden?

Mr. Langell. I think it was on the same day; Monday.

Mr. LaRouche. With you?

Mr. Langell. No; Mr. Miller and I came down together.

Mr. LaRouche. Was it planned that Mr. Cornbrooks would come?

Mr. Langell. I beg your pardon. I recollect now. They all came down with us on the train.

Mr. LaRouche. Mr. Cornbrooks came down?

Mr. Langell. Yes; that is right.

Mr. LaRouche. Then, as far as any meeting is concerned, or any session between officers of your company and the other big shipbuilders, you do not know at all?

Mr. Langell. Not the slightest knowledge.

Mr. LaRouche. But you do not know that there was not any such meeting?

Mr. Langell. I do not know anything about it.

Mr. Raushenbush. Coming back a minute to the question I was asking you before, I show you the official report of the Bureau of Construction and Repair of the Navy and of Engineering, dated August 20, 1934, showing the proposals received, corrected for evaluated differences in guarantees for fuel consumption, which are as follows—showing New York Ship had a fixed price of $15,000,000 and an adjusted price of $12,550,000 on light cruisers nos. 46 to 48. Is that correct?

Mr. Langell. I do not recollect that I ever saw this sheet before in my life.

Mr. Raushenbush. Does that refresh your memory about a fixed price going in by New York Ship for $15,000,000? That seems to be the thing we were arguing about a minute ago.

Mr. Langell. It must be right. And the adjusted price was $12,550,000.

Mr. Raushenbush. The adjusted price was $12,550,000. I offer this for the record as an exhibit, to be inserted at this point.

(The document referred to was marked "Exhibit No. 1487.")

(Pursuant to the above instructions "Exhibit No. 1487" is given in full as follows:)

CL46 to 48/L4 (C N/C
Br

CL46–48/L4 (8–18–D
August 20, 1934.

JOINT LETTER

To: The Secretary of the Navy (Judge Advocate General).

Subject: Light cruisers nos. 46 to 48 class—Recommendation of award of contracts.

References: (a) J.A.G.'s. let. of August 15, 1394, No. CL46/L4–2 (34815) P.

Enclosures (herewith):

(A) Bid of the Newport News Shipbuilding & Dry Dock Co.
(B) Bid of the Bethlehem Shipbuilding Corporation, Ltd.
(C) Bid of the Federal Shipbuilding & Dry Dock Co.
(D) Bid of United Shipbuilding & Dry Dock Corporation in duplicate.
(E) Bid of the Gulf Industries, Inc.
(F) Bid of New York Shipbuilding Corporation.

1. After examination and analysis of the proposals for the construction of light cruisers of the nos. 46, 47, 48 class, forwarded with reference (a), the Bureaus recommend award of contracts for the construction of two vessels as follows:

"One light cruiser to the lowest satisfactory bidder, the Newport News Shipbuilding & Dry Dock Co., at the bid price of $11,900,000, subject to adjustments for changes in costs of labor and materials, less $250,000 on account of obtaining plans from the contractor for light cruisers nos. 42 and 43, as provided in the bid; net contract price $11,650,000.

"One light cruiser to the next low satisfactory bidder, the New York Shipbuilding Corporation, at the agreed price of $11,975,000, subject to adjustments for changes in costs of labor and materials. Since this company is also the contractor for light cruisers nos. 42 and 43, and already has available the plans for these vessels, no deduction for plans is applicable."

2. In view of the considerable advance in price quoted by these two bidders for bids on a fixed-price basis, it is considered to be to the Government's advantage to make award upon the basis of adjustments for changes in labor and material costs.

3. The proposals received, corrected for evaluated differences in guarantees for fuel consumption, are as follows:

Bidder	Basis	Price	Plan deduction	Fuel consumption evaluation	Net evaluated bid
Newport News Shipbuilding & Dry Dock Co.	Fixed	$13,700,000	$250,000	+$238,425	$13,688,425
Do	Adjusted	11,900,000	250,000	238,425	11,888,425
New York Shipbuilding Corporation	Fixed	15,000,000		+88,600	15,088,600
Do	Adjusted	12,550,000		88,600	12,638,600
United Shipbuilding & Dry Dock Corporation.	Fixed	16,800,000	700,000	+46,400	16,146,400
Do	Adjusted	13.440,000	700,000	46,400	12,786,400
Federal Shipbuilding & Dry Dock Co	Fixed	13,997,000	600,000	+413,025	13,810,025
Do	Adjusted	13,043,000	600,000	413,025	12,856,025
Bethlehem Shipbuilding Corporation, Ltd	Fixed	16,600,000	500,000	+294,375	16,394,375
Do	Adjusted	13,244,000	500,000	294,375	13,038,375
Gulf Industries, Inc	Fixed	12,600,000	550,000		12,050,000
Do	Adjusted	12,250,000	550,000		11,700,000

4. The bids of Gulf Industries, Inc., of $12,600,000 fixed price and $12,250,000 subject to adjustments for changes in labor and material costs, are recommended for rejection for reasons which are being submitted in separate correspondence covering all bids submitted by this company.

S. M. Robinson, *Chief of Bureau.*
E. S. Land, *Chief of Bureau.*

Mr. Raushenbush. Having established there was that fixed bid on light cruisers of $15,000,000, may we come back to the question: With material rises largely because the material was more complicated and the average price rising only $650,000, according to your estimate, and labor rising only $120.000, making a total rise of only $900,000, how can you possibly explain and help us in arriving at this question of why there was a jump from $10,800,000 in the bid to $15,000,000, practically $4,200,000 jump in a price rise that was under $1.000,000?

Mr. Langell. Mr. Raushenbush, I do not see how I can explain it to you, because, as I said before and have said time and time again, I had nothing whatever to do with it. All I could do was turn in what I thought was the proper labor and proper material cost.

Mr. LaRouche. You have been estimating for a great many years, have you not?

Mr. Langell. Yes, sir.

Mr. LaRouche. And during that time prices have fluctuated up and down a great deal in 35 years?

Mr. Langell. I will say they have.

Mr. LaRouche. Thirty-six years, is it not, since you began?

Mr. Langell. Thirty-eight years.

Mr. LaRouche. Thirty-eight. You have had some pretty wild fluctuations in price, both for labor and material, in those 38 years?

Mr. Langell. Right.

Mr. LaRouche. And you have a reputation of never guessing wrong on estimates?

Mr. Langell. I could not prove that on a bet.

Mr. LaRouche. But the fact is that it is common knowledge amongst the shipbuilders that you are the no. 1 estimator, or one of the leading estimators in the business, and you would not be if you guessed wrong very often, would you?

Mr. Langell. I have guessed wrong often enough.

Mr. LaRouche. Now here, after 38 years of experience, or 37 years at the time, you were confronted with the problem of estimating the amount of labor, the cost of the labor, for all these jobs, and you knew that it might go up, and so you probably took cognizance of that in your estimate, as you always had in the past. Is not that true?

Mr. Langell. Cannot I go into that a little more?

Mr. LaRouche. Yes.

Mr. Langell. When I made the estimate for the *Salt Lake City* in the latter part of 1925, and the first part of 1926, we had never built a vessel of that description in the world, in our plant. To be perfectly frank, I was a little afraid of it. I made up an estimate, and we did not get the contract. The following year, Cramp defaulted. Cramp secured the contract and defaulted the following year, and all the papers were turned over to us, as we took the contract over. Amongst the papers was Cramp's original estimate on the ship. They had already built five cruisers, somewhat smaller, but of a good deal the same design. And when I compared my estimate with Cramp's estimate, I thought I was pretty good.

Mr. LaRouche. You were pretty good?

Mr. Langell. No; I was not. At that time we were figuring on the *Chester*, and I though, on account of Cramp's estimate being so near mine, that my estimate must have been fairly correct, and I based the estimate of the *Chester* on that of the *Salt Lake City*.

When we came to figure on the *Indianapolis*, we had proceeded so far with the *Salt Lake City* and the *Chester* that we found that we were building them cheaper than what I had estimated.

Mr. LaRouche. You found that you were building them cheaper than you had planned?

Mr. Langell. Than my judgment; yes, sir.

Mr. LaRouche. I think the committee ought to get that clearly. It is a very interesting point. You estimated the *Salt Lake City* high, and when you came to the *Chester* you found that you could build it for less money than you had thought?

Mr. Langell. No; the *Indianapolis*.

Mr. LaRouche. The *Indianapolis* you found you could build for less than you had thought?

Mr. Langell. Less than I had thought for the *Chester*.

Mr. LaRouche. On the *Chester* the bid was $10,815,000?

Mr. Langell. Righto.

Mr. LaRouche. That was a great deal more than you got for the *Salt Lake City?*

Mr. Langell. I do not remember. I do not know what we got for the *Salt Lake City*, to tell you the truth, because that was adjusted and I do not know anything about it.

Mr. LaRouche. It was very much adjusted, was it not?

Mr. Langell. I do not know anything about it. You will have to excuse me on that.

Mr. LaRouche. It was negotiated, was it not?

Mr. Langell. Yes, sir.

Mr. LaRouche. I think the committee is interested in that.

Mr. Langell. You would have to ask Mr. Parker that. I know nothing whatever about it.

Mr. LaRouche. But the fact is that on the *Chester* your experience on the *Salt Lake City* saved you a good deal, and the company? Is not that true?

Mr. Langell. Not as regards the *Chester*, because we built them both together.

Mr. LaRouche. That is right. But on the *Indianapolis?*

Mr. Langell. Yes, sir.

Mr. LaRouche. You saved not only by reason of your knowledge and experience, but when labor dropped, I think you told me that the company saved, or made an extra profit, a little short of a present, of $700,000 roughly?

Mr. Langell. On what ship, now?

Mr. LaRouche. On the *Indianapolis*, cruiser no. 35.

Mr. Langell. I do not recall telling you that.

Mr. LaRouche. Are you sure of that?

Mr. Langell. It might have been so.

Mr. LaRouche. That they did not actually make that much, but they made something like that, in addition to what they had planned. That was the fruit of falling labor.

Mr. Langell. I do not think I told you that. I might have, but I do not recollect it.

Mr. LaRouche. I took it down at the time. I was rather startled by it myself.

Mr. Raushenbush. Right on that point, Mr. Langell, you were saying a minute ago, if I understood you, that you found that you could do the *Chester* more cheaply than you had thought. Is that right?

Mr. Langell. I found, as the work progressed on the *Chester* and the *Salt Lake City*, that we could build them a good deal cheaper on labor than what I had expected.

Mr. Raushenbush. So that when you came around to 1929 and bid on the *Indianapolis* you were able to lower your estimate by over $700,000?

Mr. Langell. Let us see what we did.

Mr. Raushenbush. I call your attention to an estimate on the *Chester* in 1927 of $7,950,000, and an estimate on the Indianapolis in 1929, totaling $7,173,000.

Mr. Langell. That is right.

Mr. Raushenbush. You were over $700,000 ahead of the game there. With $700,000 down in your estimate, knowing that you could produce that kind of ship lower than you thought, how did it happen, and can you give us any explanation of why the company, instead of lowering $700,000, went up $100,000 over its 1927 bid, shown by this red line? They jumped $100,000 there, and your estimate there dropped $700,000.

Mr. Langell. That is about $88,000 higher.

Mr. Raushenbush. Yes, sir; $88,000.

Mr. Langell. Yes, sir.

Mr. Raushenbush. So that you had a spread in 1927 of $2,854,820, and in 1929 that spread was roughly $1,800,000 larger, $3,730,200.

Mr. Langell. That is right.

Mr. Raushenbush. Can you explain that at all?

Mr. LANGELL. Not the slightest in the world. That is the management.

Mr. LAROUCHE. In other words, when you make the estimate, you are done?

Mr. LANGELL. I am done.

Mr. LAROUCHE. Whatever playing that is done with it is out of your hands?

Mr. LANGELL. They can do as they please.

Mr. LAROUCHE. And they do.

On the *Indianapolis*, then, not trusting my memory any more, I took it down. You said to me on September 25 in your office—and I think you and Mr. Miller were both there—that on the *Indianapolis* the price of materials went down sharply after the contract was awarded.

Mr. LANGELL. Right.

Mr. LAROUCHE. "Way down. We quoted rather high prices, relatively high." That, as I remember it, was in 1929. That was the year before the year of the big jump-off.

Mr. LANGELL. Yes.

Mr. LAROUCHE. The point I want to make on the *Indianapolis* is just this: That I have your exact words here, and you only made a guess at that time. I do not mean that you attempted to give me the exact figures, but you said, "We made at least $700,000 above our original expectations because of the drop in prices."

Mr. LANGELL. I think that is about right.

Mr. LAROUCHE. The company, so far as you know, did not turn any of that back to the Government?

Mr. LANGELL. No.

Mr. LAROUCHE. That would be ridiculous?

Mr. LANGELL. That would be crazy.

Mr. LAROUCHE. The point I wanted to make is, that when prices are going up, the shipbuilders agree to be protected by the Government, and when prices go down, the shipbuilders take the difference. In other words, they get it both ways.

Mr. LANGELL. No; I do not agree to that. We took a ship at a definite price.

Mr. LAROUCHE. Yes.

Mr. LANGELL. And if the material goes up and labor goes up, the shipyard is stung; that is all.

Mr. LAROUCHE. Not on an adjusted price?

Mr. LANGELL. No; not on an adjusted price.

Mr. LAROUCHE. That is what I am getting at.

Mr. LANGELL. We only had one adjusted.

Mr. LAROUCHE. That is right.

Mr. RAUSHENBUSH. One more question, Mr. Langell. Have you ever heard from the management what percent of your estimate on labor they add to make up the overhead figure? Have you ever heard that discussed? Do they take 50 percent, 15 percent, or some definite percentage to estimate overhead on?

Mr. LANGELL. No; I cannot say as to percentage, but I think—and this is just my recollection—I think in 1933 that they added something like $3,000,000 per ship on a cruiser for overhead. That would be her share of the overhead for 3 years. That is my impression.

Mr. RAUSHENBUSH. That is almost 100 percent of your labor, is it not—80 percent?

Mr. LANGELL. Yes; about that.

Mr. RAUSHENBUSH. Was that the figure usually used?

Mr. LANGELL. I do not know. That is the only time I ever saw it.

Mr. RAUSHENBUSH. So far as you know, was there a great jump in overhead after the codes? Overhead is bond interest?

Mr. LANGELL. Yes.

Mr. RAUSHENBUSH. That did not jump, did it?

Mr. LANGELL. No.

Mr. RAUSHENBUSH. Taxes?

Mr. LANGELL. They would jump all right.

Mr. RAUSHENBUSH. Did property taxes? Did they jump?

Mr. LANGELL. It does in Camden.

Mr. RAUSHENBUSH. Very considerably?

Mr. LANGELL. Mr. Parker would tell you the exact figures. I do not know them.

Mr. RAUSHENBUSH. Did you gentlemen there have your wages or salaries raised very considerably?

Mr. LANGELL. I do not recall anything of the kind.

Mr. RAUSHENBUSH. You would remember that?

Mr. LANGELL. I would.

Mr. RAUSHENBUSH. What I am trying to get at is—what elements in overhead would justify such a terrific jump? And if it is not bond interest, and it is not taxes—beyond a certain amount—and if it is not salaries, the only thing left is profit, is it not?

Mr. LANGELL. You see, that is entirely out of my jurisdiction—that end of it. I have nothing whatever to do with the accounting. I do not know anything about it.

Mr. RAUSHENBUSH. All right; I have no further questions.

Senator VANDENBERG. Do you ever compare estimates with other estimators?

Mr. LANGELL. Never.

Senator VANDENBERG. Did you ever do it in connection with merchant-ship bidding?

Mr. LANGELL. Me? No, sir; never in the world.

Senator VANDENBERG. You did not do it in connection with the *Malola?*

Mr. LANGELL. We did not build her, thank Heaven.

Senator VANDENBERG. Did you discuss it with other estimators?

Mr. LANGELL. I beg your pardon?

Senator VANDENBERG. Did you discuss it with other estimators?

Mr. LANGELL. After the bids were opened, if we ever got together we would talk about it, naturally.

Senator VANDENBERG. Not before?

Mr. LANGELL. Not before; never.

Senator VANDENBERG. I think that is all for the time being, Mr. Langell.

Mr. LANGELL. Thank you.

STATEMENT OF THOMAS M. CORNBROOKS

MEETING OF SHIPBUILDERS IN WASHINGTON, JULY 1933

(The witness was duly sworn by the chairman.)

The CHAIRMAN. You may be seated there at the end of the table, Mr. Cornbrooks. Have you given the reporter your full name and address?

Mr. CORNBROOKS. I have given him my name—how to spell it. My address is 1110 Stokes Avenue, Collingswood, N. J.

The CHAIRMAN. Go ahead, Mr. LaRouche.

Mr. LAROUCHE. You are and have been a shipbuilder, Mr. Cornbrooks?

Mr. CORNBROOKS. Yes.

Mr. LAROUCHE. And you are a brother, I believe, of Ernest Cornbrooks?

Mr. CORNBROOKS. Yes.

Mr. LAROUCHE. Who was with New York Ship?

Mr. CORNBROOKS. Yes.

Mr. LAROUCHE. We are interested to know a little about your connections with Gulf Industries. You are not with them any more?

Mr. CORNBROOKS. No.

Mr. LAROUCHE. How long were you associated with that organization?

Mr. CORNBROOKS. Why, about a year.

Mr. LAROUCHE. At that time you were particularly interested in the 1933 bids?

Mr. CORNBROOKS. Yes.

Mr. LAROUCHE. And you were associated with that company when those bids were opened?

Mr. CORNBROOKS. Yes.

Mr. LAROUCHE. And when the contracts were let?

Mr. CORNBROOKS. Yes.

Mr. LAROUCHE. We should like to know something about what happened in the period between July 20, we will say, and August 3. We are particularly interested to know what existed in the way of general understanding, in which you shared, as to the possible outcome of that letting—knowledge that you may have had, or anyone may have had—before the official awards were made.

Mr. CORNBROOKS. I had no knowledge.

Mr. LAROUCHE. Not any?

Mr. CORNBROOKS. No.

Mr. LAROUCHE. Had you any hearsay information?

Mr. CORNBROOKS. Oh, there was talk around among different people, outside of the shipyards, as to who might possibly be the low bidder.

Mr. LAROUCHE. Do you remember the talk?

Mr. CORNBROOKS. No; there was all kinds of talk.

Mr. LAROUCHE. Did you have any knowledge, or were you in any way interested, in a loan application made by Gulf Industries?

Mr. CORNBROOKS. Not at that time. I afterward took part in a loan application for the Municipal Port Development Corporation, with the P. W. A.

Mr. LaRouche. Did you get it?

Mr. Cornbrooks. No.

Mr. LaRouche. Are you associated with any shipbuilder now?

Mr. Cornbrooks. No.

Mr. LaRouche. Or any prospective shipbuilder?

Mr. Cornbrooks. No.

Mr. LaRouche. Do you have any knowledge, direct or otherwise, of any meeting of shipbuilders at the Mayflower Hotel in 1933?

Mr. Cornbrooks. No; I have not.

Mr. LaRouche. You do not know of any such meeting?

Mr. Cornbrooks. No.

Mr. LaRouche. I think that is all.

Senator Clark. Did you ever have a conversation with Mr. Wilder in which you told him substantially who would get the awards for these ships?

Mr. Cornbrooks. No; I do not remember any.

Senator Clark. You have not discussed the matter with him?

Mr. Cornbrooks. Yes.

Senator Clark. What was the nature of that discussion?

Mr. Cornbrooks. As to the general talk among the suppliers.

Senator Clark. Did you hear Mr. Wilder's testimony here yesterday?

Mr. Cornbrooks. No, sir; I did not.

Senator Clark. Or his testimony the day before?

Mr. Cornbrooks. No; I did not.

Senator Clark. Mr. Wilder testified that he was able to make a list of the concerns, the shipbuilding companies which would get the awards on each class of ships, and put it in a sealed envelop and handed it to Mr. Frey, some days before the bids were opened, on information supplied by you. Is that statement true?

Mr. Cornbrooks. Not to my knowledge.

Senator Clark. How many conversations did you have with Wilder on the subject?

Mr. Cornbrooks. I do not remember having any until the day before the opening of the bids, as I was in New York preparing an estimate from the 6th of July up to the day before the bids were opened.

Senator Clark. Did you have any information which came to subcontractors and others as to inquiries made by the several shipbuilding companies?

Mr. Cornbrooks. No, sir.

Senator Clark. If we told you that Mr. Wilder made such a statement as that, would you say it was correct or incorrect?

Mr. Cornbrooks. That I made a statement like that?

Senator Clark. If you were told that Mr. Wilder said that the information upon which he was able to make up this list and seal it in an envelop some days before the opening of the bids came from you, what is your reply as to that?

Mr. Cornbrooks. I would say he was mistaken.

Senator Vandenberg. Have you a brother in the shipbuilding business?

Mr. Cornbrooks. I have.

Senator VANDENBERG. Who is he?

Mr. CORNBROOKS. Ernest I. Cornbrooks.

Senator VANDENBERG. What is his connection?

Mr. CORNBROOKS. He is retired now.

Senator VANDENBERG. What was his connection?

Mr. CORNBROOKS. He was with the New York Shipbuilding Corporation.

Senator VANDENBERG. Was he here at the time of this meeting in Washington?

Mr. CORNBROOKS. You mean my meeting with Mr. Wilder?

Senator VANDENBERG. No; I mean this meeting of shipbuilders in July at the Mayflower Hotel.

Mr. CORNBROOKS. I do not know of any meeting. I do not know when he was here. I did not see him.

Senator VANDENBERG. You did not know that your brother came to Washington at that time?

Mr. CORNBROOKS. No, sir; I did not.

Senator VANDENBERG. You have never talked to your brother about that meeting?

Mr. CORNBROOKS. No, sir.

Senator VANDENBERG. He never gave you any information on that subject?

Mr. CORNBROOKS. No, sir.

Senator VANDENBERG. You are quite clear on that?

Mr. CORNBROOKS. Absolutely.

Mr. LAROUCHE. I would like to offer for the record at this time a communication from the Hotel Mayflower, containing the names of certain shipbuilders who were present and registered there at the period under discussion.

The CHAIRMAN. Let the letter be read for the information of the committee.

Mr. LAROUCHE. It is a letter received by one of our investigators from the credit manager, as a result of a visit that one of our men made to the hotel.

The CHAIRMAN. And requested, incidentally, this statement?

Mr. LAROUCHE. This statement, with the supporting records from their official register. The letter reads as follows:

> GENTLEMEN: In compliance with your order we have listed below a copy from our records of the rooms, rates, etc., occupied by the gentlemen shown at the times designated, taken from the registration cards of the Mayflower.
>
> July 25–29, 1933; Korndorff, L. H. Suite 333–4; $15 per day.
> July 17–21, 1933; Korndorff, L. H. Room 509; $5 per day.
> July 1 to August 9; Bardo, C. L. Apartment 465; $200 per month.
> July 17–26, 1933; Smith, H. G.—

The bids were opened on the 26th of July, as you will remember [continuing reading]:

> Room 678–A; $7 per day.

Mr. Smith, as the committee perhaps knows, is president of the National Council of American Shipbuilders [reading]:

> July 6–8, 1933; Smith, H. G. Room 378–A; $7 per day.
> July 9–10, 1933; Smith, H. G. Room 378–A; $7 per day.
> July 23–24, 1933; Ferguson, H. L. Room 389; $6 per day.
> July 25–26, 1933; Gatewood, W.—

Mr. Gatewood is works manager of the Newport News Shipbuilding & Dry Dock Co. and Mr. Ferguson is president of Newport News Shipbuilding & Dry Dock Co.

To continue [reading]:

Room 389; $6 per day.
July 24–26, 1933; Cornbrooks, E. F.—

That is incorrect; it should be E. I.—

Room 316; $7 (special).
July 24–26, 1933; Wakeman, S. W. Suite 860; $22 per day.
July 29, 1933; Wakeman, S. W. Room 617; $5 per day.
August 14–15, 1933; Wakeman, S. W. Suite 451–2–3; $18 per day.
(Attached hereto are duplicates of room charges on certain of these rooms.)

It is signed by the credit manager.

(The letter referred to was marked "Exhibit No. 1488", and is included in the appendix on p. 5194.)

Senator Vandenberg. Mr. Cornbrooks, were you in Washington in July 1933?

Mr. Cornbrooks. I was here the day before the opening of the bids and the day of the opening of the bids.

Senator Vandenberg. Then you were here on July 25 and 26?

Mr. Cornbrooks. If those were the dates of the opening of the bids.

Senator Vandenberg. The bids were opened on the 26th.

Mr. Cornbrooks. Yes; then I was here on the 25th and 26th.

Senator Vandenberg. Do I understand you to say that you did not know that your brother was here at the same time?

Mr. Cornbrooks. No, I did not.

Senator Vandenberg. How long has your brother been in ill health?

Mr. Cornbrooks. I could not tell you that.

Senator Vandenberg. He is in ill health, is he not?

Mr. Cornbrooks. He has been. He just had an operation and his tonsils removed.

Senator Vandenberg. You never heard about his being ill in Washington on July 25 or 26, 1933?

Mr. Cornbrooks. His wife did tell me he had ptomaine poisoning while he was down here at that time. She told me afterwards.

Senator Vandenberg. Did she tell you the circumstances?

Mr. Cornbrooks. No; that is all I heard about it; that he had ptomaine poisoning.

Senator Vandenberg. Did you ever hear that he had to be taken out of a conference at 4 o'clock in the morning?

Mr. Cornbrooks. No, sir.

Senator Vandenberg. Do you mean to say that you have never talked to him since about any phase of this matter?

Mr. Cornbrooks. No, sir.

Senator Vandenberg. You smiled when I asked you about his being taken out of the conference. Evidently you had heard that story.

Mr. Cornbrooks. I read it in the paper this morning.

Senator Vandenberg. Is that the first time you ever heard of it?

Mr. Cornbrooks. Yes, sir.

Senator VANDENBERG. And your brother was here for 2 days and you never knew anything about it?

Mr. CORNBROOKS. No; I did not.

Senator VANDENBERG. You were both in the same business at the time?

Mr. CORNBROOKS. Yes.

Senator VANDENBERG. Working for the same company?

Mr. CORNBROOKS. No.

Senator VANDENBERG. What company were you working for?

Mr. CORNBROOKS. Gulf Industries.

Senator VANDENBERG. And he was working for whom?

Mr. CORNBROOKS. New York Shipbuilding Co.

Senator CLARK. What hotel did you stop at on those days, Mr. Cornbrooks?

Mr. CORNBROOKS. The Washington.

Senator VANDENBERG. Were there other officers of your company at the Washington?

Mr. CORNBROOKS. Yes.

Senator VANDENBERG. What were they here for?

Mr. CORNBROOKS. They had their office there. That was the office of Gulf Industries.

Senator VANDENBERG. Were there any more than the ordinary number of officers here at that time?

Mr. CORNBROOKS. No.

Senator VANDENBERG. You never talked with Mr. Wilder about this either?

Mr. CORNBROOKS. About which?

Senator VANDENBERG. About this contract letting?

Mr. CORNBROOKS. Contract letting?

Senator VANDENBERG. You never talked with Mr. Wilder about the probable outcome of the bidding?

Mr. CORNBROOKS. Oh, I may have discussed what my guess was as to who would be the lowest bidders, based on their experience.

Senator VANDENBERG. Now, do you think that you perhaps did talk with Mr. Wilder in a speculative sort of way about it?

Mr. CORNBROOKS. I do not remember it. I may have.

Senator VANDENBERG. Did you have some pretty fixed ideas about who was going to get the bids?

Mr. CORNBROOKS. No; only a guess. I think I made three guesses, if I am not mistaken.

Senator CLARK. You guessed right in each of those, did you not?

Mr. CORNBROOKS. No; I did not.

Senator CLARK. Where were you wrong in your guess?

Mr. CORNBROOKS. It is pretty hard to remember just what the guesses were, but, as I remember it, I guessed that Federal would get the 1,850-ton destroyers. That is my recollection of one of the guesses I made.

Senator VANDENBERG. When did you next see your brother after July 1933?

Mr. CORNBROOKS. I did not see him until the end of September. I went to California.

Senator VANDENBERG. You saw him in September 1933?

Mr. CORNBROOKS. I saw him in September 1933; yes, sir.

Senator VANDENBERG. Did you talk to him at that time about this group of cruisers and the contracts?

Mr. CORNBROOKS. No.

Senator VANDENBERG. Did not talk to him at all about it?

Mr. CORNBROOKS. We never discussed matters of business of the companies for which we were working. We made it a rule of our life.

Senator VANDENBERG. You were both in the shipbuilding business and never discussed it together?

Mr. CORNBROOKS. We discussed the question of technical or practical ship-building questions, but never questions as to prices.

Senator VANDENBERG. Would there not be a practical question there as to whether there was a group which divided up the field and allotted the contracts in advance? That would be fairly practical.

Mr. CORNBROOKS. Not to my knowledge, it is not.

Senator VANDENBERG. You never heard anything about a matter of that nature?

Mr. CORNBROOKS. I heard Mr. Wilder make a claim that there was. That is the only place I ever heard it.

Senator VANDENBERG. At that time you mean Mr. Wilder suggested it?

Mr. CORNBROOKS. At some time later.

Senator VANDENBERG. Mr. Wilder never said anything to you at the time about the possibility of collusion?

Mr. CORNBROOKS. I do not remember it. I said at the time—I cannot tell you what time—but he made a remark of that sort, but I do not remember just when it was.

Senator CLARK. How much later was it that you and Wilder discussed the matter and he then made a claim of collusion?

Mr. CORNBROOKS. I could not tell you that, sir.

Senator CLARK. About how long?

Mr. CORNBROOKS. I could not say how long.

Senator CLARK. Was it a month or a week?

Mr. CORNBROOKS. It might have been a week or it might have been a month. I was busy working on another estimate.

Senator CLARK. What did Wilder say at that time?

Mr. CORNBROOKS. He said it looked as though there might be collusive bidding on the basis of the bids.

Senator CLARK. Is that all he said?

Mr. CORNBROOKS. That is all I remember.

Senator CLARK. Did you inquire as to what he was basing that remark on?

Mr. CORNBROOKS. I beg your pardon?

Senator CLARK. Did you make any inquiry as to the basis of that remark?

Mr. CORNBROOKS. No; I did not pay any attention to it.

Senator CLARK. You were interested in the question of whether there had been collusive bidding, were you not?

Mr. CORNBROOKS. No; because we had been barred out and were not in it any longer.

Senator CLARK. It was Wilder's contention that you were barred out because of collusive bidding. That interested you as an official of the company, did it not?

Mr. CORNBROOKS. I made a visit to the Navy Department and asked why we were barred out.

Senator CLARK. What did they tell you?

Mr. CORNBROOKS. Because we could not qualify as a responsible bidder.

Senator CLARK. Did you agree with that?

Mr. CORNBROOKS. I did.

Senator CLARK. Were you present at a conference some time later in the Navy Department when Admiral Land made a statement, in the presence of Mr. Wilder, that this company was capable of building any kind of ships?

Mr. CORNBROOKS. Admiral Land made the statement that our personnel was competent to build any class of ships. That is the statement he made.

Senator CLARK. Did you ever see a report made by the Navy Department, by the commandant of the Pensacola station?

Mr. CORNBROOKS. No; I never saw it.

Senator CLARK. To the effect that with the expenditure of some $400,000 the yard was suitable for building cruisers?

Mr. CORNBROOKS. I heard there was such a report but I never saw it.

Senator CLARK. Did you ever hear about it at that time?

Mr. CORNBROOKS. I heard about it at that time, yes, I think.

Senator CLARK. When did you go to the Navy Department to find out why you had been locked out?

Mr. CORNBROOKS. A day or two after the awards.

Senator CLARK. With whom did you talk?

Mr. CORNBROOKS. Admiral Land.

Senator CLARK. What did he say?

Mr. CORNBROOKS. He said we were locked out because we did not own a plant and we had no working capital.

Senator CLARK. Did you report that to Wilder?

Mr. CORNBROOKS. I did.

Senator CLARK. What did he say at that time?

Mr. CORNBROOKS. He said he could get it.

Senator CLARK. Did you pursue the matter any further with the Navy Department?

Mr. CORNBROOKS. No; because that was up to Mr. Wilder. I was engaged in making estimates and that class of work, and he was handling the business of the company.

Senator CLARK. You were vice president of the company, were you not?

Mr. CORNBROOKS. Operating vice president; yes, sir.

The CHAIRMAN. What was the direct occasion of your being here on the 25th and 26th?

Mr. CORNBROOKS. Because I had been making an estimate in New York, preparing to bid on these destroyers, and I came down the day before to make my final figures. You see, the figures were gotten ready and everything in shape to put in the bid before noon on the day of the bidding. I think I arrived in the afternoon, if I am not mistaken, the day before. I am pretty sure I did.

The CHAIRMAN. With whom did you confer on that work?

Mr. CORNBROOKS. The board of directors.

The Chairman. Yes, sir.

Mr. Cornbrooks. With Mr. Wilder.

The Chairman. Alone?

Mr. Cornbrooks. I think there were two directors there—two or three—Mr. Corbett, Mr. Hoyt, and Mr. Newcomb.

The Chairman. Did you go over to the Navy Department at that time?

Mr. Cornbrooks. No; I did not.

The Chairman. Your calculations were exclusively carried out within the hotel, then?

Mr. Cornbrooks. Yes, sir; I did not even go to the opening of the bids. I worked all night to finish up my estimate, and finished about a quarter to twelve on the day of bid, and the final papers were signed, and I went to bed.

The Chairman. Did you encounter during those 2 days any representatives of any of the other shipbuilding yards?

Mr. Cornbrooks. No; I was not out of the hotel. I was busy.

The Chairman. Did any of the representatives of the other yards come to the hotel?

Mr. Cornbrooks. No, sir.

The Chairman. That will be all for the time being.

Senator Vandenberg. We may want Mr. Cornbrooks back.

The Chairman. Do not leave, please.

Mr. Raushenbush. Mr. Kaltwasser.

TESTIMONY OF C. M. KALTWASSER

VICE PRESIDENT'S DENIAL OF KNOWLEDGE OF 1934 BIDS

(The witness was duly sworn by the chairman.)

The Chairman. Give the committee your full name.

Mr. Kaltwasser. C. M. Kaltwasser.

The Chairman. What is your official capacity, Mr. Kaltwasser?

Mr. Kaltwasser. Vice president, New York Ship.

The Chairman. At the present time?

Mr. Kaltwasser. Yes, sir.

The Chairman. How long have you been such?

Mr. Kaltwasser. Since October.

The Chairman. How long have you been connected with the New York Shipbuilding Corporation?

Mr. Kaltwasser. March 1933.

Mr. Raushenbush. Had you been connected with the Cord Corporation before then, Mr. Kaltwasser?

Mr. Kaltwasser. Yes, sir.

Mr. Raushenbush. For how long?

Mr. Kaltwasser. Since December 1932.

Mr. Raushenbush. And you made——

Mr. Kaltwasser. Wait a minute. I am wrong. March 1934 I came with the New York Ship as assistant to the president, but I had been there for the Cord Co. since the previous December 1933.

Mr. Raushenbush. Your testimony should be corrected, then, tha you did not join the New York Ship Co. until December 1933?

Mr. Kaltwasser. 1933.

Mr. Raushenbush. And worked there and you were appointed vice president?

Mr. Kaltwasser. Assistant to the president.

Mr. Raushenbush. Assistant to the president in March 1934?

Mr. Kaltwasser. That is right.

Mr. Raushenbush. Before that you had been identified with the Cord Corporation?

Mr. Kaltwasser. Yes, sir.

Mr. Raushenbush. We have been trying to get some information here, apparently from the wrong officials, Mr. Kaltwasser, on the large jump between the estimates as prepared by the estimators and the bids put into the Navy Department by the officers of the company. Have you any knowledge or understanding of that for the year 1934?

Mr. Kaltwasser. No.

Mr. Raushenbush. And yet you were with the company from March 1934, was it?

Mr. Kaltwasser. Yes, sir.

Mr. Raushenbush. And the bids were only put in in July or August. July, was it not, 1934?

Mr. Kaltwasser. Yes, sir.

Mr. Raushenbush. July 1934 for the 1934 program?

Mr. Kaltwasser. Yes, sir.

Mr. Raushenbush. You have no knowledge at all of how those bids were fixed?

Mr. Kaltwasser. None whatsoever.

Mr. Raushenbush. Or what led the company to jump from a difference of around three million dollars between the estimate and the bid to a difference of $6,343,000 in 1934, on one cruiser, and $6,075,000 on another?

Mr. Kaltwasser. None whatsoever.

Mr. Raushenbush. Would it not be one of the things that a vice president of the company would normally know, Mr. Kaltwasser?

Mr. Kaltwasser. I was not vice president at that time. I was not vice president until October of 1934.

Mr. Raushenbush. Well, you were Cord's representative in the company at the time, were you not?

Mr. Kaltwasser. I was assistant to the president at that time, and my duties did not touch anything with reference to the bids, and I had nothing to do with it.

Mr. Raushenbush. You were assistant to Mr. Bardo?

Mr. Kaltwasser. Yes, sir.

Mr. Raushenbush. And while all this bidding went on on a program which involved some scores of millions of dollars, two bids in 1934 totaling $31,000,000, on a fixed-price basis, you did not know at all how he arrived at this jump of $6,000,000 over the estimates?

Mr. Kaltwasser. No, sir.

Mr. Raushenbush. Was it something Mr. Bardo kept very confidentially to himself?

Mr. Kaltwasser. No, but my duties were such that they did not reach into that end of it at all at that time.

Senator Vandenberg. What was the nature of your duties?

Mr. Kaltwasser. The matter of checking on the duties of the various functions that operated the yard.

Senator VANDENBERG. You were particularly charged with the control of finance, were you not?

Mr. KALTWASSER. No, sir.

The CHAIRMAN. Who was?

Mr. KALTWASSER. Mr. Parker, the treasurer.

Senator VANDENBERG. As Mr. Cord's representative, were you not responsible in a general way to Mr. Cord for what was going on?

Mr. KALTWASSER. No, I was responsible to Mr. Bardo, as assistant to the president.

Senator VANDENBERG. Give us an example of the type of thing for which you were responsible.

Mr. KALTWASSER. I had no direct responsibilities in the capacity as assistant to the president.

Senator VANDENBERG. Why were you there? What were you doing?

Senator CLARK. As a matter of fact, you were sent there by Mr. Cord to be his representative and to be the power behind the throne. were you not?

Mr. KALTWASSER. No, sir.

Senator CLARK. Did you not make that statement to Mr. LaRouche, one of our investigators?

Mr. KALTWASSER. I did not.

Mr. LAROUCHE. When we were in the office of New York Ship on the day that Mr. Bardo left the firm's employ, I think you said to me that it was very difficult to be the power behind the throne without having the ostensible authority. That is as near as I can remember it.

Mr. KALTWASSER. Your memory is not very good, because I never would have made that statement.

Senator VANDENBERG. Let us see if we can have an answer to the question which I asked you, which you were lingering on, Mr. Kaltwasser. Will you repeat the question, Mr. Reporter?

(The pending question, as above recorded, was read by the reporter as follows:)

> Senator VANDENBERG. Why were you there? What were you doing?

Mr. KALTWASSER. New York Ship had not developed, for instance its incentive work.

Senator CLARK. Its what?

Mr. KALTWASSER. Its incentive work to a point that we felt it should be——

Senator CLARK. What is "incentive work"? It seems like $6,000,000 velvet on one cruiser was a pretty fair incentive.

Mr. KALTWASSER. You ask that question, what is incentive?

Senator CLARK. Yes, what did you mean by "incentive work"?

Mr. KALTWASSER. The workmen in the yard are either paid on a straight hourly basis or they are paid on a basis of an incentive or bonus that will give them more of an income per hour than they have on the straight hourly rate.

Senator VANDENBERG. Were you attending to that problem?

Mr. KALTWASSER. I was attending to that problem.

Senator VANDENBERG. What else were you doing?

Mr. KALTWASSER. I was setting up a control of overhead expenses budgeting overhead expenses.

Senator VANDENBERG. Exactly. That was your principal job, was it not? Were you not primarily concerned with the financial or net result of the operation?

Mr. KALTWASSER. I had no jurisdiction over the finances of the company.

Senator VANDENBERG. I am not talking about jurisdiction. I am asking you whether the thing which you were there for was not to make a careful study of the financial situation in respect to the operations of the New York Ship Co.?

Mr. KALTWASSER. I rather answer that by saying that I was there to reduce the overhead costs of the company.

Senator VANDENBERG. All right. Do you mean to say that with the responsibility of reducing the overhead costs which would be one very important element in respect to the financial operation, that a tremendous cruiser-bidding program would be contemplated at that time without any discussion with you respecting the costs involved in it?

Mr. KALTWASSER. That is exactly what happened; yes, sir.

Senator VANDENBERG. You are around the plant in a rather indefinite supervisory capacity, more or less responsible for the general situation unofficially to Mr. Cord, but this most important of all things that is going on in the plant at the time, you are entirely ignorant of?

Mr. KALTWASSER. Right.

Senator VANDENBERG. That is the situation?

Mr. KALTWASSER. Correct.

Mr. RAUSHENBUSH. Have you been successful in reducing the overhead at all, Mr. Kaltwasser?

Mr. KALTWASSER. To a degree; yes.

Mr. RAUSHENBUSH. In what respects?

Mr. KALTWASSER. Simplifying methods of store accounting, revamping of various overhead functions, so that it takes less personnel to effectively cover them.

Mr. RAUSHENBUSH. Could you give us an estimate of how much saving your presence in the company there for Mr. Cord had made in the overhead item?

Mr. KALTWASSER. I could not.

Mr. RAUSHENBUSH. Could you come within $100,000 of it? Was it $100,000, would you say?

Mr. KALTWASSER. I cannot give you that with any degree of accuracy at all. I think Mr. Parker can give you that.

The CHAIRMAN. Can you tell us what your salary is?

Mr. KALTWASSER. $15,000.

The CHAIRMAN. Has that been the amount of your salary from the beginning of your employment?

Mr. KALTWASSER. No.

The CHAIRMAN. How long have you been drawing that?

Mr. KALTWASSER. Since October.

The CHAIRMAN. Did you have more or less prior to that?

Mr. KALTWASSER. Less.

The CHAIRMAN. The $15,000 salary, then, is the high mark which you have received?

Mr. KALTWASSER. Yes, sir.

Senator VANDENBERG. Is that one of the largest salaries, or is that just a nominal salary?

Mr. KALTWASSER. I do not quite get the question.

Senator VANDENBERG. I mean, is that one of the major salaries?

Mr. KALTWASSER. I think that is the highest salary next to the president's salary.

Senator VANDENBERG. That is the point. It is the highest salary next to the president's salary. Can you not understand my perplexity and wondering why the second highest paid man in the institution should know absolutely nothing about the most important single thing that is going on in the institution, namely, its effort to get this tremendous contract?

Mr. KALTWASSER. I cannot give you the reason for that. Mr. Bardo may be able to give you that reason.

Mr. RAUSHENBUSH. You understood, did you not, that Mr. Bardo was in direct contact with Mr. Cord on that matter?

Mr. KALTWASSER. I did not understand any such thing.

Mr. RAUSHENBUSH. You were not in contact. The company was owned by Mr. Cord. Does it not follow necessarily?

Mr. KALTWASSER. Not necessarily. Mr. Bardo was the president of the company, in full charge of that company.

Mr. RAUSHENBUSH. Coming back a minute, you said your two functions, as I got them in answer to Senator Vandenberg's question, were that you were arranging for an incentive rate in the yards and doing something to cut down the overheads. Did you have any success in the matter of the incentive rate? Were you able to cut down the labor rate per unit through that at all?

Mr. KALTWASSER. We have no means of determining that as yet.

Mr. RAUSHENBUSH. Has it been put in at all?

Mr. KALTWASSER. We are increasing the percent of the incentive work in the yard slowly but consistently; yes, sir.

Mr. RAUSHENBUSH. That is put in for the sake of cutting down the labor cost per unit, is it not?

Mr. KALTWASSER. And to expedite the work.

Mr. RAUSHENBUSH. And to expedite the work. And you do expect that when you get that in all the way through, the labor cost per unit will be cheaper than it was before?

Mr. KALTWASSER. It should be all the way down, due to it.

Mr. RAUSHENBUSH. It should be all the way down due to it, of course. How long after your going there did this strike happen, this 7 weeks' strike in March, April, and May 1934?

Mr. KALTWASSER. Approximately 3 months.

Mr. RAUSHENBUSH. You had been there about 3 months. As a result of that strike, how much of an increase did the men get at the time?

Mr. KALTWASSER. I would like to have that verified. My impression is about 14 percent.

Mr. RAUSHENBUSH. Subject to verification.

Mr. KALTWASSER. By Mr. Parker.

The CHAIRMAN. Was that the sole occasion for the strike, merely a question of pay?

Mr. KALTWASSER. It appeared to be; yes, sir.

Mr. RAUSHENBUSH. When did you first go there, Mr. Kaltwasser?

Mr. Kaltwasser. The first of December.

Mr. Raushenbush. December 1933?

Mr. Kaltwasser. Yes, sir.

Mr. Raushenbush. You knew that Mr. Cord had acquired the company before then, did you not?

Mr. Kaltwasser. Oh, yes.

Mr. Raushenbush. Did you know, and do you know now, who Mr. Cord's men on the board of directors are?

Mr. Kaltwasser. Do I know who the board of directors is?

Mr. Raushenbush. Who are Mr. Cord's personal representatives on the board of directors?

Mr. Kaltwasser. I can give you the names of the board of directors.

Mr. Raushenbush. That is not the question, unless you are answering it that all of them are Mr. Cord's appointees.

Mr. Kaltwasser. You speak of Mr. Manning, for instance, he is connected with the Cord Corporation. Mr. Pruitt is connected with the Cord Corporation. Mr. Beal is connected with the Cord Corporation.

Mr. Raushenbush. And are there others who hold nominal blocks of stock who were put on there by Mr. Cord?

Mr. Kaltwasser. I could not inform you as to that.

Mr. Raushenbush. You were there alone before Mr. Cord really took operating control of the outfit out of the hands of the old officers?

Mr. Kaltwasser. Yes, I was there.

Mr. Raushenbush. Did you make any report on this considerable property for Mr. Cord before he purchased it?

Mr. Kaltwasser. No.

Mr. Raushenbush. Did you ever see that report?

Mr. Kaltwasser. I saw a report made by Arthur Young & Co.[1]

Mr. Raushenbush. When?

Mr. Kaltwasser. After I came to the New York shipyard.

Mr. Raushenbush. When was that made?

Mr. Kaltwasser. I could not tell you the exact day. I really could not even guess at it.

Mr. Raushenbush. Roughly?

Mr. Kaltwasser. I do not know.

Mr. Raushenbush. That was made to Mr. Cord?

Mr. Kaltwasser. That I do not know.

Mr. Raushenbush. Was it way back in 1927 or sometime like that?

Mr. Kaltwasser. I should not think so, no.

Mr. Raushenbush. It was a fairly recent report?

Mr. Kaltwasser. Yes.

Mr. Raushenbush. How big a report was it, Mr. Kaltwasser?

Mr. Kaltwasser. Big in what respect?

Mr. Raushenbush. How bulky?

Mr. Kaltwasser. Probably one-half inch thick.

Mr. Raushenbush. I wonder if you could ask Mr. Parker to bring that down with him when he comes down next week, or if you come yourself, will you bring it down?

---

[1] Entered later as "Committee Exhibit #7", see infra, p. 5113.

Mr. Kaltwasser. I think we can locate that report; yes, sir.

Mr. Raushenbush. All right. Mr. Chairman, I have nothing further at the moment.

The Chairman. Mr. Kaltwasser, what were your activities prior to your connection with the Cord Corporation?

Mr. Kaltwasser. How far back do you want me to go on that?

The Chairman. How long have you been connected with the Cord Corporation?

Mr. Kaltwasser. Since December 1933.

The Chairman. What were you doing prior thereto?

Mr. Kaltwasser. Receiver for a company in Jamestown, N. Y., Watson Manufacturing Co.

The Chairman. How long have you been in this country?

Mr. Kaltwasser. Ever since I was born.

The Chairman. You are a citizen of the country?

Mr. Kaltwasser. Yes, sir.

Senator Vandenberg. Mr. Kaltwasser, where is your office in relation to Mr. Bardo's office?

Mr. Kaltwasser. You mean the location of it?

Senator Vandenberg. Yes, sir.

Mr. Kaltwasser. At the moment, or when he was there?

Senator Vandenberg. When he was there.

Mr. Kaltwasser. I was on the first floor and he was on the upper floor.

Senator Vandenberg. Is a twelve million ship an important order for New York Ship?

Mr. Kaltwasser. Yes, sir.

Senator Vandenberg. Would the getting of a $12,000,000 order be a rather important event in the New York Ship's existence?

Mr. Kaltwasser. Yes, sir.

Senator Vandenberg. Yet when the New York Ship is bidding and getting a twelve million cruiser order in 1934, Mr. Bardo does not talk with you about it in any way whatever?

Mr. Kaltwasser. Absolutely not.

The Chairman. The witness then is excused.

Senator Vandenberg. Not permanently, of course.

The Chairman. The committee will be in recess until 10 o'clock Monday morning.

(Whereupon the hearing was recessed until 10 a. m. Monday, Feb. 4, 1935.)

INVESTIGATION OF MUNITIONS INDUSTRY

MONDAY, FEBRUARY 4, 1935

United States Senate,
Special Committee to Investigate
the Munitions Industry,
Washington, D. C.

The hearing was resumed at 10 a. m., in room 357, Senate Office Building, pursuant to recess, Senator Arthur H. Vandenberg presiding.

Present: Senators Vandenberg, Clark, Pope, and Barbour.

Also present: Stephen Raushenbush, secretary to the committee; and F. W. LaRouche, investigator.

Senator Vandenberg. The hearing will come to order.

The first thing I want to do this morning is to present a letter from Mr. Charles H. Hyde. It will be recalled that in the conversations between Mr. Wilder and Mr. Gravem there were several witnesses present at both conversations.[1] The only witness not thus far heard from is Mr. Charles H. Hyde, who, at the time, was an attorney in Washington. The committee was unable to reach Mr. Hyde because he had moved from the city. Mr. Hyde sends the following voluntary letter to the committee, which I will read into the record. It is addressed to me, and dated February 1, 1935, from No. 3 Terrace Place, Port Washington, N. Y.

I read:

My Dear Senator: When I wrote you on December 16 last that I hoped you would go to the bottom of the munitions racket I had not the slightest idea that anything of which I had more than general knowledge would come before the committee.

But I see by the New York Times that proposals of one Gravem in respect of shipbuilding contracts are being aired.

In the summer of 1933 Mr. Wilder consulted me in reference to a project in Pensacola for which he wanted an R. F. C. loan, a drydock and shipbuilding plant.

At the time I understood he bid on some light cruisers or destroyers, and bids were low enough to warrant consideration, although that was not a matter concerning which he had consulted me.

While he was talking with me one day callers were announced and, I being about to leave, he asked me to remain.

One of the callers was A. B. Gravem, who stated that he was a lawyer associated with a Mr. La Prete with offices in the Tower Building. He was introduced by a gentleman whose name I do not remember but who I understood was a friend of Mr. Wilder.

Mr. Gravem stated that he had been with the R. F. C. and had a wide and intimate knowledge of departmental business and in position to secure contracts in the Navy Department.

He was very bold in his assertion that a man he represented was so influential that he took part in framing specifications and conditions for warship contracts. He said he was not an official but was on intimate terms with practically everybody of influence and called the President "Frank."

---

[1] See testimony of A. B. Gravem and L. R. Wilder, Hearings, Part XVIII.

Personally I thought him one of those chiseling lawyers who swarm in Washington.

Wilder expressed interest and an appointment was made for another meeting, Wilder asking me to be present.

At the second meeting Gravem was even bolder. He glorified the importance of the man behind but would not identify him, although going into detail as to his personal influence with him through family connections. He said he was a high-price man and would want at least $250,000. He was quite sure that this man could have an award made under Wilder's bid, and further stated that other ships than those presently under consideration were soon to be advertised.

The exact day I do not remember, but only a few minutes before Mr. Gravem's second visit, Mr. Wilder had received a telephone message stating that the awards had been made, a fact that Mr. Gravem did not mention, if he knew.

I have been a practicing lawyer for over 40 years, a member of the bar of New York and Florida and of the Federal bar in several States, with some experience in politics, and I have never heard a proposition more brazenly made.

As I saw Mr. Wilder only once, a few days after that, I never knew what he discovered as to the identity of the influential citizen.

Very truly yours,

(Signed) CHAS. H. HYDE.

The present occupant of the chair will state that it is his own view that this situation is sufficiently serious to justify certification of the record to the United States district attorney, to determine whether perjury is involved. The committee will decide this matter later. But the desperate importance of getting at the truth with respect to these problems that are now presently before the committee makes it very necessary that nothing be left undone to get the truth.

Senator CLARK. So far as I am concerned, Mr. Chairman, I desire to state that I heartily concur in that conclusion.

Senator VANDENBERG. May we have Miss Kitchen on the stand for a few minutes?

TESTIMONY OF JULIA MARGARET KITCHEN—Resumed

MEETING OF SHIPBUILDERS IN WASHINGTON, JULY 1933

(The witness was previously sworn by the chairman.)

Senator VANDENBERG. Miss Kitchen, you are Mr. Wilder's secretary?

Miss KITCHEN. Yes.

Senator VANDENBERG. You were his secretary in the summer of 1924?

Miss KITCHEN. 1924?. No.

Senator VANDENBERG. 1934.

Miss KITCHEN. Yes.

Senator VANDENBERG. You were connected at that time with Gulf Industries?

Miss KITCHEN. Yes.

Senator VANDENBERG. That was Mr. Wilder's company?

Miss KITCHEN. Yes; it was.

Senator VANDENBERG. Was Mr. Thomas Cornbrooks connected with the Gulf Industries at that time?

Miss KITCHEN. Yes.

Senator VANDENBERG. What was his position?

Miss KITCHEN. Operating vice president.

Senator VANDENBERG. Do you recall an interview between Mr. Wilder and Mr. Thomas Cornbrooks in which the subject of the probable successful bidders upon the 1933 naval program was discussed?

Miss KITCHEN. Yes.

Senator VANDENBERG. This was before the bids were opened?

Miss KITCHEN. Yes; it was.

Senator VANDENBERG. Did you see Mr. Wilder prepare a memorandum purporting to state who would be successful bidders on the naval contracts soon to be let, in 1933?

Miss KITCHEN. Yes. It was a green slip of paper.

Senator VANDENBERG. It was prepared on a green slip of paper?

Miss KITCHEN. Yes.

Senator VANDENBERG. Was it prepared in the presence of Mr. Thomas Cornbrooks?

Miss KITCHEN. Yes.

Senator VANDENBERG. Was this the memorandum subsequently given by Mr. Wilder to Mr. Frey?

Miss KITCHEN. Yes. I believe he made his memorandum from hat slip. It was not that green slip.

Senator VANDENBERG. You know that Mr. Thomas Cornbrooks saw it?

Miss KITCHEN. Yes.

Senator VANDENBERG. Did Mr. Wilder and Mr. Thomas Cornbrooks discuss the matter together before Mr. Wilder wrote out his guess?

Miss KITCHEN. Yes; they did. I remember that Mr. Cornbrooks lid not want Mr. Wilder to divulge the source of the information ecause he (Mr. Cornbrooks) had gotten it from Mr. Ernest Cornrooks, who was at that time works manager of New York Ship.

Senator VANDENBERG. In other words, you heard Mr. Thomas Cornbrooks tell Mr. Wilder, or you heard him give Mr. Wilder the asic information upon which Mr. Wilder constructed his guess, nd Mr. Thomas Cornbrooks indicated that inasmuch as much of he information came from his brother, he preferred that the source f the information be not divulged, lest it embarrass his brother. s that correct?

Miss KITCHEN. Yes; that is true.

Senator VANDENBERG. Did you hear a second interview between Ir. Wilder and Mr. Thomas Cornbrooks, in which Mr. Cornbrooks gain alluded to his brother?

Miss KITCHEN. Yes; I did.

Senator VANDENBERG. Was this after the naval bids were opened?

Miss KITCHEN. Yes; that was afterward. The conversation to hich he referred had been before the bids were opened, but he lked to Mr. Wilder and to me afterward.

Senator VANDENBERG. Did it relate to a conference of shipbuilders the Mayflower Hotel prior to the letting of the bids?

Miss KITCHEN. Yes.

Senator VANDENBERG. Relate what you heard Mr. Thomas Cornooks say in that connection.

Miss Kitchen. He said that before the bids were opened there had been a conference at the Mayflower Hotel, at which the executives of New York Ship, Newport News, and Bethlehem Shipbuilding companies had been present, and that time they were deciding which ships the different companies were to have, who would have the aircraft carriers and the cruisers and the destroyers, and so forth. And at that meeting Mr. Bardo was present, and Mr. Langell was present. Mr. Bardo was not getting what he considered, or what Mr. Langell considered, was New York Ship's share, so that Mr. Langell went out of the office, the room, and talked to Ernest Cornbrooks at Camden, and said that he had better fly down there because Mr. Bardo was not getting New York Ship's share.

So that Mr. Ernest Cornbrooks did fly down, and the meeting became such a row that Mr. Cornbrooks was carried out of that room about 4 o'clock in the morning with a heart attack.

Senator Vandenberg. You are now relating what you heard Mr. Thomas Cornbrooks tell Mr. Wilder?

Miss Kitchen. Yes.

Senator Clark. When was that conversation, Miss Kitchen, please?

Miss Kitchen. It was after the bids were opened. I do not remember exactly the time.

Senator Vandenberg. You are very clear in your recollection about it?

Miss Kitchen. Yes; I am.

Senator Vandenberg. Mr. Thomas Cornbrooks is no longer connected with Mr. Wilder or Gulf Industries, is he?

Miss Kitchen. No; he is not.

Senator Vandenberg. That is one other matter, Miss Kitchen I think you inspected your files Saturday and found the copy of the original minutes of the N. R. A. code hearings in respect to the so-called "monopoly clause", did you not?

Miss Kitchen. Yes; I did. I have those here.

Senator Vandenberg. In order to simplify the process, I wish you would simply read into the record verbatim from the minutes of the N.R.A. code hearing such references as refer to the monopoly clause.

Miss Kitchen. Yes.

This is on page 79 of the transcript of proceedings, Shipbuilding Code Hearing, first day, July 19, 1933, afternoon session. This is a statement of Mr. C. L. Bardo, president New York Shipbuilding Co.:

> Mr. Bardo. My mandate from the shipbuilders and ship repairers this afternoon is to present to you their views urging the inclusion in the code of that paragraph which is now written into it, reading as follows:
>
> "The present capacity of active shipbuilding and ship-repairing companies of the United States as a whole, is in excess of present or any prospective needs. Therefore, it will be considered a violation of this code to make any material increase in the plant capacity of the industry."

Then, further on in Mr. Bardo's testimony, on page 89 of the same document, he says:

> There is now pending, and I think this is a correct statement, before the Administrator of the Public Works Section of the National Industrial Recovery

> Act, an application by Gulf Industries, Inc., for a very substantial loan to be used for the creation of shipbuilding and ship-repair facilities at Pensacola. The shipbuilders and ship repairers, signers of the code, submit herewith a report prepared by Admiral Frederick R. Harris (retired) in opposition to the proposal of Gulf Industries, Inc., as outlined in the brief of Fay, Spofford & Thorndike.

We have never been able to obtain a copy of Admiral Harris' report, but this document, this loan application which was filed with P. W. A., was, of course, a private document. Those applications are not public.

Then here, following the report of Admiral Harris, there is a statement of Rear Admiral Emory S. Land, Chief of the Bureau of Construction and Repair of the United States Navy:

> Admiral LAND. We want to build these ships on what I call the 4-E platform, namely, employment, expedition, economy, and efficiency.
>
> Deputy WHITESIDE. In what capacity do you speak?
>
> Admiral LAND. I am representing the Navy Department, Chief of the Bureau of Construction and Repair.

Deputy Whiteside was the man who conducted the hearing.

Then, further in his testimony Admiral Land says, on page 99:

> The Navy Department is of the opinion that some provision should be included in the code such that it will avoid establishment of new shipbuilding yards, reopening of those long since inoperative, or expansion of small yards and repair plants for shipbuilding purposes. This opinion is in direct accord with the declaration of policy of the National Industrial Recovery Act.

This is on page 102, being a statement of Capt. H. L. Wyman. He says:

> I have a very short memorandum which has been prepared which merely supplements to a small extent what the chief constructor has just said. The reason I am doing it is that Assistant Secretary Roosevelt is away at the present time and I happen to know that this has been passed upon already by him before his departure. So in placing this in the record I trust I am placing the Assistant Secretary's ideas in the record.

This is on page 106, and this is still Captain Wyman's testimony:

> Deputy WHITESIDE. Are you prepared to say anything regarding the expansion of plants?
>
> Captain WYMAN. No, sir; not other than to concur in what Admiral Land just said. That has been talked over considerably in the Assistant Secretary's office, and that is the feeling of the Department, just as expressed by Admiral Land a few moments ago.
>
> Deputy WHITESIDE. Which is that the present plant facilities are adequate?
>
> Captain WYMAN. Yes, sir; that the present plant facilities are adequate and that it would be undesirable to scatter into new plants the work and cause migrations of labor from centers where they are now living to build up plants in other areas.

I believe that is all.

Senator VANDENBERG. I wish you would leave those memoranda, please, Miss Kitchen, to be marked as an exhibit.

Miss KITCHEN. They are all marked with green slips of paper.

(The series of documents referred to were marked "Exhibit No. 1489" and are included in the appendix on p. 5194.)

Senator VANDENBERG. That is all, Miss Kitchen.

Mr. Ernest Cornbrooks.

TESTIMONY OF ERNEST I. CORNBROOKS

1933 BIDDING

(The witness was duly sworn by Senator Vandenberg.)

Senator VANDENBERG. Mr. Cornbrooks, will you state for the record your full name and address?

Mr. CORNBROOKS. Ernest I. Cornbrooks, 151 Fern Avenue, Collingswood, N. J.

Senator VANDENBERG. You are a brother of Mr. Thomas Cornbrooks?

Mr. CORNBROOKS. Yes, sir.

Senator VANDENBERG. What is your present position, Mr. Cornbrooks?

Mr. CORNBROOKS. I haven't any.

Senator VANDENBERG. What was your position in 1933?

Mr. CORNBROOKS. Operating vice president and general manager in charge of operations, New York Shipbuilding Co.

Senator VANDENBERG. In that capacity were you related to the bidding of the New York Ship in connection with the naval program of 1933?

Mr. CORNBROOKS. I had nothing to do with the bidding.

Senator VANDENBERG. What was your function?

Mr. CORNBROOKS. Operating of the yard, technical design, and building ships.

Senator VANDENBERG. Do I understand that the bidding and the contracting was not discussed with you at all by your associates in New York Ship?

Mr. CORNBROOKS. Not the actual bidding.

Senator VANDENBERG. A problem of this magnitude would inevitably involve some call upon your judgment, would it not, Mr. Cornbrooks?

Mr. CORNBROOKS. Oh, yes. We would discuss it up to the estimate and discuss what the future would hold, as far as operations are concerned, and that sort of thing; certainly.

Senator VANDENBERG. Did you attend a conference in the Mayflower Hotel which preceded the bidding?

Mr. CORNBROOKS. Yes.

Senator VANDENBERG. Do you recall the date of that conference?

Mr. CORNBROOKS. It was the night before the bidding, whatever time that was; the 25th, I think.

Senator VANDENBERG. How did you happen to come to Washington to attend that conference?

Mr. CORNBROOKS. Well, I got home from Europe, and we had to estimate on a lot of things in a short time, and we had 6 weeks, I think, in which to make the estimate, and everything was in a rush, and came down here to see if we could not have a quiet conference.

Senator VANDENBERG. Could not have what?

Mr. CORNBROOKS. A quiet conference, without everything going on, as it does in the yard.

Senator VANDENBERG. You mean a conference of whom? A conference of all these various shipbuilders?

Mr. CORNBROOKS. Oh, no.

Senator VANDENBERG. You mean just a conference of the New York Ship?

Mr. CORNBROOKS. Of the New York Shipbuilding Co.

Senator VANDENBERG. Yes, sir.

Mr. CORNBROOKS. And the code was not fixed at that time, and we wanted to discuss labor and what was likely to occur in the future, what the increase in labor was to be, and our prices were not firm, and we wanted to discuss how much we thought the material would cost, and we had a new design—both of them were practically new designs—and we wanted to discuss that.

We also wanted to discuss the estimates.

Senator VANDENBERG. That is not quite what I had in mind by my question. I was wondering if you were sent for to come to the conference, after the conference was under way.

Mr. CORNBROOKS. Oh, no. I came down with the rest of them.

Senator VANDENBERG. How long were you here?

Mr. CORNBROOKS. I think that we came the afternoon of the 24th—I am not sure—or the afternoon of the 25th.

Senator VANDENBERG. Several of the other New York Ship officers were here before that, were they not?

Mr. CORNBROOKS. That was at the same time. I came down on the train with Mr. Bardo, Mr. Metten, Mr. Parker, and Mr. Charlie Langell, and Carl Miller.

Senator VANDENBERG. Did you fly down?

Mr. CORNBROOKS. No. Do you mind if I use some aspirin gum? I do not like to chew gum, but my throat is bad.

Senator VANDENBERG. No, sir; make yourself quite comfortable.

Now, when you got here and proceeded into these conferences, did I understand you to say that your only conferences were with the officers of the New York Ship, and not with the officers of any of the other prospective bidders?

Mr. CORNBROOKS. My conference—I only attended the one conference. It was a sort of continuous proposition, and was with the New York Shipbuilding Co. officials, all in our own group.

Senator VANDENBERG. You attended no conferences with the officials of any other group?

Mr. CORNBROOKS. No.

Senator VANDENBERG. Is this conference which you are talking about the one that has been referred to as the "midnight" session?

Mr. CORNBROOKS. I do not know what has been referred to.

Senator VANDENBERG. Was it an all-night session?

Mr. CORNBROOKS. Yes.

Senator VANDENBERG. Were you taken ill in the course of the session?

Mr. CORNBROOKS. No, sir.

Senator VANDENBERG. You were not carried out of the Mayflower Hotel?

Mr. CORNBROOKS. No, sir. I heard that this morning; but I was not.

Senator VANDENBERG. Did you see your brother when you were here at that time?

Mr. CORNBROOKS. No, sir.

Senator VANDENBERG. Did you ever talk to your brother about the bidding?

Mr. CORNBROOKS. No, sir; I did not. I never discussed with him anything about shipbuilding, unless it was of a technical nature, designs.

Senator VANDENBERG. Then if your brother indicated to Mr. Wilder—I say "if", because your brother denies it——

Mr. CORNBROOKS. Yes.

Senator VANDENBERG (continuing). I want to be fair about that.

Mr. CORNBROOKS. Sure.

Senator VANDENBERG. If he did assert to Mr. Wilder, as testified by Mr. Wilder, and as testified by a witness who presumed to have heard the conversation, that you were sent for by a long-distance telephone call in a hurry, and that you came down in an airplane, and that you went into this conference, which was a conference of all the prospective bidders, where New York Ship was trying to maintain and continue the share of the prospective contracts that had been alloted to New York Ship by agreement between the various shipbuilders; if your brother stated to Mr. Wilder that you participated in such a conference, and the battle became so hot that you were taken ill and had to be carried out, that is not true?

Mr. CORNBROOKS. It is not true, no sir; certainly not.

Senator BARBOUR. Is it true in any particular at all?

Mr. CORNBROOKS. No, sir.

Mr. RAUSHENBUSH. Did you have ptomaine poisoning when you were down here, Mr. Cornbrooks?

Mr. CORNBROOKS. I had not here, but I had ptomaine poisoning, a slight attack of it, after I left the conference, about a week later, when the awards were made.

Senator BARBOUR. Were you carried out on that occasion?

Mr. CORNBROOKS. No, sir.

Senator BARBOUR. Because, if the inference is that that was the occasion, we want to clear it up.

Mr. CORNBROOKS. I was not carried out at all. I did not have it until I went home. I got a sandwich on the way home that gave it to me.

Senator VANDENBERG. Did Mr. Bardo talk to you at any time, or did Mr. Langell talk to you at any time, about the fact that New York Ship was not getting what it expected to get out of an agreement with the other shipbuilders?

Mr. CORNBROOKS. No, sir.

Senator VANDENBERG. You know nothing whatever about the conference of the so-called "Big Three" in Washington at that time?

Mr. CORNBROOKS. No, sir; I do not.

Senator VANDENBERG. And you had no participation, direct or indirect, in any such conference?

Mr. CORNBROOKS. No, sir.

Senator VANDENBERG. Did you furnish any information to anybody who did sit in a conference of that character?

Mr. CORNBROOKS. No, sir. I do not know that there was any conference. I certainly did not furnish any information except to our own people.

Senator VANDENBERG. Did you know, by any prearrangement or otherwise, what allotment of ships your company was going to get?

Mr. CORNBROOKS. No, sir. I asked the estimate to be made on what we could do.

Senator VANDENBERG. You knew that the only complete estimates that had been made were on the four 1,850-ton destroyers and the two light cruisers nos. *42* and *43?* You knew that those were the only bids upon which complete estimates had been made?

Mr. CORNBROOKS. Yes. I probably fixed that myself.

Senator VANDENBERG. That is what I am trying to get at. How did you happen to fix that?

Mr. CORNBROOKS. As far as the 1,500 tons are concerned, the way I reasoned it out on the 1,500 tons, I thought that we could not do light work in that yard, after doing the heavy work; see? And on the airplane carriers I did not want the experience, after going through the *Saratoga.* On the heavy cruiser I thought, if we had the estimate on that, we had enough information from past experience and past costs to estimate on that; but it was the last of the kind, or at least I thought it was the last of the kind, and I did not make much of an estimate on that.

But on the light cruisers and on the 1,850-ton destroyers, before that one of the yards beat us by pulling the machinery space together on a class 2 bid, and I thought that we ought to put a class 2 bid in. They asked for a class 2 bid. We had been working, so as to save space in the engine room, and we thought that the Navy would be interested in that thing, because the Bureau of Construction and Repair always wants more room. And we pulled our machinery together and saved 12 feet on that space; and, as the 1,850-ton destroyers were half of the horsepower of the light cruisers, we found by turning the machinery around end for end that we could also save space on the light cruisers. And I thought that was the thing to go after—the 1,850 and the light cruisers—because we would have duplicate machinery in the 1,850 and twice the units in the 6-inch cruisers.

Senator VANDENBERG. Was it your decision which resulted in the New York Ship actually seeking only the 2 cruisers and the 4 destroyers?

Mr. CORNBROOKS. I do not know whether—it was not exactly my decision, because I could not make those decisions entirely. It was a conference.

Senator VANDENBERG. It was your recommendation?

Mr. CORNBROOKS. It was my recommendation; yes, sir.

Senator VANDENBERG. And those, in fact, were the ships which you subsequently got when the bids were opened?

Mr. CORNBROOKS. Yes.

Senator VANDENBERG. In other words, the ships upon which you prepared complete estimates were the ships you got, and the ships upon which you did not prepare complete estimates were the ships you did not get?

Mr. CORNBROOKS. I think that is right, because I thought by what we were doing on our design we could bid cheaper.

Senator VANDENBERG. When you did not make complete estimate preparations for the other ships, you put in bids which you were pretty sure were entirely safe, if you should happen to get one of those contracts?

Mr. CORNBROOKS. I did not put in the bids.

Senator VANDENBERG. That is the practice, is it not?

Mr. CORNBROOKS. Yes, sir.

Senator VANDENBERG. That is what is called a "protective bid"?

Mr. CORNBROOKS. I do not know what they call a "protective bid." I never heard of that expression before.

Mr. LAROUCHE. It is a safe bid?

Mr. CORNBROOKS. It is a safe bid; yes, sir.

Senator BARBOUR. I think, Mr. Witness, that the chairman means that you made careful preparation, took care in the bid put in on the vessels in which you were interested, and then made a less-careful and a higher-price bid on vessels in which you were not interested.

Mr. CORNBROOKS. Naturally.

Senator VANDENBERG. That is not the question entirely. I would rather put it this way: You made very careful preparation for the bids on the contracts that you got. That is the question I am asking.

Mr. CORNBROOKS. Yes. I do not know what the inference is.

Senator VANDENBERG. I do not know, either; but I am just asking you if that is what happened.

Senator BARBOUR. What the committee is really interested in, is whether you knew you were going to get those ships.

Mr. CORNBROOKS. No.

Senator BARBOUR. And that is why you made careful, exhaustive bids in one case?

Mr. CORNBROOKS. No; we did not know what we were going to get, as far as business is concerned. We tried to get those.

Senator VANDENBERG. Mr. Cornbrooks, you knew, did you not, that Bethlehem wanted the heavy cruisers and Newport News wanted the aircraft carriers?

Mr. CORNBROOKS. No, sir; I did not. I had no means of knowing.

Senator VANDENBERG. You never talked with anybody who professed to have any information as to what Bethlehem and Newport News were inerested in with respect to any particular allocation of work?

Mr. CORNBROOKS. No, sir. I had enough to do to operate the yard without inquiring into those things.

Mr. LAROUCHE. You would not be surprised to learn that that was what they did want?

Mr. CORNBROOKS. It looks like it now. Hindsight is better than foresight always.

Senator VANDENBERG. Apparently your foresight was just as good as your hindsight.

Mr. CORNBROOKS. I am supposed to have good judgment. I do not know whether I have or not.

Senator VANDENBERG. I would say your judgment was excellent, if it was just a guess, Mr. Cornbrooks. You obviously, then, were in the preliminary conferences in which it was determined what the New York Ship should go after in connection with this particular naval letting?

Mr. CORNBROOKS. Yes; surely.

Senator VANDENBERG. And you knew precisely what it was that the New York Ship wanted to get?

Mr. CORNBROOKS. Yes. It was my recommendation.

Senator VANDENBERG. Now, it is asserted—and I submit this to you for your comment—it is asserted that when Mr. Bardo came to Washington, on the eve of the contract letting, he discovered that something had happened so that New York Ship was not going to get these 2 cruisers and these 4 destroyers, as had been previously planned; and that it was because of a failure, a prospective failure, to get this work which New York Ship had expected to get. that you were sent for to see if you could not help straighten it out and get the business back for New York Ship that New York Ship anticipated.

Is there no truth in that at all?

Mr. CORNBROOKS. No, sir; absolutely none.

Senator VANDENBERG. When you came to Washington, did you discuss with Bardo the fact that perhaps New York Ship was not going to get these 2 cruisers and these 4 destroyers?

Mr. CORNBROOKS. No.

Senator VANDENBERG. What was the nature of your discussion? What did you contribute to this conference?

Mr. CORNBROOKS. My contribution to this conference was that I thought that both labor and material would go up during the life of the contract, and that our estimate was too low. Of course, the estimators always make the estimates on the present prices, that is, on the time that they make their estimate.

Senator BARBOUR. You also recommended, I suppose—it would be quite natural for you to have recommended, I should think—that certain types would be preferable for your particular yard.

Mr. CORNBROOKS. Yes, sir.

Senator BARBOUR. And that was the starting point, so far as what you wanted was concerned?

Mr. CORNBROOKS. Yes, sir.

Senator BARBOUR. You did not know you were going to get that type of ship?

Mr. CORNBROOKS. We wanted to get duplicate machinery for one thing, because we had had an awful lot of trouble with cast steel.

Senator BARBOUR. Did you know or did you learn from that particular conference what particular type of ship you were going to get, or what the other yards were going to get?

Mr. CORNBROOKS. No; we did not know until the awards were made.

Senator VANDENBERG. Speaking generally and not technically, Mr. Cornbrooks, what is the difference between the two cruisers you got, and the heavy cruisers that Bethlehem got?

Mr. CORNBROOKS. There is a lot of difference in them. The first thing is, they are 6-inch cruisers and have lighter armor on them, and they have five turrets. They are just not the same at all.

Senator VANDENBERG. It is the same general type of construction, is it not?

Mr. CORNBROOKS. I do not know what you mean by "general type." All ships are general types. It is a lighter-constructed ship than the heavy cruisers.

Mr. LAROUCHE. How about the machinery, Mr. Cornbrooks? Is there any difference in that?

Mr. CORNBROOKS. Our design makes a difference in that.

Mr. LAROUCHE. Essentially, as to particular coat, and so forth?

Mr. CORNBROOKS. If I remember correctly, the armored cruisers were 110,000 horsepower, and the light cruisers 100,000 horsepower.

Mr. LaRouche. The actual distinction between light and heavy is a false distinction, is it not?

Mr. Cornbrooks. I would not say so.

Mr. LaRouche. Referring to the size of the guns, and not the size of the ships?

Mr. Cornbrooks. I do not remember the dimensions of the ships, but they are just a different cruiser, that is all, so far as construction is concerned. A great deal more welding is in the 6-inch cruisers than there is in the 8-inch cruisers.

Mr. LaRouche. There is nothing about the heavy cruisers that would make them difficult for you to build, is there?

Mr. Cornbrooks. No; we built heavy cruisers.

Mr. Raushenbush. Mr. Chairman, in that connection, may I call your attention to Mr. Langell's testimony,[1] beginning at page 7193 of the transcript, discussing these various bids between the light and heavy cruisers. [Reading:]

> Mr. Langell. Now, look, I had already figured on the *Quincy* about a year before, I think, and this *Vincennes* was a duplicate of the *Quincy*, although I had *Quincy* all figured out for me.
>
> Mr. LaRouche. You had the weights figured out for you, but I think you told me that the coverage was equally important, if not more important. This was 9 months later, 9 months after the *Quincy*.
>
> Mr. Langell. The machinery for that heavy cruiser was practically identical with the machinery for the light cruiser, and we were thoroughly covered on the light cruiser, the machinery end of it.
>
> Mr. Raushenbush. Nine months before?
>
> Mr. Langell. No, I am talking about on the light cruiser, we were covered.
>
> Mr. Raushenbush. At the same time?
>
> Mr. Langell. And the heavy-cruiser machinery was almost identical to that of the light. I figured at that time, and I think I told Mr. Bardo, that I could not see much difference, and why I should change the estimate for the *Vincennes* from that I made on the *Quincy*.
>
> Mr. LaRouche. Except this was kind of a left-handed estimate on the *Vincennes*, was it not?
>
> Mr. Langell. I did not make any.
>
> Mr. LaRouche. You did not make any?
>
> Mr. Langell. I made none at all.
>
> Mr. LaRouche. In other words, on a heavy cruiser involving, roughly, something like $12,000,000, you made no estimate at all?
>
> Mr. Langell. None at all.

Mr. Cornbrooks. You mean, then, could you use the estimate on machinery so much per pound? Yes, you could.

Senator Vandenberg. You could use the same yard, could you not, speaking generally, to build both types?

Mr. Cornbrooks. Oh, yes. We had built heavy cruisers in the yard.

Senator Vandenberg. Why was it that you decided that you only wanted to build the light cruisers?

Mr. Cornbrooks. Because we had duplicate machinery on the *1,850* and the light cruisers, absolutely duplicate machinery, except turned around and run the shaft to the gear on one side of the cruiser, because the cruiser pulled in closer and there was not room for the machinery and the gears there, and we put the gears forward of the machinery and run the shaft between the two turbines.

---

[1] See text, p. 4970.

Senator VANDENBERG. What was the purpose of putting in any bid on the ones you did not want?

Mr. CORNBROOKS. We thought the President wanted us to put in bids on the whole thing. That was just our judgment of it. We thought we ought to—first, we did not make the estimate so complete, because we thought we could use other stuff that we had, and time was short. I came here from Europe and I found the things before me, and I did the best I could.

Mr. RAUSHENBUSH. Mr. Chairman, in that connection, may I direct the attention of the committee to Mr. Langell's testimony [1] on that point, still on the 1933 bids, appearing at page 7194 of the record. [Reading:]

> Mr. LAROUCHE. You told me, I think, at one time that on the 1,500-ton destroyers, you paid very little attention to your inquiries in your estimate on that.
>
> Mr. LANGELL. Right.
>
> Mr. LAROUCHE. You did not expect the company was going to get those?
>
> Mr. LANGELL. I did not even expect that they were going to bid on them.
>
> Mr. LAROUCHE. That is the 1,500-ton destroyers?
>
> Mr. LANGELL. Yes, sir.
>
> Mr. LAROUCHE. Which, Mr. Raushenbush, they did not get. * * * Here is the aircraft carrier on which you also made a sort of left-handed estimate, did you not?
>
> Mr. LANGELL. Right.
>
> Mr. LAROUCHE. In other words, you just took a long running leap at the estimate on the aircraft carriers *Nos. 5* and *6*, which you did not think the company would get?
>
> Mr. LANGELL. That is perfectly right.
>
> Mr. LAROUCHE. And did not want?
>
> Mr. LANGELL. I understood they did not want that.
>
> Mr. LAROUCHE. But they made a bid?
>
> Mr. LANGELL. I did not.
>
> Mr. LAROUCHE. The company?
>
> Mr. LANGELL. Yes.
>
> Mr. LAROUCHE. They did not want them, did not want the aircraft carriers, but they made a bid. On the 1,500-ton destroyers they did not want them?
>
> Mr. LANGELL. I do not think they did.
>
> Mr. LAROUCHE. And they made a bid?
>
> Mr. LANGELL. They made a bid.
>
> Mr. LAROUCHE. And on the heavy cruiser *Vincennes* you made no estimate at all?
>
> Mr. LANGELL. None.
>
> Mr. LAROUCHE. And you did not get it?
>
> Mr. LANGELL. Certainly not.
>
> Mr. LAROUCHE. On all the other jobs which the company did get——
>
> Mr. LANGELL. And wanted.
>
> Mr. LAROUCHE (continuing). And wanted, you made very elaborate preparation?
>
> Mr. LANGELL. I did.
>
> Mr. LAROUCHE. That is all.

Senator VANDENBERG. I think the record should be very plain that these files tell their own story to a very eloquent degree.

Does it not follow there pretty clearly that the company knew, and the estimator knew, long ahead of time, before they were told to make those estimates, even, Mr. Cornbrooks, that the company did want some and did not want others?

Mr. CORNBROOKS. We did not want the submarines, for instance. We did not put a bid in on them.

Mr. RAUSHENBUSH. No; you never do.

---

[1] See p. 4970.

Mr. Cornbrooks. Yes, we did put in one bid on them.

Mr. Raushenbush. But you did put in bids on the light destroyers and the heavy cruisers which, according to that testimony, you did not want and did not expect to get?

Mr. Cornbrooks. Yes.

Mr. Raushenbush. Now, asking Senator Vandenberg's question again, after reading this testimony, what was the point in putting in a bid on ships you did not want and did not expect to get?

Mr. Cornbrooks. We wanted to be represented, as we do at all bidding.

Senator Vandenberg. You said a moment ago that you assumed that the President wanted you to bid on everything.

Mr. Cornbrooks. I won't say the President, but I mean the Government.

Senator Vandenberg. That is what I assumed.

Mr. Cornbrooks. Because it was an emergency proposition.

Senator Vandenberg. I was wondering what assistance you thought you were rendering the Government by putting in a so-called " safe " bid. What assistance is that to the Government?

Mr. Cornbrooks. It was only in our judgment that it was a safe bid. It might have been lowest, for all we knew.

Mr. LaRouche. Did the same thing follow in 1934 as to light destroyers, for instance?

Mr. Cornbrooks. I do not know whether we put in a bid; yes, we discussed that. We were not going to put in a bid, and then we did put in a bid.

Mr. LaRouche. According to your records, there, again, the estimating data was very meager on the 1,500-ton destroyer which you did not expect to get?

(Mr. Cornbrooks, the witness, nods assent.)

Mr. LaRouche. And did not get?

(Mr. Cornbrooks, the witness, nods assent.)

Mr. LaRouche. Was not that true of the heavy cruiser in 1934, as well? That was cruiser *No. 45*.

Mr. Cornbrooks. We wanted a light cruiser, if we could get one.

Mr. LaRouche. You wanted a light cruiser, if you could get one?

Mr. Cornbrooks. Yes; because we had a light cruiser in our yard and it would save drawings.

Mr. LaRouche. And you did get it?

Mr. Cornbrooks. Yes.

Mr. LaRouche. You did not want the heavy?

Mr. Cornbrooks. No.

Mr. LaRouche. And did not get it?

Mr. Cornbrooks. No.

Senator Barbour. I do not want to lead you into some answer, because it is not fair to you or to the committee, but, as I understand this thing, and I want to get at the practical side of it—there was very little time for all the estimating, taking it over the whole program submitted to you?

Mr. Cornbrooks. There was not enough, not nearly enough.

Senator Barbour. And it was quite natural that you went more exhaustively into the estimating of the ships that, from your own point of view, you felt were more acceptable to your yard?

Mr. Cornbrooks. Yes, sir.

Senator Barbour. And then did the best you could on the others?

Mr. Cornbrooks. Yes, sir.

Senator Barbour. And that made a very obvious contrast between certain estimates that were made?

Mr. Cornbrooks. Yes, sir.

Senator Barbour. I do not think there is anything very material about that.

Mr. Cornbrooks. No; it was the practice. I have done it all my life, on what we wanted.

Senator Vandenberg. Mr. Cornbrooks, on the time element, was it not a fact that the shipbuilding industry as a whole had very general information about this prospective naval program long ahead of the time you are speaking about?

Mr. Cornbrooks. Very general information; yes.

Senator Vandenberg. Were not the subcontractors, even, sufficiently informed prospectively about the thing that was ahead so that they were discussing with you the question of jobs?

Mr. Cornbrooks. We knew that they wanted to save space in the machinery, clear from the *Dewey*.

Senator Vandenberg. You knew long before this last 6 weeks' pinch period you are talking about what you were going to get ready to bid on, did you not?

Mr. Cornbrooks. No; I did not. I was in Europe and got back in June.

Senator Vandenberg. When did you go to Europe?

Mr. Cornbrooks. May 10.

Senator Vandenberg. Did you not know all about it before May 10?

Mr. Cornbrooks. Not all about it. We knew in general that we were going to have a program of ships, and in general what the types were going to be.

Senator Vandenberg. Were all of Mr. Langell's estimates made during those last 6 weeks?

Mr. Cornbrooks. Yes. About 6 weeks. I won't say it was exactly 6 weeks, but about 6 weeks.

Senator Barbour. Could you have made any estimates at all on any general information which you may have had?

Mr. Cornbrooks. Absolutely not. It was just like building a ship, it changed right along.

Mr. Raushenbush. Mr. Cornbrooks, is it not the usual practice for the estimators not to have their estimates in much before 10 days or a week before the bids are opened?

Mr. Cornbrooks. Yes. In this case they were closer than that.

Mr. Raushenbush. This was not anything very unusual. They always managed to finish the estimates at something like the last moment?

Mr. Cornbrooks. We have had them done 10 days to 2 weeks before the bids go in, but this was too close. We could not get it.

Senator Vandenberg. Did you talk to your brother, Mr. Cornbrooks, subsequent to July 1933 about these contracts and the New York Ship's relation to them?

Mr. Cornbrooks. No, sir.

Senator Vandenberg. Did you ever talk to your brother about them?

Mr. CORNBROOKS. No, sir.

Senator VANDENBERG. Have you ever talked to your brother about this story of how you flew down here, and so forth?

Mr. CORNBROOKS. No, sir.

Senator VANDENBERG. Never talked to him about that at all?

Mr. CORNBROOKS. No, sir.

Senator VANDENBERG. Did you ever talk with your brother about Mr. Wilder's amazingly good judgment in being able to announce ahead of time who the low bidders were going to be?

Mr. CORNBROOKS. I never heard of that.

Mr. LAROUCHE. There is just one thing for the record, and that is as to the plans and the like on these cruiser and destroyer programs. Is it true that Babcock & Wilcox, Westinghouse, and General Electric helped prepare the specifications on all these ships, and that they were consulted as to the machinery by the Navy well in advance of the 6-week period about which you speak?

Mr. CORNBROOKS. I do not know, sir. I do not know whether they were or were not.

Mr. LAROUCHE. The only point in asking was this: That if they were, and we will establish that, then these subcontractors, to whom you must turn for your machinery and boilers, and other equipment, would be fully equipped and prepared to give you, on a moment's notice, information as to the prices, weights, coverage, and all the other things, almost overnight. Is not that true?

Mr. CORNBROOKS. I do not know whether they were prepared or not, but we had an awful time getting it. We had an awful time getting the prices, because they did not know what the code was going to do, and things were generally upset, and I do not think that at the last minute we had prices to cover over 50 or 60 days.

Mr. LAROUCHE. That is probably true, but we will say if Babcock & Wilcox should say that they had full information, say a year ahead, on this job, you would not think that there was any reason to say that that was not true?

Mr. CORNBROOKS. No; I do not see any reason why they should say that.

Senator VANDENBERG. Did you have anything to do, Mr. Cornbrooks, with the N. R. A. code hearings in respect to the monopoly section?

Mr. CORNBROOKS. No, sir.

Senator VANDENBERG. You did not know anything about that?

Mr. CORNBROOKS. No, sir; I was not here. I was not in any of those conferences.

Senator VANDENBERG. That is all, so far as I know.

Mr. RAUSHENBUSH. Mr. Cornbrooks, at various times the opening of the bids has been postponed from one time to another, sometimes at the request of the shipbuilders. Did you feel that this rush was an imposition on the shipbuilders?

Mr. CORNBROOKS. You mean, did I personally think it was?

Mr. RAUSHENBUSH. Yes.

Mr. CORNBROOKS. Yes. I asked, or I wanted to ask for an extension, but we thought that they wanted to get the program into action, get the work going, so that I did not ask for an extension.

Mr. RAUSHENBUSH. And none of the other shipbuilders asked for an extension?

Mr. CORNBROOKS. I do not know that; I cannot answer.

Mr. RAUSHENBUSH. This was to get the work started rapidly?

Mr. CORNBROOKS. Yes, sir.

Mr. RAUSHENBUSH. A large part was under the P. W. A. funds?

Mr. CORNBROOKS. Part of it was under the increased Navy and part of it was N. I. R. A. I do not know it was Public Works or not.

Mr. RAUSHENBUSH. And under that they wanted to get the employment going as fast as they could?

Mr. CORNBROOKS. Yes, sir.

TIME ELEMENT IN CRUISER BUILDING

Mr. LAROUCHE. Do you think your voice will stand up long enough to tell us something about the background of ship designing, which the committee would like to know about? I do not know whether my voice will.

Mr. CORNBROOKS. Go ahead. When my throat hurts me, I will say so.

Mr. LAROUCHE. Do you believe that it is possible, from your experience, and how long have you been a shipbuilder, Mr. Cornbrooks?

Mr. CORNBROOKS. Since 1897.

Mr. LAROUCHE. Since 1897?

Mr. CORNBROOKS. Yes, sir.

Mr. LAROUCHE. Do you think, from your experience, that it would be possible or practical for a shipyard, a modern shipyard, to build a cruiser that now takes from 36 to 42 months, to build it just as well in a lot less time, and for a lot less money, than we are now building them?

Mr. CORNBROOKS. It is possible, I think.

Mr. LAROUCHE. What would you say would be the minimum time, as against 36 to 42 months that are now required? What would you think that an equally good job could be done for? What would be the least time?

Mr. CORNBROOKS. Probably 2 years.

Mr. LAROUCHE. You would not think 18 months?

Mr. CORNBROOKS. It might. I do not know. It just depends on the class of ship and what the design of it was, and if there was any new stuff on it.

Senator BARBOUR. It would depend on the labor situation, too?

Mr. CORNBROOKS. It would depend on the labor situation, too, and it depends on so many things, Mr. LaRouche. You are asking my personal judgment.

Mr. LAROUCHE. Yes; I am. I have learned to respect it very highly.

Mr. CORNBROOKS. Thank you.

Mr. LAROUCHE. You spoke about designs. Do you think that under the existing order that we are getting the last word in modern designs? Do you think we are getting the last word in efficiency for the money that we spend?

Mr. CORNBROOKS. I think you are for the money you spend. Of course, you can go to higher pressures, and things like that, than you do now. That is, whether it would become practical or not, you would have to try it out.

Mr. LAROUCHE. You told me once that you could build a better cruiser than we are now building in 18 months for less money.

Mr. Cornbrooks. I do not know that I told you that, but I think it is possible.

Mr. LaRouche. I think that is what we wanted to know. That is a great deal less time than is now consumed?

Mr. Cornbrooks. That would have to be to cut out all Government inspection and things that hold you up.

Mr. LaRouche. Do you think the Government inspection helps the final product any?

Mr. Cornbrooks. I do not know, really.

Mr. LaRouche. You mean you do not think so?

Mr. Cornbrooks. I would not say that.

Mr. LaRouche. You would not like to say so?

Mr. Cornbrooks. No.

Mr. LaRouche. No harm in thinking it.

Mr. Cornbrooks. I do not know. It is such a complicated proposition that you cannot make a distinct answer to it. It depends on so many conditions.

Mr. LaRouche. What does it cost the Government to inspect a cruiser? Could you make a rought estimate?

Mr. Cornbrooks. No.

Mr. LaRouche. One-half or three-quarters of a million dollars?

Mr. Cornbrooks. I could not say. I do not know what they pay their people.

Mr. LaRouche. I do not know whether they know, either, but I thought you might know from your experience, in a rough, general way.

Mr. Cornbrooks. Inspection force for whatever time the contract is. Whatever it costs, I do not know.

Mr. Raushenbush. How many different men does the Government have inspecting the ship as it is built for the Government?

Mr. Cornbrooks. They have an inspector of ordnance and a superintending constructor and his corps, superintendent of machinery, or inspector of machinery, they call him, and his corps. I do not know how many are there, but 20 or 30. I do not know.

Mr. Raushenbush. You mean altogether 20 or 30?

Mr. Cornbrooks. Yes. I do not come in contact with all the people. I do not know. My dealings were simply with the superintending constructor or the inspector of machinery or the inspector of ordnance.

Mr. Raushenbush. And those men are not paid by the company? They are paid by the Government?

Mr. Cornbrooks. Yes; we do not pay them.

Mr. Raushenbush. It is not taken care of in your bid at all?

Mr. Cornbrooks. Not the Government inspection.

Mr. Raushenbush. That is an additional amount?

Mr. Cornbrooks. Yes, sir.

Mr. LaRouche. And it is not charged against the constructor at any time?

Mr. Cornbrooks. I think not; no.

Mr. LaRouche. So that actually when the shipbuilder gets through building the ship, and gets his final settlement, contract price plus extras, bonuses, and whatever else he gets, there is still a considerable cost which never appears, never is charged against that cruiser at all?

Mr. CORNBROOKS. Sure.

Mr. LAROUCHE. Is it not a fact that if there were a great deal less inspection, that there might be a great deal more ship?

Mr. CORNBROOKS. I would not like to say that.

Mr. LAROUCHE. I do not think you should be required to, but you would not deny it?

Mr. CORNBROOKS. I just do not know.

Senator BARBOUR. This Government inspection is entirely separate from your own operation altogether?

Mr. CORNBROOKS. Yes, sir.

Senator BARBOUR. You have no control over the number of men they send to the industry at all, or anything else?

Mr. CORNBROOKS. No.

Senator BARBOUR. And no reason why you should have?

Mr. CORNBROOKS. No, sir.

Senator BARBOUR. You would be misunderstood, if you did, probably?

Mr. CORNBROOKS. I think we would probably be severely criticized.

Senator BARBOUR. That is what I mean.

Mr. CORNBROOKS. Yes, sir.

Mr. LAROUCHE. I think the committee would be interested to know whether those two types that the New York Ship is now building, I believe, had anything to do with the delays in the cruiser program.

Mr. CORNBROOKS. Nothing whatever. It helped employment.

Mr. LAROUCHE. It helped employment?

Mr. CORNBROOKS. Yes, sir.

Mr. LAROUCHE. But you were unable to lay cruiser *No. 43* until you got one of those tankers out of the way. Is not that true?

Mr. CORNBROOKS. Yes; but it would not have advanced the cruiser any.

Mr. LAROUCHE. It would not have?

Mr. CORNBROOKS. No. You could lay the keel at that time, so far as that is concerned. I think during the war a number of shipyards laid the keels at the last minute, getting everything out, and I think one of the shipyards said they built a ship in 27 days, but, of course, actually they did not; 27 days from laying the keel and everything else, and go right ahead.

Mr. LAROUCHE. That was the *Tuckahoe*?

Mr. CORNBROOKS. I think it was. It was the New York Shipbuilding Co., but I was not there at the time.

Mr. LAROUCHE. I think it was 37 days.

Mr. CORNBROOKS. Whatever it was.

Mr. LAROUCHE. Not very many days, anyway.

Mr. CORNBROOKS. No.

Mr. LAROUCHE. The point of the questions simply was that I believe that the committee is interested, and the record should show, your opinions in regard to time and efficiency and all these other things.

Mr. CORNBROOKS. My opinions are not worth anything. It is the actual work.

Mr. LaRouche. Your experience in New York Ship and elsewhere is worth something. I think because of that your comments particularly on the time of cruiser building are pertinent.

Senator Vandenberg. All right, Mr. Cornbrooks, that is all.

Mr. Raushenbush. May we have Mr. Bardo?

TESTIMONY OF CLINTON L. BARDO—Resumed

REJECTION CLAUSE—1927 CONTRACT FORM

(The witness was previously sworn by the chairman.)

Mr. Raushenbush. Mr. Bardo, do you remember back in 1927, at a time when the shipbuilders were taking up with the Navy the idea of changing the proposed contracts on the scout cruisers for the year 1927?

Mr. Bardo. I recall distinctly that we made an application to the Navy Department to change some of the provisions of the contract. I do not know whether I recall the details.

Mr. Raushenbush. I have here a photostat taken from the Navy Department files, labelled " Conference held at the Navy Department on Tuesday, February 8, 1927, at 10 a. m., in connection with the proposed form of contract (class 1) for the construction of scout cruisers *Nos. 26, 27*, and *28*." And it lists as present for the American Brown Boveri Electric Corporation, Groesbeck, Bardo, and Newell. Which " Newell " was that?

Mr. Bardo. That is the Newell who is now president of the Bath Iron Works. He was at that time vice president and general manager of the shipbuilding company.

Mr. Raushenbush. And on the first page there is a reference to meetings that have been held between the shipbuilders in this matter of these contracts. Do you remember how many of those there were, or over what length of time they extended at all?

Mr. Bardo. My recollection is that it extended over quite a period of time. There were some features of the contracts which all of us felt were too onerous and ought to be changed, and we had several conferences, first among the shipbuilders, and then the shipbuilders and their attorneys, and then in a group with the representatives of the Navy Department.

Senator Barbour. Mr. Bardo, I am becoming a little confused. We are using this term " conference " in several different respects, as I see it. I want to clarify it in my own mind. My impression is that in relation to these contracts that are being so discussed, you and other shipbuilders were operating under the Industrial Recovery Act. Is that so?

Mr. Bardo. He was referring now to things that occurred in 1927.

Senator Barbour. I know, but it is this constant reference to conferences. I want to clear up something else in my mind which may not be relevant now, but you of necessity had a lot of conferences with your competitors because of the N.R.A.?

Mr. Bardo. If you are referring to the 1933 and 1934 program——

Mr. Raushenbush. Mr. Chairman, just a minute.

(Informal discussion off the record.)

Senator Barbour. This only refers to 1927, Mr. Bardo. so that I will withdraw my question.

Mr. Bardo. All right.

Mr. RAUSHENBUSH. I think you were answering the question as to the number of meetings that there had been between the shipbuilders in connection with these contracts and the form of contracts that was to be drawn for these scout cruisers in the classes 26 to 28. Did you have anything further to say in that connection, Mr. Bardo?

Mr. BARDO. I do not think so.

Mr. RAUSHENBUSH. There is a paragraph here on the first page of this memorandum to which I should like to refer. First, however, I want to offer this memorandum as "Exhibit No. 1490."

(The memorandum referred to was marked "Exhibit No. 1490" and is included in the appendix on p. 5207.)

Mr. RAUSHENBUSH. That reads:

> Mr. Palen stated that the meeting was the result of the request for duplicating the vessels, which presents a new phase to the shipbuilder. In considering the contract it was only natural to discuss the specifications, and the serious thing seems to be whether or not there is sufficient information for the estimators to make a fair and just estimate of cost and time for building these ships that would be equitable to the companies. That a memorandum had been prepared as to the matters desired to be considered.

You took part, I take it, in preparing that memorandum?

Mr. BARDO. I think so. That is a good while back to remember everything that you did.

Mr. RAUSHENBUSH. There is another paragraph here on the same basis:

"Mr. Wakeman"—Mr. Wakeman is a Bethlehem official?

Mr. BARDO. He is a vice president of the Bethlehem Shipbuilding Co.

Mr. RAUSHENBUSH (reading):

> Mr. Wakeman stated that the meeting developed from a desire to discuss certain sections of the contract. The shipbuilders had a meeting to discuss the question of interchangeability of certain parts of the scouts and in the discussion many other points were brought out.

Mr. Bardo, do you remember this series of meetings in the Navy Department?

Mr. BARDO. We had several meetings. I do not recall all of them or exactly what took place.

Mr. RAUSHENBUSH. Do you remember particularly what sections the shipbuilders wanted to have changed in those contracts?

Mr. BARDO. No; I could not answer the question. One of them I do recall was the question of the over-all liability, the penalties that could be assessed against the shipbuilder for failure to meet the guarantees, either as to weight, speed, usability, and oil consumption. The penalties were very severe, and we felt that it was not fair to impose those conditions in view of the fact that we were plowing a new field, that we were developing the art of the industry, and that if we were willing to go along and do that, that we ought to have some protection against the very heavy penalties which might amount to several hundred thousand dollars if we failed. We felt that there ought to be some agreed limit to liability which could be written into the contract, and which we might know would be the worst which could happen to us, if it happened.

Mr. RAUSHENBUSH. Is it the same time that the idea of bonuses came up to sort of offset liabilities?

Mr. BARDO. You mean in the contracts themselves?

Mr. RAUSHENBUSH. Yes.

Mr. BARDO. No; my recollection is that the old contracts contained substantially the same provisions that are in the new ones with respect to that.

Mr. RAUSHENBUSH. There seems to be considerable discussion here. Do you remember also the point that the companies in their memorandum proposed to strike out a clause, called clause 19, of the Navy contracts, that dealt with the right of the Navy to reject ships?

Mr. BARDO. Yes; I recall that particular feature because there again was another very dangerous provision. The old contract, as I recall it, vested in the Secretary of the Navy the right, in his judgment, to reject the ship, and we felt, as I have just outlined, in view of the new field that we were plowing, that that was a very severe penalty, and we ought to be relieved of it, or at least it ought to be modified.

Mr. RAUSHENBUSH. Up to that time the Navy had always had the right to reject ships. That is, that clause or its equivalent had been in all contracts?

Mr. BARDO. So far as I know. I had not been in the shipbuilding business before then. In fact, I was practically new at it. So that I cannot tell you very much about what happened prior to 1926.

Mr. RAUSHENBUSH. I note on page 9 of the memorandum which has been entered as "Exhibit No. 1490", clause 19.

> Clause 19, strike out the clause.

And this conversation takes place:

> Mr. WAKEMAN. What will the Comptroller say?
> Mr. PALEN. We don't want anything in here to have a vessel on our hands.

Was not that the proposition that a Government department should give up its right to reject the job for inferior workmanship, that is, was not that whole proposition whomewhat contrary to ordinary Government practice?

Mr. BARDO. You must differentiate between what you are talking about, in the first instance, namely, the right to reject a ship and the right to reject for defective workmanship. They are two very different and distinct features. In other words, we did not ask and did not want the Government's right to reject defective workmanship impaired in any way, and it never has been impaired, and it is still in all the existing contracts. But we did feel that the right to reject a ship involved something which would wreck a shipyard, because you might exceed your weight limitations, or you might fail in some of the guarantees; we felt that that was a dangerous provision and that we ought to be relieved of it.

Mr. RAUSHENBUSH. The penalties for going overweight, or other defects, were covered in other sections, were they not? This is a question of rejecting the whole ship for bad workmanship.

Mr. BARDO. Yes; but you injected into it the right of the Government to reject defective workmanship, which are two distinctly unrelated subjects.

Mr. RAUSHENBUSH. What other cause, outside of very defective workmanship, would there be for rejecting a ship?

Mr. BARDO. I could not tell you; I do not recall the form of Navy contract. It was a very involved contract, one which had been condemned by the shipbuilders, or by the directors, and by everybody else, as a very unfair contract.

Mr. RAUSHENBUSH. That is taking in a lot of territory, is it not?

Mr. BARDO. That contract took in a lot of territory.

Mr. RAUSHENBUSH. Condemned by everybody?

Mr. BARDO. I think that is a true statement. They had to sign it and be responsible for its provisions.

Mr. RAUSHENBUSH. I notice here that Captain Robert, on page 9 of the memorandum, makes the observation:

> Suppose you turned out a rotten ship and got by the inspectors and went to sea and during the 6 months there were a lot of defects plainly attributable to the contractors; if you've got a reservation of $250,000 it seems to me that there possibly could be a limited liability for guarantees, but not a limited liability for defective workmanship.

Mr BARDO. I do not know what was in the captain's mind when he made that statement, but certainly the right of the Government to condemn and reject defective workmanship has never been questioned in any contract.

Mr. RAUSHENBUSH. The point I am getting at is that the contracts up to this point had all had that right of the Government in, and at this point the shipbuilders put up the request that that be cut out. Is not that substantially correct?

Mr. BARDO. That is correct; and the request was made, as I have outlined to you, that we were in a new industry; there had been no cruisers built since the time of the war, and there was nobody who really knew very much about what was going to happen. We were in an entirely new field.

Mr. RAUSHENBUSH. I offer for the record a memorandum prepared by the Bureaus of Construction and Repair and Engineering, dated the 18th of February 1927, as "Exhibit No. 1491", in which the proposals of the shipbuilders are discussed.

(The document referred to was marked "Exhibit No. 1491" and is included in the appendix on p. 5216.)

Mr. RAUSHENBUSH. The whole report is turned over to the Judge Advocate General of the Navy, and speaking of this nineteenth clause, on the fifteenth page the bureaus say:

> This clause specifies that it shall not be obligatory upon the Department to accept or pay for the vessel or any part thereof unless it shall have been completed in strict conformity with the contract and in accordance with the provisions of the acts of Congress relating thereto. Upon discussion it appears that the shipbuilders are fearful less some great loss should rest with them such as to amount to a financial catastrophe. With the clause proposed below for limited liability it is believed that they are suitably protected and it is recommended that the nineteenth clause stand as written.

Did you know about this report where the bureaus proposed to keep that clause?

Mr. BARDO. Never heard of it.

Mr. RAUSHENBUSH. In the final contracts, as they were put out, that clause was eliminated, was it not?

Mr. BARDO. I could not answer that question. I would have to review the contracts to make sure whether it was or not.

Mr. RAUSHENBUSH. I show you a revised contract, photostat thereof, in which the nineteenth clause, the old one that I have read, has been eliminated, and the nineteenth clause deals with the 8-hour day instead, and there is no further reference to it [handing paper to witness].

Mr. BARDO. If that is what the contract says, there is nothing I can say about it.

Mr. RAUSHENBUSH. Do you remember what has happened since then on the contract for the 1929 cruisers. Was that clause in or was that clause out?

Mr. BARDO. I could not answer that question. I would have to refer to the contract.

Mr. RAUSHENBUSH. Did you employ as an attorney in these matters, the matter of these contracts, Ralph M. Ketcham?

Mr. BARDO. He was the company's attorney. He was our yard attorney, located in the yard.

Mr. RAUSHENBUSH. He was not connected with White & Case?

Mr. BARDO. No.

Mr. RAUSHENBUSH. He was your own company attorney?

Mr. BARDO. He was our own company attorney.

Mr. RAUSHENBUSH. I have here a letter purporting to be from him, Mr. Bardo, dated June 14, 1929, and addressed to Mr. F. H. Skinner, First National Bank Building, Newport News, Va. Was Skinner the attorney of Newport News?

Mr. BARDO. I understand that he was.

Mr. RAUSHENBUSH. And to Mr. A. B. Homer, manager of sales, Bethlehem Shipbuilding Corporation, Ltd., Cunard Building, New York City; which seems to deal with this subject. That letter states (reading from "Exhibit No. 1492"):

> GENTLEMEN: Referring to Mr. Skinner's memo to Mr. Homer covering his notes on proposed cruiser contract dated June 3, 1929, there is one point on which I would particularly like to make a contemporaneous record and if you gentlemen agree with me, I would like to have you join in the making of this record.
>
> In the memo referred to Mr. Skinner has mentioned the implied right of rejection in connection with the omission from the last draft of the contract of the rejection clause which appeared in the earlier drafts.

He is talking about 1929, and from that sentence it seems, does it not, Mr. Bardo, that the Navy had put back that rejection clause into the contracts, and it had been omitted in the last draft? In other words, the same thing happened; that is, the right of the Navy to reject a job had been waived in 1929, and again the clause had been eliminated. Is not that a fair inference from that statement?

Mr. BARDO. You would have to ask Mr. Ketcham about that. I would not undertake to interpret his letter or what he was writing about. I have no knowledge of it at all.

Mr. RAUSHENBUSH. Were you not at all active in this 1929 attempt?

Mr. BARDO. I was active from the standpoint of negotiating a contract, but I was not active with respect to such things as discussions of it. I never heard of it before.

Mr. RAUSHENBUSH. You had heard about it plenty in the 1927 conferences, had you not?

Mr. BARDO. Yes; surely; but he raises the question again. I did not know that the question had again been raised. That is something which took place between the attorneys, again.

Mr. RAUSHENBUSH. I will read that again [reading from "Exhibit No. 1492"]

> In the memo referred to Mr. Skinner has mentioned the implied right of rejection in connection with the omission from the last draft of the contract of the rejection clause which appeared in the earlier drafts.

The letter goes on:

> In my opinion, in a contract for construction of a ship in which no mention has been made with regard to rejection, either in the written contract or in the preliminary negotiations, there is without doubt inherent in the agreement between the builder and the purchaser an implied right of rejection if the vessel fails to conform to specifications in any substantial respect and this failure is not or cannot be remedied within a reasonable time after the due date for delivery, except as special provisions with regard to liquidated damages for delay, and with regard to acceptance subject to such liquidated damages may impliedly negative to some extent such a right of rejection. I think, however, that in the present case we are in a somewhat different situation.
>
> In the draft of the contract submitted to us prior to May 8 there was a specific rejection clause, subdivision (e) of article 13. In our conference with the Department officials and the Secretary of the Navy on May 9 and 10, at which each of our three companies was represented, we pointed out to the Department the impossibility of resale of the vessel as a reason for eliminating the right of rejection and insisted that in all fairness to the shipbuilders the Department's remedies in event of default should be limited to the right to complete the vessel at the shipbuilder's expense. The Department officials and the Secretary of the Navy acceded to this view and at our request, and for this purpose withdrew the rejection clause from the draft of the contract.

Now Mr. Ketcham goes on:

> In the light of this preliminary negotiation it would seem that the parties have themselves placed an interpretation upon the contract which would entitle us to maintain that the Department had surrendered any implied right of rejection.

That is, I take it, that the Department had a right to reject, and at the request of the shipbuilders it was withdrawn.

Mr. BARDO. That is a lawyer's opinion. I could not pass upon it.

Mr. RAUSHENBUSH. This is your company lawyer's opinion, who was charged with the negotiations at the time. [Continuing reading:]

> Under the circumstances, I believe that it has been agreed that on the contracts for scout cruisers 33 and 35 the Department will have no right to reject the vessels.

So if I understand it correctly—and I wish you would check from your memory—the right of rejection that is implied in all contracts, even though it is not written in, was taken out of it by this procedure in which the attorneys for the three companies apparently asked the Government specifically to withdraw that rejection clause, which the Navy did, and the fact that those negotiations, these preliminary negotiations, have taken place, the whole general right of rejection which lies in general contracts has been invalidated.

Mr. BARDO. That is a very involved question. You have gone all around the barn. What do you want me to tell you specifically?

Mr. RAUSHENBUSH. I asked whether that would check with your memory of Mr. Ketcham's letter?

Mr. BARDO. No; I am perfectly frank to say I do not recall it at all. I never saw the letter and I do not recall even the discussion.

Mr. RAUSHENBUSH. I offer this letter of the attorney of the New York Ship, Mr. Ketcham, for the record as "Exhibit No. 1492."

(The letter referred to was marked "Exhibit No. 1492" and appears in full in the text.)

Mr. LAROUCHE. Can you remember, Mr. Bardo, any provision in any contract to which the shipbuilders objected, and in which case the shipbuilders' opinion was not adopted?

Mr. BARDO. I do not recall the details. That is a very involved thing, and I should have to go back, and I have not any memoranda covering it, and it would be a very involved problem to try and find just what was asked for and what was suggested, and what was denied and what was modified.

Mr. LAROUCHE. Before every letting of any importance, there was a discussion of contracts and it was usually a discussion among the "Big Three", was it not?

Mr. BARDO. Now what are you talking about? You say there is a discussion among the "Big Three" about contracts. Are you talking about the contract form or about contracts? Let us be sure on that.

Mr. LAROUCHE. The specific contract and the contract form both.

Mr. BARDO. All right. You cannot talk about both of them in one breath, because one answer does not answer for both of them.

Mr. LAROUCHE. How about the specific contracts?

Mr. BARDO. The specific contracts; no.

Mr. LAROUCHE. They were not discussed?

Mr. BARDO. They were not discussed.

Mr. LAROUCHE. But the contract form was?

Mr. BARDO. No; not after we settled it once. As far as I know, there was no further discussion beyond 1927. I do not recall any at all.

Mr. LAROUCHE. There were numerous instances from 1927 up to 1934 in which the shipbuilders did find fault in some respect with some contract or other?

Mr. BARDO. With the contract form or with the contract? Let us be clear about it.

Mr. LAROUCHE. With the contract form.

Mr. BARDO. As I have said, I cannot answer the question because I have not refreshed my mind on it, and I would not keep it in my mind anyway. It is not anything that I would necessarily try to retain because it is too involved a problem.

Senator VANDENBERG. Mr. Bardo, you are acquainted with Mr. Kaltwasser?

Mr. BARDO. Yes, sir.

Senator VANDENBERG. What is his position with New York Ship?

Mr. BARDO. He came there I think in December 1933, as an assistant to me, representing the Cord interests.

Senator VANDENBERG. He came in there, using your phrase, as a representative of the Cord interests?

Mr. BARDO. That is correct.

Senator VANDENBERG. What, in a general way, was the function that he served in the organization?

Mr. BARDO. He came there, first of all, to familiarize himself with shipbuilding and its activities, and to see whether, from the standpoint of his industrial background and knowledge, he could be helpful in working out any problems relating to cost, which would be worthwhile, and he devoted his time to that particular endeavor right along.

Senator VANDENBERG. Was he in on most of the important conferences which occurred within the organization respecting business policy?

Mr. BARDO. Well, we discussed it with him occasionally, but because of his unfamiliarity with the whole subject, he was somewhat reluctant to say very much about it. He held rather aloof from a discussion of these things with which he was not familiar.

Senator VANDENBERG. But, as a representative of the Cord interests, he was kept intimately informed on everything that was proceeding?

Mr. BARDO. I do not know that I would go so far as to say that. I did not see very much of him. When he was there I might see him once or twice a week, but he spent, I would say, the first 3 months he was with us, one-half of the time going around in other shipyards and finding out what their practices were, and how they did things, and familiarizing himself generally with the most approved practices that he could find in any of the yards with which we might be in competition.

Senator VANDENBERG. Do you know Mr. Ben Smith?

Mr. BARDO. I met him only once, just once.

Senator VANDENBERG. Is he connected, directly or indirectly, with New York Ship?

Mr. BARDO. No. He has no official connection.

Senator VANDENBERG. Was he related in any unofficial way?

Mr. BARDO. Not to my knowledge.

INTEREST OF SHIPBUILDERS IN LEGISLATIVE ACTIVITIES

Senator VANDENBERG. Mr. Bardo, reading from the hearings in the so called " Shearer investigation ", I quote the following discussion between you and Senator Robinson of Arkansas:

> Senator ROBINSON of Arkansas. Neither you nor your company, I assume from that statement, has had any representation during the fight on the cruiser bill.
>
> Mr. BARDO. We have a representative in Washington, but he is not here for the purpose of mixing in with legislation.
>
> Senator ROBINSON of Arkansas. Who is he?
>
> Mr. BARDO. Frank Lord.

Then dropping to the bottom of the page it states:

> Senator ROBINSON of Arkansas. He has no authority to participate in efforts to secure, or defeat, legislation?

referring now to Mr. Lord.

> Mr. BARDO. No, indeed.

That is a correct statement of Mr. Lord's status in Washington?

Mr. BARDO. Yes, sir.

Senator VANDENBERG. Mr. Lord had no authority to participate in efforts to secure or defeat legislation?

Mr. BARDO. That is correct.

Senator VANDENBERG. I want to be sure that we fully understand your answers, so that I am taking the liberty of showing you a letter of December 10, 1928, written by you to Mr. Harry R. Humphreys. There seems to be but one copy and I will read the letter.

> DEAR HARRY: Yours of the 7th enclosing expense account received. Same has been passed for payment.
>
> I know that you are now prepared to devote all of your time, when not needed in Camden or Trenton, at Washington for at least the balance of the session. What we are most interested in now is the defeat of the Dallinger amendment to the cruiser bill, and this is being handled by Mr. H. G. Smith, vice president of the Bethlehem Co., although Mr. Ferguson and I have devoted some time and have interviewed a substantial number of Senators on the matter.

We are working in Washington with Messrs. Frank A. Lord, Hotel Blackstone, and James Barnes, who has an office on the sixth of the Albee Building. You no doubt know them both. I suggest that you keep in close touch with them so that our cooperation may be complete.

Very truly yours.

Would not that indicate that Mr. Lord was interested in legislation. Mr. Bardo?

Mr. BARDO. No. You will recall there, I think, in the letter where I had said I had made it my personal business to interview the Senators, and give that my personal attention. He had no authority to interview them or talk to them, and if he did it, he did it on his own.

Senator VANDENBERG. When you speak in this letter of your cooperation with Mr. Smith, of Bethlehem, and Mr. Ferguson, of Newport News, in seeking to defeat the Dallinger amendment, I assume that refers to the navy-yard amendment.

Mr. BARDO. It referred to an amendment that was tacked on to the bill—I do not recall the year—and, as I remember the language of it, the first and every alternate cruiser was to be built in navy yards.

Senator VANDENBERG. You and Mr. Smith and Mr. Ferguson were cooperating in that battle against that arrangement?

Mr. BARDO. Yes, sir.

Senator VANDENBERG. With further reference to Mr. Lord, I call your attention to your letter of December 21, 1928, written directly to him, from which I read:

DEAR FRANK: Yours of the twentieth received.

We are greatly interested in the cruiser bill and we want to make sure just as far as it is humanly possible to do so, that there will be no slip-up in disposing of the Dallinger amendment provisions of this bill when it comes before the Senate on January 3.

It seems to me quite desirable that you should get in touch with Messrs. Barnes and Gauntlet, and it may be well to talk to Duff, who is a representative of the American Shipowners Association. I understand they have filed a formal protest against this amendment.

Am glad to know that you could be helpful to Mr. Ketcham. As a matter of fact, I am quite sure that your good offices have been quite helpful in getting the rough spots ironed out in connection with the Grace Line contract.

What reaction have you had from Vice President Plummer regarding estimates on the Herberman ships? I understand that Herberman has tried to get away with some very fast stuff with one of our shipbuilders, which hasn't helped his cause in the least.

This refers to another matter.

I am interested in particular in this sentence, Mr. Bardo:

What reaction have you had from Vice President Plummer regarding estimates on the Herberman ships?

Would that indicate that there was an exchange of information with respect to estimates between these ship companies?

Mr. BARDO. I think the Vice President Plummer who is there referred to is the man who was then vice president of the Shipping Board. My recollection of that—now that you have mentioned it; I could not think who Plummer was at the moment, because the only other Plummer I could think of was the purchasing agent of Newport News—when the bids were submitted for the export ships, I had made it my business, upon one of my trips to call on Mr. Plummer. I usually did call there and say "Hello" to him, and he immediately assailed the shipbuilders and assailed me in particular, on the ground that we had submitted an exorbitant price for those ships.

I said, "Mr. Plummer, I will give you our estimates of labor and material. You can recheck them, you can analyze them, you can do anything with them that you want to, and if there is anything that you can find in those estimates that indicates that there is anything out of line, I will be very glad if you will call my attention to it."

Therefore, when I went back home I sent in the estimates of labor and material, and it was in connection with that that this particular inquiry was made to Lord, because he did see those fellows more or less frequently. They were very close friends.

Senator VANDENBERG. This Plummer is not the Newport News fellow?

Mr. BARDO. No; it is the fellow who was then vice president of the Shipping Board.

Senator VANDENBERG. Turning to the first two paragraphs of the letter, and I won't read the rest of it because it is not pertinent, are you not in this letter telling Mr. Lord of your great interest in the cruiser bill, and its defeat, and expressing the hope there will be no slip-up in disposing of the amendment, and suggesting to him the desirability of getting in touch with certain gentlemen in connection with it?

Mr. BARDO. That is correct.

Senator VANDENBERG. Does not that indicate some activity on Mr. Lord's part, that you knew of, in connection with legislation?

Mr. BARDO. No; not so far as Mr. Lord is concerned. You will recall that I asked him to get in touch with Mr. Barnes and Mr. Gauntlet. I did not ask him to get in touch with anybody else.

Senator VANDENBERG. Mr. Lord's letter of July 20, 1928, reporting to you on the matter reads:

> DEAR MR. BARDO: I am just advised authentically that the cruiser construction bill has just been made, by unanimous consent, the unfinished business of the Senate to be taken up and disposed of on Thursday, January 3, 1929.
>
> I have been able in the last day or two to smooth the way a little bit for Mr. Ketcham, and he told me last night that he believed negotiations were proceeding at such a rate that your bill will have an executed contract in this calendar year. I hope so.
>
> Referring back to the cruiser bill for a moment, I further wish to say that you were thoroughly satisfied with the resolutions passed by the United States Shipping Board. Mr. O'Connor has assured me that he is willing to go to the bat on this question, at any time, and in any place where his services would be of value. I have kept in touch with Zachary and he is still hopeful that Senator Borah will lead the fight for our contentions.

Does not that indicate some activity of Mr. Lord on the part of legislation?

Mr. BARDO. Not necessarily so. He was merely reporting to me the information he had gotten which was pertinent to our job, to our business. He was simply reporting it as any man would.

Senator VANDENBERG. I am not complaining about his sending you the information, Mr. Bardo, but I am simply trying to discover as to whether this is not a rather limited and technical assertion, when you say that Mr. Lord had no authority to participate in efforts to secure or defeat legislation.

Mr. BARDO. That is correct. I want to reiterate just that, that he had no authority.

Senator VANDENBERG. But he did participate, apparently, over quite a large area, did he not?

Mr. BARDO. He would go and talk—he had a lot of friends, a lot of people he knew, and he would go talk to them. He did not have much to do down there, and when he found out something which he thought was of interest, he would report it to me.

Senator VANDENBERG. I call your attention to Mr. Lord's letter of December 15, 1930, in which he reports that he has interviewed Congressman Britten, and is assured that the provisions for a cruiser will be stricken out. "The rest of the bill will be reported favorably and embody Secretary Adams' recommendation and request."

This is still just reporting information?

Mr. BARDO. That is all.

Senator VANDENBERG. Mr. Lord evidently is now in contact with at least one Congressman, and if he is, that is his business and not yours?

Mr. BARDO. That is his business.

Senator VANDENBERG. On January 3, 1929, there is a memorandum addressed to Mr. W. M. Flook, signed by Mr. Bardo. That reads:

> Referring to Mr. W. B. Shearer.
>
> I discussed this matter today at luncheon with Vice Presidents Wakeman of the Bethlehem Shipbuilding Co. and Palen of the Newport News Shipbuilding Co.

You were working all the time in constant cooperation with Bethlehem and Newport News in these legislative matters?

Mr. BARDO. Yes.

Senator VANDENBERG (continuing the reading):

> The National Council of American Shipbuilders recently appointed a committee, of which I am chairman, with the request that an invitation and report be submitted to the council having to do with the creation of a strong organization to handle legislative and other matters of mutual interest. This committee will make its reports within the next 10 days or 2 weeks, and this report will contemplate the employment of a strong individual to head up the association and to look after all of the matters of general interest.
>
> Both Messrs. Wakeman and Palen are opposed to Shearer, because of the fact that they regard him as being more or less unreliable. His conduct in our previous contact was anything but complimentary to him. They will not endorse or approve of his employment directly to represent the shipyards.
>
> In view of the report which will be submitted by the committee, it is felt that we should not embarrass our organization or the man in charge of it by taking into our service in advance a man who may or may not be useful or acceptable to the new organization.
>
> Inasmuch as we now have directly on our pay roll Mr. Frank Lord, who is very useful in some features of our Washington activities, and are contributing to one or two other Washington agencies useful in their own way, I do not feel that we should further increase our cost at Washington by the employment of Mr. Shearer, particularly in view of the fact that he is persona non grata with the other principals of our competing yards.
>
> Pursuant to your directions, I will arrange to see Shearer at an early date.

Is this a discussion of a purpose to create a legislative contact man in Washington, Mr. Bardo?

Mr. BARDO. That does not sound like my letter at all. I do not have any recollection of that letter. Not that I am in disagreement with what it says, but I do not recall the letter.

Senator VANDENBERG. Here is the letter [handing letter to witness].

Mr. BARDO. It is apparently a letter of mine. What is your question, Senator?

Senator VANDENBERG. May I have the letter back please?

Mr. BARDO. Yes, sir [returning letter].

Senator VANDENBERG. Does this indicate a contemplation to choose a joint legislative contact man in Washington?

Mr. BARDO. Apparently it did. That is apparently what was the purpose of it, the appointment of that committee.

Senator VANDENBERG. And it would seem to be a justified inference from the letter that inasmuch as "we now have directly on our pay roll Mr. Frank Lord" and so forth, that Mr. Frank Lord has been doing the work which it is contemplated is to be done by this joint representative hereafter.

Mr. BARDO. No; that was not the implication in the letter at all. I referred particularly to the fact that we then had a man on our pay roll, and I did not believe we should go on and should increase our cost by the appointment or selection or taking on of another man at Washington to represent the joint interests, and we never did. That just fell dead of its own weight.

Senator VANDENBERG. What were the other one or two Washington agencies, useful in their own way, to which you were contributing in Washington at that time?

Mr. BARDO. I do not recall any agencies at Washington to which we were making any contributions at that time. The only other agency that I can recall is the Midwest-Foreign Trade Association, with its headquarters in Cincinnati, which is headed by Malcolm Stewart, who has always indicated a very keen desire in all matters relating to a merchant marine, and we did contribute to the support of that organization a very nominal monthly amount. I do not recall what it was.

Senator VANDENBERG. Under date of July 5, 1929, Mr. Lord writes to Mr. Flook; who is Mr. Flook?

Mr. BARDO. He is the chairman of the board.

Senator VANDENBERG. Of New York Ship?

Mr. BARDO. Yes.

Senator VANDENBERG. Mr. Lord writes——

Mr. BARDO. At that time he was chairman of the board of the American Brown Boveri Electric Corporation, which was the holding company for several subsidiaries.

Senator VANDENBERG. Mr. Lord writes to Mr. Flook as follows on the stationery of the Metropolitan Club:

> Just a word to tell you how glad I was to see you at Camden, if only for a moment.
>
> You are going to have a busy yard. Of that there can be no doubt.
>
> Additional legislation should be procured to take care of freighters, and with existing sentiment in Congress, the next session should bring about the desired result and I hope that I can be of service in giving it a share.

Apparently now, Mr. Lord is discussing legislation with Mr. Flook.

Mr. BARDO. I think that was a comment he had to make, and he thought Mr. Flook might be interested in it, and I do not know anything about it myself.

Senator VANDENBERG. As a matter of fact, Mr. Lord's job in Washington was primarily a contact job in respect to legislation, was it not?

Mr. BARDO. It depends altogether on how you apply that particular question. His job here was to report to us anything of a character that he thought was important, but he had no authority at all to deal or to work with legislators. That is the job that I tended to myself. I always have and always did, and anything I wanted to take to a legislator, I went and talked to him personally, and I did not send a hired man.

Senator VANDENBERG. I think that is all, Mr. Raushenbush, for the moment.

Mr. RAUSHENBUSH. During that time, Mr. Bardo, how many employees of New York Ship were down here in Washington, in 1927, 1928, and 1929?

Mr. BARDO. We never had but one man here at a time. Mr. Humphreys was here, and then he withdrew.

Mr. RAUSHENBUSH. There is a reference in here somewhere suggesting that Mr.——

Mr. BARDO. I was just trying to get this picture cleared up in my mind. There may have been a very short overlapping between Humphreys and Lord, because Humphreys was looking after the shipbuilding activities and Lord, in the fall or the winter of 1927 and up until the time that Mr. Humphreys withdrew, was here on Mr. Wilder's staff, and he was not at that time performing any function for the shipbuilding company. I think I am correct in saying that there was an overlapping period there.

Mr. RAUSHENBUSH. What was Mr. Ketcham doing down here? It speaks in this letter of December 20, from Mr. Lord to you, of Mr. Lord smoothing the way for Mr. Ketcham.

Mr. BARDO. Mr. Ketcham was new. Mr. Lord was formerly connected with the Shipping Board. I think the letter refers to the Grace contract. It was a contract which we were to be awarded or had been awarded, for the building of the *Santa Clara* for the Grace Line, and I did not place any interpretation upon that, other than Mr. Lord would take Mr. Ketcham to the Shipping Board and introduce him and give him an entree that he probably would not get so readily if he went in there cold.

Mr. RAUSHENBUSH. There is a reference in a letter of December 21, 1928, that Senator Vandenberg read to you to the effect:

> It seems to be very desirable that you should get in touch with Messrs. Barnes and Gauntlet.

Could you identify them?

Mr. BARDO. Mr. Barnes is a representative here for the Todd Shipyard, and Mr. Gauntlet is the local representative of the Illuminating Co.

Mr. RAUSHENBUSH. Of which?

Mr. BARDO. Of the Illuminating Co. of America.

Mr. RAUSHENBUSH. Aluminum Co. of America?

Mr. BARDO. Aluminum Co. of America. That is right. He also, I think, performs some service for the Newport News Co. I do not know what it is.

Mr. RAUSHENBUSH. How does the Aluminum Co. get interested in this?

Mr. BARDO. Simply through the personality of Mr. Gauntlet, who, as I say, was an old employee of Newport News. He is now the representative of the Aluminum Co. of America here, and I know he keeps in touch with what is going on in Washington.

Mr. RAUSHENBUSH. Was Mr. James Barnes on your pay roll at any time?

Mr. BARDO. No.

Mr. RAUSHENBUSH. You state here in this letter of December 10, 1928, to Mr. Humphreys:

> We are working in Washington with Messrs. Frank A. Lord, Hotel Blackstone, and James Barnes, who has an office on the sixth floor of the Albee Building.

Mr. BARDO. That was the period when there was an overlapping between Humphreys and Lord, and I just gave him information that I thought he ought to have.

Mr. RAUSHENBUSH. Whom was Mr. Barnes employed by?

Mr. BARDO. I just said by the Todd Shipbuilding & Drydock Co.

Mr. RAUSHENBUSH. I am sorry. I did not get that. Yes; you did answer that.

Mr. Bardo, could you tell us at all whether you and other larger shipbuilders of the country have ever tried to keep out threatened competition in your field?

Mr. BARDO. Now, what period do you refer to, and when? Let us be specific about it.

Mr. RAUSHENBUSH. I was asking a very general question.

Mr. BARDO. I know, but general questions are very difficult to answer.

Mr. RAUSHENBUSH. Any period of time that your memory can recall, on which you can answer.

Mr. BARDO. The only time that that question came up was in the preparation of our code.

Mr. RAUSHENBUSH. Will you tell us what was done at that time?

Mr. BARDO. With the passage of the National Industrial Recovery Act, and about coincident with that, this Navy program came formally before us. We wanted to be prepared with a code, if we could, before the closing date of the bids, and we immediately collected probably 25 or 30 shipbuilders and ship repairers from all over the United States, from the west coast, the Gulf, the Great Lakes, and the Atlantic coast, and began conferences in an effort to prepare a code for submission to the administration. We were almost in constant session, either in New York or in Washington, with the administration.

There were very many strong differences between the various members of the group regarding very many of these questions that were interjected into the industry through the provisions of the National Industrial Recovery Act. One of them was this question of shipyard capacity.

The Navy, as I recall it, sometime previous to that, or in that immediate neighborhood, had made a survey of the capacity of the private shipyards of the United States. As a matter of fact, I think it was more or less a matter of information, that they keep up currently in their records here for future use.

It developed that there was a very substantial excess capacity in the private yards over and above what anybody could see was a normal requirement. We felt that we would be asked, when we went into the code—I say "we" talking about the conference—to agree with some things which were new, and that in that case we should be permitted to have some protection against new industries, when there was already a very substantial overcapacity in private yards.

As a result of that condition, I was selected by the group and was given a mandate to appear before the administrator, Mr. Whiteside, and present the views of the group with respect to that particular feature. At that time, as I recall it, we submitted to them all the information with respect to the overcapacity, which was a matter of official record, either with the Navy Department or with some of the departments in Washington.

Senator VANDENBERG. Now, Mr. Bardo, inasmuch as this phase of the inquiry will take one-half hour at least, and we must be in the Senate in a few minutes, I think the hearing will recess for the morning until 10 o'clock tomorrow.

Mr. BARDO. Senator, I have an important meeting of the board of directors tomorrow, and I was very much in hopes that I might get off that day, but if you are going on tomorrow, I will stay away and finish it up.

Senator VANDENBERG. You are entitled to all possible cooperation, Mr. Bardo.

Mr. BARDO. While I am here, I think I would rather stay and be done with it.

Mr. RAUSHENBUSH. I think we can finish up tomorrow with Mr. Bardo, without any question.

Senator VANDENBERG. I hesitate to keep Mr. Bardo from his meeting, and unless it is necessary.

Mr. BARDO. They could get along without me. It is an important meeting, and I would like to be there, but I think this of more importance, to get rid of this.

Mr. RAUSHENBUSH. When can you come back?

Mr. BARDO. I have a meeting in Cleveland on Wednesday, and I have a meeting with the Philadelphia Regional Labor Board on Friday.

Mr. RAUSHENBUSH. That leaves Thursday.

Mr. BARDO. I have got to get some time to get from Cleveland. I cannot just jump over there.

Mr. RAUSHENBUSH. Mr. Chairman, we are hoping to finish with this company this week.

Mr. BARBO. Then I would prefer to stay here.

I would like to make this further request:

I read last night the testimony of Thursday and Friday. There has been a lot of dead cats thrown into this investigation, which I want to clear up, and I want to have an opportunity to go ahead and tell this committee the story of this 1933 situation.

Senator Vandenberg. We should be very glad to give you full opportunity, Mr. Bardo.

Mr. Bardo. I think it is very important that that be done. Let us get this thing behind us.

Senator Vandenberg. Mr. Bardo, there has been certain information requested of your company, which has not yet come down. I wonder if you can check up on that.

Mr. Bardo. If you will indicate the nature of the information, I will try to.

Senator Vandenberg. I will see that you are furnished with it.

Mr. Bardo. I will be very glad to do anything that I can.

Senator Vandenberg. We will recess until 10 o'clock tomorrow morning.

(Whereupon the hearing was recessed at 12 o'clock noon until 10 a. m. tomorrow, Tuesday, Feb. 5, 1935.)

INVESTIGATION OF MUNITIONS INDUSTRY

TUESDAY, FEBRUARY 5, 1935

United States Senate,
Special Committee to Investigate
the Munitions Industry,
Washington, D.C.

The hearing was resumed at 10 a. m., in room 357, Senate Office Building, pursuant to recess, Senator Arthur H. Vandenberg presiding.

Present: Senators Vandenberg, George, Clark, and Pope.

Also present: Stephen Raushenbush, secretary to the committee; and F. W. LaRouche, investigator.

Senator **Clark**. The committee will come to order. Mr. Bardo, will you come forward?

TESTIMONY OF CLINTON L. BARDO—Resumed

N. R. A. EXCLUSION CLAUSE

(The witness was previously sworn by the chairman.)

Senator **Clark**. Go ahead, Mr. Raushenbush.

Mr. **Raushenbush**. Mr. Bardo, at the end of yesterday morning's session you were asked the question:

> Mr. Bardo, could you tell us at all whether you and other larger shipbuilders of the country have ever tried to keep out threatened competition in your field?

Your reply to that question was begun and interrupted because of the necessity for adjourning at 12 o'clock.

Just to refresh your memory, the next few lines of the transcript read:

> Mr. **Bardo**. Now, what period do you refer to, and when? Let us be specific about it.
>
> Mr. **Raushenbush**. I was asking a very general question.
>
> Mr. **Bardo**. I know; but general questions are very difficult to answer.
>
> Mr. **Raushenbush**. Any period of time that your memory can recall, on which you can answer.
>
> Mr. **Bardo**. The only time that that question came up was in the preparation of our code.

Do you reaffirm that answer?

Mr. **Bardo**. That is the only time that I ever recall there was any action taken in which I took any part.

Mr. **Raushenbush**. Will you continue your statement?

Mr. **Bardo**. I do not think there is anything more I can say at all. I outlined to you in a very general way what happened to the shipbuilders and ship repairers in the preparation of their code.

Mr. Raushenbush. It was interrupted because of the necessity for adjourning, and it seemed to me to be incomplete. Do you care to read the remaining pages of your testimony, to be sure you have nothing more to add [handing transcript to witness]?

Mr. Bardo. I would be glad to, but I do not think there is anything I can add to that, as to anything that I had anything to do with. I think this last paragraph represents substantially a complete answer, so far as I am concerned. I think that is a complete answer. I do not recall any other instance that I have had anything at all to do with, on the question of shipyard capacity.

Mr. Raushenbush. The paragraph to which you refer reads:

> As a result of that condition, I was selected by the group and was given a mandate to appear before the Administrator, Mr. Whiteside, and present the views of the group with respect to that particular feature. At that time, as I recall it, we submitted to them all the information with respect to the overcapacity, which was a matter of official record, either with the Navy Department or with some of the Departments in Washington.

Mr. Bardo. The only thing I would add to that is, I would say that, as a matter of personal view, I was opposed to that particular provision in the code. That is one reason why I was particular to state in my presentation to the Administrator that I was acting under a mandate from the group, realizing that it was a serious thing from the standpoint of our own company because we have a duplicate shipyard which is entirely idle, on which we have been paying taxes since 1920.

Mr. Raushenbush. The clause in question was a so-called "exclusion clause" with respect to new shipyard facilities. Did it take in more than that? Did it take in the bringing up to date of facilities like your own, that were usable but not being used?

Mr. Bardo. Yes; it would contemplate, I should say, any provision or any attempt on our part to rehabilitate the south yard, the so-called "south yard", which is a complete shipbuilding facility without having the general assent of the group as a whole.

Mr. Raushenbush. As I gathered your testimony yesterday, you felt that you were giving up certain rights under the code and that you ought to get a quid pro quo, speaking of you as a representative of the shipbuilders, and the quid pro quo would be that there would be no more yards brought into existence under the code?

Mr. Bardo. Be clear about it, to the effect that that was not my personal view. I was stating the views of the group. I want to keep that clear.

Mr. Raushenbush. That was the view of the group?

Mr. Bardo. That was the view of the group, yes.

Senator Clark. That was referred to in the group as "birth control", was it not, Mr. Bardo?

Mr. Bardo. I do not know that it was quite so politely referred to as that, Senator.

Mr. Raushenbush. Earlier in your testimony, when you were asked, the other week, to comment on the fact that during the early years 1927, 1929, and 1931, on cruiser bids, the co-called "big three" were the only ones to bid, were there other yards at the time that could have bid on cruisers which were equipped at that time to build them?

Mr. BARDO. I suggest that you ask that question from the representatives of the Navy. They were in control of the bidding. We were not. They were the ones who decided whom they regarded as competent to build Navy ships. We did not decide that.

Mr. RAUSHENBUSH. Outside of the so-called "Big Three", no other shipbuilders from 1927 on ever got any awards for cruisers, did they?

Mr. BARDO. For many years there were not any, so that nobody could get any.

Mr. RAUSHENBUSH. From 1927 on there was a considerable number, and it is concerning that period I am asking.

Mr. BARDO. I do not think, with the exception of an occasional period. Newport News, in the first group, was awarded 2, and we were awarded 1, and Bethlehem was awarded 1.

The next group that came along, I think there was still only an award of one to Bethlehem and ourselves, and I do not think Newport News participated in that award at all. There were only two cruisers. I think that was maintained pretty much all through this program, and the private yards at no time had more than what you might say one live contract on the books. They would be starting a new one and finishing up an old one. So that, except for a very short overlapping period, no one of these big yards had any of these cruisers.

Mr. RAUSHENBUSH. My question was a little different. Did any of the other yards receive a cruiser award from 1927 on?

Mr. BARDO. The record will disclose whether they did or not.

Mr. RAUSHENBUSH. We know the answer is "no", do we not?

Mr. BARDO. I should say so. If you know it, why ask it?

Mr. RAUSHENBUSH. I ask it because of the question of the possibility of taking out competition through this exclusion clause and through other means.

Mr. BARDO. I think the exclusion clause ought to be cleared up a little bit. The exclusion clause is not at all intended in the light that you have presented it. You are dealing with two very different things. One is a shipyard, with ability to build ordinary ships, and the other is a shipyard with the ability and the capacity and the technical knowledge to build a particular kind of ship, which is a Navy ship. Those are two entirely separate and distinct categories, and they do not any more match than oil and water match. You can build an ordinary ship in any yard, but you cannot build a Government cruiser in any yard, by a long shot. Those of us in the business know what is involved in building a Navy ship. It is not a boy's task.

Mr. RAUSHENBUSH. The question of intention is a very hard one to talk about, Mr. Bardo. Talk about the result for just a moment. If the exclusion clause had gone through, it would have been practically impossible, would it not, for any other shipyard than those existing to increase their facilities to the extent that it would be able to build a cruiser, or for yards that had not up to that time extended their facilities to so extend them to build a cruiser? That would be the effect, rather than the intention. That is what we are trying to get at.

Mr. BARDO. Your inference is entirely erroneous. That was not the effect of it at all. As a matter of fact, as I recall the rule, it provided that there should be no increase in capacity or facility except with the approval of the code authority. It was not a close, airtight restriction. It was something that was written in there which we felt, at least the group felt, should be retained there in the protection of the industry as a whole. As I say, I did not share that view personally.

Mr. RAUSHENBUSH. And the code authority had a considerable number of representatives of shipbuilders on it?

Mr. BARDO. It was made up, as I recall it, of an equal number of shipbuilders and ship repairers, the code authority, with Governmental representatives. I do not recall just how it was.

Mr. RAUSHENBUSH. Do you remember who the Government representative was?

Mr. BARDO. During the earlier discussions of the code it was Mr. Davis, and, before the code was finally finished, he was transferred to another activity. I do not believe I can say who it was who succeeded him at that time. I do not recall.

Mr. RAUSHENBUSH. The National Council of American Shipbuilders made a series of recommendations to the governmental representative, did they not?

Mr. BARDO. I could not say as to that. That is a detail.

Mr. RAUSHENBUSH. We will introduce that later. As far as your recollection goes, Mr. Bardo, this attempt to exclude new shipbuilding facilities was the only one you can remember at all that tended to take out competition?

Mr. BARDO. Yes, sir. I do not agree that that intended to take it out. That was not the purpose of it. It was to have some regulatory control of it.

Mr. RAUSHENBUSH. With the control—that is, the permission for additional facilities—resting in the hands of a code authority largely composed of the shipbuilders and repairers who were actively in business at the time?

Mr. BARDO. Yes, and I would like to make this comment, too: I think you will recall that the codes themselves have developed the fact that there are a number of industries in the United States that are very much overcapacitated, and it has been those industries more than anything else that have broken down our whole economic and industrial structure, because they were overcapacitated in their mad struggle to support themselves and maintain the plant facilities and the investment which they had, they first reduced wages and reduced prices, and reduced and cut and chiseled in every direction. That, as a matter of fact, is one of the fundamental causes of the things which led us down into this depression where we are now.

Mr. RAUSHENBUSH. Yet you say yourself you were against this clause?

Mr. BARDO. I was against it as a matter of principle, yes.

Mr. RAUSHENBUSH. So that the constructive thought which you are developing now, that there should be either birth control or suicide, or whatever you want to call it, was not in accordance with your own view at the time?

Mr. BARDO. I did not know as much about this overcapacity situation as I have since learned, and which has been developed under the administration of the codes. That was not a matter of general knowledge except to those who were engaged in the particular industry. I did not have that knowledge, but I have it now, and, therefore, I am stating my view in the light of an actuality rather than an opinion.

Mr. RAUSHENBUSH. You mentioned the overcapacity situation. That has played a part from year to year, has it not? Do you not remember a considerable number of letters written by you and your company, and other companies, to the Senators and Congressmen in 1927, 1929, 1930, and 1931, and the like, pointing out that unless they got more work, new cruisers, their shipyards would be idle and men were suffering and walking the streets, and so forth?

Mr. BARDO. That was not a matter of overcapacity. That was trying to keep the work going in the plant which you had. It was to keep the regular work which you had under way.

Mr. RAUSHENBUSH. For the work which was actually existent at the moment, there was overcapacity, was there not?

Mr. BARDO. Yes, even the small part of the plants which were being operated.

Mr. RAUSHENBUSH. Do you ever remember getting any communications from any heads of steel companies or competitors, regretting the fact that other people were coming into the bidding, in addition to the three larger companies?

Mr. BARDO. I do not recall ever receiving such a letter as that.

Mr. RAUSHENBUSH. I have a letter here from Mr. Grace to yourself, which I show you [handing paper to witness]. I call your attention to the fourth paragraph:

> It is unfortunate to see some new interests getting their hand in on naval work when there is normally so little to be distributed.

That referred to the fact, did it not, that United had started bidding, getting into cruiser bidding, in 1933?

Mr. BARDO. That is Mr. Grace's letter, and I do not want to interpret what he writes in his letter. I would prefer that you refer that to him and let him answer it.

Mr. RAUSHENBUSH. All right; I will hold it up until Mr. Grace is on.

Mr. BARDO. I do not recall the letter, but I do not want to answer the intent of another man's letter.

EXCLUDING COMPETITION BY BLOCKING OF GULF INDUSTRIES' R. F. C. LOAN

Mr. RAUSHENBUSH. Now, Mr. Bardo, in regard to this question of taking out competition, or potential competition, you stated a while ago, in your earlier statement, that all you remembered was at the time of the code-authority hearings. Do you remember an attempt to keep the Gulf Industries from getting a loan and getting into this naval business?

Mr. BARDO. Yes; I remember that situation very distinctly.

Mr. RAUSHENBUSH. You did a considerable amount of work, did you not, to take them out?

Mr. BARDO. No; I do not think I did anything except write one letter, as I recall it. Beyond that, I took no action in it at all. I made some inquiries and wrote one letter.

Mr. RAUSHENBUSH. To whom was that letter?

Mr. Bardo. I wrote the letter to Governor Moore, of New Jersey.

Mr. Raushenbush. We have here, first of all, a memorandum from Mr. Flook to yourself, Mr. Bardo, away back on November 4, 1932, stating:

> I am very much interested in your letter with reference to the Pensacola promotion. It seems to me unthinkable that such a promotion could be successful at this time, but the man is a wizard and we had better keep our eye on it.

That refers to a letter from you, does it not? "I am very much interested in your letter", he states.

Mr. Bardo. I do not recall that letter. If he had such a letter, it should be attached to this. I discussed it with him distinctly. but I do not recall that I wrote any letter about it.

Mr. Raushenbush. He does refer to a letter there.

Mr. Bardo. I see that he does, but, if there was a letter, it should be attached to this.

Mr. Raushenbush. Please mark that as an exhibit, Mr. Reporter.

(The memorandum referred to was marked "Exhibit No. 1493" and appears in full in the text.)

Mr. Raushenbush. Then we come to a memorandum from the Gulf Industries Co., dated May 11, 1933. Do you recognize that, Mr. Bardo [handing paper to witness]?

Mr. Bardo. No; I do not recall that I ever saw that at all.

Mr. Raushenbush. Let us withhold that for a moment.

Then we have a letter here from Coverdale & Colpitts, consulting engineers, of 120 Wall Street, to you, signed "John", and starting off "Dear Boss." That deals with the same question, does it not, of the Gulf Industries' attempt to get an R.F.C. loan?

Mr. Bardo. That is right; that is correct.

Mr. Raushenbush. The letter reads:

> I understand that you phoned me yesterday and I presume that you wished to inquire what I have been able to find out with reference to Wilder's plans.

That is a phone call rather than a letter.

I offer that for the proper number.

(The letter referred to was marked "Exhibit No. 1494" and is included in the appendix on p. 5225.)

Mr. Raushenbush. Then you sent Mr. Flook a memorandum on May 17, 1933.

Mr. Bardo. Wait a minute. I want to go back and read this.

Mr. Raushenbush. Surely.

Mr. Bardo. He refers in here to this:

> I was able to secure some extracts from this prospectus which will indicate the scope of the plans.

Was that memorandum which you just handed me in connection with this?

Mr. Raushenbush. We think so, but we want you to identify it.

Mr. Bardo. I do not recall it. Mr. Slater was formerly an officer of the company, and he and I have been associated together for a great many years, and always maintained a very friendly contact and friendly reltionship on a lot of things of mutual interest.

Mr. Raushenbush. The last paragraph in "Exhibit No. 1493" is as follows:

> The situation in the R.F.C. is changing very rapidly and there is some prospect that the individual that I mentioned to you will not be in the organization long. I therefore do not believe that anything would be gained by anyone talking to him. I should suggest that the situation be closely watched, but that you do not appear directly in the matter until there is more evidence that aid will be given Wilder's project.

Who was the individual?

Mr. BARDO. I could not tell you who that was. I do not recall it at all.

Mr. RAUSHENBUSH. There is a suggestion here by Mr. Slater—

> that the situation be closely watched, but that you do not appear directly in the matter until there is more evidence that aid will be given Wilder's project.

Mr. BARDO. Yes, sir.

Mr. RAUSHENBUSH. Apparently, on the receipt of that, you sent a memorandum to Mr. Flook, according to that, and I wonder if you could not identify that as the memorandum you sent to him [handing paper to witness].

Mr. BARDO. No, I could not. There is nothing on that to identify it, and I would certainly have no occasion to deny it, if I recalled it at all, because it is a perfectly innocuous statement, so far as any activity on my part is concerned.

Mr. RAUSHENBUSH. I will offer that as "Exhibit No. 1495."

(The memorandum referred to was marked "Exhibit No. 1495" and is included in the appendix on p. 5225.)

Mr. RAUSHENBUSH. We have a letter from you to Mr. Ferguson dated May 17, 1933, reading as follows:

> Herewith for your information a memorandum having reference to Gulf Industries. Very truly yours.

Mr. BARDO. That letter and the letter to Mr. Flook referred, apparently, to the same thing, as they are dated May 17.

Mr. RAUSHENBUSH. This is also taking Newport News into the situation, to some extent, is it not, or at least keeping them in contact with the matter?

Mr. BARDO. It is giving them a matter of common knowledge so that he will be just as well informed as to what I knew, so far as that is concerned.

Mr. RAUSHENBUSH. I will offer that letter of Mr. Bardo to Mr. Ferguson as "Exhibit No. 1496."

(The letter referred to was marked "Exhibit No. 1496" and is included in the appendix on p. 5225.)

Mr. RAUSHENBUSH. On June 28, 1933, there was a letter addressed to Governor Moore, which I take it is the one you referred to. Will you look at it a moment? It talks about the Gulf Industries [handing paper to witness].

I offer that for the record.

(The letter referred to was marked "Exhibit No. 1497" and is included in the appendix on p. 5225.)

Mr. BARDO. Yes, that is the letter.

Mr. RAUSHENBUSH. There is a memorandum from Mr. Parker to you, Mr. Bardo, to which I call your attention, dated June 29, 1933, stating:

> I had a long talk with Harry Maloney in connection with the Wilder matter. Maloney understands this situation particularly well, and while he was very

busy, having just been sworn in today as collector of internal revenue, he said he would get in touch with Mayor Hague immediately and do everything possible to scotch the plan. As soon as he has a talk with Mayor Hague he will determine whether it will be necessary for either you or myself to have a talk with the mayor but he doesn't think this will be necessary as he fully understands the situation originally from the Cramp matter and later from the Wilder plan to rejuvenate Cramps, of which he was to be a part.

Have arranged the resolutions for signatures and the new resolution for possible Navy work and forwarded these to Miss Howe for the next directors' meeting.

Mr. BARDO. What is your inquiry as to that?

Mr. RAUSHENBUSH. Was Mr. Parker acting under your direction in this matter or purely on his own?

Mr. BARDO. No.

Mr. RAUSHENBUSH. Purely on his own?

Mr. BARDO. Entirely.

Mr. RAUSHENBUSH. He seems to be taking it up with the people he thinks will be politically influential in "scotching" this plan, does he not?

Mr. BARDO. No; I do not think so. Maloney was a Democrat, and Parker was a Democrat, and they had been in a lot of Democratic fights and battles and talked about a lot of things between themselves, and I suspect that was just another one which they got in.

Mr. RAUSHENBUSH. Mayor Hague is a Democrat, too?

Mr. BARDO. Yes; he is a real one.

Mr. RAUSHENBUSH. I will offer that letter for the record.

(The letter referred to was marked "Exhibit No. 1498" and is included in the appendix on p. 5226.)

Mr. RAUSHENBUSH. Do you recognize the reply of Governor Moore, dated June 30. 1933, and reading:

MY DEAR MR. BARLO: I have your letter, and shall be glad to help you in any way you might suggest. I have taken the matter up directly with Mr. Farley.

If there is anything further I can do, let me know.

Mr. BARDO. That is it.

Mr. RAUSHENBUSH. I will offer that letter for the record.

(The letter referred to was marrked "Exhibit No. 1499" and appears in full in the text.)

Mr. RAUSHENBUSH. At this point you do start taking up the matter politically, do you not?

Mr. BARDO. Yes; this is a very direct appeal. There is no question about that.

Senator VANDENBERG. What is it being taken up with Mr. Farley?

Mr. BARDO. If I may answer the question, Mr. Chairman, the reply which Governor Moore made to my letter to him, in which I reported the matter of the Gulf Industries and its effect on the industries of New Jersey.

Mr. RAUSHENBUSH. The question was taking out all competition, possible competitors, on a large scale.

Senator CLARK. The idea was to tear out the Gulf Industries?

Mr. RAUSHENBUSH. Yes.

Senator CLARK. You took it up with Governor Moore, who, in turn, took it up with Postmaster General Farley?

Mr. BARDO. That is what he says.

Mr. RAUSHENBUSH. There seems to be another letter to Governor Moore, when you stated there was only one letter. This is dated July 5, 1933.

Mr. BARDO. I should not be surprised that I should forget some of these things.

Mr. RAUSHENBUSH. You were pretty positive there was only one letter, Mr. Bardo.

Mr. BARDO. I was. I did not recall the second one.

Mr. RAUSHENBUSH. It reads [reading "Exhibit No. 1500"]:

JULY 5, 1933.

Honorable A. HARRY MOORE,
Governor, State of New Jersey,
State House, Trenton, N. J.

MY DEAR GOVERNOR MOORE: Many thanks for yours of June 30 in reply to mine of June 28, regarding Gulf Industries, Inc.

There is no doubt in my mind but what this situation will very largely rest in the President's lap before we get through with it. My suggestion would be that a letter direct to the President, calling his attention to the idle shipyard capacity in the State of New Jersey, fully equipped and competent to build any and all types of ships, either naval or merchant, should first be fully utilized before the door is opened under the Industrial Recovery Act for the creation of new industries for which there is no economic justification.

The promoter of this Gulf Industries outfit was formerly president of the New York Shipbuilding Corporation and organized the American Brown Boveri Electric Corporation. He is a promoter pure and simple and has none of the qualities necessary to carry his promotions through to a successful economic conclusion.

Your letter to Mr. Farley may reach the President, but I am very much of the opinion that any cooperative support which may directly reach the President on this subject will have weight, particularly from your good self.

Thanking you, I am, very truly yours,

C. L. BARDO.

Mr. RAUSHENBUSH. I will offer that for the record.

(The letter referred to was marked "Exhibit No. 1500," and appears in full in the text.)

Mr. BARDO. That is my letter, and I subscribe to it all.

Mr. RAUSHENBUSH. That is the second letter to Governor Moore?

Mr. BARDO. Yes, sir.

Mr. RAUSHENBUSH. Governor Moore acknowledged it, did he not?

Mr. BARDO. I suppose he did. He usually does.

Mr. RAUSHENBUSH. I show you a letter dated July 7, 1933, which reads as follows [reading "Exhibit No. 1501."]:

STATE OF NEW JERSEY,
EXECUTIVE DEPARTMENT,
Sea Girt, N. J., July 7, 1933.

MY DEAR MR. BARDO: I have your letter of July 5, and have today written the President in accordance with your request.

Very truly yours,

A. HARRY MOORE, *Governor.*

Mr. C. L. BARDO,
New York Shipbuilding Co.,
Camden, N. J.

Mr. BARDO. That is correct.

Mr. RAUSHENBUSH. I offer that for record.

(The letter referred to was marked "Exhibit No. 1501", and appears in full in the text.)

Mr. RAUSHENBUSH. Then we have a letter from Mr. Farley to Governor Moore, dated July 10, 1933 [reading "Exhibit No. 1502"]:

DEMOCRATIC NATIONAL COMMITTEE,
NATIONAL PRESS BUILDING,
Washington, July 10, 1933.

Hon. A. HARRY MOORE,
Governor, Trenton, N. J.

DEAR GOVERNOR: I have yours of July 5, with enclosure from Mr. C. L. Bardo, president of the New York Shipbuilding Co. I shall be glad to look into the matter to which he refers and advise you as soon as I have a report.

Very truly yours,

JIM.

Mr. BARDO. That was in reply to the first letter.

Mr. RAUSHENBUSH. This is July 10.

Mr. BARDO. I think he refers to the first letter I wrote, does he not?

Mr. RAUSHENBUSH. He is referring to Governor Moore's [reading]:

I have yours of July 5 * * * .

Mr. BARDO. That is the second letter.

Mr. RAUSHENBUSH. Apparently Governor Moore wrote on the same day he received your letter.

Mr. BARDO. Yes; it is the same date. I think so.

Mr. RAUSHENBUSH. I offer that for the record.

(The letter referred to was marked "Exhibit No. 1502", and appears in full in the text.)

Mr. RAUSHENBUSH. Here seems to be another letter to Governor Moore, which escaped your memory, Mr. Bardo, dated July 11, 1933 [handing paper to witness].

Mr. BARDO. That was simply an acknowledgement of the letter to which you previously referred here.

Mr. RAUSHENBUSH (reading "Exhibit No. 1503"):

JULY 11, 1933.

Hon. A. HARRY MOORE,
Governor, State of N. J.,
Sea Girt, N. J.

MY DEAR GOVERNOR: Many thanks for yours of July 7 in reply to mine of the 5, having reference to the shipbuilding situation.

Am sure that the action you have taken will be helpful and may forestall a development with Government funds that is by no process of reasoning industrially or economically justified.

Very truly yours,

C. L. BARDO.

Mr. BARDO. That is right.

Mr. RAUSHENBUSH. I offer that for the record.

(The letter referred to was marked "Exhibit No. 1503", and appears in full in the text.)

Mr. RAUSHENBUSH. Did you ask Admiral Cone, of the Shipping Board, to take up this matter with Mr. Farley?

Mr. BARDO. I do not recall that I ever wrote any letters to Admiral Cone, and I do not think I ever discussed it with him. I do not think that I ever did.

Mr. RAUSHENBUSH. We have here a letter from Mr. Farley to Governor Moore, dated July 15, 1933, which I offer for the record.

(The letter referred to was marked "Exhibit No. 1504", and appears in full in the text.)

Mr. **Raushenbush.** "Exhibit No. 1504" reads:

Democratic National Committee,
National Press Building,
Washington, July 15, 1933.

Hon. Harry I. Moore,
Governor, State of New Jersey, Jersey City, N. J.

My Dear Governor: You wrote me on July 5, inclosing a letter from the president of the New York Shipbuilding Co., and I attach hereto for your information copy of letter which I have received from Admiral H. I. Cone, Chairman of the United States Shipping Board relative to this, which is self-explanatory.

Sincerely,

Jim.

Mr. **Bardo.** I do not recall ever seeing that letter.

Mr. **Raushenbush.** Do you know whether this Mr. Maloney, to whom Mr. Parker talked, took up the matter with the representatives from New Jersey?

Mr. **Bardo.** I do not. I never heard any more from it.

Mr. **Raushenbush.** I offer for the record a letter from Representative Mary T. Norton to Mr. Maloney, acknowledging this protest, stating, in part:

> I have protested against the issuance of a financial loan, under the Public Works bill, to the promoters of the Florida shipbuilding concern.

(The letter referred to was marked "Exhibit No. 1505" and is included in the appendix on p. 5227.)

Mr. **Raushenbush.** Then you received a letter from Governor Moore, did you not, on July 18, 1933, stating as follows [reading "Exhibit No. 1506"]:

State of New Jersey,
Executive Department,
July 18, 1933.

Mr. C. L. Bardo,
New York Shipbuilding Co., Camden, N. J.

My Dear Mr. Bardo: I am enclosing herewith a letter from Mr. Farley concerning the matter which you took up with me recently.

Very truly yours,

A. Harry Moore, *Governor.*

(The letter referred to was marked "Exhibit No. 1506", and appears in full in the text.)

Mr. **Raushenbush.** You did receive that, did you not?

Mr. **Bardo.** I could not say whether I did or not. You are expecting me to remember a lot of details here that are just impossible for any human mind to remember.

Mr. **Raushenbush.** You seemed pretty positive there was only one letter.

Mr. **Bardo.** I do recall that, and I was positive about it, but to say that I remembered receiving all these letters, I would be saying something that I did not. I do not intend to put myself in that position here at all, if I can avoid it.

Mr. **Raushenbush.** You mean you do not think you received these letters?

Mr. **Bardo.** I do not say that I do not or do. You asked me if I remembered having received them, and I tell you frankly I do not remember having received them.

Mr. **Raushenbush.** We have another letter dated July 21, 1933, reading as follows [reading "Exhibit No. 1507"]:

State of New Jersey,
Executive Department,
Sea Girt, N. J., July 21, 1933.

Mr. C. L. Bardo,
New York Shipbuilding Co., Camden, N. J.

My Dear Mr. Bardo: I am enclosing herewith copy of letter which I have just received from President Roosevelt.

Very truly yours,

A. Harry Moore, *Governor.*

Mr. **Bardo.** I remember that one distinctly.

Mr. **Raushenbush.** I will ask that it be put in the record.

(The letter referred to was marked "Exhibit No. 1507" and appears in full in the text.)

Mr. **Raushenbush.** I show you a letter purporting to come from the mayor of Camden, showing resolutions which were apparently passed by the city commission, and sent to Secretary Ickes on this subject [handing letter to witness].

Mr. **Bardo.** Now, I would not say that that referred to this subject.

Mr. **Raushenbush.** What else was up at the moment? We have, by the way, for your information, a copy of those resolutions here.

Mr. **Bardo.** It may be that that is, but we were having quite a fight in the city of Camden as to whether or not we were going to build a municipal electric-light plant with public funds, and I was desperately opposed to it, and I thought possibly that was what this referred to.

Mr. **Raushenbush.** The resolution was attached to that letter.

Mr. **Bardo.** That clears it up. That was an action the city took.

Mr. **Raushenbush.** I offer those for the record with the appropriate numbers.

(The letter and resolution referred to were marked, respectively, "Exhibits Nos. 1508 and 1509" and are included in the appendix on p. 5227.)

Mr. **Raushenbush.** We also find records here showing that the Camden County Chamber of Commerce was informing you that it had sent resolutions to Secretary Ickes in the matter, and others.

Mr. **Bardo.** Yes; and I would like to make this comment here, Mr. Chairman, as to just what was back of this all:

First of all, the New York Shipbuilding Corporation had a very large investment in plant and property in the city of Camden. We employed 15 percent of the industrially employed people in the city of Camden, and we disbursed 18 percent of the industrial payroll. The shipyard itself paid about $1,000 a day in State, county, and local taxes, and the men employed in there contributed several hundred thousand dollars more in taxes, through their property ownership roundabout.

As a custodian of that investment and that industry, I just could not sit still and let any of this thing go by without calling the attention of those interested to exactly what was taking place, and let them decide for themselves what they wanted to do about it. That is the motive behind all this, and I want it made perfectly clear on the record. There was not anything selfish about it, but it was doing what I regarded, as a citizen, my obligation to do, and I did it, and that was the reason for it.

Senator CLARK. You were acting in your capacity as the president of the New York Shipbuilding Corporation and not a citizen?

Mr. BARDO. I certainly was.

Senator CLARK. So that your action could hardly be that of a private citizen, differentiated from your capacity as the president of the New York Shipbuilding Corporation.

Mr. BARDO. I do not agree to that. A private citizen has the same right to take action in these matters, if he knows what is wrong and what is going to happen.

Senator CLARK. That is perfectly true, Mr. Bardo, but when a president of a company, with a very selfish interest in the matter, acts, to go far afield in a political matter, it can hardly be said to have been done in his capacity as a private citizen.

Mr. BARDO. I say that my action as president of the company was not the controlling action. Here was an employment of 15 percent, and a large investment, and a large taxpaying population.

Senator CLARK. You were acting pro bono publico rather than in the capacity as president of the shipbuilding company?

Mr. BARDO. I would say that was the outstanding reason.

Senator CLARK. If you want to stand on that on the record, I am perfectly content.

Mr. BARDO. I am perfectly content to stand on that.

Mr. RAUSHENBUSH. I offer that letter from the Camden County Chamber of Commerce.

(The letter referred to was marked "Exhibit No. 1510" and is included in the appendix on p. 5228.)

Mr. RAUSHENBUSH. We have another letter to the Governor of New Jersey, in addition to the one which you remember, saying [reading "Exhibit No. 1511"]:

JULY 21, 1933.

Hon. A. HARRY MOORE,
Governor State of New Jersey, State House, Trenton, N. J.

MY DEAR GOVERNOR: Many thanks for yours of the 18th enclosing letter from Postmaster General Farley, under date of the 10th. Am sure your activity in this matter will have a very beneficial effect.

Very truly yours,

C. L. BARDO.

Mr. BARDO. I think that is in reply to that second letter, to which you referred earlier in the correspondence.

(The letter referred to was marked "Exhibit No. 1511" appears in full in the text.)

Mr. RAUSHENBUSH. There is a letter dated July 24, 1933, which I show to you, addressed to Hon. A. Harry Moore, Governor, State of New Jersey [handing paper to witness].

Mr. BARDO. That is correct. That is in reply to a letter.

Mr. RAUSHENBUSH. I offer that for the record.

(The letter referred to was marked "Exhibit No. 1512" appears in full in the text.)

Mr. RAUSHENBUSH. That letter reads:

JULY 24, 1933.

Hon. A. HARRY MOORE,
Governor State of New Jersey, Sea Grit, N. J.

MY DEAR GOVERNOR: Many thanks for your letter of July 21 enclosing copy of letter from President Roosevelt upon the subject about which I wrote to you. I appreciate your action in this matter exceedingly.

The information from the President adequately disposes of this hazard to two of New Jersey's principal industries.

Very truly yours,

C. L. BARDO.

We have another letter written to the mayor of Camden on the subject, on July 24, 1933 [handing paper to witness].

Mr. BARDO. That is an acknowledgment of the letter to which was attached the resolution previously referred to.

Mr. RAUSHENBUSH. Acknowledging the letter protesting the same action to Secretary Ickes, with resolution attached, which I offer for the record.

(The letter referred to was marked "Exhibit No. 1513" and is included in the appendix on p. 5228.)

Mr. RAUSHENBUSH. I offer a similar letter acknowledging the letter of the chamber of commerce, which I have offered, on the same date.

(The letter referred to was marked "Exhibit No. 1514" and is included in the appendix on p. 5228.)

Mr. RAUSHENBUSH. Then you apparently wrote a memorandum on the same day [handing paper to witness].

Then on the same day, July 24, 1933, you wrote a memorandum to your board of directors, which I have shown to you, saying [reading "Exhibit No. 1515"]:

Further in connection with Gulf Industries, Inc.:

I took this matter up with Governor Moore a few days ago, and I received this morning the enclosed copy of a letter which is self-explanatory. This would seem to dispose of that phase of the shipbuilding construction.

Had you taken up the Gulf Industries matter with the board before?

Mr. BARDO. I had reported the situation to them. That is all.

Mr. RAUSHENBUSH. I will offer that letter for the record.

(The memorandum referred to was marked "Exhibit No. 1515" and appears in full in the text.)

Mr. RAUSHENBUSH. Then on the same day you apparently sent this letter to the other shipbuilding companies, Messrs. H. L. Ferguson, S. W. Wakeman, Robert Haig, and L. H. Korndorff—that is Newport News, Bethlehem, Sun, and Federal?

Mr. BARDO. That is right.

Mr. RAUSHENBUSH (reading "Exhibit No. 1516"):

Referring to the Gulf-Industries, Inc., situation:

Am enclosing herewith copy of a letter from President Roosevelt to Governor Moore in connection with this subject, which is self-explanatory.

I offer that letter for the record.

(The memorandum referred to was marked "Exhibit No. 1516" and appears in full in the text.)

Mr. RAUSHENBUSH. That indicates that they had at least a little—shall we say—platonic interest in the result of this action?

Mr. BARDO. Without attempting to say what their interest really was, I thought what had taken place would be of interest to them. I do not attempt to say what their interest was.

Mr. RAUSHENBUSH. We have here a letter from Franklin D. Roosevelt to Governor Moore, dated July 15, 1933, which reads [reading "Exhibit No. 1517"]:

THE WHITE HOUSE,
Washington, July 15, 1933.

MY DEAR GOVERNOR: Thank you for your letter of July seventh. I appreciate your writing me about the matter but we have no intention of acquiring shipyards.

Very sincerely yours,

FRANKLIN D. ROOSEVELT.

His Excellency A. HARRY MOORE,
Sea Girt, N. J.

I offer that for the record.

(The letter referred to was marked "Exhibit No. 1517" and appears in full in the text.)

Mr. RAUSHENBUSH. Then there were further letters from your representative, Mr. Wolverton and others, were there not, Mr. Bardo, about the matter, which you also acknowledged?

Mr. BARDO. My recollection is that I wrote a letter to the Senators and all the Congressmen from New Jersey, and outlined this situation to them, so that they would be informed.

Mr. RAUSHENBUSH. And acknowledged any action that they took?

Mr. BARDO. Yes.

Mr. RAUSHENBUSH. Now, in that connection, Mr. Bardo, you stated earlier in the testimony that all you did in this matter was to write one letter, and then we find a letter to Flook, a phone call to Slater, a letter to Ferguson, one letter to Moore, which you identified as the one, another letter to Governor Moore, another letter to Governor Moore of July 11, another letter to Governor Moore of July 21, another letter to Governor Moore of July 24, letter to mayor of Camden, letter to the chamber of commerce, letter to Mr. Wolverton and others.

Now, there was a good deal more interest than your earlier testimony really indicated there, was there not?

I mean, you were a little more active on that matter than one letter?

Mr. BARDO. You are confusing the issue again. You are talking about two things.

Mr. RAUSHENBUSH. What are the two things?

Mr. BARDO. One about the restrictive provision in the code, and the other about the situation which had a very direct influence on two very important New Jersey industries.

Mr. RAUSHENBUSH. I think you will find that is incorrect, Mr. Bardo. After we were through with the exclusion clause, I asked you about the Gulf Industries matter, and you said you did write one letter on that subject.

Mr. BARDO. That is all I recalled. I do not deny any of these letters. I do not want to be misunderstood here, but for a man who has got so many things to attend to as I have, and you are talking here of 3 years ago, you say he remembered every letter he ever wrote, he would just be a phenomenon, who does not exist.

Mr. RAUSHENBUSH. The matter of taking out potential competition and maintaining an exclusive bidding arrangement is one that is of interest to the committee, so that we wanted to be sure that the amount of interest you had on that subject was not unduly minimized.

Mr. BARDO. I do not want to minimize it, and I do not want the impression to prevail that I do. I want to go on record as saying emphatically that I was opposed to it. We had been paying taxes on property overbuilt during the war, since 1920, for which we had no use, and if we were going to have that sort of competition come in, where the taxpayers' money is to be taken to build a competitive industry, as a matter of principle I am opposed to it personally, officially, and in every other way. And I do not want any mistake about it, either.

Mr. RAUSHENBUSH. 1933 was the first year that Gulf Industries had started bidding on ships in competition with yourself, was it not?

Mr. BARDO. Well, my recollection is not entirely clear on that. It may be. I think there were some destroyers put up for bid.

Mr. RAUSHENBUSH. Before 1933?

Mr. BARDO. That is my recollection but I do not say that it is absolutely correct, and I think possibly that they bid on them, although I should have to consult the records to be sure of that.

Mr. RAUSHENBUSH. When would that be? In 1931, do you think?

Mr. BARDO. No; I think it was in 1932.

Mr. RAUSHENBUSH. In 1932.

Mr. BARDO. There was a group of destroyers, the *Farragut* and the *Dewey* and, I think, a couple more, which were assigned to the navy yards, for which the Bethlehem company received the award for the plans. Now, it may be that that was early in 1933, but my recollection is that it was in 1932. But I would not say.

Mr. RAUSHENBUSH. We thought we put in all the bidding here, according to the official Navy records, and I do not find any bids from Gulf Industries until 1933.

Mr. BARDO. Do you have a record there of a destroyer that was awarded to Bethlehem and one to Bath?

Mr. RAUSHENBUSH. Yes; that seems to be 1931, the 348 to 358 class.

Mr. BARDO. Yes; was Gulf Industries in?

Mr. RAUSHENBUSH. No; Bath Iron Works, Bethlehem Shipbuilding, Maryland Dry Dock Co., Newport News, New York Ship, Pusey & Jones, United Dry Docks. That is all. So that 1933 was the first year that Gulf Industries was a competitor in the situation, was it not?

Mr. BARDO. Apparently it was, from the correspondence here, because I think it came on then.

Mr. RAUSHENBUSH. Did you note at the time, by the way, that the first examiner for the Reconstruction Finance Corporation had approved the loan that the company had asked for?

Mr. BARDO. I know nothing about the R. F. C. activities at all.

Mr. RAUSHENBUSH. And later on the loan was denied by the board.

DIFFERENCE BETWEEN ESTIMATES AND BIDS IN 1927

Mr. RAUSHENBUSH. In your examination last week, Mr. Bardo, we were trying to get some information as to the way in which the difference between the estimate and the bid on these various cruisers and destroyers was determined, how you figured out how much would go to profit and how much would go to overhead, and how much to taxes, and the like. Now, at that time, you did not remember what percentages were used, and I wonder whether, in the intervening time, you have refreshed your memory at all about how those big differences were composed?

I mean, what percent went to profit and what percent you used on overhead at various times.

Mr. BARDO. No, I have not made any attempt to refresh my mind because it had gone completely out.

Now, whether upon a review of the bids I can help you or not I do not know, but I will try to, if I can.

Now, if you will tell me what you are after or what you are referring to specifically, I will see if I can answer you.

Mr. RAUSHENBUSH. Let us start off with the 1927 cruisers, where you got the *Chester*. The estimate there was $7,950,000-plus and the bid was $10,000,000——

Mr. BARDO. Wait a minute. State it correctly. You say the estimate was?—the bid was what?

Mr. RAUSHENBUSH. $7,980,180, for labor and material.

Mr. BARDO. Let us get that clear.

Mr. RAUSHENBUSH. I thought you understood.

Mr. BARDO. I do; but the people back here don't, and I want to be sure they understand.

Mr. RAUSHENBUSH. And the bid was $10,815,000, and the difference between the two, $2,854,820. The question was directed to finding out in that case, and other cases we will take up later, how you split it, how much you figured for profit, how much you figured for overhead, and how you worked out that equation.

Mr. BARDO. We take the flat estimate of labor and material. That is, contracts run over a period of 3 years. We cannot anticipate at that time what is liable to take place. If we have nothing but the Navy job, the percentage of overhead, so far as you could see, would be substantially the percentage of the overhead of the plant, which in that event would be very much higher, or relatively higher, than the percentage of overhead if we had other work in the plant, or if we had some reasonable assurances that other work would come along.

Now we take this percentage of the overhead, whatever we may decide to use, and we take the percentage of labor. The labor, we will say, on that ship—what was the amount, if you please?

Mr. RAUSHENBUSH. The amount of labor estimated?

Mr. BARDO. Yes.

Mr. RAUSHENBUSH. Was $3,780,115.

Mr. BARDO. Now, the overhead of the plant at that time—we had only one ship in there which was the *Chester*—and the overhead of the plant at that time would be somewhere around 80 percent of labor.

Mr. RAUSHENBUSH. Pardon me, Mr. Bardo. That was before you had the *Chester* that you made the estimate, was it not?

Mr. BARDO. Are you talking about the *Chester* estimate?

Mr. RAUSHENBUSH. Yes.

Mr. BARDO. Then we had only the *Salt Lake City*, and she was just being started.

Mr. RAUSHENBUSH. You had only one ship, the *Salt Lake City?*

Mr. BARDO. Yes, and at that time the outlook for the shipbuilding business was exceedingly dead. We would take the overhead and then make any adjustment of that that in the judgment of the staff and myself we felt was appropriate to make. Eighty percent of $3,780,000-odd would be in the neighborhood of over $2,000,000. That would be the charge against that contract for overhead during the 3 years of its life.

Mr. RAUSHENBUSH. Eighty percent of the labor?

Mr. BARDO. Eighty percent of the labor cost. That is the application.

Mr. RAUSHENBUSH. Would be in the neighborhood of $3,000,000.

Mr. BARDO. Three million dollars, or whatever it is. That would be it. What percentage of overhead we took at that time, I could not now say, but, whatever it was, it was the percentage that, as a result of the best judgment of myself and of the staff, that we used. We took the material and we took the labor and we took the percentage of labor and overhead upon which we decided, and it was on all those three amounts we added 10 percent for profit, and it would be more or less of an indefinite amount. I could not say what it was, because of conditions changing, which would occur, and of which we knew nothing.

Mr. RAUSHENBUSH. When you had very little work in the ward, as you say you did, the *Salt Lake City*, would you take a percentage as large as 10 percent?

Mr. BARDO. We might or might not. It would depend on the conditions and a lot of things which were discussed and analyzed and reviewed at that time, whatever it may be.

Mr. RAUSHENBUSH. I note in this particular case that 80 percent for overhead of your labor estimate would be more than you added onto the total estimate.

Mr. BARDO. Then we did not use 80 percent.

Mr. RAUSHENBUSH. Then you did not use 80 percent?

Mr. BARDO. We just cut down whatever we thought was necessary to satisfy the situation, whatever it was. That question was always one that was in a state of flux. There was no fixed rule as to what it would be.

Mr. RAUSHENBUSH. How much did you have to pay annually on your bonded indebtedness?

Mr. BARDO. I think our bonds at that time were around 4 million of 5-percent bonds, a little over $200,000 a year for interest, and about $180,000 for the sinking fund.

Mr. RAUSHENBUSH. That is about $380,000?

Mr. BARDO. Yes, sir.

Mr. RAUSHENBUSH. For interest and sinking fund?

Mr. BARDO. But that had nothing to do with the 10 percent.

Mr. RAUSHENBUSH. That was part of the overhead which you had to cover, was it not?

Mr. **Bardo**. Oh, no. Bond interest was never put into the overhead. Overhead consisted of these items—let us see if I have got it here—overhead consisted of repairs; janitors and watchmen; tool and storekeepers; supervision—everything above the working leaders; maintenance labor; production scheduling; crane elevators and transportation; power system, including generation of power, steam, air, and so forth; fuel; all consumable supplies; compensation, group, plant, public-liability insurance, and so forth; all taxes except Federal income taxes; depreciation; officers and all administrative salaries; legal and auditing fees; corporate expense; stock transfers, directors' fees, and so forth; and outside offices and representatives.

Senator **Clark**. Did that money, which Wilder spent down here lobbying for the Jones-White bill, go in the overhead?

Mr. **Bardo**. No.

Senator **Clark**. How was that carried in your accounting?

Mr. **Bardo**. Profit and loss, mostly loss.

Senator **Clark**. It did not go into overhead at all?

Mr. **Bardo**. No, sir.

ACTIVITIES IN CONNECTION WITH BRAZILIAN NAVAL PROGRAM IN 1933 AND 1934

Senator **Clark**. Mr. Bardo, during 1933 and 1934 you were with the New York Shipbuilding Co. and were actively engaged in trying to sell a considerable number of war vessels to Brazil, were you not?

Mr. **Bardo**. No; not a considerable number.

Senator **Clark**. How many were they going to buy?

Mr. **Bardo**. Well, they had a very ambitious program.

Senator **Clark**. Will you just describe this program, Mr. Bardo, in general terms, so that we will have it before us?

Mr. **Bardo**. I will have to just review it for a minute, if you please, until I see how closely I can get to it. As I recall it, they wanted two cruisers.

Senator **Clark**. What type?

Mr. **Bardo**. They were somewhat smaller than our standard 10,000-ton cruiser. As I recall it, they were 8,500-ton cruisers.

Senator **Clark**. Eight-inch guns?

Mr. **Bardo**. Yes; they were 8-inch guns. They wanted a number of destroyers.

Senator **Clark**. Do you remember about how many, Mr. Bardo? I am not trying to fix it exactly, but would you be able to give it approximately?

Mr. **Bardo**. I could not recall that figure because we were not interested in it.

Senator **Clark**. You did not bid on destroyers?

Mr. **Bardo**. No. And along with it they wanted the contractor to supervise and to manage the completion of their navy yard, which they had partially under way. They wanted them also to organize and supervise Brazilian personnel.

Senator **Clark**. You mean the whole navy or the shipbuilding end of it?

Mr. **Bardo**. This was the Brazilian personnel in the fabrication and building of ships.

I think that was the general picture, Senator. We finally submitted a bid on two cruisers.

Senator Clark. Is that all that you bid on?

Mr. Bardo. That is all.

Senator Clark. When did you first become interested in this matter, Mr. Bardo?

Mr. Bardo. It is quite a considerable period of time. My recollection is that the matter first came to my attention through a Brazilian retired naval officer who was then representing the Brazilian—I do not know whether it was the Brazilian Government or the Brazilian Navy—as a purchasing agent in New York.

Senator Clark. What was his name?

Mr. Bardo. I do not recall it. It is one of those curious names. It is a Spanish name and I do not just recall. He has been there for a long time and, so far as I know, he is there still.

As a result of that first interview—it was not an interview but was a casual luncheon, as a matter of fact——

Senator Clark. Mr. Bardo, if I may interrupt you a moment to go back to this plan for Brazil, at that time the plan also contemplated a manufacture of guns, did it not, and did you not have under consideration at one time the using of your plant's facilities for the manufacture of guns?

Mr. Bardo. Oh, yes; yes, indeed. That came about earlier when the shipbuilding business, so far as we could see, was on its way out, and we had this very large plant, and obviously I did not want to stay still and see it dry up.

Senator Clark. The shipbuilding business started on its way up immediately after the breakdown of the Geneva conference, did it not, Mr. Bardo?

Mr. Bardo. No; I do not think so.

Senator Clark. Was not that considered the turning point in the shipbuilding business?

Mr. Bardo. No; I do not think so. It was started, as I recall it, before. In other words, Congress had made the appropriation for 15 cruisers, or rather they had authorized their—the construction of 15 cruisers long before the Geneva conference was talked about. But they made no appropriation for them until 1925, when they started with the first of that group, the *Salt Lake City* and the *Pensacola*—the *Salt Lake City* to be built by Cramps and the *Pensacola* to be built in the New York Navy Yard. That was the beginning. From that came along this group of cruisers which are still under construction—those at the present time have not yet been completed.

Now then following there was no particular activity in the cruiser field, but just a sort of drifting along. But we could see—at least that was the very best information that we had—that we were going to have a very large plant on our hands and it would be a serious thing to stay still.

Senator Clark. About when was this that you were considering going into the manufacture of guns, Mr. Bardo?

Mr. Bardo. It started, oh, I should say, 6 or 7 years ago, possibly longer, and came about in the first instance in this way: I was approached by a man by the name of Driggs——

Senator CLARK. About when was that?

Mr. BARDO. Six or seven, maybe eight years ago, the first instance. I have got to go back to tell the history.

Senator CLARK. I understand. I am trying to fix approximately the time.

Mr. BARDO. I should say 7 years, 6 years ago, at the very latest.

Senator CLARK. That would be 1927 or 1928?

Mr. BARDO. Yes; it may have been 1927. I was approached by this man Driggs——

Senator CLARK. Of the Driggs Ordnance Co.?

Mr. BARDO. Yes, of the Driggs Ordnance Co. I knew nothing about him in a business way. But he said he had a tentative contract with the Polish Government for 300 antiaircraft guns. He had the designs and the plans, but he did not have the money to finance it nor did he have the plant. He had some tools, and he wanted to know if I was interested in that development.

We had this large plant at Camden which was idle, upon which we were paying taxes.

Senator CLARK. That is the so-called "South yard?"

Mr. BARDO. That is the so-called "South yard", and obviously I wanted to find something for it to do, if I could.

Senator CLARK. Is that the one you got from the Government?

Mr. BARDO. Yes; that is the one the Government built and later turned over to us.

I investigated it at that time and turned it down. Then he came later, and I think this was in 1932, and he said:

"Now, this Polish contract is very much alive again. They have reduced it to 70 antiaircraft guns and some other stuff, and I would like to know if you are still interested."

Senator CLARK. Had not you told him you were already not interested?

Mr. BARDO. He is one of those persistent devils that does not ever take "no", and he came back, and keeps on coming back. He came back and I said first I was not interested. Then this Brazilian situation was in the picture. I said:

"If we are going to bid on Brazilian ships, we have got to bid on arms, armament, and ammunition, and we would be obliged to furnish it, and I think it wise that I find out a little more about it. because if we are going to build it, I might just as well build 70 antiaircraft guns for the Polish Government as to build 8-inch or 5-inch guns for the Brazilian Government to put on the ships."

So I got on a ship and went to Warsaw. I spent less than a week there, but it only took about 3 days to convince me that, as far as Polish guns were concerned, it was a pipe dream, and I got on the train and came back home, and I gave no more attention to that.

We bid on these Brazilian cruisers and gave them a bona fide bid.

Senator CLARK. Let me fix the time. Do you remember about when it was you started these negotiations?

Mr. BARDO. With Brazil?

Senator CLARK. Yes.

Mr. BARDO. I would not want to say positively, Senator, but it was somewhere in the year we talked about.

Senator CLARK. I am referring to about the time. Was it 1927 or 1928?

Mr. BARDO. No; I am quite sure it was later than that.

Senator CLARK. As a matter of fact, it was sometime late in 1932, was it not, Mr. Bardo, when the real Brazilian business started?

Mr. BARDO. Just what do you mean when you say "real"?

Senator CLARK. I mean, when you actually began more or less active effort to get the business.

Mr. BARDO. They submitted us an invitation to bid. That fixes the time when it became active with us, and I would not undertake to say just exactly when that was. They gave us a bona fide invitation to bid on this great big program, and I sent a man down there to check up on it.

Senator CLARK. Whom did you send, Mr. Bardo?

Mr. BARDO. I sent Mr. Frank Smith.

Senator CLARK. In what capacity?

Mr. BARDO. He was a special man that I just employed to make that special investigation for me.

Senator CLARK. Who was Mr. Frank Smith? An engineer?

Mr. BARDO. Yes; he was an engineer. He had been in an industrial executive position.

Senator CLARK. What did he report, Mr. Bardo?

Mr. BARDO. He was very enthusiastic about it, so much so that I did not go quite as far as he wanted me to. He thought it was a great opportunity to do a real job.

Senator CLARK. Then after his report, what did you do?

Mr. BARDO. Then we sat down and we put our engineering force together and we developed—we decided, as a result of further investigations, let me say this: That we would not have anything to do with the reconstruction of the navy yard. We would undertake to perform, if we did it at all—and that was not definitely settled—a very limited amount of supervision, so far as Brazilian personnel was concerned, but that we would submit them a bid on one or two cruisers.

We prepared plans, very elaborate plans, made an estimate, submitted the estimate, sent three of our men down there, the technical hull man, the technical engineer, and our sales manager.

Senator CLARK. Who were they, Mr. Bardo?

Mr. BARDO. Mr. Workman was the sales manager and Torbet was the chief engineer.

Senator CLARK. Did Mr. Workman occupy any other position, such as vice president of the company?

Mr. BARDO. No.

Senator CLARK. He was the sales manager?

Mr. BARDO. He was the sales manager, and Mr. Thompson, one of the technical men of the hull department. They went to Rio with the plans and stayed there. Mr. Workman was there over 3 months, and as I recall it, Mr. Thompson came back at an earlier date, and I think Mr. Torbet came back about midway between the return of Mr. Thompson and Mr. Workman. The bids were opened——

Senator CLARK. About when was that, Mr. Bardo; when the bids were opened?

Mr. Bardo. Senator, I do not know that I can say exactly when that was, but my guess would be that it was in the early part of 1933.

Senator Clark. As a matter of fact, it was about March 1933, was it not, Mr. Bardo?

Mr. Bardo. That is the date I had in my mind.

Senator Clark. I am informed that it was March 1933.

Mr. Bardo. Whatever it is, that is correct.

Senator Clark. Mr. Bardo, who was Carlton Jackson?

Mr. Bardo. Carlton Jackson was formerly an attaché of the Department of Commerce, or in Consular Service in Rio. I never knew him before. He was relieved under the new administration and was out of a job. I met him in New York.

Senator Clark. Do you remember about when that was?

Mr. Bardo. It was while this situation was active, Senator, and he told me or he said he was going back to Rio as a fiscal agent for some American company, and I had quite a long talk with him and he impressed me as a fellow who by reason of his long experience down there, might be useful in giving me some information as to what the outside situation was and what the atmosphere was, and what is going on.

So that I made an arrangement with him at a very nominal salary.

Senator Clark. Three hundred dollars a month, was it not?

Mr. Bardo. No; I think it was $200. It may have been three.

Senator Clark. Three hundred dollars a month is a pretty fair price for "atmosphere", is it not?

Mr. Bardo. I think it was $200, Senator.

Senator Clark. We are prepared to prove that.

Mr. Bardo. Whatever the record shows. It is immaterial anyway. Whatever it was, that is what we paid him. He used to write me a letter once in a while and tell me the situation.

Senator Clark. Give you the "low down"?

Mr. Bardo. I do not know whether it was "low down" or not. I could not say.

Senator Clark. As a matter of fact, Mr. Bardo, you hired this man on the theory that he was an insider and could get the inside information, did you not?

Mr. Bardo. No; that is a very unfair inference.

Senator Clark. It seems to me to be very logical.

Mr. Bardo. It may be logical, but it is very unfair to state it that way. That was not the idea. He was down there to keep me informed as to what the situation was.

Senator Clark. You had your own executives down there, did you not?

Mr. Bardo. They were not there all the while. He was down there a long time, or a substantial time before they were. I think, as a matter of fact, Senator, he went along with Frank Smith, when Frank Smith went down there, now that you mention his name.

Senator Clark. I interrupted you, Mr. Bardo. What happened about the bids getting open?

Mr. Bardo. I beg your pardon, Senator.

Senator Clark. You said the bids had been opened, and I think we agreed on March 1933.

Mr. BARDO. Senator, what happened after that?

Senator CLARK. What happened after that. Go ahead with your story.

Mr. BARDO. Nothing happened after that.

Senator CLARK. Were you awarded the bid?

Mr. BARDO. No; nobody.

Senator CLARK. You still maintained great interest in it, after that?

Mr. BARDO. No; I gave it up. I dropped it entirely.

Senator CLARK. You dropped it entirely after March 1933?

Mr. BARDO. No; when our representatives came back.

Senator CLARK. When your representatives came back?

Mr. BARDO. Mr. Workman was there, as I recall it, more than 3 months. They were there before the bids were opened a few days.

Senator CLARK. Mr. Workman was there on March 12, 1934, was he not?

Mr. BARDO. Of this year?

Senator CLARK. 1934.

Mr. BARDO. 1934? I could not say.

Senator CLARK. Did he not have an interview with the American Ambassador to Brazil on that date, demanding—and "demanding" is the proper word to use—that the United States should send a war vessel down there as a sample exhibit for your work?

Mr. BARDO. No.

Senator CLARK. Then you are very seriously at variance with the American Ambassador at Brazil.

Mr. BARDO. Mr. Workman is not the type of man who makes a demand on anybody.

Senator CLARK. Do you admit he was there on March 12, 1934?

Mr. BARDO. Senator, I cannot say.

Senator CLARK. He was there in 1934. That was last year.

Mr. BARDO. Do not try to make me say something I do not know about, because I am not going to say it.

Senator CLARK. You know whether Mr. Workman was there in 1934 or not, do you not? Your memory is not that short.

Mr. BARDO. He was there in 1934; yes, sir.

Senator CLARK. Did he report to you any conversation with Ambassador Gibson?

Mr. BARDO. I do not know whether he did or not.

Senator CLARK. And approximately at the same time you were endeavoring to have a warship sent down there, were you not?

Mr. BARDO. Yes, sir.

Senator CLARK. Do you mean to say that Mr. Workman never had any correspondence or conversation on that subject?

Mr. BARDO. Senator, you are trying to make me answer something to two questions.

Senator CLARK. I am not trying to do anything. I am trying to get you to tell what happened.

Mr. BARDO. The first question you asked was about what I knew about his conversation with the American Ambassador. I do not know anything about it. I do not recall that at all.

Senator CLARK. Did Workman ever report to you that he was endeavoring to have a naval vessel sent down there?

Mr. BARDO. He reported to me it would be a very desirable thing.

Senator CLARK. Did he report any efforts that he was making in that direction?

Mr. BARDO. I do not recall that he did. He may have but I do not recall all the details.

Senator CLARK. As a matter of fact, Mr. Bardo, after you say you had abandoned interest in this matter in March 1933, when the bids were opened, and it was not given you, is it not a fact that there was a consistent attempt throughout 1933 and 1934, on the part of the State Department, to stop the beginning of a naval building race in South America and an equally consistent attempt on the part of the New York Shipbuilding Co. to get in on it?

Mr. BARDO. No. Before I made any attempt to enter into this Brazilian situation, I went to the State Department—I think I saw Mr. White, as I recall the name—and I told him what the situation was and I said, "What is the situation of the State Department?" And he told me. Then I went again——

Senator CLARK. About when was that, Mr. Bardo?

Mr. BARDO. Let me finish it.

Senator CLARK. I want to fix the date.

Mr. BARDO. I may be able to fix it but it is all relative.

Senator CLARK. It is very important as to the time in relation to the exhibits which we have here.

Mr. BARDO. Then I went again——

Senator CLARK. Wait a minute. About when was the first visit, Mr. Bardo?

Mr. BARDO. I could not say when it was.

Senator CLARK. Could you fix it within a year?

Mr. BARDO. I would not say that.

Senator CLARK. Could you fix it within 6 months?

Mr. BARDO. I would not say that.

Senator CLARK. Could you fix it within 10 years?

Mr. BARDO. Oh, it was not 10 years.

Senator CLARK. What is the best approximation you can make as to the time, Mr. Bardo?

Mr. BARDO. It was before we took any action, I know, or did anything at all, before I would engage in the enterprise.

Senator CLARK. You mean before you made the bid?

Mr. BARDO. I mean before I made the bid, before I did anything.

Senator CLARK. That was prior to March 1933?

Mr. BARDO. Oh, I am sure of that.

Senator CLARK. All right.

Mr. BARDO. Then I went again. Before I bid, the administration changed, and I went and saw the gentleman who was being sworn into office that very day.

Senator CLARK. The early bird catches the worm, I have always heard.

Mr. BARDO. And talked to him again, because I wanted to be sure that the change of administration and the change of personnel would not change the situation. I do not recall the gentleman's name. He was a lawyer, as I remember it, from Cleveland. He said, "You submit me a memorandum and I will tell you about it." I submitted him another memorandum and we got a reply from the Department that so far as they were concerned, that they——

Senator CLARK. They what?

Mr. BARDO. I am not quite sure as to just the language, but there was no objection to it.

Senator CLARK. Now, as a matter of fact, Mr. Bardo, what the State Department told you every time you had anything to do with them was that the State Department had no legal right to prevent you doing that?

Mr. BARDO. That is right.

Senator CLARK. But they would regard the matter with disfavor, as being calculated to start a naval building race in South America. Is not that true?

Mr. BARDO. No; they never went so far as that. That is not a fair statement, so far as the State Department is concerned.

Senator CLARK. Mr. Bardo, did you ever hear of a meeting which was held in the State Department on December 6, 1933?

Mr. BARDO. No.

Senator CLARK. At which you were not able to be present but which was attended by Mr. R. A. Workman, the sales manager of the company, and a Mr. Foster?

Mr. BARDO. I know that they did.

Senator CLARK. Did they make any report to you about the conversation?

Mr. BARDO. I do not recall whether they did or not, Senator.

Senator CLARK. Now, Mr. Bardo, as a matter of fact, you expected to be there yourself and made the appointment for yourself?

Mr. BARDO. That is right.

Senator CLARK. And then asked the other two gentlemen, for some reason?

Mr. BARDO. That is right; I could not go.

Senator CLARK. So that they made some report to you on the matter, having gone there for you?

Mr. BARDO. No doubt they did.

Senator CLARK. Do you remember what they said?

Mr. BARDO. No; I could not say that.

Mr. RAUSHENBUSH. Is Mr. Foster in the room?

Mr. BARDO. See whether he is. [Addressing associates] I do not see him here.

Mr. RAUSHENBUSH. Mr. Foster? [No response.]

Senator CLARK. Who was Mr. Foster?

Mr. BARDO. He was the man located here in Washington.

Senator CLARK. He was your local representative in Washington?

Mr. BARDO. He was our local representative in Washington.

Senator CLARK. What were his initials, if you know?

Mr. BARDO. Addison G.

Senator CLARK. I now read from a State Department memorandum, headed Further Conversation Regarding Brazil's Proposed Naval Construction Program [reading "Exhibit No. 1518"]:

To: Mr. Edwin C. Wilson.
From: Mr. Manning.

Referring to my memorandum of November 29 concerning the expected visit of Mr. Bardo, president of the New York Shipbuilding Co., a few minutes before 3 o'clock yesterday afternoon Mr. Foster, the local representative, telephoned me saying that Mr. Bardo had been tied up all day in a conference with some congressional committee and would be engaged in the same the remainder of the day, therefore he would not be able to be present at the conference; but Mr. Foster announced that he, accompanied by Mr. R. A. Workman, sales manager of the company, who was fairly familiar with Mr. Bardo's plans, would call at 3 p. m., since it was necessary for both Mr. Bardo and Mr. Workman to return to New York later in the afternoon. This made it possible to have them come at a time when you would be in your office. On my invitation, Messrs. Green and Field, of the western European division, came to my office, and we listened to what Messrs. Workman and Foster had to say.

Mr. Workman opened the conference by handing to us for the Department's files the attached photostatic copy of their translation from the original Portuguese of the document supplied to them concerning the "Brazilian naval program." I have clipped a pink marker to the page which, they pointed out shows, with the following, exactly the proposed new units for the Brazilian fleet.

Mr. Workman then explained that their purpose in calling at the Department was to inquire whether the Department had any specific comment or request to make regarding the nature of the inquiry which the company should address to the Secretary of State to determine whether the Department had objections to their submitting bids for the work. We told them that the form and content of such an inquiry was a matter, of course, for them to determine, adding that when it should be received, consideration would be given and a reply be made to it. Mr. Field observed that if and when they should sign a contract for such construction work it would be necessary for them to inform the Government of that fact, submitting full data regarding the projected program to enable this Government to comply with its obligations to other nations with reference to informing them of any naval construction work undertaken by its nationals for any third government.

Mr. Workman then asked whether the Department would object to their submitting bids. I replied that we were not in a position, of course, to speak authoritatively for the Department on such a matter, as the question would have to be considered and replied to by one of the responsible officers of the Department. I stated that there appeared to be no legal ground on which the Department could object, but that it was my personal belief that this Government might view with regret any move on the part of Brazil which might inaugurate an era of naval rivalry between that country and other Latin American countries. In response to a repetition of the inquiry apparently made in an attempt to obtain a more precise answer, Mr. Green stated that there was no statute or treaty which would prevent American companies from bidding on this contract or from building the ships for Brazil if the contract were awarded. He added that any regret which this Government might feel would, of course, be regret at the action of the Brazilian Government in launching such a naval program, and not regret at the action of American ship builders in bidding on the contract or building the ships. Mr. Workman in response agreed that the Brazilian construction program would, if carried into effect, probably have the result of bringing about competitive building among South American countries, as it would make the Brazilian navy much stronger than the navy of any other of those countries.

Mr. Field expressed his surprise at the fact that 8-inch guns were prescribed as the armament of the cruisers included in the program, observing that they would be of greater caliber than any guns now carried by any cruisers belonging to countries other than the five great naval powers.

In the further conference a belief was emphatically expressed by Mr. Workman that, if his company submitted bids for the proposed construction work, it would do so virtually on a cash basis or with the understanding that a considerable portion would be paid in advance with the remainder coming by about the time the construction work should be completed. He explained that his company had no thought of doing the work on a long-time credit basis or providing for the financing through a long period of the cost of the construction. He appeared to believe that the program was an unnecessarily extravagant one, indicating that the cost of carrying out the program would be much greater than what is mentioned in the published Brazilian project.

After continuing the discussion for probably an hour, bringing in many additional minor related matters, Messrs. Workman and Foster thanked us for having given them the hearing and departed, indicating that they would probably communicate with the Department in writing on the subject in the not distant fuure.

(In longhand in ink:)

P.S. December 8.—Their letter, dated December 6, signed by Mr. Workman has already come and goes forward with this.

future.

/s/WRM

LA: WRM: HGK: SS

(The memorandum referred to was marked "Exhibit No. 1518" and appears in full in the text.)

Senator CLARK. Now, Mr. Bardo, does that refresh your recollection on the question whether you abandoned efforts to secure the Brazilian contract in March 1933?

Mr. BARDO. We did not abandon efforts.

Senator CLARK. You said so a while ago.

Mr. BARDO. Wait. You have got two things confused.

Senator CLARK. I know exactly what you testified.

Mr. BARDO. You were thinking one thing and I was thinking another thing.

Senator CLARK. If so, you were thinking about a different matter than you were talking about, because I am referring to your testimony.

Mr. BARDO. I did not do that at all. I said after the bids were opened some of our representatives stayed there for 2 or 3 months. Mr. Workman did. When he came back, he was perfectly satisfied they were not going to build any cruisers, and that is when I lost interest. I paid no more attention to it.

Senator CLARK. When did you lose interest?

Mr. BARDO. When Mr. Workman came back from Rio.

Senator CLARK. When did he come back?

Mr. BARDO. When he came back.

Senator CLARK. When did he come back?

Mr. BARDO. I cannot say.

Senator CLARK. You say he stayed 2 or 3 months after the bids were opened?

Mr. BARDO. After the bids were opened.

Senator CLARK. He was still down there 9 months after the bids were opened, making demand of the State Department for a ruling.

Mr. BARDO. That conversation to which you referred all took place before we made any bid at all.

Senator CLARK. I think we agree, Mr. Bardo, that the bids were opened—submitted and opened—in March 1933, and this conversation took place on December 6, 1933.

Mr. BARDO. We have got dates wrong. Let us get straight on it. There is no need of talking about things which are wrong. I do not remember those things. I can get that information for you, but I do not remember it, and I do not want to be put in a false position here. Whatever the facts show as to whenever the bid was submitted and it was invited, that is the fact, and whatever it is, let us rely on it.

Senator CLARK. Mr. Workman was in Brazil?

Mr. BARDO. Yes.

Senator CLARK. In 1934, was he not?

Mr. Bardo. Now, Senator——

Senator Clark. That is less than a year ago, Mr. Bardo.

Mr. Bardo. That is true enough, there are a lot of things which happen in a year and to ask me to sit down and tell where a particular fellow was at a particular time, I cannot say that it is so, and I do not think you ought to pursue it, because it has no relation to the thing anyhow.

Senator Clark. It has relation, Mr. Bardo, as to how long ago you began your efforts, when you began them, and how long you continued them.

Mr. Bardo. That is a matter of record, and we can submit that, and there will be no argument about it at all. I will be very happy to do it, but we are talking at cross-purposes about some dates which from memory I cannot tell you is so. I speak of that sort of thing because we are just wasting time. Whatever the facts show, that is all there is to it.

Senator Clark. Mr. Bardo, I am trying to find out from you what the facts are. You are the president of the company and conducted the negotiations, and certainly should not give the committee a lecture on how to run the hearing. You are just to answer the questions submitted to you.

Mr. Bardo. I will be very happy to, but you insisted on my answering something which I cannot positively remember.

Senator Clark. All right. Mr. Bardo, if you say you cannot remember that you had a representative, one of your principal representatives, in Brazil less than a year ago, and care to stand on that statement in the record, it is all right.

Mr. Bardo. I will say whatever the records show, that is what it is, and when Mr. Workman came back and informed me of the situation, I said, "I am all through", and dropped it and paid no more attention to it.

EFFORT TO GET UNITED STATES NAVAL VESSEL FOR USE IN PROMOTING BRAZILIAN SALES [1]

Senator Clark. Do you know when you instructed or communicated with Mr. Workman in respect to trying to get a naval vessel sent to Brazil?

Mr. Bardo. My recollection of that, Senator, is this: The *Tuscaloosa*, which was under construction in our yard, was scheduled to be completed, as I recall it, in February of last year, and either as a result of a letter from Mr. Workman, or as a result of a suggestion that came to me from somebody else, I addressed a letter to the Chief of Operations of the Department and suggested to him that in view of our negotiations then going on, that I thought it would be a desirable thing, if it could be arranged, to send the *Tuscaloosa* to Rio on her shake-down cruise.

Senator Clark. That was on the 20th of December 1933, was it not, Mr. Bardo?

Mr. Bardo. Whatever the date was.

Senator Clark. I will read the letter.

Mr. Bardo. Whatever that date was, Senator.

---

[1] See end of appendix for letter from Secretary of War regarding this subject.

Senator Clark. I will read that letter into the record [reading "Exhibit No. 1519"]:

Admiral W. H. Standley, U. S. N.,
Chief of Naval Operations,
Navy Department, Washington, D. C.

My Dear Admiral: I fully intended to see you yesterday while in Washington but was obliged to leave hurriedly to make the 11 a. m. plane in order to attend an emergency meeting of the New Jersey State Labor Board, called for yesterday afternoon at Newark.

We have been working for some time upon a naval program for Brazil involving some cruisers, destroyers, submarines, tankers, and tugs, and as it is planned now the bids will be opened in Rio on March 15.

Have just received advice from the State Department to the effect that there are no regulations or laws which prevent our entering this field. We have had several conferences with the admirals of the Navy regarding the general question and will formally present the subject to the Honorable Secretary for his consideration and approval.

Quite aside from these particular matters, which will be taken up in their turn, and in view of the fact that it is customary to send our new or reconditioned ships off on extended shake-down cruises, it occurred to us that American prestige in this matter might be helped with the powers that be and the public at Rio if it were possible, as a part of the shake-down program, to have one of our new or modernized ships make a visit to that port on or before the time when these bids would be formally presented and considered, and to which I feel no criticism could attach if such visit were made as a part of the normally arranged shake-down run.

I apologize for my inability to see you yesterday, and because of the likelihood of my not being able to get to Washington for the next several days, I therefore present the matter in this tentative form for your consideration.

Very truly yours,

C. L. Bardo.

(The letter referred to was marked "Exhibit No. 1519" and appears in full in the text.)

Senator Clark. You sent that letter, did you not?

Mr. Bardo. What is the date of that letter?

Senator Clark. December 20, 1933.

Mr. Bardo. 1933?

Senator Clark. Yes.

Mr. Bardo. That begins to fix the dates.

Senator Clark. That was some 2 weeks after the memorandum of the State Department which I have just read.

Mr. Bardo. That is all right. That begins to fix them.

Senator Clark. Now Admiral Standley replied to that letter which I offer for appropriate number, under date of January 3, 1934.

Navy Department,
Office of Chief of Naval Operations,
Washington, January 3, 1934.

Mr. C. L. Bardo,
New York Shipbuilding Corporation, Camden, N. J.

My Dear Mr. Bardo: In reply to your letter of December 20, which the press of business and the recent holidays have prevented me from answering promptly, I am pleased to inform you that the Department will give your suggestion full consideration in connection with the itineraries of the newly commissioned cruisers.

However, the dates of completion of these ships are all late in the spring or early summer so that your suggested date of March 15, 1934 at Rio de Janeiro is not possible in any way.

Sincerely yours,

W. H. Standley,
Admiral, United States Navy,
Chief of Naval Operations.

(The letter referred to was marked "Exhibit No. 1520" and appears in full in the text.)

Mr. BARDO. That fixes the date when the bids were opened, March 15, 1934.

Senator CLARK. That shows that the Government was to send a warship down there to act as a sample exhibit in connection with your bid, at Government expense?

Mr. BARDO. True; they send these ships on a shake-down cruise.

Senator CLARK. But you were asking them to send a ship to that particular port, to really act as an exhibit for you. Is not that correct?

Mr. BARDO. They were not spending any extra money for our benefit. They take these ships off on a long cruise, after they are preliminarily accepted, and it is always a question where the cruise goes.

Senator CLARK. Yes; but the cruise was at Government expense.

Mr. BARDO. It is at Government expense, wherever they go.

Senator CLARK. But they were recommending that the ship be sent there at Government expense, to appear as an exhibit to promote your work.

Mr. BARDO. I do not agree with that at all.

Senator CLARK. What kind of conversational correspondence did you have with Mr. Workman on the subject of an exhibit; that is, to send a ship there and to procure through the State Department the sending of a vessel to Rio de Janeiro? Did you instruct him to make such an effort?

Mr. BARDO. I do not recall that I did, Senator.

Senator CLARK. Did he report to you that he had made such an effort?

Mr. BARDO. I do not recall that, either. He may have done it. I would not say that he did or did not.

Senator CLARK. Did he ever report to you any conversation with Ambassador Gibson?

Mr. BARDO. I do not recall that he did, Senator. He may have.

Senator CLARK. You would remember it, if he had reported to you having an argument with the American Ambassador to Brazil, and undertaking to put pressure on the Ambassador?

Mr. BARDO. Not necessarily so. I cannot, at least, put all of these details in my mind and carry them around here indefinitely. That is out of the question.

Senator CLARK. Would that be the kind of detail you would be apt to forget, the matter of one of your agents undertaking to put pressure on an American Ambassador?

Mr. BARDO. I would not attach very much importance to it.

Senator CLARK. That is all in the day's work, is it?

Mr. BARDO. That is all in the day's work.

Senator CLARK. I will read the report of Ambassador Gibson, or the substance of the report, dated at Rio de Janeiro, March 12, 1934. which I will ask be appropriately numbered.

(The report referred to was marked "Exhibit No. 1521" and is included in the appendix on p. 5229.)

Senator CLARK (reading):

> No. 37. Receiving call from Mr. Robert Aitken Workman, the N. Y. Shipbuilding Co.'s vice president. He asked that I wire immediately recommending a

scout cruiser be sent to Rio for the "moral effect" while the Brazilian Government was considering bids for naval construction. His manner was rather truculent and he took me to task for not being here when he wanted to see me. He pointed out the fact that there were two British cruisers in the harbor and referred cautiously to the fact that the British knew how to take care of their interests. The cruisers were there on a regular schedule—arranged some time ago—a fact which I pointed out to him. In spite of this he said that he would take the matter up with Navy through his own channels—to have a cruiser available for detached service sent to Rio.

I feel that no cruiser should be sent because of the effect its sudden appearance would have. I question the value of such a visit in view of the present unsettled political situation, without some valid reason.

Did you ever hear of such a conversation?

Mr. Bardo. What is the date, Senator?

Senator Clark. March 12, 1934, 11 months ago.

Mr. Bardo. That followed the conversation which had gone on before. I do not recall it.

Senator Clark. No report was ever made of any such conversation or demand to you?

Mr. Bardo. I would not say that no report was made, Senator. You asked me if I recalled this thing.

Senator Clark. Mr. Bardo, do you mean to say that a matter of such magnitude as one of your officials having conversation of that character with the American Ambassador to Brazil and threatening him that you would go through your own channels to the Navy Department would not make enough impression on your mind to remember it 11 months?

Mr. Bardo. Mr. Senator, Mr. Workman is not the kind of man that threatens anybody.

Senator Clark. Did you ever hear any report of this matter?

Mr. Bardo. I say that I do not recall that I did.

Senator Clark. You do not recall it at all?

Mr. Bardo. Yes; and I say that honestly. I am not here misrepresenting this situation. There is nothing about it I would want to conceal in the least. It is a perfectly open and real business transaction.

Senator Clark. Now, at that time, Mr. Bardo, or rather, just prior to that time, in January 1934, the Navy Department was assisting you in preparing your estimates on this Brazilian work, was it not?

Mr. Bardo. No.

Senator Clark. What conferences did you have with the Navy Department?

Mr. Bardo. We had a conference with the Navy Department for the purpose of ascertaining to what extent we might use any of our standard construction on United States Navy ships in the preparation of our designs for the Brazilian cruisers, and they gave us a general permission regarding the structure itself, and made certain reservations.

Senator Clark. Did you not ask them to prepare for you certain estimates of cost?

Mr. Bardo. Oh, no.

Senator Clark. For use in preparing your estimates, and did they not actually prepare them and furnish them to you?

Mr. Bardo. Wait a minute. Cost of what?

Senator Clark. Cost of various items going into it.

Mr. BARDO. Yes; the things that the Government normally furnishes for the cruisers which we build, of which we have no information as to what the cost was. We asked the Government for that.

Senator Clark. So that they did furnish it for bidding on the Brazilian cruisers?

Mr. BARDO. No.

Senator CLARK. As a matter of fact, did you not tell the Navy Department you wanted it for the purpose of preparing your estimates on Brazilian cruisers?

Mr. BARDO. Now, Senator, let us get this thing straight, because we are just talking and not getting anywhere.

Senator CLARK. The reason we are not getting anywhere, Mr. Bardo, is you keep saying " wait, wait, wait", and apparently do not desire to get anywhere.

Mr. BARDO. All right. Let me get this straight: On the cruisers built for the United States there is a limited cost of $17,000,000; $5,000,000 of that covers materials and supplies the Government furnishes, and $12,000,000 approximately covers what is paid for the ship. What we asked the Navy Department for was to give us an estimate of the prices or the cost of material that was involved in this $5,000,000, over which we had no control, or regarding which we had no information at all.

Senator CLARK. That is beside the point. The question I asked you was whether the Navy Department did not assist you in preparing the estimates on the bids which you were to submit, and you replied that they did not. I now offer in evidence, for appropriate number, a letter from the Navy Department, Bureau of Ordnance, Washington, D. C., dated January 26, 1934, subject, estimates of cost bids on Brazilian cruisers.

Mr. BARDO. That is right.

(The letter referred to was marked " Exhibit No. 1522 " and is included in the appendix on p. 5229.)

Senator CLARK. That letter reads in part [reading]:

> In connection with conferences of recent date between representatives of your company and representatives of the Bureau of Ordnance, the following information is furnished you for possible use as a basis in preparing estimates for the building of two Brazilian cruisers.

That is precisely what I asked you, Mr. Bardo. [Continuing reading:]

> The figures following represent the approximate costs and approximate weights of the most nearly similar United States naval material to that which you propose to furnish to the Brazilian Government. An exact comparison is not available in certain cases; for example, the Brazilian proposal is for an 8-inch, 50-caliber gun, whereas the latest information available in the United States Navy covers an 8-inch, 55-caliber gun, and so forth.

Then follows five pages of itemized information that they were furnishing.

Mr. BARDO. That is right, but that is all material, Senator, which we never furnish, and on which we had no information as to the cost.

Senator CLARK. Mr. Bardo——

Mr. BARDO. But if we had had——

Senator Clark. Just a minute, Mr. Bardo. The question I asked you was. " whether or not the Navy Department did actually assist you in the preparation of your estimates ", and you replied they did not, and this letter shows conclusively that they did.

Mr. **Bardo**. I stated that as the answer; yes, sir. So far as the estimate is concerned, we made the estimate for all the things we ordinarily estimate and supply, but the Brazilian cruiser required that we should give them a complete ship, so that we went to the Navy Department and they gave us an estimate covering all that material, which we never buy and never have anything to do with. They did do that. I want the record clear on that. There are two different things involved.

Senator **Clark**. Mr. Bardo, the Navy also gave you, or promised to give you, a set of specifications belonging to the Navy, from which it was your intention to start to build this material from the ground. Is not that true?

Mr. **Bardo**. No; we wrote our own specifications, except possibly the specifications for this material which we did not have.

Senator **Clark**. That is what I am speaking about. They did give you the Navy's specifications on that material, did they not?

Mr. **Bardo**. That may be true. I would not say they did or did not. I would not question that.

Senator **Clark**. What was—I do not know whether it is the name of a man or a company—Casa Mayrink Veiga S. A.?

Mr. **Bardo**. He was the man whom we selected as our representative in Rio. It is a very old concern there, and has been handling Brazilian business with outside companies for a number of years.

Senator **Clark**. He represented a lot of outside companies down there, did he not?

Mr. **Bardo**. That is right.

Senator **Clark**. He advised you on March 15, 1933, that Vickers, was very active on this matter?

Mr. **Bardo**. Oh, yes.

Senator **Clark**. And that two British naval vessels were in the harbor?

Mr. **Bardo**. Yes, sir.

Senator **Clark**. I will read his letter (reading "Exhibit No. 1523"):

AIR MAIL,
March 15, 1934.

Mr. C. L. BARDO,
President New York Shipbuilding Co., Camden, N. J.

DEAR MR. BARDO: In accordance with plan, the tender for the construction of vessels under the Brazilian naval program, was duly realized to-day.

As you will observe from list attached hereto, 24 firms participated, 1 being Finnish, 1 American, 6 British, 6 Italian jointly, 1 Brazilian, 4 French, 2 Dutch, 2 German, and 1 Spanish. No bids have as yet been examined, the presiding committee having decided to deliver them to the committee designated for this purpose, who will open and examine them at a secret session to be held within a few days.

In all, including your organization, four shipbuilding companies bid on the cruisers—Vickers-Armstrong, Swan, and the Italian group. It is as yet rather early to prophesy, but it would appear that we have not very much to fear from the last two mentioned competitors, and serious competition is therefore reduced to one company, namely, Vickers-Armstrong.

Upon Mr. Workman's arrival in Rio last week, he found two English cruisers—*Norfolk* and *York*— in port, and we are sure he endorses our opinion that the United States Government should follow the example set by Great Britain and arrange for one of its most modern cruisers to visit this city at an early date. In this connection we had occasion to speak to Ambassador Gibson and as a result of this Mr. Workman cabled you to do everything in your power to convince the United States Government that the visit of a United States cruiser to Rio at this time would prove of incalculable assistance to the New York Shipbuilding Co., the only American firm competing.

With highest expressions of esteem from writer,

Yours very truly,

CASA MAYRINK VEIGA S. A.
——— ———, *Director.*

I offer that letter for the record.

(The letter referred to was marked "Exhibit No. 1523" and appears in full in the text.)

Senator CLARK. Does that refresh your memory as to receiving a cablegram from Mr. Workman?

Mr. BARDO. I do not think it was a cablegram. I do not recall that.

Senator CLARK. You think Veiga was in error?

Mr. BARDO. I do not say he was in error, but I do not recall any cable.

Senator CLARK. He states that he cabled you.

Mr. BARDO. I do not think he did, but sent it in the form of a letter, although he may have cabled me. I remember that letter distinctly, because that was an important letter.

Senator CLARK. Did you pursue the matter further through the Navy Department, of sending a ship down there, Mr. Bardo?

Mr. BARDO. In both the letters to which you have referred, which I wrote to Admiral Standley. I do not think I followed it beyond that.

Senator CLARK. You did not carry it out through your own channels with the Navy Department?

Mr. BARDO. What were the dates?

Senator CLARK. The date of Ambassador Gibson's cablegram, which I read a few minutes ago, was March 12, 1934. The date of Mr. Veiga's letter——

Mr. BARDO. Was March 15.

Senator CLARK. March 15, 1934.

Mr. BARDO. What was the date of my letter to Admiral Standley?

Senator CLARK. December 20, 1933.

Mr. BARDO. You see, those two had no connection at all.

Senator CLARK. Did you pursue further the effort to get a naval vessel sent there?

Mr. BARDO. I do not know that I did.

Senator CLARK. Mr. Bardo, you wrote to Admiral Standley again on August 14, 1934, urging him to send a naval vessel down there; did you not?

Mr. BARDO. I do not recall the letter—if you have it. I may have written it but I do not recall it.

Senator CLARK. You did resume the negotiations through your own channels with the Navy Department, following the refusal of Ambassador Gibson to participate in that effort?

Mr. BARDO. Senator, I do not recall anything that ever took place, so far as my knowledge is concerned, between Mr. Workman and Mr. Gibson. That I do not recall anything about.

Senator CLARK. To say the least, in August 1934, you did take up the matter again with the Navy Department, did you not?

I read here a letter from Admiral Standley addressed to you, which I offer for appropriate number, dated the 18th of August, 1934.

(The letter referred to was marked "Exhibit No. 1524" and appears in full in the text.)

Senator CLARK. That letter reads:

NAVY DEPARTMENT,
OFFICE OF CHIEF OF NAVAL OPERATIONS,
Washington, August 18, 1934.

Mr. C. L. BARDO,
New York Shipbuilding Corporation,
Camden, N. J.

MY DEAR MR. BARDO: With reference to your letter of August 14 concerning the visit of United States vessels to Brazilian ports, I am pleased to inform you that the aircraft carrier *Ranger* is now scheduled to visit Rio de Janeiro from August 30 to September 9, Buenos Aires from September 12 to 18, and Montevideo from September 18 to 24.

The *Tuscaloosa* is scheduled to visit Buenos Aires and Montevideo in November and will probably visit Rio de Janeiro late in November.

Very sincerely,

W. H. STANDLEY.

Do you remember receiving such a letter as that from Admiral Standley, Mr. Bardo, in response to one which you had written him 4 days previous?

Mr. BARDO. I think so.

Senator CLARK. In response to that, on August 20, 1934, you wrote the following letter, which I will offer for appropriate number:

AUGUST 20, 1934.

Admiral W. H. STANDLEY,
Chief of Naval Operations, United States Navy,
Navy Department, Washington, D.C.

MY DEAR ADMIRAL: I am more than delighted to receive yours of August 18 in reply to mine of the 14th, advising that the aircraft carrier *Ranger* and the cruiser *Tuscaloosa* are to be in southern waters.

I very much hope that you will find it convenient to have the *Tuscaloosa* make a visit to Rio de Janeiro in November, as this is not only a very fine ship but in my opinion she is the very best of the group which we have built. I was greatly impressed with the steadiness of the ship on her official trials at high speed.

Thanking you, and with high personal regards, I am,

Very truly yours,

C. L. BARDO.

Copies, Messrs. Cornbrooks and Workman, together with copy of Admiral Standley's letter. I suggest that Mr. Workman advise Mr. Veiga accordingly.

C. L. B.

(The letter referred to was marked "Exhibit No. 1525" and appears in full in the text.)

Senator CLARK. You will notice that the *Tuscaloosa* is referred to there.

Mr. BARDO. Yes.

Senator CLARK. And you helped out by contributing $1,000 to help fix up the wardroom, did you not?

Mr. BARDO. No.

Senator CLARK. You had contributed?

Mr. BARDO. The wardroom was finished in accordance with the specifications. While she was lying at the New York Navy Yard the men in the wardroom, on their own money, arranged to have that room decorated and refixed. I knew nothing about it. And the ship came back to the Philadelphia yard and I went over to see it. I was very much impressed with what they had done toward improving the livable characteristics of the wardroom. The chief executive officer, I talked to him about it, and I said, "Who furnished the money for this?" and he said, "It comes out of the donation of the officers of the ship." I said, "This is such an improvement and such a highly desirable thing that I am perfectly willing to contribute $1,000 toward the expense for the relief of the officers of the ship."

Senator CLARK. He told you at the time that the cost of it was $1,000, did he not?

Mr. BARDO. No; he told me the cost of it was around 22 or 24 hundred dollars.

Senator CLARK. Before you contributed one thousand dollars, did he not tell you that that was the whole cost?

Mr. BARDO. No.

Senator CLARK. He said he did.

Mr. BARDO. He told me it was 22 or 24 hundred dollars.

Senator CLARK. Here is a letter from D. A. McElduff, Commander, United States Navy, dated October 1, 1934, addressed to you.

> MY DEAR MR. BARDO: We received your check for one thousand dollars as a contribution toward expenses incurred in decorating the wardroom. We certainly appreciate your kindness and assure you this check will be of material benefit to the officers who otherwise would have had to pay for the improvements made out of their own personal funds.

Mr. BARDO. That does not say——

Senator CLARK. Wait a minute. I will not take the trouble of reading the entire letter, because it is rather lengthy.

Mr. BARDO. All right.

Senator CLARK (continuing reading):

> We have done all this as moderately as possible and have been able to procure a discount of 30 percent from Sloan and a discount of 50 percent from Lightoiler Co. However, even with the utmost economy in buying, the total cost for the wardroom will be approximately $2,000.

Mr. BARDO. That is right.

Senator CLARK (continuing reading):

> I am telling you all this because of the interest you have shown in our wardroom and because when I saw you in Philadelphia I informed you that the total cost would be only one thousand dollars.

Mr. BARDO. He did not—$2,000 or $2,200 was the only information he ever gave me.

Senator CLARK. So that he is in error when he voluntarily wrote you this letter on October 1, 1934?

Mr. BARDO. He is in error in saying he told me the cost was $1,000 only. I was told the cost was $2,200 or $2,400, and that is confirmed by his letter.

Senator CLARK. Mr. Bardo, you felt you might have secured this Brazilian business if the State Department had exercised a little more friendly attitude, did you not?

Mr. BARDO. No; I did not feel that the State Department, so far as soliciting business for us is concerned, had anything to do with it. The only thing in which I was interested was whether or not we could go on and do it without embarrassment. I never made any approaches or made any suggestions to anybody in the State Department as to any activity or on what they might do in our interest.

Senator CLARK. You did know that other countries were helping their shipbuilding companies?

Mr. BARDO. Absolutely I knew that, and doing everything that they could.

Senator CLARK. Did you not know that your bid was some 30 percent above your competitors?

Mr. BARDO. I do not recall, Senator, that I ever saw the exact figures of the other companies.

Senator CLARK. Did you ever consider that it was the belief of the State Department that they could have secured an award for you except they did not desire to do it because of the danger of starting a naval building race in South America?

Mr. BARDO. Will you repeat the question, please?

Senator CLARK. I say, did you ever know that it was the general belief in the State Department that they might have possibly secured the award for you, 30 percent above your competitors, except they did not desire to start such an activity?

Mr. BARDO. I never knew that; no.

Senator CLARK. You actually abandoned the whole Brazilian enterprise when the Nye committee, before which you are now appearing, started operations last fall?

Mr. BARDO. No.

Senator CLARK. I would suggest at this time that the letter from Commander McElduff, to which I have previously referred, be appropriately entered.

(The letter referred to was marked "Exhibit No. 1526" and is included in the appendix on p. 5231.)

Senator CLARK. You got a letter on September 27, 1934, from Ray W. Berdeau to you, reading as follows:

INTERNATIONAL ENGINEERING & DEVELOPMENT CORPORATION.
New York, N. Y., U. S. A., September 27, 1934.

Mr. C. L. BARDO,
President New York Shipbuilding Co., Camden, N. J.

DEAR MR. BARDO: When I last talked with you on July 9, 1934, you suggested that I get in touch with you in the event that Pusey & Jones Corporation could not take on the Uruguay ferry scheme.

You probably have heard directly from Mr. Lee that they are definitely not interested and as no proposals were submitted in Uruguay on September 25, 1934, I am writing to enquire if you would be interested and would care to work with me on it.

In that there are features in this that may be of interest to other operations of the Cord properties, I would like to discuss it also with your Mr. Manning, but will defer this conversation until after hearing from you.

I am sailing shortly for South America and would be glad to get into this with you when and where it would be convenient.

Yours faithfully,

(Signed) RAY W. BERDEAU.

On September 28, 1934, you wrote the following letter (reading "Exhibit No. 1527"):

Mr. RAY W. BERDEAU,
Care International Engineering and Development Corporation,
149 Broadway, New York City.

DEAR MR. BERDEAU: Yours of September 27.

In view of the developments in connection with the Nye investigation, supported by information which I received from South America today, I question whether it is worth our while to waste any time in endeavoring to get South American business.

I have positive assurances that at least two of the countries in South America have closed their doors to American products, and I have no desire to be chasing rainbows.

Very truly yours,

C. L. BARDO.

Mr. BARDO. That is correct.

Senator CLARK. So that you did that after the committee started?

Mr. BARDO. The Nye investigating committee had nothing to do with it. Mr. Berdeau is an entirely different type of individual.

Senator CLARK. Entirely different type?

Mr. BARDO. From a lot of fellows.

Senator CLARK. What do you mean by saying he is a different type from a lot of fellows?

Mr. BARDO. He is a type of fellow you cannot afford to waste any time with. I had had experience with him before, and that is what I mean by that.

Senator CLARK. You mean different from you?

Mr. BARDO. I hope he is.

Senator CLARK. The fact is that you assigned the investigation of this committee as one of the reasons?

Mr. BARDO. That was just an easy way to put him off the track, because I was not going to waste any time with him.

Senator CLARK. I will offer that letter of September 28, 1934, for the record.

(The letter referred to was marked "Exhibit No. 1527" and appears in full in the text.)

Mr. RAUSHENBUSH. Mr. Bardo, did I understand your testimony of a little while ago to be that the communication which you had with Admiral Standley about getting a cruiser down there in December 1933, I mean the correspondence dated December 1933, had nothing to do with the bids which were opened March 15, 1934?

Mr. BARDO. What is the connection which you want to establish?

Mr. RAUSHENBUSH. I thought very definitely you had stated for the record that there was no connection, and I wanted to bring you back to that and ask you whether I understood the testimony correctly.

Mr. BARDO. I did not mean to convey the impression, if that can be read out of my answer, because I very definitely had in view that if we were going into this foreign business, that we were entitled at least to the same consideration from the standpoint of our Government that other governments gave to their people engaged in foreign business.

I do not want the impression to prevail that there was no connection, because in my mind there was a very definite connection.

Mr. RAUSHENBUSH. You did not know at that time, in December 1933, when you wrote Admiral Standley, trying to get a cruiser down there, that the British would have two in that port?

Mr. BARDO. They always have done it. They never miss it.

Mr. RAUSHENBUSH. Just to clear that up, I wanted to call your attention to this letter from Admiral Standley, in reply to yours, in which he ends up:

> However, the dates of completion of these ships are all late in the spring or early summer, so that your suggested date of March 15, 1934, at Rio de Janeiro is not possible in any way.

You wanted the cruiser down there for that?

Mr. BARDO. Yes, sir.

Mr. RAUSHENBUSH. It is not very important, but I wanted to clear up the record.

Senator CLARK. This Ambassador Gibson, whose cablegram I read, was the same Hugh Gibson who was the head of the Geneva Conference which was a failure because of the activities of the New York Shipbuilding Co. and the other companies, was he not? Did it ever occur to you that his coolness as to your efforts in Brazil had anything to do with your efforts in Geneva?

Mr. BARDO. I can only give you the same answer to that, Senator, that I gave to Senator Shortridge before: That anybody is a wild ass who thought I would send a man over to Geneva without power, influence, or prestige to break up an international conference, and he did not know what he was talking about.

Senator CLARK. What did you send Shearer over there for?

Mr. BARDO. Not to break up the conference.

Senator CLARK. What did you send Shearer over there for?

Mr. BARDO. I said I sent Shearer over there as an observer, to tell us what was going on. That is all.

Senator CLARK. Did you know of his efforts to break up the conference?

Mr. BARDO. I knew of it afterwards, but not then.

Senator CLARK. You did not know of it then?

Mr. BARDO. Besides, Senator, Shearer was always a big-Navy man. The plans of the people were for a big Navy. Why would he be breaking up an international conference when they were doing what he believed in himself?

Senator CLARK. The purpose was not to have a big Navy.

Mr. BARDO. The reason for breaking up was because Great Britain wanted a big Navy.

Senator CLARK. That is a matter of opinion. A great deal of the breaking of the conference was due to the activities of Shearer.

Mr. BARDO. You read the record?

Senator CLARK. I have read the record.

Mr. BARDO. So have I.

Senator CLARK. What was the reason for the soiree or dinner on July 15, 1934? What was the occasion of it?

Mr. BARDO. Where was it?

Senator CLARK. Pine Valley Gulf Club, July 15, 1934.

Mr. BARDO. That is right.

Senator CLARK. What was the nature of that?

Mr. BARDO. That followed the big demonstration which was made at New York of the Navy. They sent several of those ships to Philadelphia, to put them on display, and they invited the people of Philadelphia to arrange for entertainment for these Navy officers. I said, "I will be very glad to furnish entertainment for one afternoon for the group ", and I took Captain Johnson and all—I do not think there were over 6, 8, or 10 altogether—down to Pine Valley and we played golf. That was simply discharging an obligation I made to the entertainment committee of the city of Philadelphia.

Senator CLARK. You had golf and dinner?

Mr. BARDO. We had golf and dinner, and a thunderstorm.

Senator CLARK. Any further questions, Mr. Raushenbush?

Mr. RAUSHENBUSH. Mr. Chairman, we have got into the question of competition or noncompetition between the big three for several of the bidding years, and we want very much to get back into that sometime within the next couple of weeks, if that is possible. We have a full schedule for the rest of this week so that it will have to go over until one of the coming weeks, so far as Mr. Bardo's testimony is concerned.

Senator CLARK. Mr. Bardo may be excused subject to call, and the committee will take a recess until 10 o'clock tomorrow morning.

(Whereupon, at 12:05 p. m., the hearing was recessed until 10 a. m., tomorrow, Wednesday, Feb. 6, 1935.)

INVESTIGATION OF MUNITIONS INDUSTRY

WEDNESDAY, FEBRUARY 6, 1935

United States Senate,
Special Committee to Investigate
the Munitions Industry,
Washington, D. C.

The hearing was resumed at 10 a. m., in room 357, Senate Office Building, pursuant to recess, Senator Arthur H. Vandenberg presiding.

Present: Senators Clark, Bone, Vandenberg, and Barbour.

Also present: Stephen Raushenbush, secretary to the committee; and F. W. LaRouche, investigator.

Senator Vandenberg. The hearing will come to order. Mr. Parker, take the stand.

TESTIMONY OF N. R. PARKER—Resumed

PROPOSED MERGER OF NEW YORK SHIPBUILDING CORP. WITH NEWPORT NEWS SHIPBUILDING CO.

(The witness had previously been sworn by the chairman.)

Mr. Raushenbush. Mr. Parker, in July of 1932 we find that you were considering the matter of a proposal of a merger with Newport News Shipbuilding & Dry Dock Co. Could you tell us who was interested in that proposed merger?

Mr. Parker. The proposal was considered by the board of directors of the New York Shipbuilding Corporation. and I was directed to furnish certain information to engineers making a survey for merger purposes.

Mr. Raushenbush. Why was that proposal dropped?

Mr. Parker. Because the board of directors, I assume, did not believe that it was a feasible or advantageous proposition.

Mr. Raushenbush. I show you a copy of one of your comments on it, dated July 20, 1932, which I offer for appropriate number. [Handing paper to witness.]

(The document referred to was marked "Exhibit No. 1528" and is included in the appendix on p. 5232.)

Mr. Raushenbush. I call your attention to the second paragraph:

> It is, of course, impossible to ascertain the general attitude of the Government toward the merger of two companies out of three available to afford reasonable competition on Government contracts. This is believed to be a controlling matter in the consideration of the method of the merger. The governmental attitude is indirectly connected with the possible distribution of new business. With but three shipbuilding yards available for competition and the announced desire on he part of the Government to maintain those yards as an independent

but nevertheless part of the national defense system, governmental policy has generally distributed the work fairly equitable between the three active yards. A merger of two of these yards might very well divide the work into two parts rather than three, so that while no Newport News Shipbuilding & Dry Dock Co. independently obtains one-third and New York Shipbuilding Corporation independently obtains one-third, or a total of two-thirds under independent operation, a merger might very well reduce the combined distribution to one-half for the combined yards. It is reasonably certain that if this was the result the loss in combination would far offset any possible benefits through merger.

Do you remember that statement?

Mr. PARKER. Yes, sir.

Mr. RAUSHENBUSH. That is a fair comment there, is it not, so far as you remember it, that the Government distributes " the work fairly equitably " and they want at least three companies for the purpose of apparent competition?

Mr. PARKER. It had been indicated to the Department, that is, the Navy Department had been somewhat disturbed by the failure of one of the four qualified yards for naval construction, that is, the Cramp Shipbuilding, and, insofar as it was possible thereafter they certainly did not want to see any of the larger available yards go out of business.

Mr. RAUSHENBUSH. Was the intent of the merger to put one of the yards out of business or simply to cut the overhead by a combination? Two yards would have remained in existence, as such, would they not, as operating yards?

Mr. PARKER. As I understand the proposal, it was to, of course, reduce operating expenses of the two yards by a combination, but also contemplated the possibility of specializing in one of the two combined yards for merchant work, and specializing in the other of the two combined yards for naval work, which in effect would have really brought about two Navy building yards.

Mr. RAUSHENBUSH. Yes; it would have left two Navy building yards, would it not?

We find some memoranda back in the early days of your company, Mr. Parker, concerning the employment of Mr. Sterling J. Joyner. Do you remember whether he was any representative of Electric Boat?

Mr. PARKER. He was not, as far as I know.

Mr. RAUSHENBUSH. There are various checks, one for $1,000, and for $3,000, and the like.

REPLIES OF NEW YORK SHIPBUILDING CORP. TO COMMITTEE REQUESTS

Mr. PARKER. Mr. Raushenbush, at my last appearance I could not, because of lack of time, furnish the committee with information requested, and since the recess, at which time I was excused, I have been attempting to collect the information at the request of Senator Vandenberg, some special information as well as information for you, and information in connection with insurance.

In the matter of special representatives, I have collected some which I think has a bearing on your question as to Mr. Joyner.

Mr. RAUSHENBUSH. Is this a complete and accurate file of information in regard to the special representation? [Referring to document just offered by witness.]

Mr. PARKER. Yes, sir; so far as that goes.

Mr. RAUSHENBUSH. The other one, because of lack of time, you put in, saying definitely: "This was made up from the best of recollection and memory."

This is finally from the books, is it?

Mr. PARKER. This is from the vouchers and disbursements that I have been able to check.

I have also supplementing that, as requested by Senator Vandenberg, 2 years of the Washington representative, Mr. Foster, with all the details taken from that.

Mr. RAUSHENBUSH. About the other question, Senator Vandenberg wanted the agents of the insurance companies through whom the premiums were placed, or the insurance was placed.[1] Do you have that?

Mr. PARKER. We turned that in through Mr. Bardo, in order to put before the committee the record of the insurance policies, the coverage by the policies, and the brokers through whom this insurance was placed.

Mr. RAUSHENBUSH. Yesterday afternoon, after examination of this material turned in by Mr. Bardo, we wired you asking for the representatives of your agents. You have a good deal of it marked through Childs & Wood, through Johnson & Higgins, and we wanted the names of the individual representatives of those brokers. Could you supply that this morning?

Mr. PARKER. I am ready to. With Johnson & Higgins, the policies written by that firm were negotiated, first, with an employee of Johnson & Higgins named Becker, who died, and the last of the policies were negotiated with a man named Keegan, also an employ of Johnson & Higgins.

Senator VANDENBERG. Is Johnson & Higgins a New York institution?

Mr. PARKER. Johnson & Higgins is one of the largest of the marine insurance writers in this country, in New York.

Childs & Woods: all matters and policies handled by Childs & Wood have been negotiated with Mr. Donald Wood, of the firm of Childs & Wood. They are a Chicago firm. The policies negotiated with Tifft, Layer & Co., were negotiated with Mr. Layer of the firm.

The agents through whom those various brokers place insurance are indicated in some cases on policies, as in the case of Childs & Wood's policy for use and occupancy insurance, as shown on the schedule, where it was made through a firm D. A. Henderson & Co. in Camden.

Childs & Wood are general agents for a number of companies and write the insurance directly.

The foreign insurance for Johnson & Higgins, Tifft, Layer & Co., and Childs & Wood is handled through foreign correspondents.

Senator VANDENBERG. Was there more or less of a switch over to Childs & Wood 2 or 3 years ago?

Mr. PARKER. After August of 1933, when the Cord interests and affiliates acquired ownership of the New York Shipbuilding Corporation, they had various interests scattered throughout the world, and their interests in all insurance matters were handled by Childs & Wood; and it was believed that many economies could be effected through blanket coverages, and I was instructed to turn over our insurance matters to Childs & Wood.

---

[1] See Hearings, Part XVIII, p. 4668 for request.

Senator VANDENBERG. In other words, the reason that Childs & Wood entered the situation at that particular time was because of the New Cord relationship to New York Ship?

Mr. PARKER. Yes.

Mr. RAUSHENBUSH. Do you identify this material prepared by you in connection with the insurance matter? [Handing papers to witness.]

Mr. PARKER. Yes, sir.

Mr. RAUSHENBUSH. May we, without offering that for the record, mark it and identify it as "Committee Exhibit (New York Ship) No. 1"?

(The document referred to was marked for identification "Committee Exhibit (New York Ship) No. 1" and is on file with the committee.)

Mr. RAUSHENBUSH. Coming back, then, to this matter of the employment of Mr. Joyner, do you remember back that far, or have you ever had it called to your attention, the matter of a somewhat mysterious check for $5,000 which he apparently received back there?

Mr. PARKER. What date, Mr. Raushenbush?

Mr. RAUSHENBUSH. That was back on December 31, 1920. There is an order here to make it out for expense, and Mr. Joyner writes Mr. Wickersham [reading]:

> Inserted special on expense ship. If this is improper for your purposes, let me know. Mr. Neeland will tell you what the expense is for.

Mr. PARKER. What date is that, sir?

Mr. RAUSHENBUSH. Back in 1920. What was he doing for you at that time, if you remember, Mr. Parker?

Mr. PARKER. I do not recall. I checked Mr. Joyner back for the period—may I see that letter just a second?

Mr. RAUSHENBUSH. Yes, sir; 1920 to 1923. [Handing paper to witness.]

Mr. PARKER. That is right. I recall it.

Mr. RAUSHENBUSH. But you do not recall?

Mr. PARKER. I recall the amount and the purpose of it.

Mr. RAUSHENBUSH. What was the purpose of that?

Mr. PARKER. Mr. Joyner, as stated in my letter, was engaged to be the New York Shipbuilding Corporation representative for certain work, on a basis of salary and commission. Through his efforts we obtained a Japanese contract for the construction of a naval oil tanker, *Kamoi*.

Senator CLARK. About when was that, Mr. Parker?

Mr. PARKER. About 1921 or 1922. The basis of his commission was not less than 5 percent of the net profits earned by the company on that particular contract. On the basis of the anticipated profits on the contract, he was paid $5,000 commission in advance. That is the check to which you refer. He actualy received, in final settlement, thirteen-thousand-some-odd dollars, which I have noted there.

Mr. RAUSHENBUSH. If that was a commission, what was the point of putting it in as an expense item? So that he could avoid the income tax on that? Is that the point of that?

Mr. PARKER. That is something I know nothing about.

Mr. RAUSHENBUSH. He definitely puts it in as an expense item [reading]:

> Inserted special expense ship. If this is improper let me know. Mr. Neeland will tell you what the expense is for.

Mr. PARKER. That was a matter of arrangement between Mr. Neeland and Mr. Wickersham, the then treasurer.

Mr. RAUSHENBUSH. It has nothing to do——

Senator CLARK. Did that expense item go into overhead, Mr. Parker?

Mr. PARKER. Yes, sir.

Senator CLARK. That was the Japanese representative about whom we were talking when you left here?

Mr. PARKER. Yes, sir.

Senator CLARK. In other words, the services in Japan in getting this tanker contract were partly charged up to the Government for overhead on the naval construction work which you were doing at that time?

Mr. PARKER. Yes, sir.

Mr. RAUSHENBUSH. You prepared this statement, which I offer for the record under the number "Exhibit No. 1529", supplementing further information regarding the representatives, Mr. Parker.[1]

(The letter referred to was marked "Exhibit No. 1529" and is included in the appendix on p. 5233.)

Mr. RAUSHENBUSH. I see here the name of Charles Denby, special representative, China and the Orient, 1922 to 1923. The actual amount paid to Denby was $5,048.72. Was that the brother of the Secretary of the Navy at the time?

Mr. PARKER. I believe so.

Senator CLARK. Had Mr. Denby ever been in your employ, Mr. Parker, so far as the New York Shipbuilding Co. is concerned?

Mr. PARKER. Not so far as I know.

Senator CLARK. Was there any particular reason why he would be employed and sent over to the Far East at the time when you already had two other highly paid representatives in that territory?

Mr. PARKER. That was a matter that Mr. Neeland decided. He was president of the company.

Senator CLARK. You had nothing to do with it?

Mr. PARKER. I had nothing to do with it whatever.

Senator CLARK. You simply know he was employed at the same time because the check was made out?

Mr. PARKER. Yes, sir.

Mr. RAUSHENBUSH. In the paragraph below you state that Joyner was paid during this period salary expense of $103,432.98 and Joyner was also paid in addition $13,750 commission on the Japanese tanker *Kamoi*. If Mr. Joyner was covering the Orient at the time and getting this fairly high salary, what point was there particularly in Mr. Denby going over there? He did not get any business for you, did he?

Mr. PARKER. No.

Senator CLARK. Mr. Gillis was your far-eastern representative at that time, and was the same Mr. Gillis formerly naval attaché at the American Legation at Peking, was he not?

---

[1] Hearings, Part XVIII, p. 4523.

Mr. PARKER. I do not know his connection.

Senator CLARK. At the same time he was representing you, he was also representing du Pont in China and the Far East?

Mr. PARKER. At one time he was representing du Ponts and other shipyards.

Senator CLARK. And representing Bethlehem and Newport News at the same time, was he not?

Mr. PARKER. He was representing Bethlehem Steel—Fore River plant, which was not a Bethlehem company at that time—Newport News, and du Pont.

Mr. RAUSHENBUSH. There was a good deal of other information,[1] Mr. Parker, which you prepared for the committee, at its request, and as we go along I would like to have it identified and put in the record or marked as a separate committee exhibit.

Do you identify that reply to our question no. 20? [Handing papers to witness.]

Mr. PARKER. Yes.

Mr. RAUSHENBUSH. And it states at the bottom of that:

> The limited time available does not permit the preparation of a statement of the financial effect of the changes with regard to the company and the amounts involved.

You have not been able to do anything further on that, have you?

Mr. PARKER. No, sir.

Mr. RAUSHENBUSH. In that connection there were supplemental contracts with the Government during the years 1917, 1918, and 1919. How many of the destroyers that were ordered during the war are not started—that is,(keels were not laid until after the war? Do you recall. How many of those destroyers you had which were ordered during the war but were not begun until after the war?

Mr. PARKER. I do not know the number. I know there were a few of them that were not, due to the fact that we were required to build the plant in which the destroyer was to be built, and the difficulties of building the plant took up all of our time and energy. We ran into a winter, one of the coldest winters of history, in 1917 and 1918, and we had to blast the ice in order to build piling to build the ways on which the destroyers were to be laid, and before the keels were laid the armistice had arrived.

Mr. RAUSHENBUSH. The question is not intended to cover in any way the cause of the delay, but the question is, rather, how it happened that after the war was all over on November 11, 1918, these ships whose keels were not laid at the time were then laid and continued and completed? Can you throw any light on that? You have explained quite satisfactorily that you had to build a yard, and that was the cause for that delay, but my question was the other one: Why, after the war was over, the contracts were not canceled, but instead you were given 10 destroyers to complete, and there were altogether 91 whose keels were laid subsequent to November 11, 1918. Can you throw any light on that at all?

Mr. PARKER. Not at all, except that we had a contract to build ships. The contract was not canceled, and we built them.

Mr. RAUSHENBUSH. I call the attention of the committee to the hearings in Navy Department appropriation bill, 1933, United States

---

[1] Hearings, Part XVIII, p. 4521.

House hearings, Seventy-second Congress, on pages 66 and 67, in which these 91 destroyers, of which New York Ship had 10 whose keels were not laid until after the war, being ordered during the war, are listed, and offer for the record the statement just identified by Mr. Parker in reply to question 20.[1]

(The document referred to was marked "Exhibit No. 1530" and is included in the appendix on p. 5234.)

Mr. RAUSHENBUSH. There is an illuminating comment on that, Mr. Chairman, by Admiral Pratt, who gives at least one reason why these destroyers, 91 destroyers, were built after the whole war was over [reading]:

> Admiral PRATT. That seems like a very fair question. I cannot give you a real, practical, definite reason why, but I should say this: That if you start a big machine moving, such as this production is, it takes a certain amount of time before it gets slowed up and working normally; and I should think that that had about as much to do with it as anything. We just got swept into it, and before we could get our breath and stabilize and get together. there we were with our output.

The result of that is that there were 91 destroyers whose keels were not laid at all at the time of the armistice, but were begun afterwards.

Senator CLARK. The result was we had 91 destroyers which we did not need?

Mr. RAUSHENBUSH. I am under the impression, but I could not testify to it myself, that a considerable number of them were decommissioned very shortly afterwards.

Do you know anything about that, Mr. Parker?

Mr. PARKER. No, sir; I do not.

VINSON ACT—ATTEMPT TO LIMIT PROFITS ON NAVAL SHIPBUILDING

Mr. RAUSHENBUSH. We want to get into another question, now, Mr. Parker, that dealing with the Vinson bill. You took part in some conferences with the other shipbuilders on that, did you not?

Mr. PARKER. Yes.

Mr. RAUSHENBUSH. You followed the discussion back and forth a good deal, did you not, lasting over a period pretty much since the adoption of the Vinson bill?

Mr. PARKER. Yes.

Mr. RAUSHENBUSH. The Vinson bill was an attempt, was it not, to limit profits on naval construction from 1934 on to 10-percent profit?

Mr. PARKER. That is correct.

Mr. RAUSHENBUSH. The whole subject matter is interesting to the committee, because it is interested in the attempt to limit profits during war time.

Now, were the shipbuilders friendly to this part of the Vinson bill when it went to them, or did they oppose that part limiting profits to 10 percent?

Mr. PARKER. I had no discussion with any shipbuilders other than our own management in connection with the Vinson Act.

Mr. RAUSHENBUSH. What did your own management do about it?

Mr. PARKER. I believe they referred the matter to joint action by their representative association, the National Council of American Shipbuilders.

---

[1] Hearings, Part XVIII, p. 4529.

Mr. RAUSHENBUSH. And what did the National Council of American Shipbuilders do about it?

Mr. PARKER. That I do not know, except such information and records as were written to us, as a member of that association, by the association, indicating that they had attended hearings and advising us of the various drafts of the proposed act from time to time. The matter was actively handled by Mr. Bardo. I had nothing to do with it.

Senator CLARK. Mr. Bardo?

Mr. PARKER. Yes, sir.

Senator CLARK. Was this National Council of American Shipbuilders opposed to the general proposal? Were you able to determine from the information furnished you?

Mr. PARKER. I can only speak for our own corporation. We believe that the principle of profit limitation is desirable. I think a canvass of the management as of the time the bill was passed would indicate a whole-hearted sympathy in the theory of limitation of profits, or at least preventing excess profits, not only on spending public moneys for shipbuilding but the spending of public moneys in any form, whether through naval appropriations, P. W. A., A. A. A., or any other governmental agency.

Mr. RAUSHENBUSH. Could you furnish us from your files any evidence of the whole-hearted support of your company or management for the Vinson bill, so far as the limiting of profits to 10 percent is concerned, from letters approving the bill, using the influence of the company to secure that amendment limiting the profit to 10 percent? Do you know of any such correspondence, any such influence?

Mr. PARKER. There is not any such correspondence, because it is also believed, at least by me, speaking for myself, that the Vinson Act does not accomplish that particular thing.

Mr. RAUSHENBUSH. You mean it does not limit profits to 10 percent?

Mr. PARKER. It limits profits to 10 percent but it creates an inequity that will eventually lead to a financial catastrophe so far as the shipbuilders are concerned, for the reason that it is " a tails you lose or heads you lose " all but 10 percent; that in the event of having a contract for four ships, with a profit limitation on the four, you might have a peculiar situation where on the first ship, being the first ship designed, redesigned, trial and error experience and development would run you a loss, say, of 30 percent, but that under the act would be " the tails you lose."

On the second ship you might break even, because of the experience on the first.

On the third and fourth you might make, say, 20 percent profit. The excess over the 10 percent would be returnable. So that if you take a job as a whole, you would lose money on all of it. It is a condition which creates an inequity that does not just limit profit, but prevents the averaging of work, as any industry may average work, in that certain industries may make one product and secure it at practically cost or less, in order to obtain volume, where their other product is the profitable part of it, but would not be profitable except for the volume obtained. And without the ability to average, you would have a situation that would adversely affect the concern.

Senator VANDENBERG. Now, Mr. Parker, does the 10-percent limitation in fact mean much of anything unless the cost factors which you inject into the cost estimate are strictly limited? In other words, so long as you are relatively free to count your cost items as you please, is the 10-percent profit limitation a real limitation?

Mr. PARKER. Senator, you are free under the act, or under the regulation which is a part of the contract, to count your cost items as you please. The Treasury Department is the final court in determining what is an item of cost, what elements of cost shall be allowed in determining the profit, on which the excess will be figured. So that we are not free to include elements of cost, as you would normally under the ordinary cost-plus contract.

Senator VANDENBERG. You would not be free to include items such as were originally included in the cost-plus contracts during the war?

Mr. PARKER. You would probably include them, if the contract provided for their inclusion, as they did at that time, with the same result that there was on those contracts; the Treasury Department would not allow them.

ITEMS OF COST IN WAR-TIME COST-PLUS CONTRACTS

Senator CLARK. Did that contract during the war include provision for assessing the services of your Chinese and Japanese representatives and for wines, liquors, and cigars which you actually put into the cost?

Mr. PARKER. It included all costs having to do with operating the business, and wines and liquors in shipbuilding are just as necessary as steel in many cases.

Senator CLARK. Do I understand that the contract provided for under the Vinson bill should include wines, liquors, and cigars?

Mr. PARKER. Absolutely so.

Senator CLARK. That is very illuminating.

Senator VANDENBERG. In the case of those cost-plus contracts during the war, do I understand that the items which you included in cost, and which were subsequently eliminated, such as income taxes, and so forth, do I understand that you were authorized to include those at the time in the first instance?

Mr. PARKER. The contract, the first cost-plus contract, provided as one of the items of cost all taxes. That seemed to be authority to include income taxes.

Senator VANDENBERG. Where did that authority come from?

Mr. PARKER. As a matter of fact, it was, I believe, the true meeting of the minds of the parties drawing the contract that income taxes would be included. Realize that the contracts were drawn in 1917. Income taxes were just beginning. The theory was that the 10-percent profit would be a net profit to the contractor, and that the Government, at least so we felt, had just as much right to make a contract relieving us of income taxes applicable to a Government contract as it had to sell bonds, the income on which is not subject to income tax.

Senator VANDENBERG. What I am interested in is the source of this authority to include all taxes. Did I understand that that was a Government permit to you?

Mr. PARKER. It was a contract between the Navy Department and the New York Shipbuilding Corporation.

Senator VANDENBERG. And the contract included the right to count income taxes and all taxes as part of the cost?

Mr. PARKER. The contract said, "All taxes."

Senator VANDENBERG. All taxes. Who negotiated those contracts for the Navy Department? Do you remember?

Mr. PARKER. I do not.

Senator CLARK. Did your lawyers suggest that particular clause, Mr. Parker? Do you know?

Mr. PARKER. My recollection is it was not a matter suggested on the part of the builder at all. We were told what we were to do at that particular time. We were the contractor and the contracts were handed to us. As in the case of the battleship contracts handed to us at the same time, and the airplane contract, the telegram from the Department said, "You are directed to build." There was not any contract executed in that particular case.

Senator CLARK. Do you know whether your lawyers did suggest this particular provision to which we have been referring?

Mr. PARKER. I am sure they did not.

Senator VANDENBERG. You do not recall who negotiated these contracts for the Navy Department?

Mr. PARKER. I do not.

Mr. RAUSHENBUSH. Who was president of the company at the time?

Mr. PARKER. Mr. M. A. Neeland.

Mr. RAUSHENBUSH. That was when it was still the American International, was it not?

Mr. PARKER. That was afterward.

Mr. RAUSHENBUSH. Bought by American International Corporation?

Mr. PARKER. Bought by American International Corporation.

Senator CLARK. Mr. Parker, I would like to have a little further explanation of your very surprising statement a little while ago that wines, liquors, and cigars were fully as important elements in the shipbuilding business as steel. Will you just explain why it happens that wines, liquors, and cigars are just as important in the manufacture of a ship as steel?

Mr. PARKER. Senator, if I would paint a picture of what the use of wines and liquors in the shipbuilding business is——

Senator CLARK. Since the Government has to pay for them, and then pay you an additional percentage of profit on top of them, I think that picture would be very interesting.

Mr. PARKER. All right. Wines and liquors have more to do with the building of the ship than just the champagne bottle that we push it overboard with or the few drinks that may be passed around on a trial trip, which Congressmen and Senators enjoy sometimes. [Laughter.]

In days of old when a trial was conducted, and I am sure we all remember the stories we read of the issuance of grog aboard ship, particularly in a time of stress, of storm, of extraordinary effort, that when a ship is required to go on trial, and you have the picture of 20 men throwing big, hand-picked coal in the furnaces, there are 5-gallon demijohns of liquor alongside them, and they have their drinks of beer and whisky just the same, and it is a matter of rule and routine and just as much a part of the business of operating a ship under these conditions as it is in a restaurant where the service is allowed.

Senator CLARK. Is there any more necessity for dealing out liquor and beer to these men on a trial trip than there is when the ship is in commission in the Navy? Of course, they are sweating from shoveling coal when the ship is on a regular cruise in the Navy, are they not? Is there any particular reason why they should get drunk on a trial trip any more than on a regular cruise? As a matter of fact, Mr. Parker, what this item of wines, liquors, and cigars amounts to is this, is it not: You go on a trial trip and the shipbuilding company is permitted to invite a large number of influential or distinguished people, some of whom may be Congressmen, Senators, or other Government officials, and a general jamboree is held by all, with fine, rich food and fine wines and liquors, and the Government not only pays the bill for that, for the purpose of making friends for the shipbuilding company, but also, under this program arrangement, has to pay you an additional amount for the privilege of allowing you to give a party? Is not that correct?

Mr. PARKER. Senator, when you go back to 1917 and 1918, that was the practice up to that time. That is 18 years ago. The practices which were in existence before the war were continued during that period, of course. But we did not run jamboree parties in naval vessels and never do. The only people on a naval vessel are the trial board and the representatives of the contractor and representatives of auxiliary manufacturers. There is no general jamboree on that.

Senator CLARK. I notice on naval vessels constructed after the war a very large item set down—I forget exactly when it was, but I referred to it when you were last here—a very large item for wines, liquors, and cigars in the construction of those vessels, set down as a part of the cost, on which the Government was required to pay an additional commission to you.

Mr. PARKER. They were Shipping Board vessels, Senator.

Senator CLARK. Whether they were naval vessels or Shipping Board vessels, the jamborees took place, did they not?

Mr. PARKER. They did.

Senator CLARK. You considered that part of the national-defense scheme, did you not, Mr. Parker, to have jamborees?

Mr. PARKER. Well, it certainly had a part of it. It was the first time that many of these Senators from the West and Congressmen from the West had ever seen a real ship in operation.

Senator CLARK. After having taken this pleasure trip, you felt they were better educated as to national defense, and more susceptible to suggestions of the New York Shipbuilding Co. and other members of the "Big Three"? Do I understand that to be your statement? As a matter of fact, that was the purpose of the trial trip, was it not, Mr. Parker?

Mr. PARKER. I would say that would be true from their attitude. They surely knew more about ships after that.

Senator CLARK. And also the shipbuilders, too, did they not; and had a wider education in the matter of wines and liquors?

Mr. PARKER. Yes, sir.

VINSON ACT—AGREEMENT OF SHIPBUILDERS ON UNIFORM OVERHEAD CHARGES

Mr. RAUSHENBUSH. Now, Mr. Parker, coming to the various meetings held by the shipbuilders after the Vinson Act had been passed, I show you a memorandum, treating of a meeting held on May 8, 1934, and ask you to follow that, at which were present the representatives not only of the " Big Three " but from the " Little Three " and suppliers, such as United Dry Docks, Sperry Gyroscope, Babcock & Wilcox, Worthington Pump & Machinery, Westinghouse Electric, General Electric, Electric Boat Co., and so forth? [Handing paper to witness.]

That is the summary of a discussion, is it not, that the representative officials of the shipbuilding companies and the main suppliers had concerning the effect of the Vinson bill on their business? Do you recognize that?

Mr. PARKER. I did not attend that meeting.

Mr. RAUSHENBUSH. No; but you attended a subsequent meeting, for which this was the basis. You have had this in your possession, have you not?

Mr. PARKER. Yes.

Mr. RAUSHENBUSH. And you have studied it? The answer is " Yes "?

Mr. PARKER. Yes.

Mr. RAUSHENBUSH. I turn to page 4, where there is discussion of how much overhead should be allowed, and discussion as to what the Treasury Department will do, and what the Navy Department will do. It refers to Mr. Smith. He is president of the council, is he not?

Mr. PARKER. Yes.

Mr. RAUSHENBUSH (reading from " Exhibit No. 1531 "). At the top of the page, Mr. Smith says:

> Yes. That is where it is going to be unless there is a change in the law. The Navy Department does not want to deal with it.
>
> Mr. GILLMOR. They do not want to get into it.
>
> Mr. SMITH. The man who drafted this bill drafted it with the purpose of allowing some leeway.
>
> Mr. KING—

of Babcock & Wilcox—

> Are you going to be allowed your actual expense? Will they allow the actual overhead or a predetermined one?
>
> Mr. SMITH. I think you can collect your actual overhead as long as it goes against all work.
>
> Mr. GILLMOR—

of Sperry Gyroscope—

> They point to this provision in the act that the contractor must make his statement under oath.
>
> Mr. NIVEN—

of General Electric—

> They go on to say that the books shall be open for inspection at all times.
>
> Mr. GILLMOR. I believe their present idea is to make check inspections only.
>
> Mr. POWELL—

of United Dry Docks—

> This thing will go along all right until somebody turns back some money.
>
> Mr. GILLMOR. I think the only thing to do is act in unison.

Mr. SMITH. Supposing you do have 10 percent profit and a few dollars left over. The industry may find itself in a situation where there are items of cost which could have properly gone in but were not included. It seems to me very desirable that so far as the outstanding items of overhead are concerned there should be unanimity of opinion.

Does not that give pretty much the tone of the general discussion? The shipbuilders here wanted to get together and decide very definitely what proportion, predetermined proportion, they would agree upon as an overhead charge.

Mr. PARKER. No, sir; I do not think that is the case at all. I think that what the shipbuilders and the main material suppliers were trying to find out is what the Vinson Act meant so far as their particular business is concerned.

Mr. RAUSHENBUSH. Let us follow on with the rest of it through and see where we come out.

Turn, please, to page 7, Mr. Parker. They are starting to discuss overhead, as I understand it. [Reading from "Exhibit No. 1531":]

Mr. SMITH. When you say "actual" I suppose you mean your actual average—

of General Electric—

Mr. WHITESTONE. No; I mean actual expenditures.

Mr. SMITH. As supplied to that particular contract?

Mr. WHITESTONE. In the case of shipbuilding it will probably apply to a whole ship.

Mr. SMITH. If you had one plant using actual and another normal——

Mr. POWELL. Suppose three or four yards take contracts on a competitive basis. Then one fellow turns in actual and has a very low overhead and he turns back a lot of money—it simply throws out your whole idea of competitive bidding. It seems to me you have almost got to come to a basis of agreeing with the Treasury Department on some fixed overhead. If we could spread our overhead over 10 years, I would say it would be high enough. I think it would be high enough so that you would not have to worry about your 10-percent profit. The average overhead would be plenty high enough to satisfy anybody.

They are beginning the discussion, or resuming it, are they not, of trying to agree on a fixed percentage of overhead that all companies could charge, and that the Treasury would have to approve?

Mr. PARKER. These expressions, Mr. Raushenbush, are expressions of individuals, thinking of their own particular business, how this act affects their own particular situation, but the purpose of it all was to find out how it affected everybody, and particularly how it affected the prime contractor, the shipbuilder.

Mr. RAUSHENBUSH. Turn to page 8 in reply to that. [Reading:]

Mr. SMITH——

President of this conference and of the council—

What is your reaction to this: You have the shipyards and the allied groups, but your uniformity should be attained first amongst the shipbuilders themselves and then there can be some approach to uniformity between the shipbuilders and the allied groups.

Mr. GILLMOR. If the shipbuilders, boiler manufacturers, and electrical manufacturers—

That is taking in a rather large group, is it not?—

act in accordance with uniform rules, it will be so strong that I think the Income Tax Bureau would have a hard time resisting it.

Is not that the reasonable idea of this whole matter, that not only the shipbuilders but the operators who have a definite interest in the work and in the Vinson bill should get together and put up uniform rules; and is it not Mr. Gillmor's idea that if they do that they will be so strong that the Income Tax Bureau will have a hard time resisting it? Is that not what they are trying to do there?

Mr. Parker. They were trying to find some way by which those elements of actual cost would be unquestioned by the Treasury Department.

Mr. Raushenbush. Now, on the next page, Mr. Parker, Mr. Bardo comments after this statement [reading from "Exhibit No. 1531"]:

> If the shipbuilders, boiler manufacturers, and electrical manufacturers act in accordance with uniform rules, it will be so strong that I think the Income Tax Bureau would have a hard time resisting it.

Mr. Bardo comments:

> They could not break it down. You have two established recognized systems of accounting in the two principal groups with which we do all our business. We should get our accounting offices together. I do not think we can decide anything.

Mr. Bardo, a little later, says:

> I think we should get the shipbuilders together first on a uniform plan.
>
> Mr. Smith. Homer—

of Bethlehem—

> what do you think about it?
>
> Mr. Homer. The method of determining the 10-percent profit is to be established by the Treasury Department, and the obvious thing is that the industry will have to establish something for its protection.
>
> Mr. Jackman—

Worthington Pump & Machinery Corporation—

> They can establish it, but the Treasury Department will have to approve it.

And the whole discussion turns, as I look at it, on whether it is possible for the shipbuilding companies to get any agreement, and they decide that the comptrollers of the companies better meet together, and then you and others meet directly a little later, at the same place—11 Broadway. You were present for New York Ship, together with Mr. Langell, Mr. Ferguson was present for Newport News, and Mr. Shick and Mr. Harper and Mr. Rittor for Bethlehem Shipbuilding Corporation, Ltd.

Mr. Parker. That is correct.

Mr. Raushenbush. I do not know whether I have an extra copy of this. I want to offer that for the record—the meeting of the shipbuilders—as "Exhibit No. 1531."

(The document referred to was marked "Exhibit No. 1531" and is included in the appendix on p. 5235.)

Mr. Raushenbush. Turn now to this meeting at which you were present, and at which the subject was gone into further, and Mr. Blewett, of Newport, makes a comment here on which we would like to have your comment. I will have to show you this until we find our extra copy [handing paper to witness].

On page 3 of this mimeographed memorandum, "Exhibit No. 1532", Mr. Blewett says:

> We have recently gone through the cost of changes. We asked a higher overhead on the changes than on normal overhead. We asked for 20 points higher and they granted us 10.

He means the Navy granted them 10, does he not?

Mr. PARKER. I assume so, speaking of Navy changes.

Mr. RAUSHENBUSH. Speaking of Navy changes [reading]:

> In other words they admitted naval work called for higher overhead than commercial work. If we could obtain 20 percent higher it would cover everything such as equipment, development charges, and all items. So far as going into a uniform cost-accounting system, that is a job of 5 or 10 years rather than a month or so.

You remember this meeting fairly well, do you not?

Mr. PARKER. I do.

Mr. RAUSHENBUSH. Mr. Blewett, speaking for Newport News, was trying constantly to make the point, was he not, that the shipbuilders should definitely agree upon an overhead that was normally uniform but was very considerably higher for Navy work than for merchant marine work? Is that not correct, so far as your memory goes?

Mr. PARKER. Mr. Blewett was trying to make the Navy work bear an actual proportion of overhead which Navy work should bear. It is a fact that with all of the limitation of Navy work, inspection and various changes and consequential damage from changes, the actual overhead applicable to Navy work is truly higher than to other work, and when you spread that to all work on the same basis, Navy, of course, gets the benefit and the other work gets some penalty.

Mr. RAUSHENBUSH. He was trying very difinitely to get it on a fixed basis higher than other work, 20 percent?

Mr. PARKER. Yes, sir.

Mr. RAUSHENBUSH. He reports Newport News asked for 20 and had gotten 10 and was apparently suggesting that the other companies agree on their overhead, too. That, of course, involved an agreement on what labor was, so that overhead could be determined.

Here is a copy, if you want to follow it [handing "Exhibit No. 1532" to witness].

Mr. Smith at page 6 shows some considerable anxiety that everything is going to be put into cost by everybody, so that some of the shipbuilders do not charge the Government too little. Mr. Smith says:

> I would not do that. This group ought to go away satisfied as to what items get into cost. Each and every one of us should be assured that we are going to put into cost everything that properly belongs there.

In other words, they do not leave out anything, and not, as Mr. Gillmor said in the other meeting, so that some money does not get returned to the Government and then the Government forces them to get into action.

Can you explain the comment on page 7 of Mr. Shick, of Bethlehem, where Mr. Blewett said:

> Didn't we have such a thing as adjusted prices during the war? We took such things as cost of machinery and put it into an adjusted price.

To which Mr. Shick replied:

> That was a cost-plus contract. You only got 10 percent of it. I can give you an example of what happened on a gun contract. The Navy wanted a 16-in gun. We had to buy the equipment to machine it. Daniels—

that was the Secretary of the Navy, was he not?

Mr. Parker. I suppose that is who he is speaking of.

Mr. Raushenbush (continuing reading "Exhibit No. 1532"):

> said, "All right, this is not the last order we are going to give you for 16-inch guns. We will let you add $35,000 per gun so you can amortize this equipment. We will let you amortize part of the cost through this job so you will get paid for your new equipment, but you have to take a little chance." They did that for the reason they did not want to say to us, "We will pay you for this." If they did, then they would own it, but they wanted it to stay in our possession. We were only amortizing $35,000 on that job.

Do you have any comment on that? Does it mean anything to you?

Mr. Parker. No.

Mr. Raushenbush. It seems to be an illustration of where the Government was paying very definitely for the equipment but just because they did not want to own it they let the gun people, in this case Bethlehem, charge up an extra $35,000 per gun and amortize it immediately.

The discussion goes on at some length, and the net result of all this was that there was an interchange of information among the companies, was there not, as to definitions of their costs as regards direct labor and overhead?

Mr. Parker. That is correct.

Mr. Raushenbush. On page 12 Mr. Chick, of Bethlehem, makes one point:

> We should decide what we are going to do. For our own protection it would be a good thing if we did have an understanding so that on the completion of these contracts the overhead rate will not be out of line. If Bethlehem had 60 percent, Newport News 50 percent, and somebody else 40 percent, they will ask what is wrong? Therefore, it is important for the shipbuilders to have a very clear definition as to what is direct labor if that is the basis of distributing overhead. I believe we can agree on a definition of direct labor.

After that these interchanges of information took place, did they not?

Mr. Parker. They did.

Mr. Raushenbush. So that the point of all this was, Mr. Parker, quite frankly, to have the shipbuilders agree on something that was not an actual cost, that came out of it—and if that was so they would not need any agreement—but they agreed on a perfectly arbitrary amount of overhead, which they would unite on in trying to have the Treasury Department accept as a basis for fixing profits under the Vinson Act, thereby agreeing or following out the suggestion made by Mr. Gillmor in the earlier meeting that if they all got together they would be stronger than the Income Tax Bureau.

Mr. Parker. Not at all. That is not my understanding.

Mr. Raushenbush. If that is not true, what is your understanding?

Mr. Parker. I never heard the theory advanced that there should be a definite rate of overhead applied to every yard alike.

Mr. RAUSHENBUSH. They were certainly discussing the possibilities of it all through here, were they not?

Mr. PARKER. No; the only discussion that this refers to is that the books of each of the companies will reflect the actual and proper charges to cost that the contract provided, so that in any one of them, if they should inadvertently submit some cost, or by his method, or changing his method so that it would result in a question for the whole group. But only, of course, included those items which are proper elements of cost.

Mr. RAUSHENBUSH. What is all this discussion about as to fixed percentage of overhead, Mr. Blewett's idea that they asked for 20 percent for naval work? That is an arbitrary thing, rather than an actual one?

Mr. PARKER. That is on changes, alone, Mr. Raushenbush.

Mr. RAUSHENBUSH. That is on changes?

Mr. PARKER. The practice has always been on changes to fix a definite rate of overhead.

Mr. RAUSHENBUSH. These are changes, but still changes often amount to a very considerable amount in the cost of a ship, do they not?

Mr. PARKER. Yes, sir.

Mr. RAUSHENBUSH. In some cases a million dollars more than what the bids were.

Mr. PARKER. What Blewett was talking about was just a rate of overhead which was a proper rate of overhead. We already have a fixed rate of overhead applicable to changes, fixed by the board of changes.

Mr. RAUSHENBUSH. On page 4 of "Exhibit No. 1532", if you will follow that——

Mr. PARKER. Back again?

Mr. RAUSHENBUSH. It gets into the normal overhead, and Mr. Bates of United Dry Docks says:

> You mean a standard or normal overhead?
>
> Mr. BLEWETT. Yes.
>
> Mr. SMITH. Let me ask you this, Blewett; you say you asked for so many points higher. Would you do that on the basis of each plant saying here is my average overhead, we want 20 points higher for naval work taking into account no two plants might have the same.
>
> Mr. BLEWETT. Yes.
>
> Mr. SHICK. Only if you get it high enough.
>
> Mr. SMITH. That is the point where I see difficulty with the Government.

They are talking about overhead for naval jobs rather than for changes at that point, are they not?

Mr. PARKER. No; I believe they are still referring to changes.

Mr. RAUSHENBUSH. There is no mention of changes right at that point.

Then later on the quotation I read from the Bethlehem man, he was particularly talking about the general overhead rather than the changes, was he not?

Mr. PARKER. I do not know what he was talking about particularly.

Mr. RAUSHENBUSH. On page 12. Look at it again. All the way through—I do not want to bore the committee with reading the whole story, but I want to put it into the record.

By the way, what percentage of overhead did the Navy board on changes allow you on changes in ships before this bill went through?

Mr. Parker. It varies. Periodically the Navy makes an investigation of the actual overhead of the plant and sets a rate of overhead to be used on changes. The rate varies with the average variance of overhead rates in the yard generaly, some place between 70 and 90 percent.

Mr. Raushenbush. Do you not make quite a lot of money on changes?

Mr. Parker. No, sir; we do not make money on changes. No one ever made any money on changes. The consequential damages and delay due to the interruption of work, which are never paid for, make changes the most unprofitable part of Government work.

Mr. Raushenbush. The changes are all paid for, are they not?

Mr. Parker. The changes and the actual material, but no one can collect consequential damages.

Mr. Raushenbush. You are taking in a lot of territory when you say no one makes any profit on them. You mean your own company?

Mr. Parker. I mean my own company, and am sure the business of the other companies are so closely related that their situation is identical.

Mr. Raushenbush. I will offer this as "Exhibit No. 1532."

(The document referred to was marked "Exhibit No. 1532" and is included in the appendix on p. 5241.)

Mr. Raushenbush. The upshot of all this was several things, was it not, Mr. Parker? The companies got together and agreed on what they wanted to ask of the Treasury Department, and, in addition to any informal conversations they had with the Treasury Department they did ask for several specific changes. They asked the Treasury Department the allowance for the income taxes, did they not?

Mr. Parker. I believe a brief was filed by the National Council requesting that.

Mr. Raushenbush. That is the protest of the National Council of American Shipbuilders on rulings of the Commissioner of Internal Revenue excluding State income tax as items of cost? There was a definite protest on that, and they wanted selling expenses as a proper item, did they not?

Mr. Parker. Correct.

Mr. Raushenbush. They also made a point about compensation insurance. That was all touched on in the conversations with the Treasury Department, and any other arrangements that had been made. Then we find here a letter from the du Pont Co. as to the Vinson Act, together with comments from the National Council of American Shipbuilders, in which the du Ponts say that in addition to all the items that the shipbuilders wanted charged into the costs under the Vinson Act, they also want to have Federal income taxes. Do you remember that?

Mr. Parker. I remember reading the letter.

Mr. Raushenbush. They wanted to charge the State income tax in, the Federal income tax, they wanted to charge unemployment insurance costs in. So that they went you one better, a little bit, did they not? You people were not asking for the inclusion of Federal income taxes any longer as an item of cost, were you?

Mr. Parker. No.

Mr. Raushenbush. This was the du Pont idea, and they included it in a letter to the Bureau of Internal Revenue, explaining why they wanted to have that allowed under the Vinson Act. I offer that series of correspondence for the record as "Exhibit No. 1533."

(The documents referred to were collectively marked "Exhibit No. 1533" and are included in the appendix on p. 5248.)

VINSON ACT—PROFIT OF SUBCONTRACTOR

Mr. Raushenbush. Then, Mr. Parker, you worked out yourself, did you not, a way of handling the subcontractors under the Vinson Act, a way of seeing that they never made more than 10-percent profit?

Mr. Parker. No; I would not say that I worked it out myself.

Mr. Raushenbush. Who else gets credit for it?

Mr. Parker. I think it is a composite idea which several people contributed to.

Mr. Raushenbush. Could you describe that very briefly, what you had in mind when you tried to do that?

Mr. Parker. The Vinson Act, in attempting to limit the profit to 10 percent—and I am fully in accord with the limitation of profit—does not guarantee 10 percent nor does it prevent you from sustaining a loss of 10 percent, 20 or 50 percent. The Vinson Act, as we understand its intent, is a profit-limitation matter, but it intends to limit the profit of the contractor and requires that contractor to require of all his subcontractors an agreement to the same profit limitation that the contractor subscribes to. The problem was to find a way by which the intent of the act or the profit limitation could be passed on to the subcontractors who were limited in profit in the same manner that the contractor was.

It naturally occurred to several of us that if the subcontractor did not earn in excess of 10 percent, the act was not at all detrimental to him; that under the various codes most industries were permitted to sell at cost, and prohibited from selling at less than cost, and it seemed that since the Vinson Act is, in itself, a cost-plus contract, regardless of the so-called "topside price", which is subject to much adjustment, it is, nevertheless, in the final analysis, a cost-plus contract, and that the contractor having a cost-plus contract on his hands, would necessarily have to make his subcontracts on a cost-plus basis.

Mr. Raushenbush. Just explain that one point once more, why you say the Vinson bill is a cost-plus contract. How do you figure that, Mr. Parker?

Mr. Parker. The Vinson Act is a cost-plus contract, unquestionably, because what you finally receive is cost, as determined by the Treasury Department.

Mr. Raushenbush. Now you are talking, are you, about the bids put in under an adjusted-price basis?

Mr. Parker. I am talking about any contract under the Vinson Act. The amount that any contractor or subcontractor can receive under the Vinson Act is his cost—that is, the maximum he can receive—is his cost plus 10 percent of his contract price.

Senator Bone. There is no guarantee of that in the bill, is there?

Mr. Parker. That is the maximum he can receive.

Senator Bone. I understand; but there is no guarantee of that in the bill, is there?

Mr. Parker. The bill provides that that is exactly what he can get as a maximum.

Senator Bone. The bill provides that he may not get more than 10 percent?

Mr. Parker. That is right.

Senator Bone. That is the provision of the bill?

Mr. Parker. That is right.

Senator Bone. That does not guarantee him it.

Mr. Parker. Not at all. He has no guarantee of 10 percent.

Senator Bone. It is not really a cost-plus contract.

Mr. Parker. It is a cost-plus contract as far as the maximum is concerned.

Senator Bone. There is no guarantee there.

Mr. Parker. Correct.

Senator Barbour. But, as a matter of fact, Mr. Parker, if, after the completion of it, and the acceptance, as I suppose is the practice of the Government, it was found that you had lost 10 percent instead of having made a profit of some 10 percent, the Government would not allow you any profit at all under these circumstances?

Mr. Parker. Certainly not.

Senator Bone. That is precisely the point we want to get at. They do not guarantee profits.

Mr. Parker. In order to place that same provision, which we must subscribe to, in the main contract, and to pass that to our subcontractors, we had to make the same form of contract with our subcontractors, which was a cost plus 10 percent of a contract price not to exceed a certain amount, in the same provision that we have in our main contract.

Mr. LaRouche. Does that not mean, Mr. Parker, that instead of paying the money back to the Treasury Department, the subcontractors in effect pay it back to you, and that cuts off the Treasury?

Mr. Parker. Not at all.

Mr. LaRouche. That is the effect of it, is it not?

Mr. Parker. Not at all. It means we are making contracts, on the basis where the subcontractor could not get more than 10 percent.

Mr. LaRouche. If he did make more than 10 percent, under another type of contract not made by you, he would have to pay it to the Treasury Department. Is not that so?

Mr. Parker. If he had a contract on which he made more than 10 percent, he would have to pay it to the Treasury Department.

Mr. LaRouche. But you made a sliding-scale contract with your subcontractors, where you had a fixed basis with the Government. Is not that true?

Mr. Parker. We have no fixed basis with the Government.

Mr. LaRouche. You have a set amount.

Mr. Parker. We have not.

Mr. LaRouche. What do you have?

Mr. Raushenbush. Ten percent is what you have.

Mr. Parker. We have a contract under the Vinson Act, subject to the provisions of the Vinson Act, and subject to modification by the Secretary of the Treasury to indices prescribed, but in his discretion subject to adjustment by other indices.

Senator Bone. How do you get at the profits of a subcontractor? What mechanism is employed? What sort of set-up of bookkeeping do you have to check his profits? You do not attempt to audit his books, do you?

Mr. Parker. Certainly not.

Senator Bone. How do you know what profit he is making?

Mr. Parker. We are not concerned with the profit he makes.

Senator Bone. I understood you to say, but maybe I got it wrong, that you intended to limit the profits of subcontractors under the Vinson Act to 10 percent.

Senator Barbour. No, Senator; they are limited. The shipping company does not intend to limit it.

Senator Bone. I understood from what Mr. Raushenbush said that you had evidently got some kind of contract with the subcontractors where you apply certain restrictions to them. Maybe I misunderstood it. If I am in error, let us drop it and not take up precious time. Mr. Raushenbush can make it very plain right now.

Mr. Raushenbush. The understanding, as I have it, is that the shipbuilders there turned around to their subcontractors and said:

> Here, we will allow you cost plus 11.1 percent, which is 10 percent of the total. We will allow you that, and we do not want any prices higher than that.

The only thing I was trying to develop through Mr. Parker at this point was the effect of that sort of an arrangement. Whereas normally a subcontractor might come in and say, " Here is my price ", and get it, among other subcontractors, and might make 20 percent profit. Then he would have to turn back some to the Treasury. This arrangement cuts out the Treasury as a benefactor of the subcontractor, as I understand it. The Treasury is never going to get anything back under this arrangement from the subcontractors.

The net result, as I gather, Mr. Parker, of this arrangement is that the shipbuilders have a far larger leeway than they ordinarily would have. Where they might have a little more charged to them normally by the subcontractors, and have a smaller margin to operate on for profit and the like, this practically takes out a large part of the risk, or a substantial amount.

Senator Barbour. I would like to ask Mr. Parker a direct question. Did you ever participate in the profits of a subcontractor in the sense of where you permitted them to charge more than the 10 percent permissible under the Vinson Act, and then you shared in it?

Mr. Parker. Senator, this is the first contract under the Vinson Act.

Senator Barbour. I see.

Mr. Parker. We have never had them before. But, to clarify your mind on the old cost-plus contracts——

Senator Barbour. That is really what I was referring to.

Mr. Parker. You had the same situation then, and had cost-plus contracts with all subcontractors, under the old cost-plus contract. And the Vinson Act is a cost-plus contract, and you are having the same arrangement as applying between the Government and the contractor as is applied between the contractor and his subcontractor.

To answer Senator Bone as to how we check the subcontractor, that is not a problem for us. The subcontractor under the Vinson Act must certify, under oath, his costs to the Secretary of the Treasury or the collector of internal revenue, and the checking will be by the Internal Revenue Department. And the Revenue Department, if he makes more than 10 percent, will collect it from him.

Mr. RAUSHENBUSH. There is a memorandum here, Mr. Parker, prepared by a committee of which you seem to be chairman, and I want to offer it for the record as "Exhibit No. 1534."

(The memorandum referred to was marked "Exhibit No. 1534" and is included in the appendix on p. 5256.)

Mr. RAUSHENBUSH. In that memorandum the advantages to the contractor and the advantages to the subcontractor are fairly clearly set out. Under the disadvantages to the subcontractor, you say:

> (1) Loss of a part of the maximum profit allowed by the Vinson Act, if it should be earned.
>
> (2) Will require adoption by code authorities of resolutions permitting violation of any code provisions now in effect which would prevent members from bidding on this basis.
>
> (3) Will disclose costs to shipbuilders currently, and perhaps create a precedent which may be difficult to overcome in the future. A similar disclosure may be made under the Vinson Act, but probably at a much later date, and with no certainty that excess profits under individual contracts will be made public.

Then the memorandum continues:

> E. Possible general advantages.—(1) Mr. Parker fears that the Vinson Act may lead to a new and permanent form of taxation by the Federal Government on all profits over a certain maximum without regard for losses which may be incurred. The general adoption of this proposed plan of letting subcontracts may, in his opinion, either avoid this possibility entirely or at least limit it to Government work, and then only on the main contract without extension to subcontracts.

Do you remember that whole memorandum?

Mr. PARKER. Yes, sir.

Mr. RAUSHENBUSH. The net result of that is, is it not, Mr. Parker, that by making it impossible for subcontractors to turn back any amounts to the Bureau of Internal Revenue for excess profits under the Vinson Act you have increased the margin between your total costs and your bid price?

Mr. PARKER. The explanation of that is rather lengthy. If you will just bear with me, I will give it to you.

Say, assuming you are familiar with the Vinson Act, that under any subcontract in excess of $10,000 the subcontractor must comply with the provisions of the act and must indicate his compliance with the acceptance of it and must certify under oath his costs.

Just shortly after the passage of the Vinson Act it was quite apparent to us, and it was apparent in the requests for tentative proposals to be used in bids that the subcontractors were very fearful of the effect on them of the Vinson Act as applied to subcontractors. Many of the subcontractors were supplying several types of equipment. The "X" company, for instance, would supply one piece of apparatus at $65,000. Normally and ordinarily we would make that a separate contract. Another piece of equipment would be supplied by the same company or the company's competitors on the basis of competitive bids, which would amount to $110,000, and the result was that "X" company got in the course of the whole contract there 8 or 10 contracts, each in excess of $10,000, all of which would be subject, or each of which would be subject, to the Vinson Act.

It was apparent to them that with a limited profit of 10 percent that on maybe 8 or 9 contracts they might lose. The loss was all theirs. And that on the one contract they might win, maybe 25 or 30 percent, and that would have to be repaid, and the net which they would get out of the whole would be a loss. They were a little averse to giving us prices, or averse to quoting. And we recognized the fact that we were going to have great difficulty in performing the contract on this basis, unless we found some solution to it. The solution, then, was just naturally that we would make this on basis of the cost, and instead of making a contract or several contracts, or a dozen contracts, we would make one contract for the ship as a whole. We would give to " X " company all the apparatus on the ship, on a cost-plus-11.11 basis, making one contract out of it. So that if all lost money on one piece of apparatus, due to operating conditions, and made money on another piece of apparatus, he would have the benefit which we do not enjoy, of placing his losses against his profits, and sharing a net profit, if the net profit results.

Mr. Raushenbush. Just in that connection, let me interrupt with a section of this memorandum, " Exhibit No. 1534 ", Mr. Parker, where you point out the advantages to the contractor. The first one is:

> If the subcontractor should exceed the full 10-percent profit allowed by the Vinson Act, the shipbuilder would benefit by, and the subcontractor would lose, a part of such profit.

Was that not really the reason why you were interested in that thing?

Mr. Parker. We were interested in that angle, for this reason: We are entering into a contract with a definite price basis, with a limited profit, taking risk on a rising commodity and labor index, where, if we lose, it is just tough luck, and, if we win, our profits are limited. It is like in a poker game, where you can only keep 10 percent of your winning hands, and the losing hands are all your own. In a very short time the poker game will get you. You cannot live under those conditions.

We realize that if a profit is made, if we can through operations, economies, and efficiency of building the ship develop a profit in excess of 10 percent, it goes to the Government, but it was quite apparent to us that if we made arrangements with some of the subcontractors, which include the same sort of contingencies, over a 3-year period, where they could protect themselves and would have to put in 25 or 30 percent in excess of their normal price for extraordinary contingencies, it might develop—and we would have to pay that price—where we might create a situation where we might lose $2,000,000 on the subcontract and subcontractors might return $2,000,000 to the Treasury on the subcontract.

Mr. Raushenbush. How often did you lose money on Navy ships, Mr. Parker?

Mr. Parker. That I cannot say, except by examination.

Mr. Raushenbush. Did you supply us with that information at one time?

Senator Barbour. To put the question a little differently: How often might you have lost if you had not given it all this thought?

Mr. **Parker.** As a matter of fact, Senator, our naval vessels, from the beginning of our construction up to the war, with the exception of destroyers, on which there was a small amount of profit, we lost money on practically every naval contract.

Senator **Clark.** Is that the reason you were always agitating for a big Navy?

Mr. **Parker.** The benefit of a naval contract was volume; that if you could have a naval contract, even though you lost some small amount of money, or got out with bare cost, you kept your organization and facilities in use, so that, with volume and other work, you could make some money on other work. It provided some sort of a backlog. That was the condition up to the time of the war.

Mr. **Raushenbush.** After the war, you did make money on your naval vessels, did you not?

Mr. **Parker.** On the cost-plus contracts, of course, you made money.

Mr. **Raushenbush.** Since that time you have made money on naval vessels and charged the loss against the merchant-marine vessels, did you not?

Mr. **Parker.** Since what date, sir? We were awarded no naval contracts from the war time up to 1927.

Mr. **Raushenbush.** From 1927 on you did not report any loss on any ships, did you?

Mr. **Parker.** We had no naval contracts except the completion of the *Saratoga*, which was in 1916, sir.

Mr. **Raushenbush.** From 1927 on, I am talking about.

Mr. **Parker.** From 1927 on we made money on naval ships.

Mr. **Raushenbush.** Yes.

Senator **Clark.** You made a good deal of money, did you not, Mr. Parker?

Mr. **Parker.** Yes, sir.

DIFFERENCES BETWEEN ESTIMATES OF COST AND MARGIN OF PROFITS IN BIDS

Senator **Clark.** I have here a letter from Mr. Bardo to the board of directors of the New York Shipbuilding Corporation, dated October 18, 1934, in which he says (reading from "Exhibit No. 1535"):

> Sirs: Having today submitted my resignation as president of this corporation, it seems only fitting that I should leave as a matter of record a brief account of my stewardship.
>
> When I first became connected with this corporation in the latter part of 1925, the shipbuilding activities were only a part of a wide prospective field, including construction of transformers, circuit breakers, electric locomotives, public-utility equipment, etc. These extended activities, together with the change of management which had taken place, resulted in the serious demoralization of the morale of the shipbuilding organization and further resulted in such a falling-off in the quality and character of the work that the corporation and its officers were subjected to very severe criticism and condemnation by the Navy Department for the work which was then in progress.
>
> In the ensuing months, while efforts were being made to reorganize the shipbuilding personnel, the financial affairs of the corporation grew rapidly worse and reached a crisis during the year of 1927.

That was the year on which this new naval building program was put into effect, was it not?

Mr. **Parker.** Yes, sir.

Senator Bone. Was that the year of the Geneva Conference?

Mr. Parker. I do not recall, sir.

Mr. LaRouche. It was.

Senator Bone. A very abortive conference, too.

Mr. Parker. It may have been.

Senator Clark (continuing reading from "Exhibit No. 1535"):

> Following this crisis, progress was steadily made from the standpoint of the corporate organization, financial condition, and reorganization of personnel.

The progress that was made was following on step by step with the increased naval building program, was it not, Mr. Parker?

Mr. Parker. Mr. Bardo wrote the letter, Senator.

Senator Clark. I am asking you from your familiarity with the company whether that is true or not, and if it is not a fact that the progress and improvement in the company's financial condition went along step by step with the increase in naval building authorization?

Mr. Parker. It went along coincident with it.

Senator Clark (continuing reading from "Exhibit No. 1535"):

> It is not necessary to review in detail what has been accomplished in each of these fields. I content myself in pointing out certain pertinent factors of the present situation as compared with that at the end of 1926, as follows:
>
> 1. Net current assets increased from $1,300,000 to $5,000,000.
>
> (Note.—At the end of 1926 there was a tax claim of $3,800,000 which later was settled for $2,350,000.)
>
> 2. Funded debt of the corporation reduced $1,500,000.
>
> 3. Preferred stock reduced from $4,000,000 (including $1,000,000 of preferred stock of a subsidiary afterward sold) to $2,000,000.
>
> 4. Participating and founders stock, 695,256 shares, reduced to 500,000 shares of $1 par value. In doing this we were able to establish the equity relationship between the founders and participating stock so that except for voting rights the stocks are equal in every respect.
>
> 5. (*a*) Balance sheet intangible assets—contract and patent rights, patents, goodwill, etc.—$4,432,845.21, written down to $1.
>
> (*b*) Corporate reorganization and electrical-division development expenses, $532,653.89, written off.
>
> 6. Surplus increased from $1,654,000 to $6,804,000.
>
> 7. Net profit during this period was $6,075,607.70. The average income during this period far exceeds that of any similar period in the corporation's existence, with the exception of the period during and immediately following the war, when all work was on a cost-plus basis.
>
> 8. (*a*) Cumulative dividends defaulted on preferred stock in 1927 and 1928 were paid and preferred-stock dividends have been earned and maintained since 1929.
>
> (*b*) Common-stock holders have received 40 cents per share per year since March 1933.
>
> 9. The value of uncompleted contracts on hand at the present time exceeds those at the end of 1926 by more than $40,000,000.
>
> In other words, during this period the management which came into full control early in 1927 and the reorganized personnel have been able to eliminate the highly dangerous actual and contingent liabilities on the one side and the intangible and highly questionable assets on the other side, and to provide a balance sheet for all the stockholders of which, in my judgment, any company may well be proud.
>
> During the same period the reorganization of the supervisory personnel took place. It is significant, however, that except for two positions this was accomplished by promotions within the plant; the two exceptions being experienced executives from other shipbuilding organizations.
>
> Following this reorganization the spirit and morale of the officers and employees progressively improved and it is due to that fact, as well as to the efforts of the officers and department heads, that great progress was made in improving the quality of the work and in radically reducing the expenses of the accomplishment. As to the quality of the work, I refer to the contrast as between the severe criticism made by high officers of the Navy in 1926 and

the letter in December 1933, from The Assistant Secretary of the Navy, which, as you will recall, commends in the highest terms the technical skill and efficiency of the organization and expresses appreciation for the fine cooperation given by the organization to the Navy Department. I also refer you to the letters and telegrams from Mr. P. A. S. Franklin, president of the International Mercantile Marine Co., expressing his appreciation and admiration for the results of the organization's efforts in building the *Manhattan* and *Washington*. The highly satisfactory performance of the ships in service more effectively emphasizes the skill of our technical and operating forces.

The satisfaction of our customers, the Navy Department, the Export Steamship Corporation, and the United States Lines, is an asset of immeasurable value to the corporation. This has not been obtained at the expense of the stockholders, as evidenced by the substantial income earned during this period. Such net earnings have been increased through the efforts of the staff in reducing costs below the estimates. For example, the actual cost of labor and material upon the three cruisers constructed during this period was $3,620,000 below the estimate or a saving of 15 percent. On the balance of the work a similar comparison shows favorable results. In the case of each Navy contract we have earned substantial bonuses and have incurred no penalties.

Now, those estimates, I mean the bids submitted on those three cruisers, allowed a very large margin of profit above the estimates, did they not, Mr. Parker? The figures were put in evidence here in previous hearings, and there was a very large allowance for a margin of profit between your estimates of cost and the bids which were actually submitted to the Navy Department and awards made as the result of those bids. Is not that correct?

Mr. Parker. There was a margin of profit there.

Senator Clark. There was a very large margin of profit. In all it was $3,000,000, was it not?

Mr. Parker. That was not profit.

Senator Clark. Take the difference between your estimate of labor and material and the award given you.

Mr. Parker. The contract price, but that includes overhead, administrative expenses, contingency allowance, penalty guarantees, and your profit is after that.

Senator Clark. Then this $3,620,000—do you agree with that?

Mr. Parker. It is the saving on labor and material.

Senator Clark. That was the saving below the estimate?

Mr. Parker. Labor and material estimate.

Senator Clark. And that 15 percent simply represented "velvet" to the company, did it not?

Mr. Parker. That is right.

Senator Clark (continuing reading from "Exhibit No. 1535"):

Improvement has not been confined to the production field but has been extended also into important items of overhead, such as local taxes, fire and compensation insurance. We are advised by the State rating bureaus that we enjoy the lowest rate for any comparable industry in the State of New Jersey for fire and compensation insurance. Notwithstanding an increase in the tax rate of 25 percent, the actual taxes paid on the shipbuilding plant have increased less than 10 percent.

Do you understand how that was accomplished, Mr. Parker?

Mr. Parker. Yes.

Senator Clark. With the tax rate going up and your property account constantly increasing, how do you account for that?

Mr. Parker. The property account was not increasing. The property account was decreasing.

Senator Clark. How was the property account decreasing?

Mr. PARKER. The property in 1925 was appraised and restated at high value, in the days of the American Brown Boveri Electric Co. As stated in that and as shown in the balance sheet shown to the committee, that reflects current adjustment downward, some writing off of plant values.

Senator CLARK. You were appraising your property at lower value?

Mr. PARKER. Exactly; and proving it to the tax appraisers.

Mr. LAROUCHE. Did not Harry Humphreys have something to do keeping that down?

Mr. PARKER. He assumed some credit for it, Mr. LaRouche.

Senator CLARK. He was paid on that basis, was he not?

Mr. PARKER. Many people are.

Senator CLARK (continuing reading from "Exhibit No. 1535"):

> These results have been brought about not only by the experience, skill, and efficiency of the supervisory personnel and the excellent morale of the rank and file, but also by the harmonious cooperation of all department heads and their subordinates. Shipbuilding is a highly complex industry, which by its very nature requires a diversified personnel.

I am inclined to agree with that myself. [Continuing reading:]

> The avoidance of discordant elements within our organization has been one of the most important factors in improving the financial standing of the corporation, in placing it in such high standing with its customers, and in producing the favorable earning results in the past years. I am confident that a continuation of this policy will assure the success of the corporation in future years.
>
> Respectfully yours,
>
> C. L. BARDO.

That certainly shows that since 1927, when the new naval building program started, the company has been doing very, very well, does it not, Mr. Parker?

Mr. PARKER. Yes, sir.

Senator CLARK. I offer that letter for appropriate number.

(The letter referred to was marked "Exhibit No. 1535" and is included in the appendix on p. 5257.)

Mr. RAUSHENBUSH. Mr. Parker, you submitted at the committee's request the stockholders having 1 percent or more at various dates.[1] Will you identify that as correct [handing papers to witness]?

Mr. PARKER. May I qualify that, Mr. Raushenbush? I submitted your request, or the request of the committee, to our secretary, and our secretary, Mr. Pruitt, prepared this list, and I passed it in. I did not accompany it with any letter. I submitted it, but it was prepared by our secretary, Mr. Pruitt.

Mr. RAUSHENBUSH. Is Mr. Pruitt going to be here again?

Mr. PARKER. I believe he will be here later.

Mr. RAUSHENBUSH. Can you, from your own knowledge, identify the board of directors, the present board, who have 1 percent or more of the stock as listed on that sheet, dated December 22, 1934?

Mr. PARKER. This does not list any of the present board of directors as stockholders.

Mr. RAUSHENBUSH. None of the present board of directors have stock, then, we may take it, stockholdings of 1 percent or more of the company's outstanding stock in each classification?

---

[1] Entered as "Exhibit No. 1547", see p. 5136.

Mr. Parker. That is what the list would indicate, if it is correct. I did not prepare it.

Senator Clark. I would like to ask Mr. Parker another question. Referring, Mr. Parker, to this letter which I just read, this figure given by Mr. Bardo as to the saving under the estimates for labor and material on the three cruisers of $3,620,000, that is correct, is it?

Mr. Parker. Yes, sir.

Senator Clark. So that during this period since 1927 there was an actual saving of 15 percent under the estimates on labor and material costs. Is that correct?

Mr. Parker. Yes, sir; approximately.

Senator Clark. Which would indicate, would it not, that the cost of labor and materials was decreasing during that period?

Mr. Parker. Yes, sir.

Senator Clark. Then, what was the justification of an increase of nearly 100 percent during the same period in the bids submitted to the Navy Department for cruisers and the awards of cruisers during that period?

Mr. Parker. That was not the case, sir.

Senator Clark. It was the case. In 1932 a cruiser was awarded for $8,000,000.

Mr. Parker. Not the New York Shipbuilding Corporation.

Senator Clark. No; not the New York Shipbuilding Corporation, but, as this chart[1] shows, the general trend of all the shipbuilding companies was approximately constant, and, while your own figures show a saving during that period of $15,000,000 on labor and materials cost at the very same time that chart shows a constant rising scale of bids and awards. What is the justification for that?

Mr. Parker. Senator, it is quite apparent to anyone familiar with long-term contracts, that long-term contracts have their chances both ways. That if you have a long-term contract, at a firm price, and you fall into a depression or a decrease in the commodity and labor indices, regardless of efficiency and regardless of the credit that Mr. Bardo would take to himself for that accomplishment in his letter, it was due to the conditions of the time. A long-term contract on a fixed-price basis must necessarily result in a decreased cost.

Senator Clark. Yes; but what I am getting at, Mr. Parker, is this: I am trying to find an explanation of the fact that cruiser costs increased from approximately $8,000,000 in December 1932 to approximately $16,000,000 in August 1934, at a time when the actual construction costs were 15 percent under the estimates.

Mr. Parker. The converse is likewise true, on a long-term contract, on a rising market, and that goes for the contractor or subcontractor. He must add those contingencies, if he thinks he is in a rising market. I can only speak for New York Shipbuilding Corporation's bids.

In 1927, the one contract there, the first contract on which we bid and were awarded the contract, our price was $10,815,000, in 1927, the cruiser *Chester*. Our next bid, incorporating in the next ship more than was contemplated or specified in the first ship, was $10,903,200 for the cruiser *Indianapolis*, a slight difference.

---

[1] See appendix, p. 5274, for cruiser bids and estimates chart.

Mr. Raushenbush. At the same time your estimates were $703,000 lower?

Mr. Parker. Yes, sir.

Mr. LaRouche. At the same time you got about $1,000,000 in extras on that job.

Mr. Parker. That was for additional work entirely.

Senator Bone. Mr. Parker, here is the president of your corporation. on October 18, 1934—and we can only assume, and I think justly so, that he knew what he was talking about—and he seems to have given every evidence of being pretty smart in that business, when testifying—who is saying that during the period 1927 and 1928 the actual cost of labor has been below the estimate, amounting to a saving of 15 percent. In other words, labor going down, or, in other words, a lessening of the labor cost involved in one of these vessels. Is not that what he is saying in there?

Mr. Parker. I think I can answer your question, if you will permit me to finish my reply to Senator Clark.

Senator Bone. Go ahead.

Mr. Parker. On the *Chester*, the $10,815,000 in 1927 has been referred to; $10,903,200 for the *Indianapolis*, which had more work on it originally, not including the changes which were additional, but the original specifications had more work; the *Tuscaloosa*, $10,450,000, which still had more work than was on the other two—there are practically no differences in the prices in that period.

The price on the 1933 two cruisers, which, of course, was on the basis of N. I. R. A. code limitation of hours, increase of pay, as provided in the code, was $11,677,000.

Mr. LaRouche. In 1933?

Mr. Parker. In 1933. The last one, in 1934, was $11,975,000, scarcely 10 percent more, or less than 10 percent more, with more than 20 percent additional work over the work specified on the vessel of 1927.

PERCENTAGE OF LABOR IN SHIP CONSTRUCTION [1]

Senator Bone. What increase did the codes require in labor costs? The average man working in shipyards, how much more did he get by reason of the code? Ten percent increase?

Mr. Parker. The code minimum.

Senator Bobne. Can you give us some definite figures on that?

Mr. Parker. The code minimum required about 10.12 percent as a code minimum.

Senator Bone. Did you pay above the minimum?

Mr. Parker. We did.

Senator Bone. How much?

Mr. Parker. 25 percent.

Senator Bone. You mean 25 percent above the minimum?

Mr. Parker. We paid the men the equivalent for 32 hours work, that they had received for 40 hours prior, 25 percent less hours.

Senator Bone. Reflected in percentage, how much would that add to your labor costs over and above the previous figures?

Mr. Parker. We assumed that the code would add at least the code minimum; that the efficiency of operation and the savings already reflected on former vessels would make up the difference.

---

[1] See illustration "Costs of naval construction", appendix, facing p. 5274.

So that our labor estimate, in total, and our bid, taking the factors of overhead which necessarily were involved because the 32-hour operation involved additional overhead, additional operation, and additional efficiency, supplementing all overhead forces, which build the overhead up, too, the net result of the contract bid of $11,677,000 in 1933, of $10,450,000 for the *Tuscaloosa*, and $10,903,200 for the *Indianapolis*, and $10,815,000 for the *Chester*, was scarcely 10 percent-increase in the total price.

Senator Bone. Senator Clark is asking about a bid on cruisers which reflects a 100-percent increase.

Mr. Parker. It was not our bid. You will have to ask the man who made it.

Mr. Raushenbush. Wait a minute, Mr. Parker. We had that out with Mr. Langell the other day. The bid we are referring to is the adjusted-price bid on which the Government took the gamble over and above the bid. You also put in the fixed-price bids, which are reflected there in comparison with the others away up there [referring to chart].

Mr. Parker. There was no adjusted bid except the last contract. If you compare the 1933 bid with any of them before, you have $11,677,000 for 1933, having full effect of the code.

Mr. Raushenbush. In 1933 we find a bid from New York Ship of over $15,000,000 on a fixed-price basis.

Senator Bone. How much of the cost of a ship—one of the cruisers, battleships, or any type of ship—how much of that cost is reflected in labor cost? In other words, if you build a ship in your yard, how much actually goes to labor?

Mr. Parker. You have it there, Mr. Raushenbush.

Senator Bone. I am not talking about salaries of executives, but about the men who actually build the ship.

Mr. Parker. The proportion, I imagine, is about 45 percent. It is about four million. At the present time it is pretty nearly fifty-fifty; just about half and half.

Senator Bone. The actual cost?

Mr. Parker. Fifty percent is material and 50 percent labor.

Senator Bone. Do you find yourself in agreement with the statement that 85 percent of the cost of a ship goes to labor?

Mr. Parker. On the work required in connection with it, that is, the materials.

Senator Bone. That is a blanket statement made by the Navy and others, that 85 percent of the cost of the ship goes to labor.

Mr. Parker. I think that is true.

Senator Bone. If that is true, can you tell us the reason for the 100-percent increase in cost of vessels, as compared to a lesser increase in the cost of labor?

Mr. Parker. I cannot agree at all, sir, to 100 percent. I can tell very well where it comes in.

Senator Bone. The Government has an interest when we appropriate money for the ships.

Mr. Parker. In our bid?

Senator Bone. That is one of the "Big Three."

Mr. Parker. Our bids were $10,815,000 for the *Chester*, $10,903,200 for the *Indianapolis*, $10,450,000 for the *Tuscaloosa*, and $10,677,000 for 1933.

Senator BONE. There was a bid of $8,000,000 in 1932 which rose to $16,000,000 less than 2 years later, Mr. Parker.

Mr. PARKER. If someone has raised the bid 100 percent, let them defend it.

Senator BONE. You are not aware of that?

Mr. PARKER. No, sir.

Senator BONE. You have not heard that?

Mr. PARKER. I have heard it, but I am not aware of it.

Senator BONE. Those of us who have to appropriate the money are painfully aware of it, and the people who have to pay the bills are painfully aware of it.

Mr. PARKER. I can only speak for our own bids.

Senator BONE. I am interested in knowing whether labor is getting any of this overplus or surplus, or whether you fellows are getting it. If it goes into wage envelops, it would not be quite so bad.

Mr. PARKER. If the contract for the *Indianapolis* in 1929, which was $10,903,200, is compared with the contract for the cruisers in 1933 of $11,677,000, or $700,000 increase, notwithstanding an increased minimum under the code of 11.11, and notwithstanding certain material increases, notwithstanding the increase in the overhead and the limitation of hours and the working of extra forces, a $700,000 increase, 1933 over 1929, is a very small increase.

Senator BONE. It may be wholly justified. That may be entirely and wholly justified, but I am talking about the increase in bid prices of cruisers, which have been described here by Senator Clark.

Mr. RAUSHENBUSH. Senator, the transcript shows the official Navy information on bids, and that has been sent for and will be here very shortly.

REPLIES OF NEW YORK SHIPBUILDING CO. TO COMMITTEE REQUESTS

Mr. RAUSHENBUSH. While you are still here, Mr. Parker, we will ask you to identify some of this information which was given to the committee. In reply to question no. 10,[1] on ownership of bonds in blocks of 5 percent or over, is this a reply prepared by you and a correct reply? [Handing paper to witness.]

Mr. PARKER. Yes, sir.

Mr. RAUSHENBUSH. I will ask one question in regard to it. It lists as being owned by domestic corporations $2,500,700 worth of bonds. Can you identify those corporations which hold those bonds?

Mr. PARKER. The coupon and certificates attached are returned to us from various banks as being owned by domestic corporations. There is no identification that is possible for those particular bonds by us.

Mr. RAUSHENBUSH. You do not know at all what domestic corporations own those bonds?

Mr. PARKER. The only thing I know is the original issue of those bonds, to whom those bonds were originally issued.

Mr. RAUSHENBUSH. I offer that statement as " Exhibit No. 1536."

(The statement referred to was marked " Exhibit No. 1536 ", and is included in the appendix on p. 5259.

---

[1] See Hearings, Part XVIII, p. 4526.

Mr. RAUSHENBUSH. Mr. Parker, I ask you to identify the reply of your company for information concerning the income taxes of the company during the period 1915 to 1920, inclusive. I do not want to offer this for the record but want to mark it "Committee's Exhibit No. 2 (New York Ship)."

(The document referred to was marked for identification "Committee Exhibit (New York Ship) No. 2" and is on file with the committee.)

Mr. RAUSHENBUSH. I ask you to identify your reply to inquiries 18 and 19,[1] the fees or commissions paid on United States governmental business for the years 1920 to 1934, inclusive, and all fees for legal services, including retainers and other expenses, 1920 to 1934. Is that the complete information? [Handing papers to witness.]

Mr. PARKER. That has not been completed as to item 19. That is being completed and will be furnished the committee on completion.

Mr. RAUSHENBUSH. It will be furnished the committee upon completion?

Mr. PARKER. Yes, sir.

Mr. RAUSHENBUSH. Was there a change in the attorneys of the company when the Cord Corporation went in and took control?

Mr. PARKER. Yes.

Mr. RAUSHENBUSH. Who were the new attorneys appointed?

Mr. PARKER. Pruitt & Grealis, in place of White & Case, general counsel.

Mr. RAUSHENBUSH. Were there any other changes?

Mr. PARKER. Goldwater & Flynn were appointed New York counsel, since Pruitt & Grealis were in Chicago, and Shepard, Porter, Foulkard & Alexander were named as local counsel in Philadelphia.

Mr. RAUSHENBUSH. What work has Mr. Flynn done for the shipbuilding company since he was appointed attorney?

Mr. PARKER. He works under the direction of the general counsel, and I have no connection with him.

Mr. RAUSHENBUSH. The general counsel?

Mr. PARKER. Mr. Pruitt.

Mr. RAUSHENBUSH. Your general counsel?

Mr. PARKER. Yes, sir.

Mr. RAUSHENBUSH. I offer this for the record as "Exhibit No. 1537."

(The documents referred to were marked "Exhibit No. 1537", and are included in the appendix on p. 5262.)

Mr. RAUSHENBUSH. That is offered as a combined exhibit. You have furnished us, in reply to questions 16 and 17,[2] all company contributions, dues, entrance fees, loans, and so forth, to all National or State associations or individuals; a summary of all publicity and/or propaganda expenses disbursed by the company and/or its officials for magazines, press, radio, or for publicity consultation and assistance, 1920 to 1934, inclusive [handing papers to witness].

Mr. PARKER. As far as 1917 publicity is concerned, that is as much as we now know. The other item was incomplete, and is being prepared and will be submitted to the committee, and if any further publicity should be disclosed in the examination of the accounts, that will be shown also.

---

[1] Hearings, Part XVIII, p. 4529.
[2] Ibid., p. 4528.

Mr. RAUSHENBUSH. But you are examining the accounts to get that?

Mr. PARKER. Yes, sir.

Mr. RAUSHENBUSH. I offer that for the record as "Exhibit No. 1538."

(The statement referred to was marked "Exhibit No. 1538", and is included in the appendix on p. 5264.)

Mr. RAUSHENBUSH. And the names of all representatives or agents of the company in the United States or abroad, together with their salaries, the expense itemized by individuals for the years 1920 to 1934, inclusive.[1] You furnished this?

Mr. PARKER. And supplemented that with further detail.

Mr. RAUSHENBUSH. And supplemented that with further detail, which has been already entered, and I ask that this be entered as "Exhibit No. 1539."[2]

(The letter referred to was marked "Exhibit No. 1539", and is included in the appendix on p. 5266.)

Mr. RAUSHENBUSH. Will you identify information supplied to the committee in reply to questions 12 and 25,[3] obtaining copies of the minutes of the board of directors and/or any executive committee of such board from 1915 to 1934, inclusive?

Mr. PARKER. You have the matter; yes, sir.

Mr. RAUSHENBUSH. Will you identify these minutes [handing papers to witness]?

Mr. PARKER. Yes, sir.

Mr. RAUSHENBUSH. Those are correct?

Mr. PARKER. Yes, sir.

Mr. RAUSHENBUSH. I am not offering those, but since they are identified will mark them "Committee's (New York Ship) Exhibit No. 3."

(The document referred to was marked for identification "Committee Exhibit (New York Ship) No. 3", and is on file with the committee.)

Mr. RAUSHENBUSH. We requested, Mr. Parker, the list of campaign contributions[4] made by the company or its officials, and you have handed me various groups of those for various dates. Do you know off-hand how many of the present directors have replied to that questionnaire showing their campaign contributions?

Mr. PARKER. I believe that all the present directors have replied.

Mr. RAUSHENBUSH. Is Mr. Brush a present director?

Mr. PARKER. No, sir.

Mr. RAUSHENBUSH. He has not replied.

Is Mr. Kenny a present director?

Mr. PARKER. No.

Mr. RAUSHENBUSH. He has not replied. Did you, or did Mr. Kaltwasser, send out these requests for this information to these individuals, Mr. Parker?

---

[1] Ibid., p. 4523.

[2] Supplementary detail entered as "Exhibit No. 1529." See, infra, p. 5083.

[3] See Hearings, Part XVIII, p. 4529.

[4] Ibid., p. 4523.

Mr. PARKER. I think we both did it. I do not recall. Who signed the letter?

Mr. RAUSHENBUSH. Mr. Kaltwasser signed the letter. Did Mr. Kaltwasser send it out?

Mr. PARKER. I sent part of them out and Mr. Kaltwasser sent part of them out.

Mr. RAUSHENBUSH. But all those signed by Mr. Kaltwasser were sent by him?

Mr. PARKER. Yes, sir.

Mr. RAUSHENBUSH. Mr. Kaltwasser, were you trying to be helpful to the committee in getting this information?

Mr. KALTWASSER. Absolutely.

Mr. RAUSHENBUSH. We find that you did not get replies from some of the former directors, Mr. William Findlay Morgan, for example, and we turn over to the envelop you sent to him addressed Mr. William Findlay Morgan, New York, N. Y. Did you expect that letter to be received at New York, N. Y., by Mr. William Findlay Morgan, under that address?

Mr. KALTWASSER. I was depending on Mr. Parker to furnish the address.

Mr. PARKER. Mr: Raushenbush, we used every effort to locate the man's address, telephone books, and through the telephone exchange, and we could not find him, and we took the only chance of the Post office being able to find him.

Mr. RAUSHENBUSH. Charles Stillman is another New York address.

Mr. PARKER. Yes, sir. He is well known in New York, and he may be dead. I have a reply from the wife of one that he was dead, and had been dead for some time.

Mr. RAUSHENBUSH. Mr. Henry M. Wehrhane, New York.

Mr. PARKER. I believe he is dead.

Mr. RAUSHENBUSH. These replies from Mr. Kenny and Mr. Brush, and so forth, which have not come in, were they similarly addressed to New York City?

Mr. PARKER. I think I gave you a reply from Mr. Brush's secretary that he is in the South, and the letter would be put before him on return.

Mr. RAUSHENBUSH. And as to Mr. Kenny, that he was in China?

Mr. PARKER. Yes, sir.

Mr. RAUSHENBUSH. You can identify these as correct replies?

Mr. PARKER. Yes, sir.

Mr. RAUSHENBUSH. We will mark them as "Committee's (New York Ship) Exhibit No. 4."

(The documents referred to were marked for identification "Committee Exhibit (New York Ship) No. 4", and are on file with the committee.)

Mr. RAUSHENBUSH. I ask you to identify reply to question no. 26, copies of all agreements with foreign companies on sales of patents, including payments made under such agreements.[1] Is that the information [handing paper to witness]?

Mr. PARKER. I listed under this the patents and the agreements with foreign companies and gave you copies that were available.

---

[1] Hearings, Part XVIII, p. 4529.

There are some companies in here which I will complete. I will try to get these payments, if you think it necessary, but the payments are so involved, having to do with the electrical business, I am sure it cannot be done. On the shipbuilding business I can give it to you, and will do it.

Mr. RAUSHENBUSH. All right, if you will do that on shipbuilding.

We will mark that as "Committee (New York Ship) Exhibit No. 5."

(The documents referred to were marked for identification "Committee Exhibit (New York Ship) No. 5", and are on file with the committee.)

You supplied us also with the estimates for the merchant marine as well as for the naval vessels?[1]

Mr. PARKER. Yes, sir.

Mr. RAUSHENBUSH. I ask you to identify these [handing papers to witness].

Mr. PARKER. That is correct, sir.

Mr. RAUSHENBUSH. I will ask that that be marked for entry as "Exhibit No. 1540."

(The statement referred to was marked "Exhibit No. 1540" and is included in the appendix on p. 5266.)

Mr. RAUSHENBUSH. Will you identify the reply to request no. 24, copies of all data, memoranda, correspondence, dealing with the enactment and enforcement of the Vinson Act?[2]

Mr. PARKER. You have everything there.

Mr. RAUSHENBUSH. As I understand it, there are some originals which you want back?

Mr. PARKER. Yes, sir.

Mr. RAUSHENBUSH. We will mark it "Committee's (New York Ship) No. 6", and we will try to get that back to you in the near future, as soon as we have studied it.

(The documents referred to were marked for identification "Committee Exhibit (New York Ship) No. 6", and are on file with the committee.)

Mr. PARKER. I would like to have this back [handing book to secretary].

Mr. RAUSHENBUSH. The other day a question was asked as to an investigation made by the Cord Corporation before taking over New York Ship, and you hand me herewith a volume entitled "New York Shipbuilding Corporation and Subsidiaries, Report on Investigation", dated August 12, 1933, by Arthur Young & Co.[3] Is that correct?

Mr. PARKER. This is a report made by them after the taking over. There was no examination made before the taking over by the Cord interests.

Mr. RAUSHENBUSH. You mean the Cord Corporation bought the company without examination?

Mr. PARKER. Yes, sir.

Mr. RAUSHENBUSH. And this is the only report available?

Mr. PARKER. Yes, sir.

---

[3] See text, supra, p. 4999.

Mr. Raushenbush. That will be returned to you and marked Committee Exhibit No. 7 (New York Ship)."

(The document referred to was marked for identification "Committee Exhibit (New York Ship) No. 7", and is on file with the committee.)

PERCENTAGE OF LABOR IN SHIP CONSTRUCTION [1]

Senator Bone. I want to ask one question, to see if you can give me some information as to this, Mr. Parker: As between the present time, 1935 and 1927, can you tell us whether your actual labor costs in the yard, that is, the actual costs for labor reflected in a completed ship, are more or less now than in 1927? In other words, if it was 50 percent of the total cost of a vessel, properly chargeable to labor, in 1927, what would that be now? What is the variance or variation, if any?

Mr. Parker. The actual cost of labor in the yard is higher now than it was in 1927.

Senator Bone. Measured in percentage, you would say, then, that a greater proportion of the cost of the ship might properly be charged to labor now than in 1927?

Mr. Parker. Yes, sir; approximately it was 45 percent labor and 55 percent material.

Senator Bone. Now, you think it is about 50-50?

Mr. Parker. Now, I think it is about 50-50. That is due entirely to increases in labor rates.

Senator Bone. What part of that, if any, is attributable to the adoption of the codes, and, if it is not to be attributed to that, to what do you attribute it?

You do not recognize the A. F. of L. unions.

Senator Clark. How much of it would you attribute to the strike which you had over there?

Senator Bone. You do not recognize organized labor, do you?

Mr. Parker. You are arriving at another factor when you say 45-55 in 1927 and 50-50 in 1935. The factors of importance, of course, are the increase in rate of approximately 25 percent due to the code.

Senator Bone. I do not expect you to be hairlined in your accuracy on anything.

Mr. Parker. And it is also due to limitation of hours and increase in the number to perform the work in a limited number of hours and get the work done in time, and adding more men to the pay roll. But that is off-set, of course, by one very important item, and that is that the men themselves are working at a higher degree of efficiency now than they were in 1927. To that extent Mr. Bardo's report is quite true, that in 1927 they were at a very low spirit. The efficiency of the yard in man-hours is higher.

Senator Bone. Does that mean that the actual worker is now getting any more money in his pay envelop than he got before, but that a readjustment of the hours and a stepping up in the tempo of efficiency has resulted in this increase in labor costs, together with changes that the code required?

---

[1] See chart "Costs of naval construction", appendix, facing p. 5274.

Now, what is the truth about the picture? Does the actual worker in your yard get more in dollars and cents in his pay envelop than before, or less?

Mr. PARKER. He gets more in dollars and cents per week.

Senator CLARK. That is due to the strike, is it not?

Mr. PARKER. I do not believe it was necessary to strike.

Senator CLARK. They did have a strike immediately preceding the increase in wages, did they not?

Mr. PARKER. Strikes are like mumps, and they are going to come out with the germ.

Senator CLARK. You had a strike immediately preceding the new wage adjustment, did you not?

Mr. PARKER. I think the men could have obtained the same without the strike, but the psychology was such that they had to have it.

Senator CLARK. You had a strike immediately preceding the new wage adjustment, did you not?

Mr. PARKER. No; we increased the wages not only to the code minimum but beyond the code minimum.

Senator CLARK. What was the strike about?

Mr. PARKER. About the same things which caused every other strike in the United States.

Senator CLARK. What were the things?

Mr. PARKER. The idea that " if we can get them on the hip, we can get a lot from them."

Senator CLARK. Was not the strike about an increase in wages, as a matter of fact?

Mr. PARKER. Not one-half as much as recognition under clause 7 (a).

Senator BONE. If, under the code, the shipping companies of the country had managed to freeze the building of new yards, any more yards, or the expanding of the yards, with any kind of combination at all between the " big three ", you sort of had poor Uncle Sam on the run, did you not? You see, we have got to credit the unions for being just as smart as business men. They see you fellows putting Uncle Sam in a tough spot with the code, and maybe they figured they could put you in a tough spot. I just wondered if that thought ever occurred to you.

Mr. PARKER. We can imagine them thinking of most everything.

Senator BONE. They saw the shipbuilding companies tilt the ante from $8,000,000 to $16,000,000, and they saw an opportunity for a lot of easy money, and they thought if you fellows could put Uncle Sam on the spot and freeze out any more yards, and keep the Government from building any more yards, they would have Uncle Sam where the hair is short.

Mr. PARKER. We did not freeze out any yards. Yards are building naval ships which never did before.

Senator BONE. Which ones?

Mr. PARKER. Federal and United Drydocks.

Senator CLARK. Did you hear Mr. Bardo's testimony yesterday?

Mr. PARKER. No, sir.

Senator CLARK. Did not Mr. Bardo testify that New York Ship did everything to obtain the insertion in the code of a provision against the construction of any additional shipyards?

Mr. PARKER. That is quite true.

Senator CLARK. And also undertook to influence various political functionaries, among them the R.F.C., against any loans for shipbuilding yards?

Mr. PARKER. That is new yards.

Senator CLARK. That is what I said.

Mr. PARKER. There were enough yards already. The New York district has enough yards to build all the ships the Navy is going to build. There are enough shipbuilding facilities now, without constructing new yards, to build five times what the Navy contemplates building.

Senator CLARK. That does not seem to be in harmony with Admiral Land, that the whole naval construction program had been held up because the New York Ship could not turn out the plans for the vessels. It seems that there were not enough facilities.

Mr. PARKER. I do not believe that is a true assertion.

Senator CLARK. The committee will be in recess until 10 o'clock tomorrow morning.

(Thereupon, at 12:05 p. m., the committee was recessed until tomorrow, Thursday, Feb. 7, 1935, at 10 a. m.)

INVESTIGATION OF MUNITIONS INDUSTRY

THURSDAY, FEBRUARY 7, 1935

United States Senate,
Special Committee to Investigate the
Munitions Industry,
Washington, D. C.

The hearing was resumed at 10 a. m., in room 357, Senate Office Building, pursuant to recess, Senator Arthur H. Vandenberg presiding.

Present: Senators Clark, Vandenberg, and Barbour.

Also present: Stephen Raushenbush, secretary to the committee; and F. W. LaRouche, investigator.

Senator Vandenberg. The hearing will come to order. Mr. Chappell.

TESTIMONY OF PHILIP W. CHAPPELL

1934 STRIKE IN NEW YORK SHIPBUILDING CORPORATION'S YARDS

(The witness was duly sworn by Senator Vandenberg.)

Senator Vandenberg. Give the reporter your full name, Mr. Chappell.

Mr. Chappell. Philip W. Chappell.

Senator Vandenberg. What is your position?

Mr. Chappell. Commissioner of Conciliation.

Senator Vandenberg. Very well, Mr. Raushenbush.

Mr. Raushenbush. Mr. Chappell, in the course of your duties as Commissioner of Conciliation you were assigned to the labor disturbances at the New York shipyards at Camden, were you not?

Mr. Chappell. Yes, sir.

Mr. Raushenbush. Will you relate the history of your negotiations there to the committee?

Mr. Chappell. I was assigned there on April 5, 1934. The strike had been in progress since about March 28, as I recall it. We immediately went into conference that day, but both sides seemed rather adamant, and it was several weeks before any suggestion of an agreement could be reached, and Mr. Bardo finally offered a 6-percent wage increase, without any recognition of the union.

This union was not affiliated with the A. F. of L. It was a union that had started as a sort of employee-representation plan, group in the plant, and as I understood the story, the president of the union had been taken sick and sent to the hospital, and while he was gone the vice president took control of the union and sort of kicked it over the fence, and the strike was pulled.

Along about 10 days or 2 weeks after my arrival there, Mr. Bardo made this proposition of 6 percent, and insisted the matter be put to a secret vote of the union. At the same time, as I recall, there was quite a broadcast come out from both sides in the newspapers in Camden. You see, at that time we also had several other strikes. There were something like 7,000 people on strike in Camden at one time, all more or less associated with the Socialist group there, under Socialist leadership.

And at the meeting of the men in the union, which I attended, when the vote was taken, they did not take a secret vote. They voted that down, but they overwhelmingly voted against the proposition.

Then Mr. Bardo, who conducted practically all the negotiations for the company, endeavored to refer it first to another board. He wanted to refer it to the New Jersey Regional Board, of which, I think, he was then a member. He tried to inject the industrial relations board of the shipbuilding code into it, although that board had never been completed. He threatened to turn it over to the Philadelphia Regional Labor Board. But the men, not being affiliated with the A. F. of L., objected to turning their case over to any board on which the only labor representation was A. F. of L. representation.

So, finally, the secretary, or, rather, Mr. Kerwin, who was head of the conciliation service, made an investigation here in Washington, and he wired me along the latter part of April that at that time I was the only Government agency authorized to have any contact with the strike.

Mr. LaRouche. Mr. Chappell, excuse me, but right at that point, what was the reason for that wire?

Mr. Chappell. Because there had been so much bickering back and forth as to whom was to have jurisdiction.

Mr. LaRouche. Bickering between whom?

Mr. Chappell. Between the men, Mr. Bardo, and myself, you might say. We would get into a conference and Mr. Bardo would say, " Well, we cannot get anywhere. We will have to turn this over to some other board."

And as a result of that, we were not getting anywhere in our conferences.

Mr. LaRouche. You did not feel that that was deliberate on Mr. Bardo's part, did you?

Mr. Chappell. Well, I think it was the position almost any employer would take under those conditions.

Mr. LaRouche. You mean, stall the situation along?

Mr. Chappell. Well, to stall along, yes; because one way to win a strike is to starve them out.

Mr. LaRouche. Starve them out. Do you think he was trying to do that?

Mr. Chappell. That is what I would have done if I had been in his place.

So, right after that another meeting was scheduled, and, in fact, I had arranged a meeting, and when I arrived at the office of the company I found the committee assembled in the outer office, and I went in to Mr. Bardo's private office and was introduced to two gentlemen who had been brought up from Washington, and I inquired if they were to participate in the meeting or expected to, and Mr. Bardo made the remark to me that he had told me that if we could not settle this dispute, that they would have to turn it over to someone who could.

Mr. LaRouche. Who were those two men?

Mr. Chappell. One of them was Mr. Weaver—I think he was administrator of the shipbuilding code.

Senator Clark. He was formerly connected with the Newport News Shipbuilding Co., was he not?

Mr. Chappell. Yes; I think he was. I know that he was. And the other was a Captain Williams, of the Navy.

Mr. LaRouche. What was Captain Williams' job?

Mr. Chappell. At that time I think he was associated in some way with the Shipbuilding Code Authority. I am not sure of that.

I told the two gentlemen and Mr. Bardo—and I showed them this telegram which had been sent to me from Washington—and told them that if they cared to sit in in the conference as observers, it was all right, but that if they were going to participate, that I would not go on with the conference; that I had arranged with the men for a conference between the company officials and myself the afternoon before, and that Mr. Bardo evidently knew the afternoon before that these two men were to be there, and that it was no more than fair to the men and myself that he should have notified us.

Mr. Weaver made the statement that they should have no objection, as the President had discussed the matter with General Johnson, and the general had suggested that he come up, and that as he was the representative of General Johnson there should be no objection to his being there; and that as Captain Williams was connected with the Navy, and the Navy was very much interested because of the *Tuscaloosa* being in the yards, that they should not object to him.

However, they agreed not to enter into the discussion. When we went out with the group from the union, the chairman of the union committee made the same inquiry as I had made, and they were assured by both Mr. Weaver and Captain Williams that they were simply there as observers.

However, as the meeting progressed, Mr. Weaver was brought into the discussion in sort of an informal way.

Senator Clark. Who brought him in?

Mr. Chappell. If I am not mistaken, I did, by asking a few questions in regard to wage rates at Newport News.

Mr. LaRouche. Excuse me. What sort of questions do you mean, Mr. Chappell?

Mr. Chappell. Well, we had never been able to get from Mr. Bardo any competitive rates, although I felt very confident that he had on file there the rates in the other yards. Mr. Bardo kept contending that his rates were higher than they were in any other yard in the industry, with the possible exception of some of those around New York which were more or less repair yards.

But I think, as I recall, that was the way that Mr. Weaver was injected into it at that time.

Later in the morning, however, Mr. Bardo said that he thought that Captain Williams had something he would like to say, and the captain started by asking some of the men who had been down here in Washington, a committee which had been down here several times, questions as to what they found out while they were down here. And finally he intimated very strongly that unless these men went back to work, that the Navy would take the *Tuscaloosa* out of the yard in an unfinished condition.

Mr. LaRouche. Who did that?

Mr. Chappell. Captain Williams.

Mr. LaRouche. He said that, unless the men took Mr. Bardo's terms, the Navy would take the *Tuscaloosa* away?

Mr. Chappell. It practically amounted to that. I objected on the grounds as a representative of the secretary, that I did not feel that any Government agency had a right to come into a meeting of that character and threaten the men that the Government would take that vessel out unless they met the company's terms.

During the meeting Mr. Weaver sat right next to John Green, who was president of the union, and I noticed they had quite a little conversation together. After the meeting adjourned, I went on back to Philadelphia, where I was staying, and that afternoon I had occasion to call up Green, and he seemed very much surprised that I was in Philadelphia because, as he said, Mr. Weaver had explained to him that Mr. Weaver and myself would meet with Mr. Bardo that afternoon and try to get him to come up on his rates to a point where the strike could be settled. And he made an engagement with Green to meet the union committee at the union headquarters that night at 6 o'clock.

Senator Clark. Weaver made that engagement?

Mr. Chappell. Yes.

Mr. LaRouche. Unknown to you?

Mr. Chappell. Unknown to me, although I was supposed to be a party to the afternoon meeting.

I told Green to go ahead to the meeting with Mr. Weaver that night, but that I would be there. And I suggested to him that in dealing with Mr. Weaver he deal with him as a representative of Mr. Bardo rather than a representative of the Government.

Mr. LaRouche. What was that again? Would you mind repeating that statement?

Mr. Chappell. I suggested to Green that he go ahead with the meeting with Mr. Weaver but suggested to him that in dealing with him he deal with him as a representative of Mr. Bardo rather than a representative of the Government, because officially I was the only representative of the Government there.

Mr. LaRouche. Were you trying to imply that Mr. Weaver was not interested in an impartial settlement? Was that the idea you wanted to convey to the men?

Mr. Chappell. To the men? I was trying to convey to them that it was not necessary for them to deal with him as a Government representative at that time.

Senator Clark. As a matter of fact, it is true, is it not, Mr. Chappell, that you had sole jurisdiction of the matter on behalf of the Government?

Mr. Chappell. Yes.

Senator CLARK. And this intervention on the part of the deputy administrator of the N. R. A. and the Navy Department, to try to coerce the men, was purely gratuitous on their part?

Mr. CHAPPELL. That is the way I figured it at that time; yes, sir.

At any rate, we met at 6 o'clock at union headquarters, with the committee of the union, and their attorney and myself and Mr. Weaver and Captain Williams and a minister from Camden—I do not recall his name right now—who injected himself into the picture——

Mr. LAROUCHE. A minister, did you say?

Mr. CHAPPELL. Yes, sir.

Mr. LAROUCHE. Would you know his name if you heard it?

Mr. CHAPPELL. I have it in my notes, I think.

Mr. LAROUCHE. Did you say he injected himself into the case?

Mr. CHAPPELL. The ministerial alliance sort of injected themselves into the picture over there several times on several different strikes.

Mr. LAROUCHE. It was not Dr. Harold Paul Sloan?

Mr. CHAPPELL. Yes; that is the man. Mr. Weaver, when he came in, told the men that he had spent part of the afternoon with Mr. Bardo and had gone over the whole situation with him, and had gone over Mr. Bardo's figures, and he submitted a list of rates that he considered fair, and he told the men that in his opinion the only thing to do was for them to take that proposition; that if they did not do it, the only course he saw open to himself was to return to Washington and to tell General Johnson and President Roosevelt that they had refused to accept a very fair proposition.

He asked me if I did not concur in that. I told him that, so far as I was concerned, he seemed to have tried to eliminate me from the picture, and that, as a representative of the Secretary, I did not feel that I could make any statement of any kind at that time. The men turned the proposition down entirely.

Senator CLARK. Did this man Weaver give any explanation of telling the men you would be in the conference when, as a matter of fact, you knew nothing about it?

Mr. CHAPPELL. No. At that particular time Mr. Weaver was rather arrogant in his attitude toward the men, and he made no explanation further than that he had been sent there by General Johnson and that he represented the President of the United States.

My recollection is that on one occasion that morning Mr. Bardo had told me that he invited Mr. Weaver and Captain Williams to come up. Another time Mr. Weaver stated that it was at his invitation that Captain Williams had come up. Mr. Weaver himself, in talking to the men, told them that he had definitely been asked to come up there by General Johnson.

A few days after that Mr. Bardo came down to Washington and had a conference with General Johnson in the general's office in the Commerce Building. Thinking perhaps that they might want the committee and myself there, I had suggested to the union that they have a committee here, so that I was here at that time and saw the ommittee, but no one of us was taken in on that conference.

Mr. LAROUCHE. You were not invited there either, were you?

Mr. CHAPPELL. Not officially.

Within a week after Mr. Weaver's visit to Camden, the strike was settled on the basis that I had suggested to both sides along early in April, almost 5 weeks before the settlement was made.

I think that is all, Mr. LaRouche.

Mr. LaRouche. I have here a letter which was taken from the files of the Department of Labor, and it is dated April 18, 1934, written from Philadelphia.

The letter reads [reading "Exhibit No. 1541"]:

United States Conciliation Service,
Philadelphia, Pa., April 18, 1934.

Re New York Shipbuilding Co., Camden, N. J.

To: Hon. H. L. Kerwin.
From: P. W. Chappell.

The conference between the management and the committee of the strikers of the above company was not resumed today. After we had assembled Mr. Bardo of the company, read aloud a news dispatch in the Camden Post covering the activities of the strikers' committee in Washington. He then announced he would refuse to negotiate further while that committee remained in Washington endeavoring to reopen his contracts with the Government. Those contracts were his business and concerned no one else. Later he modified his stand to one that it was impossible to negotiate one question in two different places at the same time. I agree his last position is well taken but feel had he been less belligerent and more willing to grant and accept compromise the conference would have resulted in the committee being recalled from Washington. For a time I hoped I could accomplish this but finally realized the atmosphere was too clouded for further negotiations at this time. I still have hopes I may be able to get them together when Mr. Bardo returns on Friday.

Frankly I feel the strike committee are using the Washington situation, and the flood of rumors that are coming in from there to rebolster the morale of their ranks. Mr. Bardo's action has played into their hands for they now frankly accuse him of being afraid of what an investigation may disclose.

Does that mean an investigation of his contracts with the Navy?

Mr. Chappell. You see, one of the main things which caused this strike was the fact that money was allotted to the Navy Department to build ships in order to give employment. It was taken, as I understand, from the P. W. A. funds. The men felt very bitter that the skilled mechanics were receiving from 65 cents to 75 cents an hour in the ship yards, whereas men out on other Government jobs, where the money was taken from the same funds, were receiving from $1 to $1.25 an hour for practically the same kind of work.

That was something that caused the strike and caused the bitterness of feeling among the workers.

And the committee came down here in an effort to have these contracts reopened to see if something could not be done to get that changed.

Mr. LaRouche. In other words, they felt, the men felt, that this emergency money, money that had been allotted on the basis of an emergency, was not being spent in the same way that other emergency funds were being spent?

Mr. Chappell. They felt that the same wage did not apply, as it did not.

Mr. LaRouche. The same wage did not apply?

Mr. Chappell. Oh, it did not.

Mr. LaRouche. Did you ever discuss that question with Miss Perkins, the Secretary of Labor?

Mr. CHAPPELL. I do not believe that I discussed it personally with her, but I was present at a conference between the men from the union and Camden and Miss Perkins, where that question was brought up.

Mr. LAROUCHE. Did she ever express an opinion, or did she ever commit herself as to the justness of the attitude of the men with regard to the pay they were receiving?

Mr. CHAPPELL. That I cannot say definitely, although I understood that she felt that way. I do not recall whether she made such a statement at that time or not.

Mr. LAROUCHE. You just understood that she felt that their claim was just?

Mr. CHAPPELL. Yes; that something should be done to equalize those rates.

Mr. LAROUCHE. I will continue reading from your letter written from Philadelphia on April 18, 1934 [reading "Exhibit No. 1541"]:

> One trouble at this plant is that they have maintained a low wage by introducing a large number of individual rates. This results in a wide spread of classifications. Te reclassify these so as to make them comparable with Chester would increase the yard pay roll about 6 percent. Chester is going to increase their rates 10 percent.

Do you mean the Sun Shipbuilding Co.?

Mr. CHAPPELL. Yes.

Mr. LAROUCHE (continuing reading "Exhibit No. 1541"):

> To equal their wage, which is what the strike committee is aiming at, would mean an increase of 16 percent in the Camden pay roll. Mr. Bardo claims his rates are the same as at Chester, but his own staff admit that due to classification they are not and that the figures given above are about correct.
>
> However, I still feel confident that had we been able to continue negotiations along the line they were proceeding when we adjourned yesterday the wage question would have taken care of itself. Perhaps Mr. Bardo welcomed the opportunity for a hitch.
>
> P. W. CHAPPELL.

(The letter referred to was marked "Exhibit No. 1541" and appears in full in the text.)

Mr. RAUSHENBUSH. Now Mr. Chappell, I would like to ask a few questions in that connection. In the course of your negotiations down there did you find out how much delay there had been on the *Tuscaloosa* before the strike started? Did that piece of information come to you?

Mr. CHAPPELL. No, sir.

Mr. RAUSHENBUSH. Another question: How much increase did the men get as a result of the settlement? How much did it amount to in percentage?

Mr. CHAPPELL. Between 14 and 15 percent on the average. The greatest amount was in the lower brackets, as I recall, and there was one group of machinists or metal workers, quite a large group, who through a reclassification of their wage received a larger percentage.

Mr. RAUSHENBUSH. Larger than 14 or 15?

Mr. CHAPPELL. The fourteen and a half was the average increase to the pay roll.

Mr. RAUSHENBUSH. Yes. The third question is, Can you identify Mr. Weaver? Was he the same man who was later appointed to investigate the *Morro Castle* disaster?

Mr. CHAPPELL. That I do not know.

Mr. RAUSHENBUSH. What was his first name?

Mr. CHAPPELL. I do not recall now.

Mr. RAUSHENBUSH. You do not have that in your records?

Mr. CHAPPELL. I do not believe I have; I may. [Examining papers.] No.

Mr. RAUSHENBUSH. That is all I have.

Mr. LAROUCHE. I have some letters here which I would like to put in the record at this point. I will read one of them. This was written on May 16, 1934, by Mr. Bardo to Dr. Harold Paul Sloan, Woodbury, N. J. It reads:

> MY DEAR DR. SLOAN: I beg to apologize for not having communicated with you earlier expressing on behalf of both the company and myself our very great appreciation for the helpful and constructive aid which you rendered in the final settlement of our labor situation.
>
> The men returned to work in full force on Monday and apparently are happy and exceedingly well pleased with the outcome.
>
> As a more substantial token of our appreciation I beg to enclose herewith check for $250, which I hope you will accept in the spirit in which it is sent. This is intended for your personal use.
>
> Thanking you, and with high personal regards, I am,
>
> Very sincerely yours,
>
> C. L. BARDO.

(The letter referred to was marked "Exhibit No. 1542" and appears in full in the text.)

Mr. LAROUCHE. That was the Dr. Harold Paul Sloan who you said injected himself into this case?

Mr. CHAPPELL. I imagine it is the same man; yes, sir.

Mr. LAROUCHE. Did you ever hear, Mr. Chappell, of Rev. John Pemberton, Jr.?

Mr. CHAPPELL. I do not recall. There were three ministers mixing up in that committee from the ministerial alliance.

Mr. LAROUCHE. I will introduce, without reading, a similar letter sent on the same day by Mr. Bardo to Rev. John Pemberton, Jr.

(The letter referred to was marked "Exhibit No. 1543" and is included in the appendix on p. 5267.)

Mr. RAUSHENBUSH. Does that also mention a check?

Mr. LAROUCHE. I will read that paragraph.

> As a more substantial token of our appreciation I beg to enclose herewith check for $250 which I hope you will accept in the spirit in which it is sent. This is intended for your personal use.

That paragraph was included in the letter to Rev. John Pemberton, as it was to Dr. Harold Paul Sloan.

I will also introduce a letter, without reading, from Rev. John Pemberton to Mr. Bardo, dated May 17, 1934, with the appropriate number, acknowledging the receipt of the "token."

(The letter referred to was marked "Exhibit No. 1544" and is included in the appendix on p. 5268.)

Mr. LAROUCHE. One more thing. Did you investigate, while you were at New York Ship—by the way, did you know about these "tokens" while you were up there?

Mr. CHAPPELL. You mean the checks?

Mr. LAROUCHE. Yes.

Mr. Chappell. No; I am wondering why I did not get one.

Senator Vandenberg. Do you know, Mr. LaRouche, whether these were personal checks or company checks?

Mr. LaRouche. We have that information. I do not have it at the moment.

Senator Vandenberg. Do you know which they were?

Mr. LaRouche. My memory is that they were personal checks but I would rather not stand on that.

Senator Barbour. I think it might be well, since the interjection of this to have it appear in the record now, and not way down some other day, so that the record will be complete in that regard.

Senator Vandenberg. You mean you want Mr. LaRouche to confirm his testimony or otherwise?

Senator Barbour. Yes, exactly. I think right at this point that should be settled one way or the other in the record, if he can.[1]

Mr. Raushenbush. We might get it by calling Mr. Parker for a moment. He might remember the checks, if they were company checks.

Senator Vandenberg. Do you remember, Mr. Parker, whether they were company or personal checks?

Mr. Parker. They were checks on the corporation.

Senator Vandenberg. They were company checks?

Mr. Parker. Yes, sir.

Mr. LaRouche. Did you ever hear or investigate, while you were there, any report that one of the issues in this strike was in connection with the *Indianapolis?*

Mr. Chappell. No.

Mr. LaRouche. I have nothing further.

Senator Vandenberg. That is all, Mr. Chappell. Thank you.

Senator Vandenberg. Mr. Manning.

TESTIMONY OF L. B. MANNING

(The witness was duly sworn by Senator Vandenberg.)

Senator Vandenberg. Mr. Manning, will you state your full name to the reporter?

Mr. Manning. L. B. Manning.

Senator Vandenberg. Your address?

Mr. Manning. 105 West Adams Street, Chicago.

Senator Vandenberg. And your position at present?

Mr. Manning. Chairman of the board of New York Ship.

Senator Vandenberg. Mr. Manning, the committee requested certain information from Mr. E. L. Cord. Mr. Cord preceded you as chairman of the board, did he not?

Mr. Manning. Yes, sir.

Senator Vandenberg. And Mr. Pruitt, your counsel, assured us that you could and would supply all the information asked of Mr. Cord by the committee. I want to check first to see to what extent this information is now available to the committee, and what still remains to be furnished, so that you can be advised accordingly.

Mr. Raushenbush, will you follow me as I read you the requests?

Mr. Raushenbush. Yes, sir.

---

[1] See appendix, p. 5276, for copies of checks.

Senator VANDENBERG. The first request made of Mr. Cord was for all reports, records, diaries, notes, and other data relating to bidding on naval vessels by the New York Shipbuilding Corporation in 1933 and 1934.

To what extent is that information available, Mr. Raushenbush?

Mr. RAUSHENBUSH. That has not been received at all, and, Mr. Chairman, the same request was addressed to Mr. Manning direct, in a letter of the same day.

Senator VANDENBERG. May we have that information, Mr. Manning?

Mr. MANNING. I have part of it with me and the other part we furnished to the company. I believe the same request was made to the company, and they, in turn, asked us for it, and we submitted it to them on the assumption that they would furnish it to Mr. Raushenbush.

Senator VANDENBERG. And you have additional information with you now?

Mr. MANNING. Yes, sir.

Senator VANDENBERG. That can be canvassed, too, Mr. Raushenbush.

Mr. MANNING. I have no information about bidding; no, sir. I have information further along in that letter, however.

Senator VANDENBERG. What is lacking, Mr. Raushenbush, that the committee wants?

Mr. RAUSHENBUSH. Under the heading no. 1, addressed to Mr. Cord, which you have just read, all reports, records, diaries, notes, and other data relating to bidding on naval vessels in 1933 and 1934, we have received nothing from the company, from either Mr. Cord's or Mr. Manning's files.

Mr. MANNING. Neither Mr. Cord nor myself had any information.

Senator VANDENBERG. In other words, you would refer us to whom for that information?

Mr. MANNING. Mr. Bardo or——

Senator VANDENBERG. Mr. Bardo is no longer connected with the corporation, is he?

Mr. MANNING. No; but he had the information at the time.

Senator VANDENBERG. He could not furnish us with any document from the New York Shipbuilding Corporation's files at present, could he?

Mr. MANNING. The New York Ship would be very glad, as a corporation, to furnish the documents, Mr. Chairman.

Senator VANDENBERG. To whom should we apply in New York Ship?

Mr. MANNING. To Mr. Metten.

Senator VANDENBERG. Mr. Metten?

Mr. MANNING. Yes, sir.

Senator VANDENBERG. The second request was for all evidences of ownership of the stock of the corporation in your possession, together with a statement of all outstanding loans, notes, or other obligations outstanding against that stock. To what extent is that information available, Mr. Raushenbush?

Mr. RAUSHENBUSH. As far as all evidences of ownership of stock of the corporation in the possession Mr. Manning or Mr. Cord is concerned, that has not been received.

Senator VANDENBERG. Have you any evidence on that here?

Mr. MANNING. I have that here.

Mr. PRUITT. We furnished a record of all of Mr. Cord's stockholdings to Mr. Raushenbush the first day I was here.

Mr. RAUSHENBUSH. Yes; that was put in the record the other day, showing that Mr. Cord owned 4,200 shares in his own name.

Senator VANDENBERG. Four thousand two hundred shares out of a total of how many shares?

Mr. MANNING. That is right.

Senator VANDENBERG. What is the total number of shares, Mr. Manning?

Mr. MANNING. One hundred and seventy-five thousand founders and 325,000 participating. Is that correct?

Mr. PRUITT. That is right; and the preferred.

Senator VANDENBERG. Which class of stock did Mr. Cord own?

Mr. MANNING. Founders. That is right.

Mr. RAUSHENBUSH. We have also, Mr. Chairman, a reply from Mr. Manning showing the ownership of his stock in corporations and it seems to indicate no ownership. Is that right?

Mr. MANNING. That is correct.

Mr. RAUSHENBUSH. No ownership of New York Ship stock.

Senator VANDENBERG. And you are furnishing additional information to Mr. Raushenbush this morning?

Mr. MANNING. It has already been furnished, Mr. Chairman. Here is a letter about Mr. Cord [presenting letter].

Senator VANDENBERG. This letter, in a moment, will be entered in the record, after we have completed this survey.

The third request was for a full record of any options taken or given on New York Shipbuilding Corporation's stock for the years 1928 to 1934, inclusive.

Mr. Cord's secretary responds—and I am reading from the letter you have just handed me:

> No record of any options taken or given * * *.

Mr. MANNING. There were no options of any kind.

Senator VANDENBERG. The fourth request is copies of all analyses, surveys, or other data in your possession concerning New York Shipbuilding Corporation received prior to August 1933.

The answer from Mr. Cord's secretary is: "No copies of analyses" and so forth "received prior to August 1933."

The fifth and final request was a record of all contributions or loans to political parties or individuals prominently connected with political parties for the years 1928 to 1934, inclusive, made either directly or through agents.

Mr. Cord's secretary replies:

> No contributions or loans to political parties or individuals prominently connected with political parties, made either directly or through agents, since he became interested, either as a stockholder or director, in New York Shipbuilding Corporation.

That response, Mr. Manning, would seem to be limited to the period since Mr. Cord became a stockholder or director in New York Ship. When was it that he became a stockholder or director?

Mr. MANNING. Mr. Cord, to my best knowledge, did not become a stockholder in his own name until later on in 1933. However, the controlling block of stock was purchased on or about August 2, 1933.

Senator VANDENBERG. So that this answer, then, would mean that no contributions or loans to political parties or individuals prominently connected with political parties, made either directly or through agents, have been made since August 2, 1933. The committee's request goes back to 1928. Will you communicate with Mr. Cord's secretary and suggest that the information under this heading is incomplete and should be carried back to 1928? [1]

Mr. MANNING. Yes, sir. I might say that that information was furnished the Black committee in full last year in its investigation, and it is available here.

(The letter referred to was marked "Exhibit No. 1545" and is included in the appendix on p. 5268.)

Senator VANDENBERG. Mr. Raushenbush seems to think that there is some distinction between our request and the Black committee's request, inasmuch as ours includes contributions through agents. That can be determined later.

This same request for information was addressed to you, Mr. Manning, under date of January 4. Have you furnished a response to the four requests that were made to you?

Mr. MANNING. I thought I had.

Senator VANDENBERG. What do you find lacking, Mr. Raushenbush?

Mr. RAUSHENBUSH. Under the first heading, "A record of all contributions or loans to political parties or individuals prominently connected with political parties for the years 1928 to 1934," we have only a reply from Mr. Manning, in the form of a letter to Mr. Kaltwasser, dated January 17, acknowledging your letter of January 11, in which he says:

> Acknowledging your letter of January 11, I was elected an officer and director of New York Shipbuilding Corporation on August 2, 1933. Since that time I have made no campaign contributions.

That is in the same class as the response from Mr. Cord. It does not cover the years in question.

Senator VANDENBERG. In other words, the response should be supplemented back to 1928?

Mr. RAUSHENBUSH. Yes.

The second question is, "Full record of any options taken or given on New York Shipbuilding Corporation stock for the years 1928 to 1934, inclusive." I understood Mr. Manning was answering for Mr. Cord on the previous request.

Mr. MANNING. That goes for myself also.

Mr. RAUSHENBUSH. That goes for yourself also, that you have no records of that kind.

The third question, I believe, has also been answered—you have no surveys of the kind.

---

[1] In hearings of March 12, 1935, the reply to this request was entered into Record as "Exhibit No. 1671." This exhibit is included in the appendix to this part on p. 5274.

The fourth question is a little different than the one addressed to Mr. Cord, Mr. Chairman, and it is a little more inclusive: "All reports, records, diaries, notes, and other data relating to bids on naval vessels by the New York Shipbuilding Corporation in 1933 and 1934."

You say you have no such records, reports, diaries, or notes?

Mr. MANNING. No, sir.

Mr. RAUSHENBUSH. It goes on also: "All records, all correspondence or interviews with naval officials or officers or other Government officials involved directly or indirectly with the bidding and awards on naval vessels for the years 1932, 1933, and 1934."

Mr. MANNING. No record.

Mr. RAUSHENBUSH. Did you have any conversations with naval officers in connection with company affairs during the years 1933 and 1934?

Mr. MANNING. No, sir.

Mr. RAUSHENBUSH. No conversations at all?

Mr. MANNING. No, sir. Mr. Raushenbush, did I understand your question to mean as relating directly to bids and awarding of contracts?

Mr. RAUSHENBUSH. Presumably there would be very little company business that would not deal in some way with those two questions.

Mr. MANNING. There was one other important conference I had later, but not in connection, in any way connected, with the actual bidding or awarding of the contracts.

Mr. RAUSHENBUSH. Or the carrying out of the awards of the contracts?

Mr. MANNING. I did not understand that question that way. I am perfectly willing to tell you about that later conference.

Mr. RAUSHENBUSH. Yes, sir.

Mr. MANNING. But I did not have anything to talk to them about before the bids were made.

Mr. RAUSHENBUSH. Then with those statements, Mr. Chairman, the incompleteness lies in the first paragraph.

Senator VANDENBERG. Very well. Mr. Manning says he will furnish that information.

STOCKHOLDERS OF NEW YORK SHIPBUILDING CORPORATION—ACQUISITION OF CONTROL BY CORD INTERESTS

Senator VANDENBERG. Mr. Manning, as I understand it, Mr. Cord's interest formally took possession of New York Ship on August 2, 1933. Is that correct?

Mr. MANNING. I believe that was the date; yes, sir.

Senator VANDENBERG. That is the date you gave us before. You said that that was the first time, using your language, that he became a stockholder in his own name. Was he a stockholder in the names of others prior thereto?

Mr. MANNING. No; I meant by that that the Cord Corporation bought its interest on or about August 1 or 2, but that later on in 1933 he bought some more stock, which he reported. That is the 4,200 shares which were reported there. The stock in the Cord Corporation records was not in his own name. It belonged to the corporation.

Senator VANDENBERG. Who operated with Mr. Cord in the acquisition of New York Ship stock?

Mr. MANNING. Do you mean who were the other partners involved, if any?

Senator VANDENBERG. Yes; who were related to the stock acquisition of New York Ship?

Mr. MANNING. I made the transaction, and the other parties were B. E. Smith and T. E. Bragg, of New York.

Senator VANDENBERG. B. E. Smith is Mr. Ben Smith?

Mr. MANNING. That is right.

Senator VANDENBERG. Did Mr. Matthew Brush participate?

Mr. MANNING. Not that I know of.

Senator VANDENBERG. Who was the other gentleman you named?

Mr. MANNING. T. E. Bragg.

Senator VANDENBERG. To what extent was Mr. Ben Smith interested in that venture?

Mr. MANNING. He and Mr. Bragg purchased this stock with the understanding that we would take a half interest in it and provide the management for the company.

Senator VANDENBERG. Mr. Smith purchased the stock?

Mr. MANNING. He and Mr. Bragg purchased it, but they did not purchase it until after they had gotten a commitment from us to take a half interest in the stock and then provide the management for the company.

Senator VANDENBERG. Do you recall, Mr. Manning, whether this is the same Mr. Smith and Mr. Bragg who were prominent in the investigation of the New York Stock Exchange situation recently? Have you any recollection in respect to that?

Mr. MANNING. No; I have no information on that.

Senator VANDENBERG. Do you know who Mr. Ben Smith's statistician and confidence man, so to speak, has been in all these transactions?

Mr. MANNING. No; I do not.

Senator VANDENBERG. I should like to present for the record the data respecting the rise in stock prices of New York Ship, beginning in March 1933 and continuing to August 1933 when the Cord Corporation announcement respecting control was made. Do you remember what the stock prices were in March 1933, Mr. Manning?

Mr. MANNING. No, sir.

Senator VANDENBERG. Have you the records, Mr. Raushenbush?

Mr. RAUSHENBUSH. Yes; I think so. In March 1933 the low was 3¼ and the high was 6¼.

Senator VANDENBEGG. Three and a quarter to six and a quarter in March 1933?

Mr. RAUSHENBUSH. Yes, sir.

Senator VANDENBERG. What was it in April?

Mr. RAUSHENBUSH. April, 5¾ low, high 8⅛.

Senator VANDENBERG. What was it in May?

Mr. RAUSHENBUSH. May 6½ low; 8 high.

Senator VANDENBERG. And June?

Mr. RAUSHENBUSH. Six and five-eighths low, 18¾ high.

Senator VANDENBERG. July?

Mr. RAUSHENBUSH. Twelve low, 21⅜ high.

Senator VANDENBERG. August?

Mr. RAUSHENBUSH. Sixteen and a half low, 22½ high.

Senator VANDENBERG. In other words, this is a rise, as I understand it, from March 1933 to August 1933 from 3¼ low to 21½ high. Is that correct?

Mr. RAUSHENBUSH. Yes, sir.

Senator VANDENBERG. Since that time have you the record to indicate what market price the stock has maintained, on the average?

Mr. RAUSHENBUSH. The low in October, November, and December was 9 and a fraction, after which, in 1934, the stock fluctuated between 11¼ on the low side and 17⅞ high, and on the high side in 1934 between 13¼ and 22⅞.

Senator VANDENBERG. In other words, it maintained a consistent relationship even on the low side of 3 or 4 times the figure in March 1933? Is that correct?

Mr. RAUSHENBUSH. Three or four or five times as high; yes.

Senator VANDENBERG. Mr. Manning, what caused that stock to rise from 3¼ to 21½ in 5 months?

Mr. MANNING. I am sure I could not tell you, sir.

Senator VANDENBERG. Was there anything about the prosperity of the company which would have produced that result?

Mr. MANNING. Nothing, unless the market of the stock had something to do with the sympathetic rise—I mean in sympathy with the rise in all the rest of the markets at that time.

Senator VANDENBERG. Would you say that an increase from March to August in 1933 from 3¼ to 22½ was about the average rise of all stocks during that period?

Mr. MANNING. No, sir.

Senator VANDENBERG. This is more pronounced, is it not?

Mr. MANNING. I would say so. I did not know a thing about New York Ship at that time.

Senator VANDENBERG. Were you related to the Cord acquisition of stock in any active way during this period?

Mr. MANNING. What period, sir?

Senator VANDENBERG. March to August 1933.

Mr. MANNING. No, sir; we bought our stock sometime between the 20th and 30th of July 1933. Never owned a share of it or traded in a share of it prior to that time.

Mr. RAUSHENBUSH. When you say " we ", Mr. Manning, do you mean the Cord Corporation?

Mr. MANNING. I mean Mr. Cord, the Cord Corporation, and myself personally.

Mr. RAUSHENBUSH. But that does not include in the case these gentlemen, Mr. Ben Smith and Mr. Bragg, who may have been purchasing it on the market before that time?

Mr. MANNING. I would not know anything about what they did.

Senator VANDENBERG. Please tell me again, when was it that Mr. Smith and Mr. Bragg made their proposal to the Cord interests?

Mr. MANNING. I did not get the question.

(The pending question, as above recorded, was read by the reporter.)

Mr. MANNING. Some time between the 20th and 30th of July 1933.

Senator VANDENBERG. When they made that proposal, they were in possession of a substantial amount of this stock?

Mr. MANNING. If you will allow me to explain, I will tell you exactly how it happened.

Senator VANDENBERG. I will be very happy to have you.

Mr. MANNING. The Chase National Bank had 50,000 shares on a loan, which was the result of the Pynchon & Co. failure, and they were the firm that originally underwrote or financed American Brown Boveri Co. Another bank in New York had 40,000 shares from another source. And the two blocks were put together and made 90,000 shares, and that is the first and only—I mean that is the only block that is mentioned, the only block in which we were interested and finally bought.

Senator VANDENBERG. You did not buy out Ben Smith and Tom Bragg, as I understand it?

Mr. MANNING. No, sir.

Senator VANDENBERG. Do you recall how much stock Smith and Bragg had in August 1933?

Mr. MANNING. They had half of 90,000 shares.

Senator VANDENBERG. Do they appear on the list of stockholders?

Mr. MANNING. I do not believe so.

Mr. RAUSHENBUSH. Mr. Chairman, the list of stockholders, which was not identified yesterday, because Mr. Parker could not identify it and said Mr. Pruitt furnished it and could identify it, is here. May we have that identified now?

Senator VANDENBERG. Yes, sir.

Mr. RAUSHENBUSH. Mr. Pruitt, Mr. Parker said you could identify this. Can you do that?

Mr. PRUITT. That stock was in brokers' names. Your question calls for the names of stock by individuals.

Mr. RAUSHENBUSH. But you do identify this information as correct, insofar as individual holdings go?

Mr. PRUITT. That is correct, insofar as it is shown by the records of the transfer office.

Senator VANDENBERG. Now, the Smith and Bragg stock, then, would not be in their own names, but would be in some other's name?

Mr. MANNING. Probably in some broker's name; yes.

Senator VANDENBERG. What is the situation today in that respect? Do they appear in their own names as stockholders?

Mr. MANNING. No, sir; they do not; do they, Mr. Pruitt?

Senator VANDENBERG. But they still have the same ownership, so far as you know?

Mr. MANNING. Yes, sir.

Senator VANDENBERG. Do they have any increased ownership, so far as you know?

Mr. MANNING. I could not say as to that.

Senator VANDENBERG. How much stock does Mr. Cord himself own, or the Cord Corporation?

Mr. MANNING. So far as I know, he owns the amount that was given on his report there.

Mr. RAUSHENBUSH. Four thousand two hundred shares of Founders.

Mr. MANNING. And the Cord Corporation owns a little more than 45,000; it is 46,200 shares.

Senator VANDENBERG. Is that clear on the record, Mr. Raushenbush?

Mr. RAUSHENBUSH. The names of certain nominees of the Cord Corporation—Dean, Friese, Grant, and Reyelt—are shown as holding here 32,600 shares as of December 22, 1934.

Mr. MANNING. That is not right.

Senator VANDENBERG. The present directors of New York Ship and their stockholdings would seem to indicate that they have only relatively nominal interest in the company. Is it a fair interpretation that they represent stock which has not been transferred, or that they represent Mr. Smith and Mr. Bragg? That is a pretty broad question

Mr. MANNING. It is quite a long question, Senator.

Senator VANDENBERG. Let us take them individually, Mr. Raushenbush; let us have the list of directors. Whose name is first on the list?

Mr. RAUSHENBUSH. At a meeting December 6, 1934, its lists present Manning, Metten, Kaltwasser, Gene Tunney, Beal, Pruitt, and Leibenderfer, and says "Also Ben Smith, Tom Bragg." Those are not directors, are they?

Mr. MANNING. No, sir.

Mr. RAUSHENBUSH. They were just present.

Senator VANDENBERG. How much stock has Mr. Metten, according to the record?

Mr. RAUSHENBUSH. The statement of individual holdings does not show his name. Mr. Parker was asked that question the other day, Mr. Chairman, and could not identify any of the board of directors as holding stock, according to this list of individuals holding stock.

Mr. MANNING. I am unable to say. I do not know how much stock he has. He may have some stock in brokers' names, too, but I have no information on that.

Senator VANDENBERG. Is Mr. Gene Tunney listed as a stockholder?

Mr. MANNING. No; I do not believe so.

Senator VANDENBERG. How can they be directors without any stockholdings?

Mr. MANNING. I am under the impression that he has some stock, but I do not know whose name it is in.

Mr. RAUSHENBUSH. Mr. Chairman, it might clarify things a little bit for me to state that we asked for individuals holding considerable blocks, 1 percent of the stock or over. He might have less than that.

Senator VANDENBERG. Oh, yes. What I am trying to get at, Mr. Manning, and what the committee is interested in, is to know the extent of interest still maintained by Mr. Ben Smith and by Mr. Tom Bragg, to begin with. Can you enlighten us at all on that?

Mr. MANNING. What you would like to know, if I may put it this way, is that you would like to know who represents the real owners? Is that right?

Senator VANDENBERG. Precisely. I would like to know where the actual ownership is, and who speaks for it.

Mr. MANNING. I represent the Cord Corporation, and Mr. Tunney represents the Bragg-Smith interests. Mr. Kaltwasser also represents the Cord interests, as do Mr. Leibenderger and Pruitt.

Senator VANDENBERG. Beal?

Mr. MANNING. And Beal.

Senator VANDENBERG. They represent whom?

Mr. MANNING. The Cord Corporation.

Senator VANDENBERG. Metten?

Mr. MANNING. I would rather say that Mr. Metten represents himself. We asked him to become the president of that corporation, and he accepted the position, and I know we feel very friendly toward him, and he does toward us, but I would rather have him answer that question.

Senator VANDENBERG. That is fair.

Mr. RAUSHENBUSH. Is Mr. Slater on the board still?

Mr. MANNING. No, sir.

Mr. RAUSHENBUSH. Are there any other directors you have not mentioned?

Mr. MANNING. I think that takes in all of them.

Mr. RAUSHENBUSH. Do we then have the situation that the Bragg-Smith interests own about 50 percent of the stock and have only one of their own men on the board, Mr. Tunney?

Mr. MANNING. That appears to be the situation.

Senator VANDENBERG. The public record of stock ownership means absolutely nothing, does it, by way of identifying the actual ownership?

Mr. MANNING. No, sir.

Senator VANDENBERG. When Smith and Bragg were putting up this deal to the Cord interests, in contemplation of New York Ship prosperity, did they indicate that new naval building programs were in prospect, and that this made the opportunity more inviting for a successful operation?

Mr. MANNING. They did not necessarily have to point out that to us, Mr. Chairman. The newspapers were full of it.

Senator VANDENBERG. And the enterprise was based, to some extent, on those aspirations, at least upon that prospect? You say it was in the newspapers. Was not that one of the reasons why the stock went up so rapidly?

Mr. MANNING. I would not say as to that—that is, directly in regard to the stock—what the stock did, but it would seem a little foolish for any organization that wanted to go into another industrial business, that if there was not some business in prospect for the future, they would just head along and go on into it anyway.

Senator VANDENBERG. I agree with you. We at least argue ourselves to the same conclusion. Now, I would like to go another step in that direction and see if we can argue ourselves into another agreement. Would it not be quite important to know before a rather substantial investment of this character was undertaken, would it not be rather important to know that the new organization was going to have acceptable contracts in Washington, so that some of these contracts could be reasonably expected, and was not that specifically discussed between the Cord interests and Mr. Ben Smith and Tom Bragg?

Mr. MANNING. No, sir.

Senator VANDENBERG. No discussion of that whatever?

Mr. MANNING. No, sir.

Senator VANDENBERG. There was no discussion by Mr. Ben Smith that he thought he could, let us say, encourage sympathetic consideration for the New York Ship bids?

Mr. MANNING. No such discussion, Mr. Chairman.

Senator VANDENBERG. Mr. Ben Smith did have some rather potential political connections, did he not?

Mr. MANNING. I would not know as to that.

Senator VANDENBERG. At any rate, I understand from you that so far as any information that came to you in connection with the partnership between Ben Smith and Bragg to acquire New York Ship, there were no presentations that Smith and Bragg could help you get business from the Government?

Mr. MANNING. The only presentations that were made at any time were those having to do with the yard's ability to design and build good ships. And we felt that if the amount of business that was going to be released under the P.W.A. program was right, that New York Ship could not help but get part of that business, if it did a good job of designing and manufacturing.

Senator VANDENBERG. The Cord people are not shipbuilders in any sense, are they?

Mr. MANNING. Not by original trade; no, sir. We are manufacturers.

Senator VANDENBERG. They were interested in this particular transaction as an industrial speculation?

Mr. MANNING. All industrial businesses are speculations.

Senator VANDENBERG. Particularly now?

Mr. MANNING. Yes, sir.

Senator VANDENBERG. You can see what interests the committee. We are wondering to what extent this was a speculation and whether or not the element of speculation had been somewhat eliminated by the prospect of these naval contracts and the prospect that Ben Smith and Tom Bragg could help you get your naval contracts, and you have not any information, directly or indirectly, which would confirm any such hypothesis?

Mr. MANNING. I can assure you that that is still a considerable speculation.

Senator VANDENBERG. That is hardly responsive. You have no information about any representations of this character, including the Cord interests to make this arrangement with Ben Smith and Tom Bragg?

Mr. MANNING. No; it would have been just the same, Mr. Chairman, if it had been with John Brown or anybody else.

Senator CLARK. Was anything said prior to the purchase of the Cord interests of the relationship existing between the New York Shipbuilding Co. and Newport News and Bethlehem Shipbuilding Co.?

Mr. MANNING. No, sir.

Senator CLARK. Nothing whatever was said as to the general conditions of competition or lack of competition in the trade?

Mr. MANNING. No, sir; not a bit.

Senator VANDENBERG. Do you know Mr. Flynn, of New York? What is his full name?

Mr. RAUSHENBUSH. The attorney.

Mr. MANNING. Goldwater & Flynn? Yes, sir; I know them.

Senator VANDENBERG. Why was he hired as soon as Cord took over New York Ship?

Mr. MANNING. I do not recall that he was hired as soon as the Cord Corporation took it over; but he was hired, at any rate, for the reason that our headquarters are in Chicago; and Mr. Pruitt is our general counsel and employs a great many attorneys all over America for handling specific things in their territory, and we felt it desirable to have a New York attorney on this matter, so that he was employed there.

Senator VANDENBERG. Is this the Mr. Flynn who is the Bronx Democratic leader? I am trying to identify him.

Mr. MANNING. I do not know as to that. I know that he is quite a prominent man up there.

Senator VANDENBERG. Is he secretary of state for New York?

Mr. MANNING. I could not answer these things, Mr. Chairman, as far as the politics of the men are concerned.

Senator VANDENBERG. Who looks after the politics? Whom could we inquire of about the politics?

Mr. MANNING. Perhaps Mr. Pruitt here knows something about his politics, but I am sure I do not.

Senator VANDENBERG. I mean the politics of the New York Shipbuilding Corporation. I thought that was what you had been referring to.

Mr. MANNING. One of the things I have been trying to do is take it out of politics.

Senator VANDENBERG. Has it been quite a job to take it out of politics?

Mr. MANNING. It is always quite a job to take any business out of politics that sells anything to the Government.

Senator VANDENBERG. Were you taking it out of politics when you hired the Democratic secretary of state of New York just as soon as you took over?

Mr. MANNING. That did not have anything to do with it.

Senator VANDENBERG. Have you anything else, Mr. Raushenbush?

Mr. RAUSHENBUSH. Yes. At this time I would like to offer as "Exhibit No. 1546" a statement showing the fluctuation in the price of stock of the New York Shipbuilding Corporation for 1932, 1933, and 1934.

(The statement referred to was marked "Exhibit No. 1546" and is included in the appendix on p. 5269.)

Mr. RAUSHENBUSH. I would also like to offer the information furnished by the company regarding stockholders having 1 percent or more stock in New York Shipbuilding Corporation as of December 22, 1934, as "Exhibit No. 1547."

(The statement referred to was marked "Exhibit No. 1547" and is included in the appendix on p. 5269.)

Mr. RAUSHENBUSH. Mr. Manning, the rise in stock prices seems to have taken place beginning about March; and as has been brought out, the great jump from a high of 8 in May to a high of 18¾, more than 100-percent jump, took place between May and June. Now, if there was purchasing of that stock, it would seem that that was the time when the bulk of it took place, or when it became known that the stock was being actively bought. Would not that seem a reasonable conclusion?

Mr. MANNING. It would, providing the records showed that there was a large volume of stock changing hands.

Mr. RAUSHENBUSH. Then the stock starts up at that point. Through July it rises to 21⅜ high; and in August, at the time the Cord Corporation formally took over, it is twenty-two and a half, the high, I suppose, for many years.

The surface indication there, including the rise all the way from March, is that the purchasing was going on fairly steadily at that time; and you do know, and I think here have testified, that before Mr. Bragg and Mr. Smith got into the picture, the stock was held in the Bano America Blair hands, was it not?

Mr. MANNING. No, sir; it was the Chase Bank.

Mr. RAUSHENBUSH. Chase hands.

Mr. MANNING. It says right in that report where it was.

Mr. RAUSHENBUSH. We have here the report, identified yesterday by Mr. Parker, being made by Arthur Young & Co., dated August 12, 1933, after the company had changed hands, and it lists the board of directors at June 30, 1933, giving the name, and then the principal reason for being on the board.[1]

It starts off:

> Clinton L. Bardo—principal reason for being on board, president of the corporation.
>
> Allen Curtis, William F. Ingold—the underwriting of American Brown Boveri Electric Corporation (New York Shipbuilding Corporation) stock was by Curtis & Sanger (Boston) and Pynchon & Co. (New York). Mr. Curtis was a member of the firm of Curtis & Sanger and Mr. Ingold a member of the firm of Pynchon & Co.

Then it lists "William M. Flook, William V. Griffin, and William F. Kenny", and says:

> Were the Brady estate representatives, which estate was interested in public-utility projects.

Do you understand that Mr. Flook, Mr. Griffin, and Mr. Kenny were Brady estate representatives? Is that correct, so far as you know?

Mr. MANNING. The report was made to us exactly as it should have been made, in an effort to get the information for our associates to know something about the history of this company. We bought the company on the income account, the balance sheet, and made a quick spot check that the assets as represented were there.

Then we immediately had this report made by Arthur Young & Co., in order to get some of the history of the situation.

Mr. RAUSHENBUSH. You have no reason to believe that that is inaccurate, do you?

Mr. MANNING. No, sir.

Mr. RAUSHENBUSH. They say here:

> Were the Brady estate representatives, which estate was interested in public-utility projects.

Mr. MANNING. I just took that report as being their findings and being accurate.

Mr. RAUSHENBUSH. The Brady estate held Consolidated Gas of New York one time, did they not?

Mr. MANNING. I do not know a thing about it.

---

[1] Report of Arthur Young & Co. was marked for identification as "Committee Exhibit No. 7" and is on file with the committee. See infra, p. 5113.

Mr. RAUSHENBUSH. Then Theodore G. Smith:

> Vice president of Central Hanover Bank & Trust Co. Came on the board to protect the bank's interest following a loan of $2,000,000 to the corporation.
>
> Edward F. Hayes, Henry Lockhart, Jr., represented Blair & Co., which acquired the ownership of approximately 40,000 shares of Founders stock through default on loan by Lawrence R. Wilder (owner of the stock).
>
> Earle G. Hines—represented the former Chase Securities Corporation which acquired approximately 50,000 shares of Founders stock through the failure of Pynchon & Co.

That is 50,000 shares in Chase Securities, and more than that must have been picked up by Mr. Bragg and Mr. Smith because, as I got your testimony, if I got it correctly, they had more than this, did they not? They had the whole 90,000?

Mr. MANNING. I said before that they had this 90,000 shares under option, providing we would take half of it.

Mr. RAUSHENBUSH. I see. It was under option.

Mr. MANNING. So that I naturally assume it was those two blocks, one of 50,000 and one of 40,000 shares.

Mr. RAUSHENBUSH. Both the Blair and Chase?

Mr. MANNING. Yes, sir.

Mr. RAUSHENBUSH. That would total up. The other question in that connection was that a moment ago you testified that this was not exactly a speculation, although this report was not made until after the acquisition of the company, because you understood that with the P. W. A. money being handed out to the Navy there would be an expectation of reasonable business.

Now, take that together with this rise in the prices of the stock from May on, and notably May and June, and we may presume, may we not, that those factors, not only what you testified to, the P. W. A., but also the oncoming bidding for cruisers, destroyers, and aircraft carriers in July 1933 was also an item that a business man would consider in saying whether or not this was a speculation or an investment. Is it not true that those factors may have played some part in that purchase of stock by your associates?

Mr. MANNING. Mr. Raushenbush, in one case you asked me about the rise in the stock in March, as related to the P. W. A. funds, that were advertised in the paper, and in the same breath you asked me if that had anything to do with us purchasing the stock.

Mr. RAUSHENBUSH. That was not asked about. That you testified to a few moments ago, that that was one of the factors. I was asking whether that and the other factors, including the new one I mentioned, that of the bidding coming on, a very large Navy bidding coming on in July 1933 did not presumably have some influence on your decision to invest in this company, to take over this company?

Let me make the question even simpler, Mr. Manning, if I may. I may be involving you unnecessarily.

Mr. MANNING. I understand your question, and I think the proper answer to that is that, knowing that the American Navy was far below treaty strength, and knowing that the administration was at least favorable toward building the Navy up to treaty strength, that regardless of whether the P.W.A. money had been appropriated to be allotted to this purpose or not, it was perfectly evident, on the surface, that the shipbuilding business over a period of years should be a good industrial speculation, as the chairman just said, providing—and this is an all-important thing—that the company not only had the facilities to do the work but primarily had an organization to do it.

Mr. Raushenbush. Was there any question in your mind at that time, when the company had been getting a steady share, in fact a little more than some of the other companies, a steady share of the naval business, that it did not have an organization capable of doing the work?

Mr. Manning. If we had thought that it did not, we would not have bought the company, no matter how many millions of dollars may have been involved.

Mr. Raushenbush. So that the question of an organization was not one of the major elements really coming into the situation as a new matter, was it? What I am trying to get at is this, Mr. Manning: There were about $200,000,000 of Public Works money being allocated in 1933 and 1934 to the Navy, and that changed the picture very definitely, did it not? That made anybody thinking of buying a company see a prospective business, which certainly had not been there before this $200,000,000 was allocated.

Mr. Manning. Yes; it was perfectly evident if it was allocated, it was going to be spent.

Mr. Raushenbush. Yes. Now, coming back to the question of bidding in July 1926 you know, of course, that the bids had been called for for some time before?

Mr. Manning. I do not know anything about 1926.

Mr. Raushenbush. I am sorry. I am talking about July 26, 1933, at the time when the bids were opened on the 1933 building program. That was known to the trade generally quite a while before, that the shipbuilding bids were being called for, and the extent of the whole program was known some months ahead, was it not?

Mr. Manning. It was known to the shipbuilding trade. We did not know anything about it.

Mr. Raushenbush. You mean, when you went into this arrangement to take over the stock that you did not know that that was on the boards?

Mr. Manning. The bids were already in. They were placed on July 26, as I recall it.

Mr. Raushenbush. Yes; they were.

Mr. Manning. But they were not opened until about August 3 or 4.

Mr. Raushenbush. August 3, I believe.

Mr. Manning. And it was about that time—in other words, we could not have had anything to do with the bids if we had wanted to, because they were all in there before we knew anything about going into this business. We did not buy, sell, or trade in any way, shape, or manner 1 share of New York Shipbuilding stock of any class or description until we bought half interest in the 90,000 shares.

Mr. Raushenbush. The trading was done by somebody else. You have established that.

Mr. Manning. I do not know anything about that.

Mr. Raushenbush. Perhaps my confusion comes from the fact that Mr. Bardo the other day, when he was asked when the Cord Corporation first took over, he said formally August 2, and when pressed he said he did not know back in July that they were taking over. Are you establishing August 2 as the first date that you knew that the Cord Co. was going into the shipbuilding business?

Mr. MANNING. No, sir. We paid for our stock, as I recall it—I think our records will show—on July 31, and we knew about it perhaps a week before that—not over a week.

Mr. RAUSHENBUSH. That would bring it to July 14?

Mr. MANNING. No; the 31st back a week.

Mr. RAUSHENBUSH. I am sorry. I thought you said 21st.

Mr. MANNING. No; 31st.

Mr. RAUSHENBUSH. That would bring it to July 24?

Mr. MANNING. That is right. I might also incidentally add that this was a speculation that, as I said before, was not so good. We paid $20 a share for our stock.

Senator VANDENBERG. That is, the Cord interests?

Mr. MANNING. Yes, sir.

Senator VANDENBERG. Do you know what Ben Smith and Tom Bragg paid for theirs?

Mr. MANNING. I presume they paid $20 for theirs.

Mr. RAUSHENBUSH. Why do you presume that? Do you know about the arrangements, these options that they had from the Bancamerica Blair & Chase?

Mr. MANNING. No; I do not.

Mr. RAUSHENBUSH. How do you arrive at the figure of 20?

Mr. MANNING. If I asked a man to go into a partnership with me on anything on an equal basis, I would expect to give him anything I got at my price.

Mr. RAUSHENBUSH. Yes; but the stock back there in March was as low as 3¼, and the buying seems to have started at that time and slowly gone up. You were asked to bring along all evidences of ownership of stock, and I wondered if you had anything more on that—that is, also all records of options—that would show at what price the stock was actually taken over by Smith and Bragg.

Mr. MANNING. I would not have any of that information, Mr. Raushenbush.

Mr. RAUSHENBUSH. You see very clearly what I am trying to get at. Here it was public knowledge, to say the least, that a very big naval program was being planned in 1933, and the whole question of allotment of P. W. A. money to them was being agitated; and various of the builders were taking credit for it; and someone with inside information about these things might have seen a speculative buy which was very attractive; and what I am trying to get at is something definite on it—as much as possible. The stock market records put it somewhere between March and June very clearly.

You can add nothing to our information there?

Mr. MANNING. We have not any records or any discussions of any kind or description.

Mr. RAUSHENBUSH. And it was not until July 24, the day before the opening of the bids, that you really knew that the Cord Corporation was going into the shipbuilding business?

Mr. MANNING. It was not until when?

Mr. RAUSHENBUSH. July 24, about a week before the 31st, the day before the bids were opened, that you knew that the Cord Corporation was going into the shipbuilding business?

Mr. MANNING. I am trying to remember the dates the best I can, when we first heard of it. We discussed this matter two or three times, and I saw this balance sheet upon which the deal was made, and to my best knowledge and belief it was about the 24th, 25th, or 26th of July. I do not know which. But I know that we paid for our interest within 3 or 4 days after we decided to go in.

Senator VANDENBERG. Who conducted the negotiations between the Cord interests and Smith and Bragg?

Mr. MANNING. I did.

Senator VANDENBERG. And in the course of these negotiations what did Smith and Bragg hold out to you as being the inviting prospect in this investment? They must have had some sales talk.

Mr. MANNING. They had just the sales talk that you would expect to get from anybody that was going to put their own money into a deal with you, and wanted you to represent them and ourselves both in the management. And the idea was that it was going to be a prosperous business.

Senator VANDENBERG. Why was there a prospect of profit at this particular time, when there had been no profit for some time past?

Mr. MANNING. There hardly could be any profit in a shipyard, Mr. Chairman, when there was not any work in the yard. The shipyard was just finishing up the *Tuscaloosa*, and that was that. There was not any more business in sight at the moment.

Senator VANDENBERG. The Cord Corporation is a very successful and substantial business institution, and as far as I am concerned I have great respect for its business judgment, and for yours, and it seems to me that when Bragg and Smith, who were only stock speculators and nothing else, come to you with a deal of this magnitude, they must present you with something tangible in order to interest you in paying $20 a share for a substantial interest.

It seems to me that they must have indicated to you that there was some reasonable assurance that you were going to get some of this naval business, some of this P. W. A. business.

Mr. MANNING. If they had made that kind of assurance, Mr. Chairman, I would not have believed it, and I would not have gone into it on that basis.

Senator VANDENBERG. My question is, once more, whether or not they did make any such assurances?

Mr. MANNING. No, sir; they did not, sir.

Mr. RAUSHENBUSH. Where did this question come up about taking the company out of politics, which you were talking about a few minutes ago, Mr. Manning?

Senator CLARK. Was there any discussion, Mr. Manning, between you and Mr. Smith and Mr. Bragg as to the basis for this remarkable rise in stock from March to August 1933? In other words, before you bought into the company, naturally you wanted some explanation of the fluctuation in the price of the stock, did you not?

Mr. MANNING. We thought it was plenty high, and had gone up.

Senator CLARK. Was anything said about the basis for this rise from March to August 1933?

Mr. MANNING. No; no discussion whatever.

Senator CLARK. As a good sound business man, did not that very remarkable fluctuation attract your attention before you bought into the property?

Mr. MANNING. Yes, sir; it did.

Senator CLARK. In other words, you were paying some six times what it was selling for some 5 or 6 months before. Did not that attract your attention?

Mr. MANNING. It attracted the attention, but it did not seem entirely out of the ordinary, inasmuch as all the rest of the markets had gone up in the same time.

Senator CLARK. But not in the same proportion.

Mr. MANNING. No; but they did not all——

Senator CLARK. Was not that a very unusual increase, from 3¼ to 22½ in 5 or 6 months?

Mr. MANNING. Pretty unusual; yes, sir.

Senator CLARK. Did not that circumstance attract your attention and lead you to investigate before you invested money of your group in such an outlay?

Mr. MANNING. We bought the company on the basis—I mean we bought the stock on the basis of purely a balance-sheet situation.

Senator CLARK. Yes; but they had had approximately a very similar balance sheet in March, when the stock was selling for 3¼, had they not?

Mr. MANNING. Yes, sir; plus the prospect of new business.

Senator CLARK. What was said in these negotiations about the prospect of new business?

Mr. MANNING. Just the general discussion that I have mentioned, that there were prospects of new business. We did not have to discuss that with Bragg or Smith. Anybody who reads the newspapers could see that there were prospects of new business.

Senator CLARK. I understood you to say, Mr. Manning, that the company bought into New York Ship partly on the basis of the organization.

Mr. MANNING. That is right.

Senator CLARK. Was the organization satisfactory to you?

Mr. MANNING. Not entirely, as it turned out later on.

Senator CLARK. Why did you fire Mr. Bardo?

Mr. MANNING. On account of the lack of progress that was going on in the yard.

Senator CLARK. In what way?

Mr. MANNING. Well, in this way: The yard had set up a production curve, and the curve was not being met.

Senator CLARK. How far was it falling short of being met?

Mr. MANNING. I do not recall the percentage, but enough so that I was worried about it.

Senator CLARK. You had placed Mr. Kaltwasser in there as your particular representative?

Mr. MANNING. That is right. And it was reported to me that the curve was down. Not that I want to try to specify any particular reason for it, but I was not satisfied with the situation, and I had been contemplating doing something about it, but before I had the chance to do anything about it the Navy came to Mr. Kaltwasser and said, "There has got to be something done about this delay." That was relayed to me, and I came to Washington and talked to the Assistant Secretary of the Navy Mr. Roosevelt, Admiral Robinson, and Admiral Land, and discussed making this change.

Senator CLARK. Was it only in the matter of delay that the Navy complained?

Mr. MANNING. I believe so; yes, sir. At least that is all I had on that. That was sufficient.

Senator CLARK. What did you say to the Navy?

Mr. MANNING. Sir?

Senator CLARK. What did you say to the officials of the Navy at the time you conferred with them?

Mr. MANNING. What did I what?

Senator CLARK. What did you tell them when you conferred with them about Mr. Bardo?

Mr. MANNING. I think my exact wording was that I had hoped to be able to correct this situation before they insisted that it be corrected. In other words, we recognized it; and we wanted to correct it before we were told to correct it; but in trying to change the top side of an organization to get it corrected, you better be right before you make a change.

Senator CLARK. How long after this conversation did Mr. Bardo leave, Mr. Manning?

Mr. MANNING. Within a few days.

Senator CLARK. As a matter of fact, the investigators of this committee learned from the Navy Department that Mr. Bardo was on his way out before he knew it himself.

Senator VANDENBERG. Mr. Manning, do you remember why Mr. Ben Smith and Tom Bragg were invited to be present at a board meeting of December 6, 1934, as noted in the minutes of the meeting?

Mr. MANNING. Yes. We gave up the New York Ship offices as being an expense that we did not feel warranted in continuing, and for the past several months have held our board meetings at the Waldorf-Astoria Hotel in my suite; and they happened to be in the room when the meeting was called on some other matters, and we invited them to stay.

Mr. RAUSHENBUSH. In these earlier negotiations between Mr. Smith, Mr. Bragg, and the company, about taking it over, was Mr. Hurja there?

Mr. MANNING. Who?

Mr. RAUSHENBUSH. Mr. Hurja. He was Mr. Smith's assistant at the time.

Mr. MANNING. I do not know him.

Mr. RAUSHENBUSH. You never met him in this connection?

Mr. MANNING. No, sir.

Mr. RAUSHENBUSH. Coming back to a question I asked a while ago, Mr. Manning, you made a statement that one of your aims in making a change of management was to take the company out of politics. Certainly you would not have said that unless you had something fairly definite in mind. I wonder if you can explain that a little more fully?

Mr. MANNING. I think that statement had something to do with answering the question which the chairman had just asked me, which was part of a rather long question, and the word "politics" came into it, and I said, "What we have been trying to do is to take it out of politics", meaning if there was any politics in it, we would like to have it out of politics.

Mr. Raushenbush. The politics of the situation was not discussed at all before you took it over, or not?

Mr. Manning. The politics of New York Shipbuilding?

Mr. Raushenbush. Yes.

Mr. Manning. As related to what?

Mr. Raushenbush. The business of New York Ship depends largely on getting governmental business, either directly through the Navy building or through subsidized merchant-marine building. It is sort of in the nature of things in politics.

Mr. Manning. No politics were discussed.

Mr. Raushenbush. The change in management was not made until over a year after the Cord Corporation took it over, was it?

Mr. Manning. That is right.

Mr. Raushenbush. And that followed, as I believe Senator Clark brought out, a letter from the Navy Department censoring New York Ship for delay in its construction program?

Mr. Manning. I do not believe there was any letter. I am not sure as to that point.

Mr. Raushenbush. How did the matter come up?

Mr. Manning. The information came through the resident engineers to Mr. Kaltwasser.

Mr. Raushenbush. It came without letter, so far as you know?

Mr. Manning. I would be glad to find out if there was a letter, but I do not know of any.

Mr. Raushenbush. Is Mr. Kaltwasser here?

Mr. Manning. I believe he is not. He was excused yesterday, I believe.

Mr. Raushenbush. We place the letter as September 1934, and will offer it for the record later. That was very shortly after the awards had been made on the 1934 program, was it not? Those awards were made on August 22, 1934, and very shortly after that the company was censored for delaying the building program. Now, the question we wanted to ask of somebody—and you understand, let me say parenthetically, Mr. Manning, what a dilemma we are in: We find that the president of the company, who was president during all this time, is no longer with the company, and that the man who is president now does not know anything about these things, so that we are in somewhat of a dilemma as to where to get our information from. But the question is: How it would happen that New York Ship would get such a very considerable share of the 1934 program on August 22 and then a very few weeks later receive a censure from the Secretary of the Navy as to the delay in the building programs of 1933 and 1934.

How do those things dovetail?

Mr. Manning. I do not know how it came about.

Senator Vandenberg. Did you know what cruisers New York Ship was going to bid on in 1933, at the time you took over?

Mr. Manning. No, sir.

Senator Clark. You bought sight unseen for future business?

Mr. Manning. I beg your pardon?

Senator Clark. You bought sight unseen as to what they had bids on?

Mr. Manning. That is right.

Senator CLARK. Is there any director of the New York Shipbuilding Corporation at the present time, besides Mr. Metten, who ever had the slightest connection or experience with the shipbuilding business before that connection?

Mr. MANNING. I believe that is right.

Senator VANDENBERG. Now, Mr. Manning, that will be all for today, if you will be good enough to supplement the record with the information we asked you for.

Inasmuch as Secretary Ickes cannot appear tomorrow as planned, the committee will now recess until Monday at 10 o'clock.

Mr. PRUITT. You mean Mr. Manning is excused?

Senator VANDENBERG. Yes.

(Whereupon the hearing was recessed at 11:55 a. m. until Monday. Feb. 11, 1935, at 10 a. m.)

INVESTIGATION OF MUNITIONS INDUSTRY

MONDAY, FEBRUARY 11, 1935

United States Senate,
Special Committee to Investigate
the Munitions Industry,
Washington, D. C.

The hearing was resumed at 10 a. m., in room 357, Senate Office Building, pursuant to recess, Senator Gerald P. Nye presiding.

Present: Senators Nye (chairman), Clark, Pope, Bone, Vandenberg, and Barbour.

Also present: Stephen Raushenbush, secretary to the committee; and F. W. LaRouche, investigator.

The Chairman. The committee will be in order. Mr. Yard.

TESTIMONY OF GEORGE B. YARD, JR.

SHIPBUILDERS' CONFERENCES ON 1933 BIDDING

(The witness was duly sworn by the chairman.)

The Chairman. Give the committee your full name.

Mr. Yard. George B. Yard, Jr.

The Chairman. What is your residence, Mr. Yard?

Mr. Yard. Woodbury, N. J.

The Chairman. And your present occupation?

Mr. Yard. Insurance business.

Senator Vandenberg. Mr. Yard, what was your business previous to your present occupation?

Mr. Yard. I was connected with the New York Shipbuilding Corporation.

Senator Vandenberg. In what capacity?

Mr. Yard. As office and personnel manager and assistant to Mr. Bardo, the president. I sat in his office for 7 or 8 years—office of the president.

Senator Vandenberg. You say you sat in his office?

Mr. Yard. Yes, sir; right in his office.

Senator Vandenberg. That was a pretty close relationship, was it not?

Mr. Yard. Yes; it was.

Senator Vandenberg. You were in a position, were you not, to know pretty much what was going on in New York Ship during that time?

Mr. Yard. I should have been, sir.

Senator Vandenberg. How long were you in that capacity?

Mr. YARD. Well, all the time that Mr. Bardo was president. He was president, I think, for about 6 years, and before that he was vice president for a year or two.

Senator VANDENBERG. State it in terms of years, please.

Mr. YARD. I would say, to be exact, about eight and a half years, all told.

Senator VANDENBERG. That would include from 1927 to 1934?

Mr. YARD. Yes, sir.

Senator VANDENBERG. During those years Mr. Bardo and New York Ship were very much interested in naval contracts, were they not?

Mr. YARD. Yes; that was their business—part of it—that and merchant work.

Senator VANDENBERG. Were you somewhat familiar with the preparation of New York Ship bids in connection with naval work?

Mr. YARD. Well, I had nothing myself to do with the preparation of the bids, but I was familiar with how they were prepared, as to the routine of their direction through the organization, and so forth, if that is what you mean.

Senator VANDENBERG. How do you happen to be here testifying, Mr. Yard?

Mr. YARD. I am inclined to think that a lot of your people finally caught up with me. That is the only way I know.

Senator VANDENBERG. You came in response to a subpena?

Mr. YARD. That is the only way, sir.

Senator VANDENBERG. In connection with the letting of these various naval contracts from time to time—and subsequently I want to go into each year with you—what other shipbuilding corporations in the country were particularly interested in these same contracts along with New York Ship?

Mr. YARD. You mean the main competitors of New York Ship—these so-called "competitors"? It would be—Newport News, Bethlehem Shipbuilding Corporation, Sun Ship, and Federal would probably be the main ones.

Senator VANDENBERG. Did you say they were the so-called "competitors"?

Mr. YARD. They were the competitors of the New York Shipbuilding Co.; yes.

Senator VANDENBERG. When Mr. Bardo was preparing the bids of New York Ship upon these various naval contracts, was he in communication with Bethlehem and Newport at any time?

Mr. YARD. Well, yes; I imagine so.

Senator VANDENBERG. You are pretty sure of that, are you not?

Mr. YARD. Well, yes; he was.

Senator VANDENBERG. Did you ever hear Mr. Bardo communicate, for example, with Mr. Ferguson, of Newport News Ship, regarding bids which were going to be submitted on these contracts?

Mr. YARD. Well, of course, the shipbuilders were all bidding on the same class of work, and they had their shipbuilders' association, and they probably talked things over, I suppose, a little bit.

Senator VANDENBERG. What was this association they had? Let us start at that point. What was the nature of this association?

Mr. YARD. That was an association of shipbuilders which was, I imagine, probably formed by the three largest shipyards, namely, New York Ship, Newport News, and Bethlehem. Of course, all the others came into the picture. The association was supported by contributions, I think on a per head basis. In other words, there was a charge; each one contributed an amount in proportion to the number of employees that that particular shipyard had.

Senator VANDENBERG. Now, you sat in Mr. Bardo's office for 8 years, and you know what was going on. Would you say that the members of this association were in more or less constant contact with each other in respect to business of bidding?

Mr. YARD. If I answer that at all—and I am under oath—I will have to say that I think that that is probably so.

Senator VANDENBERG. You are under oath, and the oath runs through the entire series of questions. Let us take, for example, the 1934 contracts. Before New York Ship's proposal was submitted in 1934, do you know whether Mr. Bardo communicated with Mr. Ferguson or Mr. Wakeman of Bethlehem, ahead of the bidding, in connection with what the bidding would be?

Mr. YARD. Well, as I say, through their association et cetera they were in touch with each other quite often.

Senator VANDENBERG. Were they not in touch with each other over the telephone?

Mr. YARD. Yes; they would call each other up over the telephone quite frequently.

Senator VANDENBERG. And would they discuss their bids?

Mr. YARD. They would discuss business in general.

Senator VANDENBERG. Would they discuss their bids?

Mr. YARD. Well, of course, that was their main line of business, Senator.

Senator VANDENBERG. The answer is "yes", is it not?

The CHAIRMAN. They did discuss bids over the telephone, did they not?

Mr. YARD. I believe they did, Senator.

The CHAIRMAN. Do you not know they did?

Mr. YARD. Yes; I know they did.

Senator VANDENBERG. They would discuss bids before the bids were put in. Is that the situation?

Mr. YARD. Oh, yes; yes.

Senator VANDENBERG. Would they indicate to each other what they intended to bid and the particular ships they were going to bid on?

Mr. YARD. Well, I think it was pretty generally understood among themselves as to what they each preferred to receive, and I think there is not very much doubt that they tried to come to some such conclusion; that is, as to what they should want.

Senator VANDENBERG. As a matter of fact, you heard one end of conversations more than once, did you not—I am coming to this conclusion from your testimony—which indicated that Mr. Bardo and Mr. Ferguson and Mr. Wakeman were specifically discussing what portion of each Naval program each was going to have. Is not that a fact?

Mr. YARD. Of course, Senator, I only heard one side of the conversation, and I would not want to testify too specifically about that. That would probably be the answer.

The CHAIRMAN. You can tell us what your impressions were out of hearing one side of that conversation or those conversations, surely.

Mr. Yard. That would be the impression that you would receive, of course.

Senator Clark. Did you ever hear Bardo tell these other fellows what he thought he ought to have out of these bids?

Mr. Yard. Oh, yes; it was very generally understood what each one wanted. There were not any secrets about that.

Senator Clark. There was not any secret between them about anything, was there? Have you not heard them discussing various costs over the telephone?

Mr. Yard. Well, I do not know whether I can exactly recall that or not, Senator.

Senator Clark. Did you ever hear Bardo call up one of these fellows and tell them any conversations he had had with Naval officials?

Mr. Yard. No; I do not recall that.

Senator Clark. Did you ever hear him refer to anything that had gone on in meetings with these other fellows having to do with the allocation of bids?

Mr. Yard. Oh, yes; as I say, that was generally understood. In other words, each yard had its preference for what class of shipbuilding construction they wanted.

Senator Clark. Each yard was better equipped for certain kinds of shipbuilding construction than others, was it not?

Mr. Yard. That is true.

Senator Clark. In other words, one would be better fitted for destroyers and another for cruisers.

Mr. Yard. And another for airplane carriers, et cetera.

Senator Clark. Certainly; and each one was trying to get what it was best equipped for?

Mr. Yard. That is right.

Senator Clark. As a matter of fact, it was the practice in such case for the yards which were not best equipped for that class of ships to lay off or make protective bids, was it not? Did these telephone conversations which you heard indicate that?

Mr. Yard. Well, you might infer that.

Senator Clark. You could not infer anything else from the conversations you heard, could you, Mr. Yard?

Mr. Yard. That would be the natural inference, I suppose.

Senator Vandenberg. Did it usually happen that the New York Ship got the contracts which it preferred to have?

Mr. Yard. It generally worked out pretty close to that, Senator.

Senator Vandenberg. Let me see if I understand this. I want to take one of these years. Here is the naval program for 1934. Prior to the bidding on the ships in 1934, did Mr. Bardo talk with Mr. Ferguson and Mr. Wakeman about the bids which each of these three producers were going to put in?

Mr. Yard. Well, as I say, it was generally the usual practice to confer, I think, among each other.

Senator Vandenberg. You sat right in Mr. Bardo's office all this time?

Mr. Yard. Yes, sir.

Senator Vandenberg. Whenever Mr. Bardo had a conversation with Mr. Ferguson, or Mr. Wakeman on the phone, if you were there you heard it, did you not?

Mr. Yard. Well——

Senator VANDENBERG. You heard what Mr. Bardo had to say?

Mr. YARD. I could not hear it——

Senator VANDENBERG. You did hear it, did you not?

Mr. YARD. I heard some of it; yes, sir.

Senator VANDENBERG. And you heard Mr. Bardo, as I understand it, discuss the ships that he wanted for New York Ship out of a prospective naval program, and you heard him discuss what he was going to bid and what the others were going to bid; is not that true?

Mr. YARD. I heard him say what he wanted out of the naval program. That is absolutely so; yes, sir.

Senator VANDENBERG. Now, in 1933 there was another big naval program, was there not?

Mr. YARD. Yes, sir.

Senator VANDENBERG. And you were in Mr. Bardo's office when they were preparing for that program?

Mr. YARD. Yes, sir.

Senator VANDENBERG. Did Mr. Bardo talk with Ferguson and Wakeman prior to the submission of the bids in connection with the 1933 program?

Mr. YARD. As I say, they did. They conferred together, yes.

Senator VANDENBERG. How often would they talk together on the telephone?

Mr. YARD. I have not any exact idea of that, Senator.

Senator VANDENBERG. Would there be frequent conversations when the Government was going to open bids on one of these jobs?

Mr. YARD. They seemed to keep in pretty close touch with each other.

Senator VANDENBERG. Yes. And, so far as you knew, each one of them knew pretty much what the other one knew. Is not that about right?

Mr. YARD. Most of the time I think that is so.

The CHAIRMAN. Did Mr. Bardo indicate from time to time any knowledge of what his competitor was going to do?

Mr. YARD. It was pretty common knowledge around what each yard was going to get, and it turned out that that was what they did get, almost 100 percent.

Senator CLARK. Mr. Yard, you said a while ago that there had been conversations over the telephone which indicated what each company wanted. But each company was in the habit of submitting bids on all the ships, those they did not want as well as those they wanted, were they not?

Mr. YARD. Yes, sir.

Senator CLARK. For instance, if New York wanted cruisers, they would also submit bids on destroyers and airplane carriers, which would be protective bids for the other companies, would they not? They would be so high they knew they could not get them.

Mr. YARD. If they did not want that class of work, that is probably the procedure.

Senator CLARK. If they did not want the work, they would submit a bid anyhow, but would submit a bid which would be high enough that they knew that they would not compete with the company which actually wanted the work?

Mr. YARD. Either kill that or kill it by a long-time delivery.

Senator CLARK. Do what?

Mr. YARD. Time delivery enters into the bid also.

Senator CLARK. Either as to price or time delivery, or some other condition, but they would make a protective bid, would they not, protecting the other company which was to get the work? Was not that common practice?

Mr. YARD. You might infer that, Senator.

Senator BONE. You could not draw any other inference from that sort of situation, could you? You could only conclude from the facts that that was actualy done. Is not that the case?

Mr. YARD. That would be the inference you would draw.

Senator BONE. It would be a very legitimate inference from the facts, would it not, Mr. Yard?

Mr. YARD. Yes; it would.

POSITION OF CORD REPRESENTATIVE WITH NEW YORK SHIPBUILDING CORPORATION

Senator VANDENBERG. Mr. Yard, when did Mr. Kaltwasser come with New York Ship?

Mr. YARD. I think he came there towards the end of 1933.

Senator VANDENBERG. And in what capacity?

Mr. YARD. Well, he came down there, it was generally understood, as Mr. Cord's direct representative.

Senator VANDENBERG. Did he have a good deal to say about what was going on?

Mr. YARD. We all thought he had a great deal to say.

Senator CLARK. He was regarded throughout the plant as the "power behind the throne", was he not?

Mr. YARD. Absolutely.

Senator CLARK. And Mr. Kaltwasser was known to take it on himself to overrule Mr. Bardo on occasion, was he not?

Mr. YARD. I have seen him do that.

Senator CLARK. In spite of the fact he was supposed to be an assistant to the president?

Mr. YARD. Correct.

Senator VANDENBERG. Mr. Yard, when one of these naval contracts was in contemplation and New York Ship was getting ready to submit its bid, was there some kind of conference usually at which the chief executives of New York Ship went over the general situation before the bid was presented?

Mr. YARD. Yes; the procedure on that, Senator, was in the preparation of bids, of course, the estimating department secured all the details as to actual labor and material. The shops—generally each shop foreman was required to make up an estimate of the number of man-hours which would be required for that shop to do the work on any particular contract. Then all those details were brought in finally to the estimating department, and then the chief estimator would take the situation up with the then vice president and general manager, who was of course the responsible man in the end for the building of the ships.

Senator VANDENBERG. Who was that?

Mr. YARD. If the shipyard got the contracts——

Senator VANDENBERG. Who was that?

Mr. YARD. The man's name at that time was Ernest Cornbrooks.

Senator VANDENBERG. Yes.

Mr. YARD. Then, after the bids were in such shape, insofar as labor and material was concerned, up to that point, then of course they were referred to the topside executives, in addition to Mr. Cornbrooks.

Senator CLARK. What do you mean by "topside executives", Mr. Yard?

Mr. YARD. I mean the president and the treasurer and Mr. Kaltwasser, after he was there.

Senator VANDENBERG. That is what I want to know. The fact is that Mr. Kaltwasser sat in when these bidding problems were discussed. Is that right?

Mr. YARD. He sat in everything that I ever saw anybody sit in down there until I left. I left just before this 1934 bid was finally prepared, but I think it is very, very safe to assume that he sat in on that.

Senator VANDENBERG. Never mind any assumption because I just want what you know about it. During the time that you and Kaltwasser were there together, Mr. Kaltwasser was in on all these conferences. Is that correct?

Mr. YARD. Yes, sir; for instance, during the strike which we had down there, Mr. Kaltwasser sat in in every conference. The conference was right in the room that was my place of abode at the time, in Mr. Bardo's office, and the only time that he ever missed a meeting or was a little bit late, he had been to a dinner, I think over in Philadelphia, and he came back in a dinner coat just as the meeting was breaking up, but to my knowledge on all the labor conferences, that is the only one he ever missed.

Senator VANDENBERG. He was in on the discussion of the contracts too, was he not?

Mr. YARD. Yes.

Senator CLARK. Was Kaltwasser present at the meetings when the bids were under discussion, Mr. Yard?

Mr. YARD. You see, Mr. Kaltwasser was not there during the letting of the 1933 program. He came after that.

Senator CLARK. Yes, and you left before the 1934 letting?

Mr. YARD. I left about a month before it finally took place.

Senator CLARK. Had there been any meetings at which bids for 1934 were discussed before you left?

Mr. YARD. That was going on constantly, Senator.

Senator CLARK. Did you ever see Mr. Kaltwasser at one of these meetings where bids were under discussion?

Mr. YARD. He was continually in and out of Mr. Bardo's office all of that time.

Senator CLARK. Did you ever hear Mr. Kaltwasser take part in one of these discussions as to submission of bids?

Mr. YARD. I would not want to answer it directly, sir.

Senator CLARK. Can you answer it directly? Have you any recollection of ever having seen Kaltwasser at one of these meetings?

Mr. YARD. It is my best belief that these matters were under discussion some time before the actual letting of the bids, and of course Mr. Kaltwasser was in attendance of everything of any importance.

Senator CLARK. So that if Kaltwasser testified here last week or week before last that he was simply engaged on work in improving the "incentive work" in the yard, and had nothing whatever to do with bids, he was not telling the truth, was he?

Mr. YARD. I cannot imagine, Senator, that he would say that he had nothing to do with anything, because he was Cord's direct representative. He hired men and sent them in there, and I know Mr. Bardo did not know some of them, who they were, or what they were going to do, and they came in and they were top-side men, with very important jobs, some of which displaced some of us, and a man who bites in like that, you can use your own judgment.

Senator CLARK. Did you ever see any indication that Mr. Kaltwasser was confining his activities to trying to improve the status of the incentive work in the yard?

Mr. YARD. I would say that the only limit to his activity was the limit of the plant itself.

Senator BONE. What had been his experience prior to coming there?

Mr. YARD. He has been some sort of automobile mechanic—or I mean in some sort of automobile business.

Senator BONE. Then he went in over a lot of chief executives in a plant engaged in Government shipbuilding?

Mr. YARD. Yes, sir; and the men be brought in with him, the first three or four men, had never had any shipbuilding experience.

Senator BONE. That is the type of efficiency that the Navy officials talked to us about with respect to private yards. You know, they boast of the efficiency of the private yards doing work for them. You know that, do you not, sir?

Mr. YARD. Yes sir.

Senator BONE. This is really a demonstration of the efficiency found in the private shipyards.

Mr. YARD. Of course, that last condition is brought about by the change of ownership.

Senator BONE. I understand the Cord interests coming in and buying that plant and putting an automobile mechanic in charge of it.

Mr. YARD. That was just a slip, Senator. I meant he was in the automobile business.

Senator CLARK. He was a prize fighter, so the record shows today.

Mr. YARD. We had a prize fighter on the board.

Senator BONE. A company building battleships for the Government should have a couple of prize fighters on the board.

Mr. YARD. They ought to go on after it was finished and possibly not before.

PRE-BID CONFERENCES OF SHIPBUILDERS

Senator VANDENBERG. We discussed the letting in 1934 and 1933, and you indicated that Wakeman and Ferguson were in constant contact about these bids. In 1931 there was another letting of Government business. Do you remember whether these same conversations between Bardo, Wakeman, and Ferguson occurred in 1931, before the bids were put in?

Mr. YARD. I do not recall exactly about that, Senator.

Senator VANDENBERG. It always occurred whenever there was any letting, did it not?

Mr. YARD. It generally did.

Senator VANDENBERG. Now, for instance, here is a letter from Mr. Bardo to Homer L. Ferguson dated May 28, 1931, marked "personal." It says [reading]:

> MY. DEAR HOMER: I would like to arrange an interview with you at the very earliest practicable moment to discuss a subject of very great mutual interest. I understand you will arrive in New York Friday, and if you will phone me at the yard I will arrange to meet you at any time and place most convenient.

When Mr. Bardo is talking to Mr. Ferguson about a subject of very great mutual interest, just preceding the submission of bids on a naval program, what would be the great mutual interest which would excite such concern at the moment?

Mr. YARD. Well, I suppose there is only one logical inference to draw from that, Senator.

Senator VANDENBERG. In addition to these telephone conversations, were there direct personal meetings between Bardo, Ferguson, and Wakeman or other representatives of the "big three" from time to time?

Mr. YARD. They met each other and communicated quite frequently. Of course, they had an association set up for that purpose. They all supported it. That was the place in New York where——

Senator VANDENBERG. Did you ever hear of a so-called "famous meeting" at the Mayflower Hotel in 1933?

Mr. YARD. I heard about it. I was not there.

Senator VANDENBERG. From whom did you hear about it?

Mr. YARD. It was in a general sort of way, we heard about it.

Senator VANDENBERG. If you were Mr. Bardo's intimate, and there was a meeting of that sort, would not Mr. Bardo be likely to say something to you about it?

Mr. YARD. He did not say anything to me about that.

Senator VANDENBERG. Did Mr. Cornbrooks ever say anything to you about it?

Mr. YARD. No; I think that is the meeting that Mr. Cornbrooks became very ill, Senator.

Senator CLARK. Do you understand that he became very ill at the meeting?

Mr. YARD. I believe so.

Senator CLARK. How long after the meeting did he tell you that?

Mr. YARD. He did not tell me that. We heard it.

Senator VANDENBERG. Was there a meeting at which he was very ill?

Mr. YARD. I believe he had not been feeling well and he had to leave the meeting. As I say, I was not there myself.

Senator VANDENBERG. What did you understand was the reason he had to leave the meeting?

Mr. YARD. I could only guess at that, Senator. I really do not know.

Senator VANDENBERG. I do not want you to guess it. Did anybody ever tell you about it?

Mr. YARD. Not so that I could be exactly specific on that.

Senator VANDENBERG. Have you any recollection about Bardo, Cornbrooks, or Parker talking to you about the meeting in the Mayflower Hotel?

Mr. YARD. As I said, there was some talk about it around the plant, afterwards.

Senator VANDENBERG. You mean there was some talk around the plant which indicated that there was a midnight conference at the Mayflower Hotel?

Mr. YARD. Oh, yes; there is not any doubt about that.

Senator VANDENBERG. There is not any doubt about the fact that there was a conference?

Mr. YARD. I do not think there is.

Senator VANDENBERG. Is there any doubt about what the conference was for?

Mr. YARD. It was in connection with shipbuilding business.

Senator VANDENBERG. Was it the talk around the plant that the purpose of the conference was to divide up these contracts? Is that what the talk around the plant was?

Mr. YARD. I was not there, Senator.

Senator VANDENBERG. You were in the plant. I am talking about what the talk around the plant was.

Mr. YARD. That would be only more or less hearsay.

Senator VANDENBERG. You got the general impression from some source, which, let us say, you cannot recall, or are not willing to recall—you got the impression that there was a conference at which there was an agreement upon what portions of this naval program were to be awarded to each of the "big three." Is that a fact? You got that impression from some source?

Mr. YARD. I may have received that impression, but I would not say from my own knowledge that that is correct.

Senator VANDENBERG. That is all right. I just want to fix the fact that that was your judgment.

Senator CLARK. Did you not say a moment ago, Mr. Yard, that Cornbrooks told you himself he got sick at this conference?

Mr. YARD. No, sir; I did not say that.

Senator CLARK. I understood you to say that.

Mr. YARD. No; I said that Cornbrooks was taken ill at that meeting.

Senator CLARK. But Cornbrooks did not tell you himself?

Mr. YARD. Cornbrooks did not tell me himself; no, sir.

Senator VANDENBERG. Do you know why Bardo left New York Ship?

Mr. YARD. Well, I imagine that he probably felt that the authority had become so divided that he probably came to realize that somebody else was really in control, that he figured he could not live with the situation any longer. That is only my idea.

Senator VANDENBERG. Did he ever talk to you about it?

Mr. YARD. No, sir; he did not say much about those things.

Senator VANDENBERG. Did you notice any change after the Cord interests took possession of New York Ship, any change in management or policy?

Mr. YARD. Well, there were plenty of changes in the personnel and in the change of certain systems, such as the incentive system, and the morale of the plant was very materially affected, in my estimation, but of course that is probably only natural in any change of ownership.

Senator VANDENBERG. Were you familiar with any of the transactions through which the Cord interests and Ben Smith and Tom Bragg obtained control of New York Ship? Do you know anything about that?

Mr. YARD. No; I do not know anything about that. I do not think many people did know much about that part of what was happening.

Senator VANDENBERG. Did you ever hear Mr. Bardo telephone anybody in the Navy Department regarding contracts?

Mr. YARD. Well, he—naturally a lot of our business was with the Navy Department.

Senator VANDENBERG. I mean regarding the letting of bids.

Mr. YARD. I cannot recall anything, sir.

Senator CLARK. Did you ever hear him talk over the telephone to any of the officials of Bethlehem or Newport News about conferences he had had with naval officials?

Mr. YARD. I do not recall any specific item.

Senator CLARK. Do you recall any such conversations in which he told Mr. Ferguson and Mr. Wakeman, of Newport News, he had had talks with naval officials preceding the letting of your contracts. As a matter of fact, there was nothing unusual about that, was there?

Mr. YARD. No; there would not be, but I thought you were trying to ask me to think of some specific one.

Senator CLARK. I did ask you that first, but I am asking you now, whether in the general course of the business, it was customary for Bardo to call up Mr. Wakeman and Ferguson and retail to them any conversations he had had with Naval officials about the letting of bids. Is not that true?

Mr. YARD. Yes, sir.

Senator BONE. Are you acquainted in any way with lists of stockholders of the New York Shipbuilding Co.?

Mr. YARD. No, sir; I really do not know that.

Senator BONE. Are you familiar with the names of any holders of the larger blocks of stock?

Mr. YARD. I really could not say that.

Senator BONE. Do you have any knowledge of the blocks of stock held by Hornblower & Weeks?

Mr. YARD. I believe they did at one time hold a fairly large block of stock.

Senator BONE. Did they hold it at the time you left?

Mr. YARD. I believe so, sir.

Senator BONE. Do you know whether it was their stock or they were holding it for the account of someone?

Mr. YARD. I rather imagine it was for someone else's account.

Senator BONE. Can you inform the committee who that was?

Mr. YARD. I have no first hand information on that.

Senator BONE. Have you any second-hand information, or anything which would give us any light as to the principal for which Hornblower & Weeks was holding this stock?

Mr. YARD. I only heard a rumor as to who held it. Of course everybody was wondering who owned the company, and everybody was guessing here and there, and strictly on absolute knowledge I cannot answer the question.

Senator BONE. Did you discuss among the members on the board of directors or other executives of the company the matter?

Mr. YARD. No; I mean all the members and employees of the organization. There was quite some question in all our minds as to where the control really lay. Nobody seemed to know down the line. I suppose somebody at the top knew about it.

Senator BONE. Did this block of stock have something to do with the control of the company? Was it a factor in the control?

Mr. YARD. It was a very good-sized block, I believe, that that particular firm had.

Senator BONE. Does this rumor which you heard about come from the executives of the company?

Mr. YARD. I do not recall.

Senator BONE. The mechanics in the yard would not be discussing it.

Mr. YARD. No; but you would be surprised as to how much the mechanics in the yard sometimes know. They knew things before we did sometimes.

Mr. LAROUCHE. Did not Parker or Bardo know or say who owned that block of stock?

Mr. YARD. I do not exactly recall that.

Senator VANDENBERG. Mr. Yard, now there were big contracts let in 1927, 1929, 1931, 1933, and 1934, and, as I understand it, you were in a close confidential capacity with Mr. Bardo during each of those five episodes. That is correct is it not?

Mr. YARD. Yes, sir; I was there during that time.

Senator VANDENBERG. During all of those five incidents, when the New York Ship made up its bids, you knew all about it. You sat in at the conferences when the matter was discussed?

Mr. YARD. They were discussed right in the presence of us there, and I was in his office; yes. I had nothing to do with the preparation of the bids, however.

Senator VANDENBERG. I understand that. But, based upon the knowledge that you inevitably gained in that intimate capacity, what is your answer to this question: Did the New York Ship confer with Bethlehem and Newport News in each instance in advance of bidding respecting the classification of ships upon which each was going to bid, which each wanted to get, and how the bidding was to be done to produce that net result?

Mr. YARD. Do I have to answer that question, Mr. Senator?

Senator VANDENBERG. Yes, sir; I find it necessary to ask you to answer it.

Mr. YARD. Well, of course, as I say, they had this association——

Senator VANDENBERG. Never mind the association. That question is susceptible of a yes or no answer.

Mr. YARD. I guess I will have an answer "yes", Senator.

Senator VANDENBERG. That is all so far as I am concerned.

Senator CLARK. Were you working for the New York Shipbuilding Co. prior to the 1927 program?

Mr. YARD. I went there, I think, January 1926.

Senator CLARK. Were you working there when they employed Mr. William B. Shearer to go to Geneva for them?

Mr. YARD. I never came in contact with that particular feature of the thing, I do not think.

Senator CLARK. Did you hear Mr. Shearer's employment discussed in the office?

Mr. YARD. I do not recall anything about that, sir.

Senator CLARK. You do not remember that incident at all?

Mr. YARD. Oh, I remember the fact that Mr. Shearer went to Geneva; yes, of course.

Senator BONE. Now Mr. Yard, I would like to ask one question. I think your answer to Senator Vandenberg's question is not only very revealing, but it is almost conclusive as to why there has been this peculiar increase in the bid price of ships for this Government during the last 2 or 3 years; but I want to ask you one other question in connection with that. How much, if you can tell us, has there been in the way of an increase in actual dollars and cents going to labor in these shipyards between the latter part of 1932 and August or September 1934? In other words, how much did labor benefit by any increase in wages in the by and large? I do not ask you to be specific, but just give a general picture of how much increase labor got out of the yards' bids.

Mr. YARD. Are you referring to the new agreement they got after the settlement of the strike? I think that that increase amounted to about 14.6 percent.

Senator BONE. Fourteen percent. Then there could not be any legitimate connection between that and an increase of 100 percent in the price which is demanded from this Government for the same type of ship in a period of 18 months?

Mr. YARD. Not as far as labor is concerned.

Senator BONE. That is what I am getting at. We have been told—and I have clippings on my desk—or the assertion is made that labor constitutes anywhere from 60 to 85 percent of the cost of one of these vessels.

Mr. YARD. I have often wondered just how that was figured out myself.

Senator BONE. So do we wonder. No one has ever been able to make it clear.

Mr. YARD. Of course, it includes labor in all the auxiliaries and all the other stuff bought.

Senator BONE. I understand that. There has been testimony here that the actual dollars and cents going into one of these vessels in a building yard is about 50 percent, perhaps a little more. But it is your best judgment, is it not, that the increase in this period in the money going to labor, in the pockets of the workers, was something over 14 percent?

Mr. YARD. Fourteen and six-tenths percent; yes, sir.

Senator BONE. During that period has there been a frightful rise in the price of steel, or can you give us some idea how far steel has advanced during this period in price to these yards?

Mr. YARD. I have no statistics.

Senator BONE. I understand; but you are a shipyard executive and know something about the trend of prices.

Mr. YARD. There was a slight increase in the price of material, but of course nothing like that.

Senator BONE. Would that amount to as much as 5 percent?

Mr. Yard. I do not feel competent to testify as to that, Senator.

Senator Bone. You say there was a slight increase?

Mr. Yard. There are a great many different kinds of materials going in there, and what the increase would average over all of them, I have not the slightest idea.

Senator Bone. There is nothing in this picture of the amount flowing to labor or the increase in prices of material that would warrant a 100-percent increase in the bid price of vessels within a period of 18 months?

Mr. Yard. I would not think so.

Senator Bone. You know that, do you not? You can answer frankly to us that that is your idea.

Mr. Yard. That would be my idea.

Senator Bone. That is one phase of the explanation you made to Senator Vandenberg, and that is with regard to collusion.

Senator Clark. I want to ask one more question. When did you first hear about Mr. Shearer's employment by the New York Shipbuilding Co.? Do you recall?

Mr. Yard. I really have not any very definite recollection about that.

Senator Clark. Did you ever hear any discussion about Mr. Bardo's arrangements which had been made with Mr. Shearer; what he was supposed to do?

Mr. Yard. The most I know about was what was in the papers which came out during the investigation.

Senator Clark. Did you hear any discussion of that in Mr. Bardo's office?

Mr. Yard. I do not recall anything along that line; no, sir.

Senator Clark. Did you ever hear any discussion about what the break-up of the Geneva conference would mean to the "big three" shipbuilding companies?

Mr. Yard. Not directly; no, sir.

Senator Vandenberg. Now, Mr. Yard, just in conclusion, if we had had testimony that there were no consultations between the "big three" preceding the bidding in 1927, that testimony is not true; is that correct?

Mr. Yard. Well, as I say, they had their association, Mr. Senator.

Senator Vandenberg. I understand. Never mind the association. But the blunt basic fact, if there is testimony that there was no consultation between New York Ship, Bethlehem, and Newport, respecting the 1927 bidding, prior to the bidding, that testimony is not true? Is that your estimate of it?

Mr. Yard. You are going back to 1927 now?

Senator Vandenberg. I am starting at 1927; yes.

Mr. Yard. That is a long while to remember about that, Senator.

Senator Vandenberg. Do you remember a little better about 1933?

Mr. Yard. That is a little nearer by.

Senator Vandenberg. All right. I will ask you about 1933. If there is any testimony that there were no consultations in 1933 between New York Ship, Newport, and Bethlehem in advance of the bidding, that testimony is incorrect? Is that right?

Mr. Yard. Well, it is very questionable in my mind.

Senator Vandenberg. The answer is that the testimony is incorrect, as you view it?

Mr. YARD. I would say it was very questionable.

Senator VANDENBERG. As as matter of fact, that is a question you can answer yes or no, Mr. Yard, and just choose one or the other, will you?

Mr. YARD. You are forcing me to answer that one?

Senator VANDENBERG. I certainly am.

Mr. YARD. Will you state the question again, please, so that I do not answer it the wrong way?

Senator VANDENBERG. All right; I will state it again. In connection with the 1933 naval contracts, if we have testimony which asserts that there were no consultations respecting bids and allocation of work between New York Ship, Bethlehem, and Newport preceding the bidding, that testimony is incorrect?

Mr. YARD. To the best of my belief; yes.

Senator VANDENBERG. That is all.

Senator CLARK. You know, do you not, Mr. Yard?

Mr. YARD. I am rather sure, Senator, but it is a hard thing.

Senator CLARK. You testified one way here and if these other gentlemen testified directly at variance with your testimony, then they are not telling the truth according to your story. Is not that true?

Mr. YARD. Either that or simply have mental paralysis. I do not know.

The CHAIRMAN. That is all, Mr. Yard.

Mr. RAUSHENBUSH. Mr. Chairman, in view of the circumstances, may we ask that Mr. Yard be kept under subpena?

The CHAIRMAN. You will understand yourself to remain under subpena, Mr. Yard.

Mr. YARD. Yes, sir.

The CHAIRMAN. Mr. Flook.

TESTIMONY OF WILLIAM M. FLOOK

TRANSFER OF CONTROL TO CORD INTERESTS

(The witness was duly sworn by the chairman.)

The CHAIRMAN. Give the committee your full name, Mr. Flook.

Mr. FLOOK. William M. Flook.

The CHAIRMAN. What is your occupation at this time?

Mr. FLOOK. I have none at the moment, sir.

The CHAIRMAN. You have had connection with the New York Shipbuilding yard?

Mr. FLOOK. Yes, sir.

The CHAIRMAN. In what capacity?

Mr. FLOOK. I went with the corporation in January 1927 as chairman of the executive committee. About the summer of 1927 I became chairman of the board. The following winter, I think late in December, I became president. That was the American Brown Boveri Electric Corporation, you understand.

Senator CLARK. When was it you became president of the American Brown Boveri Electric Corporation, Mr. Flook?

Mr. FLOOK. In December 1927, according to my recollection.

The CHAIRMAN. Were you a stockholder in the New York Ship yard?

Mr. Flook. At that time, Senator, the name was the American Brown Boveri Electric Corporation. I had some stock; yes, sir.

Senator Clark. Did you succeed Mr. Wilder as president of the American Brown Boveri Electric Corporation?

Mr. Flook. Yes, sir; later on, and I think in the summer of 1928. I became president, and that continued until we sold the electrical division to the Allis-Chalmers Manufacturing Co. and changed the name to the New York Shipbuilding Corporation.

Senator Bone. When was that?

Mr. Flook. May I look at a memorandum on that, Senator?

Senator Bone. It is not important. What year?

Mr. Flook. I think it was 1930 or 1931. I made a memorandum of 1 or 2 of these dates (examining memorandum). Yes; that was in December 1931. At that time Mr. Bardo was elected president and I remained chairman of the board. That continued until the summer of 1933, when the Cord interests took the property over and I resigned.

Senator Vandenberg. Just a moment. At what time in 1933, precisely, did you resign?

Mr. Flook. I resigned as chairman of the board at a meeting held on August 2, 1933. The Cord interests took control in July 1933.

Senator Vandenberg. The Cord interests took control in July?

Mr. Flook. They bought stock control.

Senator Vandenberg. Had the stock been transferred to them at that time?

Mr. Flook. I do not know, Senator.

The Chairman. How extensive a stockholder were you, individually?

Mr. Flook. The most that I and my family ever had in the company was some seven thousand-odd shares of Founders.

Senator Clark. Was this a regular meeting of the board at which you resigned?

Mr. Flook. This was a special meeting, sir.

Senator Clark. How did you become advised that the Cord interests had acquired control of the company?

Mr. Flook. The two blocks that held control of the company before that time, Senator, was a block owned at one time by Pynchon & Co., which approximated some 50,000 shares. That, on the failure of the Pynchon & Co., had fallen into the hands of the Chase Bank and had been converted to ownership by them. There was another block, as I understand, of about 37,000 shares, which was owned by the old Blair interests, Blair & Co., and those two blocks for years had constituted control of this corporation because those two blocks together were more than one-half the voting stock.

Senator Clark. These two banking houses or brokerage houses owned the stock themselves, did they, Mr. Flook?

Mr. Flook. Yes, sir.

Senator Clark. And exercised active control of the stock in running the company?

Mr. Flook. Yes, sir; and it was those two blocks which were bought, as I understand it, by Cord.

Senator Clark. How were you advised that Cord had taken control of the company?

Mr. **Flook.** One of my directors, Mr. Earl Hines, one of the directors of the company, Mr. Earl Hines, was also a vice president of the Chase Bank, and represented their interests on the board, called me up and asked me to lunch with him. I did, and he then told me that they had sold out, wanted to advise me that they had sold out their block, and the Blair crowd had sold out their block, and therefore that the control had changed. He told me that he did not know who the purchasers were, but that a man named Taradash had made the purchase.

Senator **Clark.** Did he suggest to you you resign as chairman of the board?

Mr. **Flook.** No; he wanted me to meet Mr. Taradash. His idea was that they were going to continue me as chairman of the board.

Senator **Clark.** What did Taradash say when you met him?

Mr. **Flook.** I met him and he intimated that the real purchasers were the Cord crowd.

Senator **Clark.** Did he intimate they wanted you to step out?

Mr. **Flook.** No; he intimated they did not want any change, but Mr. Taradash was mistaken. They did.

Senator **Clark.** When and how were you advised that you were to step out as chairman of the board?

Mr. **Flook.** A few mornings later I found Mr. Manning, who was Mr. Cord's associate, and Mr. Bernard Smith——

Senator **Clark.** Mr. Who?

Mr. **Flook.** Bernard Smith, commonly known as "Ben" Smith, I believe. I had never seen either of them before. They were going by plane down to Camden and they asked me to notify Mr. Bardo that they were coming, and I saw them on that occasion for about a minute.

Senator **Clark.** About when was that, Mr. Flook?

Mr. **Flook.** That was late in July 1933.

Senator **Clark.** Did they say anything to you about the meeting of the board on August 2?

Mr. **Flook.** No; not at that time. A few days later—this meeting for August 2 had already been called. It had been called before they got control or before I knew they had control, and they were invited, of course, to be present at that meeting. A few minutes before the meeting they came into my office and Mr. Manning said that I must understand——

Senator **Clark.** Mr. Who?

Mr. **Flook.** Mr. Manning said that I must understand, of course, that they had their own supervisory organization and therefore would no longer require me. I told them, all right, they could have anything they wanted, and I would resign at once, which I did.

Senator **Clark.** That was on August 2, 1933?

Mr. **Flook.** Yes, sir.

Senator **Clark.** You were aware at that time that the bids on the warship program were to be opened the next day, were you not, Mr. Flook?

Mr. **Flook.** Was it that close? I had forgotten that it was that close.

Senator **Clark.** The record shows it.

Mr. **Flook.** I knew it was about that time.

Senator **Clark.** It was the day before the bids were to be opened.

Senator VANDENBERG. Mr. Flook, you speak of the control which the Cord interests had acquired. Do you know whether that control up to August 2 was a matter of actual purchase or simply a matter of option?

Mr. FLOOK. I do not know of my own knowledge, Senator, but my understanding clearly was that it was purchased, that it had been purchased—yes; I do know Mr. Hines told me that the purchase had been completed.

Senator VANDENBERG. Do you remember when he said it was completed?

Mr. FLOOK. No, sir.

Senator VANDENBERG. When would you fix the time when it was completed?

Mr. FLOOK. Generally in the middle of July or late in July.

Senator VANDENBERG. The time element is rather important, because I am interested in knowing whether they completed their purchase before or after the naval bids were opened.

Mr. FLOOK. I have no knowledge of that, Senator.

Senator VANDENBERG. And they were opened on July 26.

Mr. FLOOK. I do not know, Senator. I have no information on that.

Senator BONE. Mr. Flook, do you know at what price that stock changed hands?

Mr. FLOOK. I do not know, Senator; but it is common knowledge around the street that it was around $18 or $19 a share. That is the closest I can come.

Senator BONE. That is the whole block of some 87,000 shares?

Mr. FLOOK. Yes. I understand really it was around 90,000 shares.

Senator CLARK. Mr. Flook, could you fix approximately the time of this lunch with Mr. Hines, with reference to the meeting of August 2? Perhaps that may enable you to refresh your memory. About how long before that, if you can recall?

Mr. FLOOK. I think it was a couple of weeks before that.

Senator CLARK. Which would throw it roughly in the middle of July?

Mr. FLOOK. I think so.

Senator CLARK. That these other interests had acquired this property?

Mr. FLOOK. Yes, sir.

Senator CLARK. That the Chase National Bank and Blair & Co. had transferred their stock by sale to other interests?

Mr. FLOOK. Yes, sir.

Senator CLARK. And at that time he did not know who the other interests were?

Mr. FLOOK. That is right.

Senator CLARK. But asked you to consult with Mr. Taradash?

Mr. FLOOK. But asked me to consult with Mr. Taradash.

Senator CLARK. About how long after that did you consult him?

Mr. FLOOK. The same day.

Senator CLARK. You think that was about 2 weeks before the meeting at which you were requested to resign?

Mr. FLOOK. I think it was.

Senator CLARK. That would be about the middle of July?

Mr. FLOOK. I think so.

Senator VANDENBERG. What happened between March and June, Mr. Flook, to drive the stock up from 3 to 20?

Mr. FLOOK. I suppose the talk of a naval program, of increased naval ships, unless it was known in the Street that the Cord crowd was negotiating for the stock. I had no knowledge of it. I do not know.

Senator VANDENBERG. Would the mere newspaper talk about a naval program drive stock up from 3 to 20?

Mr. FLOOK. I should not think it would.

The CHAIRMAN. You would not think it would?

Mr. FLOOK. I would not think so.

Senator VANDENBERG. You were interested in the stock at the time. What did you think was driving the stock up from 3 to 20?

Mr. FLOOK. I thought that 3 was ridiculously low for it. I thought that it was a very good stock. I thought that 20 was high, but at the same time I did not sell any. I was not as wise as I wish I had been.

Senator VANDENBERG. There was not anything inherent in the company's own situation which warranted an increase from 3 to 20 in 3 months?

Mr. FLOOK. Oh, no.

Senator VANDENBERG. There must have been some external reason.

Mr. FLOOK. Yes; I should think so.

Senator VANDENBERG. And you have no information as to what that reason was, in fact?

Mr. FLOOK. None whatever.

Senator CLARK. And was there anything outside of a prospective naval building program which tended to increase the value of the stock during that period, Mr. Flook?

Mr. FLOOK. No; there was not anything, Senator, which was public knowledge.

Senator CLARK. That was the only thing probable, looking to an improvement in the company's financial situation, this prospective naval building program?

Mr. FLOOK. That was true, so far as public knowledge is concerned. I was working on some things for the corporation, which I personally thought very valuable, but the public did not know about that at that time.

Senator VANDENBERG. As far as public knowledge is concerned, what you say is true, but did you ever hear that Ben Smith and Tom Bragg, and the other new owners of the controlling interest, were in a position to know that they were going to get naval contracts so that they could justify this price that they were paying for this stock?

Mr. FLOOK. I have heard it, heard it in the papers recently, Senator.

Senator VANDENBERG. You never heard anything at the time about it?

Mr. FLOOK. No, sir.

The CHAIRMAN. You were holding about 7,000 shares of stock?

Mr. FLOOK. I do not think I had that much at that time.

The CHAIRMAN. Of the entire holdings, what were yours, roughly?

Mr. FLOOK. Just a minute. [Figuring:] About one-fifteenth. No; I beg your pardon. Just a minute. [Refiguring:] About one seventy-fifth.

The CHAIRMAN. About one seventy-fifth?

Mr. FLOOK. Yes, sir.

The CHAIRMAN. Yet you were serving in the capacity as directing head of the corporation?

Mr. FLOOK. Yes, sir.

The CHAIRMAN. Were you representing other interests than your own?

Mr. FLOOK. No, sir.

The CHAIRMAN. Were you made the candidate for your position by any particular group of stockholders?

Mr. FLOOK. No, sir. It happened in this way:

In December 1926, I was in London and I got a telegram from one of the directors, I think Mr. James Imbrie, asking me if I would take the chairmanship of the board, and I replied in effect that I would not because I thought the chairman of the board ought to be a man much closer to the public-utility industry than I was. At that time this was the American Brown Boveri Electric Corporation, and its principal activities seemed to be electrical apparatus.

When I got back to New York I had a conference with Mr. Davison, of the Central Hanover Bank, and one or two others, and did take the chairmanship of the executive committee, with a view of studying the situation and finding out if anything could be done with it.

The CHAIRMAN. Were you advanced in any particular by the Mellon interests at that time?

Mr. FLOOK. No, sir; I do not know any of them.

The CHAIRMAN. Did you know that they had a large interest at the time?

Mr. FLOOD. I am practically certain that they did not, Senator.

The CHAIRMAN. You do not know that they did have an interest?

Mr. FLOOK. I am practically certain that they did not, Senator.

The CHAIRMAN. I have before me a letter written by yourself to Mr. Manning, a copy of which——

Mr. FLOOK. Their holding had been long before that, Senator.

The CHAIRMAN. Their holding had been long before that?

Mr. FLOOK. Yes. I am familiar with that letter.

The CHAIRMAN. This letter is dated November 13, 1933.

Mr. FLOOK. Yes, sir.

The CHAIRMAN. And in the second paragraph of your letter you will note this language:

> During a very large part of the company's history it was controlled by Mr. Mellon and I think it may be taken for granted that there was strong and aggressive management. We have its records for the last 29 years, during which the average annual earnings applicable to the present common stock are in round figures $550,000, or $1.10 per share. Eliminating the so-called "war years" (that is, the years in which profits were abnormally large because of orders placed during the war) this average is $42,000, or 84 cents per share.

That has reference, does it, to the holdings of Mellon, that were rather ancient?

Mr. FLOOK. Yes, sir. It was my understanding that the Mellon interest ceased about 1924 or 1925.

Senator CLARK. They took bonds for their controlling stock?

Mr. FLOOK. They took bonds and I always understood that Mr. Mellon distributed those around to charitable institutions, so that even in the bonds he had no interest, no direct ownership.

The CHAIRMAN. On the second page of the letter open before you, the first paragraph, I wonder if we can get a little clarification there. I read:

> Another fact is that there never has been, and in the absence of actual war conditions there never can be enough naval work to keep the large yards really busy. This is where the merchant-marine business is of such vital importance; because, while it is not so remunerative as the naval business, it helps out enormously on the heavy overhead. It is therefore, absolutely vital that everything possible should be done to foster a merchant-marine policy. Fortunately, the best thought of the country is now solidifying on the proposition that, whether war times or peace times be considered, nothing is of much vital importance to the country's safety and prosperity as the maintenance of a powerful merchant marine.

Are we to gather from that language that you considered the most profitable business that of construction of ships of war?

Mr. FLOOK. Oh, obviously, Senator, because of their size and price. The merchant-marine work that had been done in this country, by and large, with the exception of the Manhattan and Washington, were very small ships, and they could be built, for the most part, in a great many yards on the east and west coasts.

The CHAIRMAN. Let the letter from which I have read be offered as an exhibit.

(The letter referred to was marked "Exhibit No. 1548" and is included in the appendix on p. 5271.)

The CHAIRMAN. Who owned the company control, or who was understood to have owned the control of the company when Mr. Wilder was with the company?

Mr. FLOOK. I am guessing a little, Senator, but I think that Pynchon, Blair & Co., and Mr. Wilder's personal holdings probably constituted control of the voting stock.

The CHAIRMAN. During your time with the yards, what was your salary?

Mr. FLOOK. I went in as chairman of the executive committee at $30,000, with the clear understanding, however, that if I stayed with the company, it would have to be increased because I would not stay at that.

The CHAIRMAN. Was it increased?

Mr. FLOOK. When I became chairman of the board, in the summer of 1927, it was doubled. It was set at $60,000.

The CHAIRMAN. Were there any bonuses in addition to that?

Mr. FLOOK. There were bonuses in 1932 and 1933.

The CHAIRMAN. 1933 and what other year?

Mr. FLOOK. 1932 and 1933. Those they paid in those years.

The CHAIRMAN. What did your pay bonus amount to?

Mr. FLOOK. At that time the salary had been reduced, because of a straight 15-percent reduction in salaries, which made the salary for a considerable time $51.000 instead of $60,000, but my total compensation for those 2 years was approximately $80,000 a year.

The CHAIRMAN. Having in mind the 1933 bids that had been asked for, had been requested, did you and Mr. Bardo have frequent conversation concerning the bidding?

Mr. Flook. No, sir.

The Chairman. You had none?

Mr. Flook. I never had a conversation with Mr. Bardo regarding a bid. I never knew what a bid was.

The Chairman. Did he report to you in writing or by letter frequently concerning progress with relation to these bids?

Mr. Flook. No, sir.

The Chairman. What of the 1927 contracts? Did you have any knowledge of the bidding in connection with those contracts?

Mr. Flook. No, sir.

The Chairman. 1929?

Mr. Flook. No, sir.

The Chairman. 1931?

Mr. Flook. No, sir.

The Chairman. 1933?

Mr. Flook. No, sir.

The Chairman. You had no knowledge of what progress was being made in connection with the bidding?

Mr. Flook. None whatever, sir.

The Chairman. No reports were made to you?

Mr. Flook. None whatever.

The Chairman. Did you have any knowledge as to how many ships your company was to have?

Mr. Flook. No, sir.

The Chairman. Did you have any knowledge that there was rather agreement among the shipbuilders?

Mr. Flook. No, sir.

The Chairman. As to what the division of this work should be?

Mr. Flook. No, sir; and I do not believe there was.

The Chairman. Did you discuss these contracts with others than Mr. Bardo?

Mr. Flook. No, sir.

The Chairman. With other companies, competitors?

Mr. Flook. No, sir.

The Chairman. You have told us of the sale of large blocks of stock in 1933, that carried with it the control. Was any effort made to buy your stock from you in 1933?

Mr. Flook. No, sir. It was not needed. The two blocks were enough. They constituted control.

The Chairman. Mr. Smith or Mr. Bragg made no approach to you?

Mr. Flook. I never saw Mr. Bragg in my life, and never saw Mr. Smith except for the two occasions I mentioned to you.

The Chairman. Neither tried to buy your stock?

Mr. Flook. No, sir.

The Chairman. Never made an offer to you in writing or otherwise about it?

Mr. Flook. No, sir.

Senator Bone. Mr. Flook, if you know nothing about the matters which Senator Nye has mentioned, what was the scope of your duties? What were you supposed to do about it?

Mr. Flook. When I went with this company, it was the American Brown Boveri Electric Corporation, a company formed for the manufacture of heavy electric apparatus in America. The theory at that time was that the shipbuilding business was dead. You will remember that was before the passage of the Jones-White bill, when it looked like all the shipbuilding plants in America were going out of business, as the Cramp plant already had. There were a great many problems—they were all financial problems—connected with the corporation, and it looked at the time I went in that it was on the verge of bankruptcy. Everybody was of the general opinion in New York that it was going to fail, and a great many moves had to do with the financial affairs of the company, the cancelation of contracts which existed, and making new ones.

The CHAIRMAN. What was the nature of the reports submitted to you by Mr. Bardo or other executives of the company from time to time?

Mr. FLOOK. I, of course, got all the financial reports of the company from time to time.

The CHAIRMAN. Never any reports concerning the activities within the industry to accomplish these contracts?

Mr. FLOOK. No, sir.

Senator CLARK. What did you do in 1932 and 1933, for instance, to earn a salary of $51,000 and a bonus of $29,000 each year, if you did not know what was going on in the yard?

Mr. FLOOK. I never had anything to do with the operation of the yard, Senator. I was doing a great many things in connection with the financial affairs of the company.

Senator CLARK. Did you know anything about the status of the efforts to get business from the Navy Department during those years?

Mr. FLOOK. Every time the Navy was about to build ships, naturally it was a subject of conversation at the board meetings.

Senator CLARK. You just told Senator Nye you had no reports as to the status of the bids.

Mr. FLOOK. As to the status of the bids, at any time.

Senator CLARK. Was not the matter of the prospects of the company for getting business from the Navy Department a matter which had the most vital bearing on the whole financial set-up of the company?

Mr. FLOOK. Certainly.

Senator CLARK. And you mean to say you did not get any reports from anybody as to those matters?

Mr. FLOOK. I did not and in the nature of things I could not, Senator. The making of these bids was a tremendously complicated matter, that was dealt with by a number of technical shipbuilding experts in the plant.

Senator CLARK. Were you given the net results of the efforts of these technical experts?

Mr. FLOOK. No, sir.

Senator CLARK. You did not know what ships the New York Shipbuilding Co. had bid on?

Mr. FLOOK. I knew they bid on them, of course.

Senator CLARK. You knew they bid on them?

Mr. FLOOK. Yes, sir.

Senator CLARK. You did not know the ones they expected to get?

Mr. FLOOK. No, sir.

Senator CLARK. You did not know anything whatever about that?

Mr. FLOOK. No, sir.

The CHAIRMAN. Mr. Flook, upon your resignation what was done with your files respecting New York Shipbuilding business?

Mr. FLOOK. I walked out of the office, Senator, and the files of the New York Shipbuilding Corporation that were located in New York remained there, of course, in the office. Afterwards, and in 1934, those offices were closed and I was told that the correspondence was all sent to Camden.

The CHAIRMAN. Did you take any correspondence out of the files at the time of your resignation?

Mr. FLOOK. No, sir; I had my personal files in a separate file, which I took with me.

The CHAIRMAN. What do you mean by "personal files"? What did those files carry?

Mr. FLOOK. Personal letters of all kinds.

The CHAIRMAN. From Mr. Bardo?

Mr. FLOOK. Oh, no.

The CHAIRMAN. You are saying, then, that your personal files would have nothing to do with the shipbuilding business?

Mr. FLOOK. Nothing to do with it whatever, Senator. When your investigator was in my office on Saturday, he went through my personal files and he found, by mistake, one small file remaining there, and he took that with him.

ACTIVITIES OF WILLIAM B. SHEARER

The CHAIRMAN. During your official connection with the company, what did you know of and how well did you know Mr. Shearer?

Mr. FLOOK. I met Mr. Shearer several times in Mr. Bardo's office, and in Mr. Bardo's house in Washington, while he was interested in the so-called "4-day-liner project."

The CHAIRMAN. In what?

Mr. FLOOK. The so-called "4-day-liner project."

Senator CLARK. When was that?

Mr. FLOOK. That was in 1928.

Senator CLARK. That was after Wilder had put over the Jones-While bill?

Mr. FLOOK. It was about that time, I think, Senator.

Senator CLARK. Then the next year Bardo came down and got a house to lobby for the 4-day-liner bill. Is that correct?

Mr. FLOOK. I do not think Mr. Bardo ever had a house in Washington.

Senator CLARK. I understood you to say you met Shearer at Mr. Bardo's house.

Mr. FLOOK. I beg your pardon. I should have said Mr. Wilder's house.

The CHAIRMAN. Did you have personal conversation with Mr. Shearer at any time?

Mr. FLOOK. On several occasions.

The CHAIRMAN. What of the activities in 1929? Did you then employ him in any capacity?

Mr. FLOOK. For the New York Shipbuilding Corporation?

The CHAIRMAN. Yes, sir.

Mr. Flook. No, sir.

The Chairman. For yourself?

Mr. Flook. The only employment—yes; now, just a minute. I had forgotten the dates. But while Mr. Wilder was working on the 4-day-liner project, which involved his option to purchase the New York Shipbuilding Corporation, Mr. Shearer went out to California to try to interest Mr. William Randolph Hearst in that proposition. I had a conversation with him before he went; and then on another occasion there was going to be some meeting in Washington—I have forgotten what it was—and Mr. Wilder thought that Mr. Shearer could be useful here. I thought so, too, at that time, and I sent him down here for about a week and paid his expenses.

The Chairman. You sent him down here to Washington?

Mr. Flook. Yes, sir.

The Chairman. He want to the Pacific coast at the expense of the New York Shipbuilding Co.?

Mr. Flook. Yes, sir.

The Chairman. Before me is a photostat of an interoffice letter dated March 30, 1929, written by yourself, dictated by yourself, and signed with your initials, Mr. Flook, evidently, to Mr. Bardo; subject, W. B. Shearer. [Reading "Exhibit No. 1549":]

> Dear Mr. Bardo: I am in receipt of your letter of March 29 regarding Mr. Shearer.
>
> When I was dictating my letter to you of the 28th, Mr. Shearer was in the room. He had just talked for three-quarters of an hour about the tremendous amount of invaluable work he had done at Washington and his great accomplishments there; and I had told him, as I had so many times before, that I did not know anything about this matter, had never employed him, did not propose to employ him, and would not interfere in any way whatever with your handling of the situation; also, as I had told him so many times before, that I was personally entirely willing to have your company pay its share of any expenditure, past or contemplated, that might be agreed upon by the shipbuilding companies. Finally, being unable to get any other commitment, he asked me if he might quote me to this effect, and I thereupon thought it better to put it in writing than to leave it in such shape that there might be some misconstruction.
>
> I agree with you that we are, of course, not obligated in any way, and that the $250 was more than ample for the expense we authorized.
>
> As to the $5,000, it was not solely to pay his expenses to California but to clean up other things to make his trip to California possible.
>
> I have always felt that he was a dangerous man.
>
> (Signed) W. M. F.
> W. M. Flook.

Mr. Flook, reference is made here to this—

> To have your company pay its share of any expenditure, past or contemplated, that might be agreed upon by the shipbuilding companies.

What work was done or what work was contemplated in which the shipbuilding companies, your own and your competitors, so to speak, were interested?

Mr. Flook. I do not recall at the moment, Senator, (after this length of time, but I assume that that referred to the Geneva Conference—to the work done at the Geneva Conference.

The Chairman. What was that work, Mr. Flook?

Mr. Flook. That was before my time—before I had anything to do with the company.

The CHAIRMAN. What did you understand that work to have been?

Mr. FLOOK. I understood that he was sent over there as an observer, to keep the companies posted as to what was done over there, and I also understood he was claiming afterward a very large amount of money due him for services.

Senator CLARK. What did he claim to have done on this trip to California and immediately thereafter?

Mr. FLOOK. On the trip to California he was to see Mr. William Randolph Hearst and try to interest him in Mr. Wilder's proposition. A little background is necessary.

Senator CLARK. He was trying to get up a war scare with England, was he not?

Mr. FLOOK. Not that I know of; no.

Senator CLARK. Is not that a period when Mr. Shearer was running around with a lot of letters, which he claimed to have been stolen from a British spy in this country?

Mr. FLOOK. I do not know, Senator.

Senator CLARK. What was the period of your employment of Mr. Shearer during that time?

Mr. FLOOK. These two items were the only two items with which I had anything to do.

Senator CLARK. When was that—in the early winter of 1929, was it not?

Mr. FLOOK. I imagine so.

Senator CLARK. It was in March 1929 that I saw him showing these notes to a United States Senator, trying to interest him.

The CHAIRMAN. I will offer the interoffice memorandum of March 30, 1929, on the letterhead of the American Brown Boveri Electric Corporation, addressed to Mr. C. L. Bardo, from Mr. W. M. Flook, for the record.

(The memorandum referred to was marked "Exhibit No. 1549", and appears in full in the text on p. 5171.)

Senator BONE. What was the nature of the work claimed to have been done by Mr. Shearer at Geneva for your company?

Mr. FLOOK. I do not know, Senator. That was before my time.

Senator BONE. You referred to the fact he had claimed to do some work and wanted more money. What was the nature of his work at Geneva?

Mr. FLOOK. I have no knowledge.

Senator BONE. He was sent to Geneva by the private shipbuilding companies?

Mr. FLOOK. I so understood.

Senator BONE. There is no question about that. They sent him over as an observer?

Mr. FLOOK. So I was told by Mr. Bardo.

Senator BONE. To sort of peacefully pick at the convention?

The CHAIRMAN. Mr. Flook, coming back to the letter which I have just read, "Exhibit No. 1549", it states:

> I agree with you that we are, of course, not obligated in any way, and that the $250 was more than ample for the expense we authorized.

Was that the expense of the trip to Washington to which you had reference?

Mr. FLOOK. Yes, sir.

The Chairman. In the next paragraph you state:

> As to the $5,000, it was not solely to pay his expenses to California but to clean up other things to make his trip to California possible.

What is the meaning there?

Mr. Flook. At that time, Senator, this corporation was handling two lines of business, one a shipbuilding business and the other a heavy electrical-apparatus business. It was under contract, made before my time, with the Swiss firm of Brown Boveri & Co., which bounded it to prosecute with all its resources the electrical business in America. The company had obviously not enough money to go along with both of those lines of business, and it was vitally important to sell one of them. Mr. Wilder had at the time an option on the shipbuilding plant of the New York Shipbuilding Corporation, and he was trying to put himself in financial position to exercise that option. All of us on the board were very desirous at that time that he should leave the company in a clean financial position, to go ahead and prosecute its electrical business.

Mr. Wilder told me that Mr. Shearer knew Mr. William Randolph Hearst very well, and he was sure that he would be interested in that proposition, and wanted me to make it possible for Mr. Shearer to go out there and see him and try to interest him in it. I foolishly did it. Nothing ever came of it.

The Chairman. At this very time was not your company as much interested in this 4-day or was it not more interested in the 4-day ships as in the so-called "Jones-White bill" that was pending at the time?

Mr. Flook. For the same reason, Senator. The building up of the merchant marine in America was absolutely contingent, of course, on the passing of the Jones-White bill. If the Jones-White bill passed, it seemed to us very probable that Mr. Wilder would be able to exercise his option.

Senator Bone. Is that why Wilder came down to Washington and worked on the Jones-White bill?

Mr. Flook. Yes, sir.

Senator Bone. That accounts for the expenditure of a quarter of a million dollars, more or less, here on preliminary work, to which he testified?

Mr. Flook. I imagine so.

Senator Clark. How did you carry this $5,000 which you gave Shearer on the accounts of the company, Mr. Flook? Did that go into overhead?

Mr. Flook. No, sir; it went into straight expense.

Senator Clark. It went into cost, then?

Mr. Flook. Yes, sir.

Senator Clark. If you had a cost-plus contract with the Government, that $5,000 would have been pulled in, would it not?

Mr. Flook. No; the company was losing so much money at that time it could not affect any contract.

Senator Bone. One other matter before leaving it. When was this 15-percent reduction in wages and salaries made?

Mr. Flook. I think in 1932, Senator.

Senator Bone. 1932. So that reduction went all the way down the ranks; did it?

Mr. Flook. It affected all salaried men.

Senator Bone. It affected all salaried men?

Mr. Flook. Yes, sir.

Senator Bone. It did not affect the workers in the yard?

Mr. Flook. No, sir.

Senator Bone. Did any of these salaried men get bonuses?

Mr. Flook. Yes, sir; as I recall it there were about 25 or 30 men whose services were supposed to be vitally important to the company, who got bonuses in those 2 years.

Senator Bone. How many were affected by the wage reduction?

Mr. Flook. All the salaried men there were.

Senator Bone. You said 25 or 30 got bonuses. How many did not?

Mr. Flook. Many hundreds, of course.

Senator Bone. Hundreds of them. So, in other words, you got a 15-percent reduction in your salary but at the same time you got a $29,000 bonus, which gave you $20,000 more than you were getting before?

Mr. Flook. Not $29,000, 25, I think, or 24, is approximately correct.

Senator Clark. I think you testified, Mr. Flook, that your salary was reduced from $60,000 to $51,000 by this cut, a net loss of $9,000, but that the net result, assuming you got the bonus, was $80,000, a final gain of $20,000.

Mr. Flook. That is correct, sir.

Senator Clark. A pretty good trade.

Senator Bone. My reason for this question is because I wondered whether this trade between bonus and salary cut affected everybody in personnel.

Mr. Flook. There was no trade between bonus and salary cut.

Senator Clark. Everybody getting cuts did not get bonuses, in other words?

Mr. Flook. No, sir; they did at different times.

The Chairman. There were large sums spent throughout those years to accomplish results here in Washington and accomplish results out on the Pacific coast to get backing for the larger program?

Mr. Flook. Not during those years, sir. The large sums which were spent here in Washington were in 1928.

The Chairman. What were those expenditures for?

Mr. Flook. The support of Mr. Wilder.

The Chairman. What?

Mr. Flook. The support of Mr. Wilder and his program here.

The Chairman. The Jones-White bill?

Mr. Flook. And for the support of his program to buy the shipbuilding plant.

The Chairman. I observe in the summary of expenditures that in 1928 an advance of $250 appears to W. B. Shearer. Evidently that was this trip you have told us of to Washington?

Mr. Flook. Quite possibly.

The Chairman. In the summary for the same year I find a special expenditure by H. C. Hunter of $10,908.33. Do you know what that was?

Mr. Flook. No, sir. May I ask what summary that is?

The CHAIRMAN. That is the summary, I understand, for the year 1928.[1]

Mr. FLOOK. You mean of Mr. Wilder's expenses?

The CHAIRMAN. Yes.

Mr. FLOOK. Oh, no; I have no knowledge.

The CHAIRMAN. I find thereon a note on that summary, "Special to William M. Flook, $17,000." What was that?

Mr. FLOOK. That was money—that was much later. The board of directors of the New York Shipbuilding Corporation authorized the support of Mr. Wilder in his program up to a certain sum, I have forgotten just what that was, but that was reached from time to time, and exceeded, and they extended the limitation from time to time in the hopes that he would be able to exercise his option. In addition to that, I supported him personally in several instances, where the payments authorized by the board did not warrant it. Afterward, after the situation was all cleaned up, and we were getting in pretty good financial shape, I suggested to the board that I was out of pocket this amount of money, and that I was perfectly willing to let it go, but it might be in order to pay it back to me, and that was unanimously done.

The CHAIRMAN. Have you paid anything to Mr. Shearer yourself?

Mr. FLOOK. No, sir; not in that amount—not in any way; no, sir.

The CHAIRMAN. In no amount?

Mr. FLOOK. No, sir.

Senator BONE. Mr. Flook, who drew the Jones-White Act?

Mr. FLOOK. I do not know, sir.

Senator BONE. What lawyer?

Mr. FLOOK. I do not know, sir. I always understood that Senator White had a good deal to do with the drawing of that thing himself.

Senator BONE. I think it was asserted that the first paragraph and the preamble, which was somewhat of a high-flown expression of patriotism, was written by a Member of Congress, or in the other House, and the rest of the bill was prepared by counsel for the private shipbuilding companies.

Mr. FLOOK. I do not know.

Senator BONE. That was the testimony of Mr. Wilder, and do you have any reason to believe it is not correct?

Mr. FLOOK. I do not know anything about it.

Senator BONE. He was very positive on that, and you people gave him a quarter of a million dollars.

The CHAIRMAN. Were you not a little bit fearful of having it appear on the record that moneys were being paid to Mr. Shearer in 1929?

Mr. FLOOK. No, sir; I do not think so. I never thought of it.

The CHAIRMAN. As a matter of fact, did you not know that some of the money which you advanced, which could probably be accounted for in this $17,000, was money paid to Mr. Wilder for, in turn, payment to Mr. Shearer?

Mr. FLOOK. No, sir.

The CHAIRMAN. You did not so understand it at that time?

Mr. FLOOK. I did not, sir.

---

[1] Entered as "Exhibit No. 1550", see p. 5177, infra.

The CHAIRMAN. Did you make advances of moneys to Mr. Wilder?

Mr. FLOOK. Yes, sir.

The CHAIRMAN. You were reimbursed for that in this $17,000?

Mr. FLOOK. In that $17,000.

The CHAIRMAN. What did you understand Mr. Wilder's purpose of this money to be?

Mr. FLOOK. It was just in connection with his regular running expenses in Washington.

Senator CLARK. Did Wilder ever tell you he paid Shearer $7,500 in payment for the painting of a picture of a ship?

Mr. FLOOK. No, sir; he never did.

Senator CLARK. He testified to that on the witness stand.

The CHAIRMAN. Who was Mr. H. C. Hunter?

Mr. FLOOK. I do not know, sir.

The CHAIRMAN. The committee has before it the photostat of a letter or memorandum dated August 6, 1929, to Mr. C. L. Bardo, from Mr. N. R. Parker:[1]

> Paid to H. C. Hunter. March 17, 1927, $2,500; paid to H. C. Hunter, June 24, 1917, $2,500; paid to H. C. Hunter, December 7, 1927, $3,333.33, making a total of $8,333.33.

Do you know what these payments were for?

Mr. FLOOK. No, sir.

The CHAIRMAN. The memorandum goes on to say:

> The above represents New York Ship's proportion of the $25,000 paid to W. B. Shearer.

You had no knowledge that a proportion was being paid to Mr Shearer at that time?

Mr. FLOOK. What was the date of that, Senator?

The CHAIRMAN. August 5, 1929.

Mr. FLOOK. I have no recollection of it, Senator. I do know that at some time, though—though it was a later date than that—the shipbuilding companies settled with Mr. Shearer.

The CHAIRMAN. Did the other shipbuilding companies make any contribution through you to this fund for Mr. Shearer?

Mr. FLOOK. No, sir; this fund, I do not know what it is, Senator. this particular item.

The CHAIRMAN. The memorandum by Mr. Parker says:

> The above represents New York Ship's proportion of the $25,000 paid to W. B. Shearer.

Mr. FLOOK. What was the date of that letter, please?

The CHAIRMAN. August 5, 1929.

Mr. FLOOK. That may be their proportion of the settlement finally made with Mr. Shearer, although I was under the impression it was at a later date.

The CHAIRMAN. You know of no moneys from other shipbuilders as to their contributions to this Shearer fund?

Mr. FLOOK. I do not think so. I think we paid our proportion and they paid theirs.

The CHAIRMAN. What does Mr. Parker mean in his memorandum by this [reading]—

> In addition to the above there was paid to William M. Flook, November 13, 1928, $5,000, which was the amount received from the Sun Shipbuilding

---

[1] Entered as "Exhibit No. 1551", see p. 5177, infra.

Co. There was also advanced on your instruction from the New York Ship's petty cash fund January 9, 1929, $250. That received by W. B. Shearer from this company, directly and indirectly, is as above $13,583.33.

Mr. Parker's memorandum would indicate that the Sun Shipbuilding Co. had contributed to Mr. Shearer $5,000, which went through you.

Mr. FLOOK. It would indicate that, and possibly it did, Senator, but I have no recollection of it. Mr. Parker could clarify that incidentally, of course.

The CHAIRMAN. Surely in a matter of this kind, Mr. Flook, it would seem that you would be able to remember, had it actually taken place.

Mr. FLOOK. I have not any recollection of it. I think Mr. Parker is mistaken.

The CHAIRMAN. You think Mr. Parker is mistaken?

Mr. FLOOK. I think, in that the $5,000 passed through me, although it may have. I do not know.

The CHAIRMAN. Did you help maintain favorable political connections for the New York Shipbuilding Co.?

Mr. FLOOK. No, sir.

The CHAIRMAN. Were you in any wise interested politically in those days?

Mr. FLOOK. No, sir; neither then nor now.

The CHAIRMAN. At this point I want to offer for the record the summary of expenses referred to.

(The statement referred to was marked "Exhibit No. 1550", and is included in the appendix on p. 5273.)

The CHAIRMAN. Were you dependent at all upon the favors of any political party or any political group?

Mr. FLOOK. No, sir.

The CHAIRMAN. You were not aware of the fact, then, that the company was using political pressure at that time?

Mr. FLOOK. At what time?

The CHAIRMAN. In 1926 or on up through the years?

Mr. FLOOK. No, sir.

The CHAIRMAN. Did you have any Tammany connections, Mr. Flook?

Mr. FLOOK. I am a very great friend of Mr. William F. Kenny. That is the only connection I have. I know no other Tammany people.

The CHAIRMAN. I would like to offer for the record the memorandum I have previously referred to from Mr. Parker to Mr. Bardo.

(The memorandum referred to was marked "Exhibit No. 1551" and is included in the appendix on p. 5273.)

The CHAIRMAN. I have before me a letter by L. G. Buckwalter to Mr. L. R. Wilder, dated July 14, 1926. Were you then with the company?

Mr. FLOOK. No, sir.

The CHAIRMAN (reading):

> Referring to our conversation of Monday regarding close affiliations with Tammany:
>
> The concern I mentioned is Edwards & Booth, 80 Maiden Lane, New York. The partnership is "Big Bill" Edwards and Walter C. Booth. They are both Princeton men of about 1900. They are both widely known in New York, and

are close to Tammany and the politicians. Edwards had a responsible political position for years. I believe he was street-cleaning commissioner. Mr. Bardo stated that he understood he was dead. This is incorrect—at least, he was alive on Monday.

Mr. Flook. They are in the insurance business, Senator.

The Chairman (continuing):

> And I asked Mr. Wickersham sometime ago to get in touch with Mr. Booth the next time he was over to New York. I feel that it would be of advantage to know these people and keep in touch with them, and I will be glad to arrange for an interview, if you desire.
>
> When you and Mr. Neeland were returning from Europe last fall, Mr. Neeland cabled me to have someone meet you at the pier to expedite your customs' examination, clearing of baggage, etc. Mr. Booth himself took care of this matter, called at the pier and rode to the hotel with Mr. Neeland.
>
> L. G. Buckwalter.
>
> Copies. Mr. Bardo, Mr. Wickersham.

(The letter referred to was marked "Exhibit No. 1552" and appears in full in the text.)

The Chairman. Has this practice of maintaining close political relationships continued through the years with the company?

Mr. Flook. No, sir.

Senator Vandenberg. Mr. Flook, has the practice of using insurance contracts been pursued subsequently by New York Ship in order to obtain advantageous rates?

Mr. Flook. No, sir.

Senator Vandenberg. The annual premium on New York Ship insurance is a pretty big item, is it not?

Mr. Flook. Yes, sir; I do not remember what it is.

Senator Vandenberg. About $600,000?

Mr. Flook. I imagine so.

Senator Vandenberg. You never heard of the placing of this premium for insurance in quarters where it might be politically helpful?

Mr. Flook. No, sir. I understood that one firm of insurance brokers located in Philadelphia handled the business of the company for a great many years, until the Cord crowd came into control.

Senator Barbour. Do you know who they were, Mr. Flook?

Mr. Flook. The name slips me now. I will get it and put it in the record.

Senator Vandenberg. Was it a name something like Telft?

Mr. Flook. Tifft Layer & Co.

Senator Vandenberg. Was there a complete change in the insurance relationships in 1932 or 1933?

Mr. Flook. No, sir; not to my knowledge.

Senator Clark. Mr. Flook referring again to those payments to Mr. Shearer, I will read a paragraph from a letter from Mr. Shearer to Mr. Bardo. dated January 23, 1929, headed "My dear C. L." [reading]:

> Realizing just what the United States is up against I find it necessary to release bit by bit a British secret document that has come into my possession. The first reference to this document I herewith enclose and before I am finished I will without question prove a case against England which was so ably referred to in Senator James A. Reed's speech before the Senate. There is much that I could tell you which I don't care to write on the evidence in my posssion. However I will submit it at a later date. In the meantime it was distinctly understood that to carry on my work Mr. Flook was to contribute toward the expenses and as I have assumed the position as well as the obligation I am forced to look to you in Mr. Flook's absence.

As a matter of fact, that is what those payments were for, is it not, Mr. Flook?

Mr. Flook. No, sir.

Senator Clark. How is that?

Mr. Flook. No, sir.

Senator Clark. Were you not advised of this arrangement between Mr. Bardo and Mr. Shearer, to which Mr. Shearer refers there?

Mr. Flook. No.

Senator Clark. Did you know the nature of the work that Mr. Shearer was supposed to be doing?

Mr. Flook. Let me get this clear, Senator. I know of course before 1927 that Mr. Shearer had been sent to Geneva, and there was a claim for further compensation on that account.

Senator Clark. Yes, but, Mr. Flook, this letter which I have just read indicates that in January 1929 Mr. Shearer was carrying on the work of actively putting out propaganda against England in this country, and that there had been an arrangement between him and Mr. Bardo by which you were to finance his activities. He said in your absence he looked to Mr. Bardo to do it, and that is his explanation of the situation, is it not, Mr. Flook?

Mr. Flook. I do not believe there was any such arrangement, and I do not believe that that is true.

Senator Clark. Did Mr. Bardo ever report any of these activities to you?

Mr. Flook. No, sir; he never did, and I do not believe that anything of the kind ever happened.

(The letter referred to was marked "Exhibit No. 1553" and is included in the appendix on p. 5273.)

NAVY'S DESIRE FOR ALLOCATION OF SHIPBUILDING[1]

The Chairman. Mr. Flook, you have told us that Mr. Bardo never made any reports to you concerning activities with regard to bidding on these Government contracts.

Mr. Flook. That is right.

The Chairman. As a matter of fact, did not Mr. Bardo report to you frequently concerning visits he had had in Washington with naval officials and with shipbuilders in connection with these bids?

Mr. Flook. Not with shipbuilders. He frequently mentioned in conversation that he had been down to the Navy Department and had seen so-and-so and so-and-so, and that the Government plans on so-and-so and so-and-so with reference to ships.

The Chairman. That was in conversation, a verbal message to you?

Mr. Flook. Yes, sir.

The Chairman. But no letters?

Mr. Flook. No; to the best of my recollection, no letters.

The Chairman. How good is that recollection, Mr. Flook?

Mr. Flook. Pretty good.

The Chairman. If Mr. Bardo had upon occasion written you that he had been in touch with naval officials and that the naval officials had rather suggested to him that the shipbuilders ought to get together, would you not remember having had such a letter?

Mr. Flook. I should think so. May I ask what year this was?

---

[1] See chart on p. 5190.

The CHAIRMAN. In any of these years.

Mr. FLOOK. While I have no recollection of it, I should not be at all surprised if that happened in 1933.

The CHAIRMAN. In 1933?

Mr. FLOOK. Because it was while I did not know. It was my clear understanding in 1933 that the Government not only wanted but demanded that the work be divided among the different yards.

The CHAIRMAN. What do you mean by "the different yards"? The three yards?

Mr. FLOOK. The three, and the Federal yard and I think Sun. In a general way, that the work that was being done for the Navy under the Public Works program should be spread around.

Senator CLARK. That work was let on contracts, was it not, Mr. Flook?

Mr. FLOOK. Yes, sir.

Senator CLARK. How was it to be spread around if it was let on contracts? Do you mean to say that the Navy Department requested that there be collusion with respect to the bidding on those contracts?

Mr. FLOOK. No, sir; I am just saying that was my understanding of the conversations had with respect to it. I was never in touch with it and I do not know.

The CHAIRMAN. You destroyed no such letters?

Mr. FLOOK. I destroyed no letters at any time.

The CHAIRMAN. But you have nothing more than recollection of conversation from Mr. Bardo regarding these matters?

Mr. FLOOK. No, sir.

The CHAIRMAN. You do not recall his having written to you at any time?

Mr. FLOOK. No, sir. It is possible that he did, but I do not recall it.

The CHAIRMAN. I hand you, Mr. Flook, a letter dated June 22, 1933, from C. L. Bardo, addressed to yourself, and ask you if you can recall having received this letter [handing paper to witness]. Perhaps if we read it through you would better recall [reading "Exhibit No. 1554"]:

> Mr. W. L. FLOOK:
>
> DEAR MR. FLOOK: I spent the last 2 days in Washington in connection with the shipbuilders'- and ship-repairers' code required by the Industrial Recovery Act. We finally worked out a code which was reasonably satisfactory to the ship repairers, although there are some questions of a more or less controversial nature which we will have to iron out between now and the time the code is made effective.

Do you recall this letter?

Mr. FLOOK. Not so far. I undoubtedly received it, but I do not recall it.

The CHAIRMAN (continuing reading "Exhibit No. 1554"):

> Three or four of these smaller yards, including the Todd and United Dry Docks in New York who have never been engaged in Navy work, have had their eyes set right along upon having allocated to them some of the destroyers.
>
> It was necessary for me to be here today and it was also necessary for Ferguson to be in Newport News, so that the shipbuilders' code could not be completed. In order, however, to set the ship repairers aright I sent the attached telegram to Mr. Smith who was presiding at the meeting. I outlined our company's position on this matter of allocation to yards not hereto-

fore engaged in shipbuilding activities. I talked to Ferguson on the phone this afternoon and he fully approved of this position.

I know from my talks with some of the representatives of the Navy, who are keenly interested in this work, that they are desirous of finding some substantial reasons for awarding this work to the largest possible extent to private yards upon whom they must rely for the necessary engineering to complete the ships.

Do you recall this letter?

Mr. Flook. Yes; I do, Senator.

The Chairman. You do recall it?

Mr. Flook. Yes; I received it.

The Chairman. I read on [reading "Exhibit No. 1554"]:

> There was also expressed to us the desire that the builders themselves should get together and agree as far as we could upon what each would bid and then bid on nothing else. The situation as it now stands is substantially as follows:
>
> Newport News: The two airplane carriers, which while not duplicates of the *Ranger*, are of similar type.
>
> Bethlehem: The 10,000-ton 8-inch cruiser, a duplicate of the ship which they are now building.
>
> New York Ship: A new 10,000-ton 6-inch cruiser, and a distribution of the eight destroyer leaders.
>
> This new work would amount approximately to the following values:
>
> Newport News: $30,000,000.
>
> Bethlehem and New York Ship: $28,000,000 each, although the final estimates may slightly change these figures.

Did the final estimates change those figures materially?

Mr. Flook. I do not know, Senator.

The Chairman (continuing reading "Exhibit No. 1554"):

> I have a suspicion that the Department has clearly in mind ordering some additional cruisers once this first lot is out of the way, and I am also clearly of the view that they regard our cruiser output as being superior to that of the other yards.
>
> I am now of the opinion that we will probably submit a bid for 6 of the 8 destroyer leaders, although it may be necessary to reduce this slightly in the final set-up.
>
> We are preparing a clause to be inserted in the contract, which we think will be acceptable to the Navy, to the effect that in the event labor and material charges under these contracts should exceed the labor and material estimates of the yard to a point where losses would accrue, that the contractor will be authorized to apply to the President who in his discretion can cancel the contract and order the work completed on the basis of a cost plus a fixed fee.
>
> Very truly yours,
>
> C. L. Bardo.
>
> P. S.—As near as we can figure out, the distribution of the new Navy program will run about 60 percent to private yards and 40 percent to Navy yards, although this may later be changed without further notice.
>
> C. L. B.

(The letter referred to was marked "Exhibit No. 1554" and appears in full in the text.)

The Chairman. You recall this letter now, do you, Mr. Flook?

Mr. Flook. Yes, sir.

The Chairman. Were there other letters that Mr. Bardo wrote to you concerning these relations with the Navy?

Mr. Flook. I can recall no others.

Senator Clark. You could not recall that one until you saw a copy of it, could you?

Mr. Flook. That is right. But it bears reference to the same idea I expressed a minute ago.

Senator CLARK. So that there might be other letters which you could not recall, unless letters were produced?

Mr. FLOOK. It is quite possible in that year.

Senator CLARK. Or any other year. You could not recall it in 1933, and there might have been letters in 1932 or 1934, which you could not recall?

Mr. FLOOK. They would not be letters relating to this subject.

The CHAIRMAN. What is the meaning here of the Navy officials being desirous of finding some substantial reasons for awarding the work to the largest companies?

Mr. FLOOK. I took that to mean that they preferred to have those companies build ships.

The CHAIRMAN. Why would they not get them if they bid right upon them?

Mr. FLOOK. Irrespective of the exact bidding, I think they would liked to have gotten them to build the ships because they build better ships.

Senator CLARK. You mean private companies build better ships than navy yards?

Mr. FLOOK. I think so.

Senator CLARK. You think the Navy took the position themselves having these ships constructed in private yards rather than in navy yards?

Mr. FLOOK. No; I did not remember it that way. Just a moment.

Senator BONE. Don't forget the language, " they are desirous of finding some substantial reasons "—meaning the Navy.

Mr. FLOOK. May I ask where that is?

Senator VANDENBERG. In the fourth paragraph of the letter.

The CHAIRMAN. They want " some substantial reasons."

Senator BONE. " They ", meaning the Navy officials, " are desirous of finding some substantial reasons for awarding this work to the largest possible extent "—meaning the building of the ships, and that might mean up to 100 percent—" to private yards upon whom they must rely for the necessary engineering to complete the ships." That is for the plans.

Mr. FLOOK. For the necessary engineering to complete the ships.

Senator CLARK. You understand that to mean that the Navy Department understood that the Navy Department's engineering personnel was incapable of completing the ships?

Mr. FLOOK. I would not say that.

Senator CLARK. What does it mean?

Mr. FLOOK. They liked the engineering skill of the private yards better.

Senator CLARK. What did you understand Mr. Bardo meant when he said " for awarding this work to the largest possible extent to private yards upon whom they must rely for the necessary engineering to complete the ships "?

Did it not mean that the Navy could not complete the engineering work themselves?

Mr. FLOOK. Yes, sir. I have heard to that effect.

Senator BARBOUR. Might it not mean that the time element is important?

Mr. FLOOK. Yes, sir.

Senator BARBOUR. And there are only a certain number of navy yards?

Mr. FLOOK. There might be many reasons, but I do not know what the reasons were.

Senator BARBOUR. That could be a reason?

Mr. FLOOK. That could be a reason.

Senator BARBOUR. And they were also anxious to get out as many ships as rapidly as possible?

Mr. FLOOK. As rapidly as possible.

Senator BARBOUR. And wanted to use the private yards and navy yards to the greatest extent possible?

Mr. FLOOK. Yes, sir.

The CHAIRMAN. Therefore they wanted the shipbuilders all to get together and not bid against each other. Is that what that amounts to?

Mr. FLOOK. No; I do not think so.

The CHAIRMAN. What is the meaning of the letter, "There was also expressed to us the desire that the builders themselves should get together and agree as far as we could upon what each would bid and then bid on nothing else"?

Mr. FLOOK. The private yards are always up against the bids of the navy yards.

Senator BONE. That is not the point.

Senator CLARK. Referring to the time element mentioned by Senator Barbour, in actual practice the time element amounted to this, did it not: That the Government would depend on the New York Shipbuilding Co. to prepare the plans for the light cruisers in the 1933 program, and as far as the time element is concerned, the New York Shipbuilding Co. was so dilatory that this program has been held up from that day to this. Is not that right?

Mr. FLOOK. That is all since I left the company, Senator.

Senator CLARK. You know that as a matter of common knowledge, do you not?

Mr. FLOOK. I do.

Senator BONE. That is not susceptible of interpretation but means what it says, Mr. Flook. "There was also expressed to us the desire that the builders themselves should get together and agree as far as we could upon what each would bid and then bid on nothing else."

That is collusion if you ever saw it. Can there be any doubt in your mind, as a business man, that that means collusion and nothing else?

Mr. FLOOK. Collusion is a word of opprobrium.

Senator BONE. It makes no difference what it is, but it was an invitation for the shipbuilders to get together and fix up their bids in advance.

Mr. FLOOK. If it were done at the request of the Government, I would not call it collusion.

Senator CLARK. That is collusion, if the Navy is a party to it.

The CHAIRMAN. That makes the Navy a party to the collusion.

Mr. FLOOK. It would seem that if each shipyard bid only on the ships which it wanted——

Senator CLARK. After agreeing on which ones they want.

Mr. FLOOK. At the request of the Government——

The CHAIRMAN. The question was asked you by Senator Bone, as he read that paragraph, "There was also expressed to us the desire that the builders themselves should get together and agree as far as we could upon what each would bid and then bid on nothing else." And he asked you if the Navy was suggesting this. You nodded your head but unfortunately the reporter cannot record a nod. Do you mean to say that that was your understanding?

Mr. FLOOK. May I have the question again?

The CHAIRMAN. That the Navy was suggesting that they should get together.

Mr. FLOOK. As I read this letter.

The CHAIRMAN. Yes.

Senator BONE. Paragraph 5 of the letter.

Senator VANDENBERG. That means not only——

Mr. FLOOK. This seems very clear "expressed to us the desire"—I assume by the Navy.

Senator BONE. It could not mean anything else.

Mr. FLOOK. Of course it could not.

Senator VANDENBERG. Mr. Flook, this says "expressed to us the desire that the shipbuilders get together upon what each would bid." Does that not include not only the categories but also the price?

Mr. FLOOK. I would not think so, Senator.

Senator VANDENBERG. Upon what each would bid?

Mr. FLOOK. I would not think so.

Senator VANDENBERG. And then bid on nothing else?

Mr. FLOOK. That is it—and then bid on nothing else. Agree as to which they would bid on, and do not bid on anything else.

Senator VANDENBERG. And, as a matter of fact, what actually happened was that after they did get together, as indicated in this letter, and did agree on what each was to have, ahead of the bidding. they did only bid in good faith upon the things that they wanted themselves, and each of the other shipbuilders in the big three did not put in competitive bids against those categories which had been agreed upon, but did put in so-called "protective" bids. That is what happened, is it not?

Mr. FLOOK. I do not know, sir.

Senator VANDENBERG. But you were there in 1933.

Mr. FLOOK. Yes, sir; I was there.

Senator VANDENBERG. And New York Ship got the contracts upon which it actually prepared full sets of estimates and actually submitted good-faith bids. You got everything you tried to get, did you not?

Mr. FLOOK. I do not know that, Senator. Mr. Bardo will know, of course.

Senator BONE. Mr. Bardo won't tell. [Laughter.]

Senator VANDENBERG. That is hardly fair. We have not allowed Mr. Bardo to tell except as he waived his immunity. But it is a fact that the thing described in the fifth paragraph of this letter is substantially what happened, is it not? The builders did get together and they did agree, so far as they could, upon what each would bid, and then they did not bid on anything else except in a purely pro forma way?

Mr. FLOOK. Senator, you are telling me, but I do not know.

Senator VANDENBERG. I am asking you what happened.

Mr. FLOOK. No, sir; I do not know. It was a matter handled by Mr. Bardo. He would know all about it, and I do not know anything about it.

Senator VANDENBERG. What was your position in 1933?

Mr. FLOOK. Chairman of the board.

Senator VANDENBERG. And you knew nothing about this $30,000,000 transaction?

Mr. FLOOK. I knew that there were ships to be built, certainly. I knew nothing about the bids or the preparations of the bids for them. I never at any time incidentally had anything to do with the technical business of building ships or getting business.

Senator VANDENBERG. No; but you got this letter from Mr. Bardo, in your official capacity as chairman of the board, and when you read the letter you discovered that the three big shipbuilders are going to get approximately an even split on this $100,000,000 that the Government was going to spend. Did it not occur to you, when you read that, that that was a collusive arrangement?

Mr. FLOOK. It certainly did not, but it undoubtedly occurred to me that they would do exactly what the Navy wanted them to.

Senator VANDENBERG. In other words, if it was a collusive arrangement, you were satisfied that whatever was being done was being done with naval blessing?

Mr. FLOOK. In good faith, and open and above board.

Senator CLARK. If it was done open and above board, what was the idea of going through the empty formality of having bids submitted at all, and going through the pretense of making awards on bids? Did that occur to you?

Mr. FLOOK. If the bids were too high the business would not have been allotted.

Senator CLARK. If the Navy wanted to do this thing by that method what was the idea of going through the pretense of having bids submitted and making awards, if the thing was agreed on in advance?

Mr. FLOOK. I do not know.

Senator CLARK. Did that occur to you as being a fraud on the public?

Mr. FLOOK. No, sir.

Senator BONE. What percentage of the business of the New York Shipbuilding Co. in 1933 was represented by building of ships and what percentage represented by these contracts?

Mr. FLOOK. All of it.

Senator BONE. So that 100 percent of the business of the yard at that time was in shipbuilding, and you were receiving $80,000 that year, and you tell us you did not know anything about this?

Mr. FLOOK. I did not know anything about the bids or the making of the bids.

Senator BONE. If you did not know anything about 100 percent of the business of the plant, of which you were chairman of the board, what did you get the $80,000 for? It seems to me a fair question.

Mr. FLOOK. It is a fair question.

Senator BONE. You have said you got $80,000 and yet you knew nothing about the business of the concern.

The Chairman. Let him answer.

Senator Bone. That is what I want him to do.

Mr. Flook. Do you want me to answer?

Senator Bone. Yes.

Senator Clark. Yes.

Mr. Flook. I took this company from the beginning of 1927 over this period of 7 years, from a point where it was bankrupt to a point where, in the summer of 1933, the Cord interests were willing to pay approximately $2,000,000 for approximately 17 percent of its capital stock.

Senator Bone. That may be true, but I cannot understand how you did not know anything about the business.

Mr. Flook. So that I must have done something. Just a minute. The reconstruction of the balance sheet of that company in a way ended after we succeeded in selling the electric division to Allis-Chalmers, and changing the name to the New York Shipbuilding Corporation. From that time on my activities were almost entirely concerned with the finding of new business for the south yard, with the finding of things to manufacture in the south yard, which was then entirely unoccupied, and I did during that last year or two get three things under option, all of which I think were very valuable. But those were the activities in which I was principally concerned at that time: The attempt to build up this company into a successful corporation.

The Chairman. The company was practically broke in 1927?

Mr. Flook. Yes, sir.

The Chairman. And yet it was finding it possible to throw out a rather large outlay to accomplish results at Geneva, was it not?

Mr. Flook. That was in 1926.

Senator Clark. When was this balancing of the budget completed?

Mr. Flook. Let me look at this memo again, because that is one thing which I have here some place. [Examining papers.] Toward the end of 1931.

Senator Clark. So that in 1932 and 1933 you were not actually doing anything excepting looking for new business?

Mr. Flook. Practically so.

Senator Clark. Was any of this new business accepted by the company for the south yard?

Mr. Flook. Yes, sir; it was so acceptable that they took options on these devices and spent considerable money on the development of them.

Senator Clark. Did they actually go through with the work?

Mr. Flook. As soon as the Cord people came in, they threw them out the window.

Senator Clark. Yes, sir; but they paid you bonuses in 1932 and 1933 of $29,000 a year?

Mr. Flook. Yes, sir.

Senator Clark. As a sort of salesman looking around for something for the yard to do?

Mr. Flook. I was not a salesman, but trying to look for something to manufacture.

Senator Clark. They actually paid you more in 1932 and 1933—$29,000 each year—as a sort of salesman for new business, more than when you were accomplishing this great work of putting the balance sheet back in place?

Mr. Flook. That is all true, except I never was a salesman and never sold anything.

Senator Bone. But you say this company was practically broke in 1926 and 1927.

Mr. Flook. In 1927.

Senator Boone. Did it have any balance in the bank at all?

Mr. Flook. Very small balance.

Senator Bone. Was it in position to realize any money in the way of loans from banks?

Mr. Flook. It did—I did establish credit for the company of $2,500,000, as a matter of fact.

Senator Bone. Where did it raise the amount in excess of $250,000 spent by Wilder down here in putting over the Jones-White Act? Where did that money come from?

Mr. Flook. That was in 1929—not in 1928.

Senator Bone. The bill was enacted in 1928?

Mr. Flook. Yes.

Senator Bone. The money could not have been spent in 1929, and you have told us the money was spent to put over the bill.

Mr. Flook. I corrected myself.

Senator Bone. Where did the company get the money when it was broke?

Mr. Flook. I did not say it was broke in 1928.

Senator Bone. You said 1926 and 1927.

Mr. Flook. No.

Senator Bone. The work on the Jones-White bill must have been done in 1926 or 1927?

Mr. Flook. No; it was done in 1928.

Senator Bone. The bill was enacted in May 1928.

Mr. Flook. Yes.

Senator Bone. Where did the company get the money to do this?

Mr. Flook. From the treasury.

Senator Bone. You just took the money from a broke company?

Mr. Flook. You are putting words in my mouth. I did not say it was broke.

Senator Bone. It was badly crippled?

Mr. Flook. It was badly crippled.

Senator Bone. But did not hesitate to spend over a quarter of a million dollars to put over the Jones-White Act. Is that correct?

Mr. Flook. That is correct.

Senator Clark. As a matter of fact, the company started back uphill after the failure of the Geneva Conference, accompanied by the naval building program in 1927. Is that not a fact?

Mr. Flook. As to date, yes.

Senator Bone. Mr. Flook, you say all this business was going on between the Navy and Mr. Bardo, in fixing up these bids, was all open and aboveboard. Am I correct?

Mr. Flook. No; I did not say that, Senator.

Senator Bone. Do you care to comment further on the character of it? Do you think it was open and aboveboard?

Mr. Flook. I do not think anything about it.

Senator BONE. Then one might be tempted to ask why it was that Mr. Bardo said the Navy or naval officials are desirous of finding some substantial reasons for awarding this work and getting the thing done, Mr. Flook, in paragraph 4.

You think Mr. Bardo and the Navy officials were anxious to find some substantial reasons for framing up the new deal? That is right, is it not?

Mr. FLOOK. It would seem so from the letter.

Senator BONE. It appears on the face of the letter.

Mr. FLOOK. Yes, sir.

The CHAIRMAN. Mr. Flook, the reference in Mr. Bardo's letter to you, " I know from my talks with some of the representatives of the Navy "—has he ever discussed these matters with you?

Mr. FLOOK. What matters?

The CHAIRMAN. In addition to the correspondence, have you had personal talks with Mr. Bardo concerning your relations to the Navy?

Mr. FLOOK. Many times when Mr. Bardo has been in my office he has talked to me about having seen somebody in the Navy Department.

The CHAIRMAN. Who was that somebody?

Mr. FLOOK. I have no name in mind.

The CHAIRMAN. He never named anyone?

Mr. FLOOK. He possibly did, but I do not remember the names. There were so many of them.

The CHAIRMAN. The committee understands, Mr. Flook, your very great desire to be away this afternoon, and we are all sure you should be. I hope we are not going to have to call you back, but if we should, we can find you at your address in New York?

Mr. FLOOK. Certainly.

The CHAIRMAN. Thank you, Mr. Flook.

The CHAIRMAN. The committee will be in recess until 10 o'clock tomorrow morning.

(Thereupon, at 12:15 p. m., the hearing was recessed until tomorrow, Tuesday, Feb. 12, 1935, at 10 a. m.)

This concludes that part of the testimony known as " Part XIX, Naval Shipbuilding—New York Shipbuilding Corporation (concluded)". At this point the committee continued hearings on Naval Shipbuilding, taking the testimony of officials of the Newport News Shipbuilding & Dry Dock Co. See Hearings, Part XX.

APPENDIX

DISTRIBUTION OF NAVAL CONTRACTS

In Millions of Dollars

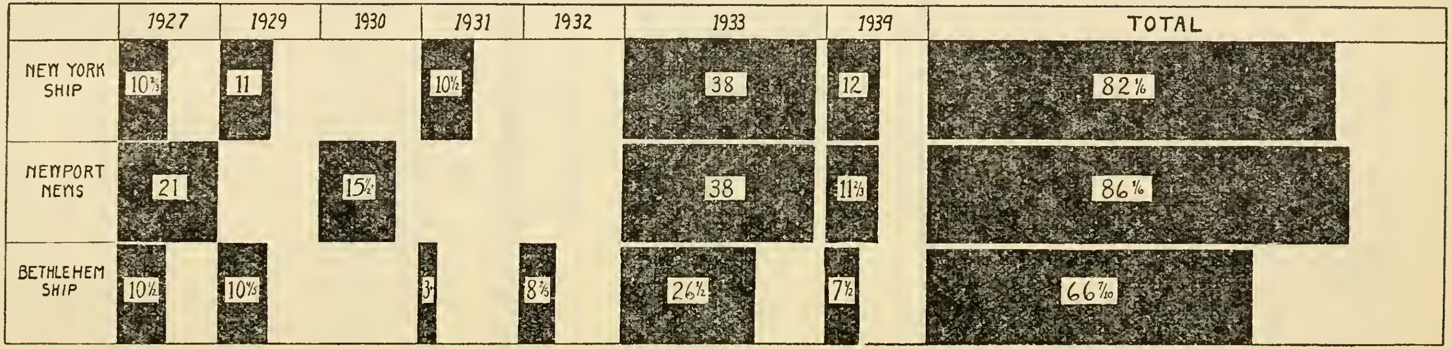

EXHIBIT NO. 1485

NEW YORK SHIPBUILDING CORPORATION,
Camden, N. J., January 24, 1935.

MR. STEPHEN RAUSHENBUSH,
Secretary Special Committee Investigating the Munitions Industry,
Room No. 357, Senate Office Building, Washington, D. C.

DEAR MR. RAUSHENBUSH: Herewith is schedule of monthly yard average labor cost per hour, discussed with you yesterday, in the form which you indicated.

Trusting this is the information desired, we are,

Yours very truly,

NEW YORK SHIPBUILDING CORPORATION,
By N. R. PARKER, *Treasurer.*

New York Shipbuilding Corporation, monthly average yard labor cost per hour

THE MAYFLOWER,
Washington, D. C., January 29, 1935.

U. S. SENATE MUNITIONS COMMITTEE,
Room #408, Senate Office Bldg., Washington, D. C.

GENTLEMEN: In compliance with your order we have listed below a copy from our records of the rooms, rates, etc., occupied by the gentlemen shown at the times designated, taken from the registration cards of The Mayflower.

July 25–29, 1933, Korndorff, L. H., suite #333-4 (per day)	$15.00
July 17–21, 1933, Korndorff, L. H., room 509 (per day)	5.00
July 1, to Aug. 9, Bardo, C. L., apt. 465 (per month)	200.00
July 17–26, 1933, Smith, H. G., room 678–A (per day)	7.00
July 9–10, 1933, Smith, H. G., room 378–A (per day)	7.00
July 6–8, 1933, Smith, H. G., room 378–A (per day)	7.00
July 23–24, 1933, Ferguson, H. L., room 389 (per day)	6.00
July 25–26, 1933, Gatewood, W., room 389 (per day)	6.00
July 24–26, 1933, Cornbrooks, E. F., room 316 (special)	7.00
July 24–26, 1933, Wakeman, S. W., Suite 860 (per day)	22.00
July 29, 1933, Wakeman, S. W., room 617 (per day)	5.00
Aug. 14–15, 1933, Wakeman, S. W., suite 451–2–3 (per day)	18.00

Attached hereto are duplicates of room charges on certain of these rooms.

Very truly yours,

E. A. ELDRED, *Credit Manager.*

NATIONAL RECOVERY ADMINISTRATION

[Immediate release July 19, 1933. Release No. 62, section 6.]

TRANSCRIPT OF PROCEEDINGS, SHIPBUILDING CODE HEARING FIRST DAY, JULY 19, 1933, AFTERNOON SESSION

AFTER RECESS

The hearing was resumed at 2 o'clock p. m.

Deputy WHITESIDE. Mr. Smith, has Mr. Ferguson arrived yet?

Mr. SMITH. He has not arrived yet, sir.

Deputy WHITESIDE. We have changed the order that was announced by me this morning regarding having anybody representing the workers speak this afternoon, because I think we should get a ruling on one or two points that came up this morning before going to that general subject. So we will defer that until tomorrow and develop the hearing on the plant facilities this afternoon.

Mr. Smith, is Mr. Bardo, president of the New York Shipbuilding prepared to proceed?

Mr. SMITH. Yes, sir; he is ready.

STATEMENT OF MR. C. L. BARDO, PRESIDENT NEW YORK SHIPBUILDING COMPANY

Mr. BARDO. My mandate from the shipbuilders and ship repairers this afternoon is to present to you their views urging the inclusion in the code of that paragraph which is now written into it, reading as follows:

"The present capacity of active shipbuilding and ship-repairing companies of the United States as a whole, is in excess of present or any prospective needs. Therefore, it will be considered a violation of this code to make any material increase in the plant capacity of the industry."

Deputy WHITESIDE. Are you reading from the code?

Mr. BARDO. No, sir. I am reading from my address.

Deputy WHITESIDE. I asked that question because there is a clause left out of what you read.

Mr. Bardo. "During the life of the act" was added on yesterday after this statement was prepared.

Shipbuilding is an essential national industry, embracing within its scope many branches of the arts, science and the highest degree of mechanical skill and administration. It is, therefore, entitled to every protection afforded or contemplated by the National Industrial Recovery Act. We welcome this opportunity to contribute to the best of our ability our most earnest and conscientious endeavors to the accomplishment of its purpose.

The text for our presentation is taken from the preamble of the act itself, the philosophy and object of which, among other things, state "to promote the fullest possible utilization of the present productive capacity of industries."

Many millions of dollars are invested in shipbuilding and ship repair facilities from Maine down the Atlantic coast, through the Gulf and upon the Pacific as far north as Seattle, and upon our inland waterways and the Great Lakes. The welfare and prosperity of many thousands of employees and their dependents hinge upon the effectuation of the policies laid down in this act, which among other things contemplate the elimination of unfair practices, destructive and cutthroat competition in the industry as now existing. We believe it necessarily follows that new and additional industries should not be created unless it can be shown that existing facilities are inadequate to efficiently and economically serve the shipbuilding and ship repair demands.

It naturally follows that any funds of the Federal Government appropriated under this act, should not in the spirit of the legislation be utilized to finance or assist in increasing the capacity of the shipbuilding or ship-repair industry. This would be especially so where such facilities, if created, would mean an additional industrial plant that would enter into destructive competition with plants already in existence.

After all, in this period of financial stress, it is unthinkable that Federal funds—which have their source in taxpayers' money—should be used in financing and building up an unnecessary industrial facility, especially when some of these funds come from the taxes of individuals, corporations, and businesses of similar existing enterprises, which would be endangered, if not entirely destroyed by the new unnecessary facility created.

There is attached to this report the following exhibits which will be referred to hereinafter:

1. Map of the United States showing the location of shipbuilding facilities, number of ways, capable of building vessels of or in excess of 3,500 tons deadweight, with the location and centers of the important steel rolling and shape producing plants—area of hatching representing capacity output.
2. Map of the United States showing ship repair facilities, graving docks, floating docks, marine railways, of a capacity in excess of 1,800 tons weight.
3. Table of shipyards in existence at close of the war, showing those still in use, those inoperative, and those no longer in existence, with the number of ways used by the Emergency Fleet Corporation.
4. Table showing ships built at various American yards in the last 10 years and the total gross tonnage of ships built at each yard in the last 10 years.

Existing shipbuilding facilities.—During the existence of the World War, a large shipbuilding industry was built up in the United States. Since the war this has shrunk. Many yards have been dismantled and abandoned, and the better located and laid out plants which have continued to exist have only done so under the most serious handicap of curtailment of business and difficulty in surviving financially. The shipbuilding facilities of this country now capable of building ships have a capacity far in excess of any business now existing, or that has existed since the war. They are fully capable of taking care of any possible growth in the shipbuilding business and doing this even though shipping and foreign trade and the demand for ships and ship work should again return to the most prosperous days before 1929.

In substantiation of this statement, reference is herewith made to exhibit 1, which, on a map of the United States, shows the location of existing American shipyards, and gives the number of ways available for building seagoing ships in excess of 3,500 deadweight tons. There are included on this exhibit the shipbuilding ways in the Government yards.

Attention is especially invited to the fact that there are no shipbuilding facilities on the South Atlantic, or in the Gulf, and while there are shipbuilding facilities on the Pacific coast, these have only been used to a minor extent in the past 10 years. A table on this exhibit shows the largest shipbuilding plants and their performance in the last 10 years. It will be noted that for these large plants the total gross tonnage of ships built on the Atlantic coast in the Boston-New York-Philadelphia-Newport News area exceeds 800,000 gross tons, while on the Great Lakes, it is about 335,000 gross tons. For the same period only 49,000 gross tons were built on the Pacific coast.

On a further examination of this exhibit it is seen that the steel-producing plants capable of supplying steel are in locations closely related to the existing shipbuilding area.

Steel for ship hulls is only part of the materials required in shipbuilding. There are involved many and various other materials and manufactured articles, such as turbines, various types of engines and machinery, electric motors, electrical material, refrigerating appliances, and a myriad of other things—the center of supply of which closely proximates the Boston-New York-Norfolk-Pittsburgh-Chicago area.

Referring again to existing shipbuilding facilities, Director Charles Piez of the United States Shipping Board, on page 13 of his report to the board of trustees of the United States Shipping Board Emergency Fleet Corporation states: "At the outbreak of the war in April 1917 there were in the United States 37 shipyards with 162 shipways capable of building steel ships, and 24 yards with shipways capable of constructing wooden ships, both of 3,500 tons deadweight, and over", making 61 shipyards with 234 shipbuilding ways. According to Mr. Piez, on March 31, 1919, there were in existence 67 steel shipyards with 420 ways, and 83 shipyards for wooden or concrete ships with 357 ways, or, 150 shipyards with 777 ways.

There are at the present time in the United States, in accordance with the figures of the National Council of American Shipbuilders, on the Atlantic, on the Pacific, and in the Great Lakes, 27 commercial plants, with 106 ways, capable of building steel ships.

An examination of exhibit 3 will plainly explain the enormous shrinkage in shipbuilding facilities since 1919, which is traceable entirely to the abandoning, closing down, and dismantling of yards on account of there being no demand on them for building ships.

These shipbuilding facilities are commercial and do not include the Federal shipbuilding facilities in navy yards, which are equipped at the present time with 18 building ways. This is important because these yards are in the nature of competitors with the commercial yards in the building of Federal ships, and to that extent add to the available commercial facilities.

Reference is herewith made to exhibit 4, which enumerates ships of over 2,400 gross tons built in American shipyards since 1923 for a 10-year period, during which time these American yards constructed ships to the extent of 1,198,105 gross tons, an average of 119,810 gross tons per year. In this period, 151 ships were built with an average gross tonnage of 8,000.

It should be borne in mind that the length of time a ship is on the shipbuilding ways, while to some extent regulated by the location and conditions of the ways, possible maximum depth of water at the outboard end, and other conditions, that the all important element is the amount of business and ship construction to be done. Frequently a builder may retain a ship on the ways for a long time—to practical completion of a ship—where, if the demands of shipbuilding and his business required it, he would launch much earlier and have, in fact, two or three ships during the period that, without such demand, the ways were occupied by one ship.

Having said the above—shipbuilding capacity will be estimated on the basis of the number of shipbuilding ways in existence at the present time, capable of being used for building ships of 3,500 deadweight tons, or over. Nine months will be allotted to the period of the ship on the ways, and the average size of the ship will be assumed at 8,000 gross tons, the average of the 151 American seagoing ships built in the last 10 years.

I might say that estimate does not include the shipbuilding facilities existing at a number of our ship repair yards, who are equipped to build smaller ships, ships of the smaller size.

On this basis, the shipbuilding capacity of existing shipyards for commercial ships is 1,055,500 gross tons per annum, or approximately one hundred and thirty-five 8,000 gross ton ships, the average gross tons per ship for the past 10 years.

For the past 10 years, including the great stimulation in shipbuilding incident to the Jones-White Act, there was an average annual building of commercial ships of 120,000 gross tons, or less than one-eighth of the shipbuilding capacity of the country.

It is impossible to forecast the future policy of the United States in connection with an expansion of its merchant marine, but irrespective of this, it is at once seen that the shipbuilding capacity of existing facilities on the Atlantic coast alone is far greater than the demands upon them for shipbuilding in any one of the last 10 years. This statement is based upon—not present conditions and demands—but demands of the most prosperous years in shipbuilding since the Emergency Fleet Corporation's shipbuilding program during the World War. Actually, at the present time there are only two seagoing merchant ships under construction in all of these yards, namely; two 7,500 gross ton ships, or 15,000 gross tons as against a capacity nearly 100 times as great as is now being utilized.

In any consideration of shipbuilding facilities of the United States, it is important to bear in mind the demand on these in connection with construction of Federal vessels, especially naval vessels, to meet any requirement of future naval building programs. The Federal navy yards at the present time, are well equipped with such building facilities and the problem of the commercial shipbuilders is not that commercial yards have not the facilities, but that shipbuilding in the United States is at a low ebb. In order that their shipbuilding plants may survive, this Federal shipbuilding capacity may not be used to anything like its capacity, and private yards may secure some much needed naval shipbuilding work to keep them going.

The announced new naval shipbuilding program under the National Industrial Recovery Act involves the construction of 37 vessels. It is also proposed that certain existing vessels be reconditioned, which includes hull work. Unfortunately for the commercial shipbuilders, the Federal navy yards' shipbuilding and ship-repair facilities are so extensive that their problem is, and their hopes are, that at least one-half of this shipbuilding and all of the ship-modernization program will come to their establishments to keep them alive, not alone for their own benefit but to the supposed general national good. Under the plain provisions of the National Industrial Recovery Act it is the view of the private shipbuilders that as a matter of simple social justice from the standpoint of employment they should be permitted to enjoy a sufficient amount of naval work to maintain stable forces substantially upon a normal basis.

Ship repair facilities.—With respect to drydocks and ship-repair facilities: The extent of these and their locations are shown graphically on exhibit 2. These are well distributed on the Atlantic, the Pacific, in the Gulf, and on the Great Lakes. The location of plants is shown with the linear foot of commercial and naval graving docks and the lifting capacity of floating docks, which, with the single exception of the New Orleans Dock, are commercial, this one dock being a naval dock. Marine railways of capacity in excess of 1,800 tons are also shown. In fact, all of the facilities are major ones, capable of taking seagoing vessels. Facilities for smaller vessels are not included, of which there are a myriad.

This exhibit gives two tables, one enumerating commercial ship repair plants, their location, ownership, graving docks, floating docks, and marine railways, with the dimensions of capacities.

The second table shows Government (naval) ship-repair plants, the dimensions of graving docks, capacity of floating docks, and marine railways.

These existing facilities are considerably in excess of any demands that have been made on them since the World War. In fact, in almost every case, the dry docks, marine railways, shops and tools available for ship repair work are far in excess of present day demands on them, and are fully up to any maximum demand that may be or has been made, even in the most active shipping period since the World War. Ship-repair facilities, in their location and in the character of the plants have the sole purpose of serving the commercial needs of ship operation. Normal routine dry docking for inspection and painting of hulls and minor repairs is performed at plants located conveniently to best serve ship operation requirements and which are closely located to the normal routes and ports of call, the convenience of the ship being considered in connection with time available and the ship being without cargo.

On account of the higher American standards of living, with its resultant high wage rates, normal routine ship inspection, painting, and minor repairs of foreign ships are not done in American ports. Foreign ships usually postpone such work for performance in their home ports. This condition only changes when repair or damage requires immediate attention, or where the financial condition of business that might be lost by the ship offsets cheaper foreign repair work. With ships of American registry, having in mind the cheaper cost of repair in foreign ports, national American interests in maintaining ship-repair facilities are protected by a 50-percent duty on repair work performed outside of the United States.

While the present ship-repair facilities of the United States and the number of plants in existence have shrunk slightly since the period of the World War, this has been due entirely to the shrinkage of business, and the fact that some of these could not survive financially. However, the principal plants are still in existence, and in fact, not alone are all the drydocking facilities in existence, but they have been added to, in some plants to a marked degree, so that the ship-repair facilities of the United States are in fact potentially greater than they were during the World War and are capable of serving any possible demands on them.

It is desirable to estimate the probable ship-repair capacity of existing facilities and this is done on the basis of yards capable of handling and drydocking ships in excess of 1,800 tons weight or displacement. It is borne in mind that this usually would be the weight light and would represent the ability to, in general, dock a 2,500-ton deadweight ship.

Any estimate of ship-repair capacity is more difficult to ascertain than is that of shipbuilding capacity. A comparison of the years 1918–19 to 1932, based upon the experience of a group of yards on the Atlantic, in the Gulf, and on the Pacific, shows the relationship of occupancy to capacity of 1 to 5, namely, that the present plants are operating at 1/5 capacity and have a capacity of 400 percent greater than they are now operating under.

There is now pending, and I think this is a correct statement, before the Administrator of the Public Works Section of the National Industrial Recovery Act, an application by Gulf Industries, Inc., for a very substantial loan to be used for the creation of shipbuilding and ship-repair facilities at Pensacola. The shipbuilders and ship repairers, signers of the code, submit herewith a report prepared by Admiral Frederick R. Harris (retired) in opposition to the proposal of Gulf Industries, Inc., as outlined in the brief of Fay, Spofford & Thorndike.

On behalf of the shipbuilders, parties to the code, it is, therefore, respectfully requested that the paragraph above quoted, now appearing in the code upon this subject, be allowed to remain.

Deputy Whiteside. Have you finished?

Mr. Bardo. Yes.

Deputy Whiteside. I imagine it is evident to all of us that this is one of the most important questions that the administration will have to solve. It is basic to all industry. It may be that it is peculiar to this industry, but it is something that we must go into very, very thoroughly, and whatever ruling or decision that is made on this is going to have an ultimate effect on the entire development of this country on an economic basis, and I think in the circumstances that we will have to ask a great many questions.

I think that briefs may have to be prepared tonight by all those prepared to testify on the subject. I will not pass it lightly by. I think it is one of the most fundamental questions that will have to be answered, and I think we should get right straight to the foundation of it, work it out, and then have the record show what the solution may be. I am going to ask you if you will answer several questions before you sit down. I am not going to ask you at first all the technical wording of the paragraph, because I think that requires explanation.

Mr. Bardo. It was intended to follow the language as it now appears in the code.

Deputy Whiteside. I am speaking of the language of the code. I am not going to speak about that necessarily at the moment.

In making your comments you spoke from the standpoint of an individual industry, and the peculiarities of that industry. Do you think that the same reasoning could be applied to all industries in the circumstances that are in a position to overproduce?

Mr. Bardo. Yes; I do. I do not see how we can have one rule and keep increasing our industrial capacity beyond that which is needed normally, to take care of our normal requirements.

Deputy Whiteside. I am under the impression from data that we have in regard to most industries, that they are in a position to produce, if allowed free machine-hours and man-hours—they would materially overproduce current requirements.

Mr. Bardo. In connection with that I would make this comment: This estimate which we have furnished in the brief is based upon a single shift operation. Now a capacity, as indicated here, could be very substantially increased if it became necessary, not by necessarily increasing the plant capacity, but by simply increasing the work force and work plants 16 or 12 hours a day instead of 8.

Deputy Whiteside. That does not change the point that we would deny in that paragraph the initiative of new concerns starting in business or materially increasing the plant capacity of existing plants, and I infer that is the interpretation we should give to it.

Mr. Bardo. Our whole industrial structure is in a state of flux.

Deputy Whiteside. What is that?

Mr. Bardo. The whole county is constantly in a state of flux, is constantly shifting, new ideas, new processes, new materials, new designs, which are constantly forcing the reconsideration of things that were considered perfectly all right a year ago, so that you would have to differentiate in my judgment in dealing with a question as to increased industrial capacity to a certain extent, to the features found necessary, determining whether or not this was a development in the interest of progress, or whether it was simply another plant coming into the picture for the sake of making the same thing.

Deputy Whiteside. As I understand it, the general attitude so far has been to restrict production through the limitation of machine-hours or man-hours, and to allow industry to fairly well regulate itself in other ways. Do you take the position there should be an exception in connection with the shipbuilding and ship-repairing industry, because of peculiarities in that industry?

Mr. Bardo. As to limitations?

Deputy Whiteside. Yes; I mean the expansion of it, expanding facilities.

Mr. Bardo. Now that the Government is in competition with business—up until this time business had no control of the situation—there is nothing to do except to accept a competitor when he comes in the field and live with him as best you can. Here the Government is making very large expenditures of the taxpayers' money, for the sake of rehabilitating industry and restoring unemployment. It seems to me the height of business folly with that policy laid down as the base of this, to allow anything to go on which will disturb or destroy or disarrange the very thing this act was created to protect.

Deputy Whiteside. Yes; but may I ask the question: It would be, I believe, within the judgment of a group, within the discretion of a group which may be appointed in some way, to advise with industry whether anyone could start in the shipbuilding business or ship-repairing business in the United States, in the classifications mentioned in the code.

Mr. Bardo. I think it is quite appropriate such a matter as that should be referred to a committee who would study the matter.

Deputy Whiteside. The first point I would like to establish is whether you believe that that is peculiar to the shipbuilding industry and may be one or two others, or a few others, or whether that same line of reasoning might be applied to all divisions of industry.

Mr. Bardo. I do not know that I should include it in all industries, when there are certain amounts of industries I know about that are suffering from exactly the same thing—overcapacity.

Deputy Whiteside. It is certainly a very, very important subject, is it not?

Mr. Bardo. Sure.

Deputy Whiteside. I gather from the discussion this morning that there was very little decrease in labor due to new processing. I wonder if you could carry that out. That there was very little advantage in the new processing that would reduce the number of employees to carry on the same job in shipbuilding.

Mr. Bardo. Shipbuilding is not a matter of mass production. It is a matter of individual workmanship. Except where you might be building six or a dozen ships of the same type, you might get into a minor form of mass production; but it does not lend itself to anything like the extent of mass production that other industries do.

Deputy Whiteside. Did we experiment with that in the war, in producing ships?

Mr. Bardo. I do not know. I was not in shipbuilding at that time. I have heard a lot about it since and the impression I have from comments was that it was not a very successful program. It was the only program that could be adopted to build a large number of ships in the minimum amount of time and with the least amount of money, but it was mass production of ships and we do not build ships that way, not good ships.

Deputy Whiteside. Now, may I go back, and will you pin this down slightly? Do you think the shipbuilding industry is a peculiar industry where you could insert that paragraph in the code, where the majority of the industries would not come within that code?

Mr. Bardo. From the standpoint of the shipbuilding industry I should say yes.

Deputy Whiteside. It is true peculiarly to that industry and not primarily on the economics itself?

Mr. Bardo. Well, I think primarily it is both, because to begin with you cannot ignore the fundamentals of economics.

Deputy Whiteside. Is it your belief that we should include this clause because the Government is also in shipbuilding?

Mr. Bardo. Not necessarily because the Government is in shipbuilding, but the Government is a very large purchaser of ships and is now proposing to go along with a very large shipbuilding program.

Deputy Whiteside. Has the financing of the Government anything to do with it?

Mr. Bardo. Very decidedly, because the greater amount of work you can give a plant the more it can stabilize its employment, and the more you do that the cheaper you can get it to produce, and interest and overhead will be correspondingly reduced.

Deputy Whiteside. Now, there is another question. You say this applies to new plants. I think you emphasized that in your remark, instead of increasing any facilities in existing plants. Did you have reason to do that?

Mr. Bardo. My remarks contemplated no increase in facilities in present plants. They are already there. Take the New York Shipbuilding Company. We have a complete shipyard, entirely idle. The ways and all that is necessary to build ships are there doing nothing. It represents a substantial investment, in a good labor market. During the war they employed in that yard about 22,000 men. We have now about 2,000, about one-tenth of that number.

Deputy Whiteside. The expression is used here, taking the literal words of the paragraph:

"Therefore, it will be considered a violation of this code to make any material increase in the plant capacity of the industry, during the life of the National Industrial Recovery Act."

What does the word "material" mean?

Mr. Bardo. It is intended—take our own plant. I regard it as a violation of the code as that language now reads to do what might be necessary to rehabilitate for full shipbuilding all the ways we now call our "South plant."

Deputy Whiteside. Would this have any bearing whatever on expansion of the repair plants?

Mr. Bardo. That would depend to a very large extent upon the needs. The repair units have been changed to this extent: We have been gradually expanding our marine service, going into other routes, and that creates another demand in another direction, for repair facilities. A port may be substantially abandoned and a new port created, and facilities required there. I would not regard that as a violation of the code, because it is not creating a new facility, but creating facilities at a point where it is regarded as necessary.

Deputy Whiteside. Does the last clause, "during the life of the National Industrial Recovery Act" tend to modify the economic situation in your mind?

Mr. Bardo. No. We simply limited it to that because we thought that was as far as we could go.

Deputy Whiteside. Is there any qualification that could be put into that that would reduce the importance of the decision if it were allowed to remain?

Mr. Bardo. I do not know as I quite get your thought.

Deputy Whiteside. We evidently are trying to span a period. I am now just thinking aloud to get your reaction so that we may more readily recommend the answer to it, that is, during the period of 6 months instead of the life of the act—whether that does affect your general opinion?

Mr. Bardo. Yes. I should say it does. I do not know how we can go into partnership in this thing and dissolve partnership any time we want to and get out. If we are going to have the National Recovery Act, let us have it in whatever way we can for that life. We do not want to let us start across the river and if somebody heads us off, turn around.

NATIONAL RECOVERY ADMINISTRATION

[Immediate release, July 19, 1933. Release no. 62, section 7]

Transcript of Proceedings, Shipbuilding Code Hearing, First Day, July 19, 1933, Afternoon Session

Deputy Whiteside. Would you have that paragraph if there were no time limit to it, assuming it were going to be a continuing provision?

Mr. Bardo. Yes. My interpretation would be that it went through the life of the code.

Deputy WHITESIDE. Who would make the decision that would enable people to go into business or expand or do whatever they thought best?

Mr. BARDO. That would come under the jurisdiction of the committee, the jurisdiction of the committee of the industry itself.

Mr. BARDO. It is a self-governing organization, as I take it, like any other governmental agency, to keep appropriate checks on the administration's acts, are applied.

Deputy WHITESIDE. Here is a question that may be presented. I think you have answered one half of it, and the other half you may answer. Would it be a violation of the purposes of the code if the present shipyards were to increase the number of their ways or reconstruct ways now in disrepair?

Mr. BARDO. No. A facility that now exists, I would not regard that—Wait a minute! Did you say, Would it be a violation?

Deputy WHITESIDE. Yes.

Mr. BARDO. No; I do not think it would, to increase new ways and rehabilitate old ways. If a way was entirely in disuse and needed to be entirely rehabilitated, it might be, in the strict language of the code, increasing the facilities. It might be a material increase. Necessarily that would have to be governed by a good many of the surrounding conditions.

Deputy WHITESIDE. Would you have any recommendation to make of a word to substitute for the word "materially", to give us a more definite basis to work on?

Mr. BARDO. We discussed that for a good many days and there was not any language anybody could find to fit our views.

Deputy WHITESIDE. It would be difficult for anybody to interpret that, except the governing body.

Mr. BARDO. I think the body selected to administer the code have thoroughly in mind what we were talking about. In other words, suppose we wanted to improve a lot of machinery that becomes obsolete. We might spend $500,000 in buying new tools and it would not materially increase the facilities. It would facilitate the use of those facilities. Whereas, if we went out and expanded the shop in a direction we had never done before, that might be regarded as a material increase.

Deputy WHITESIDE. I thank you very much.

Mr. BARDO. I thank you.

(*Pick up Report of Harris*)

STATEMENT OF REAR ADMIRAL E. S. LAND, CHIEF BUREAU OF CONSTRUCTION AND REPAIR, U. S. NAVY

Admiral LAND. We want to build these ships on what I call the 4–E platform, namely, employment, expedition, economy, and efficiency.

Deputy WHITESIDE. In what capacity do you speak?

Admiral LAND. I am representing the Navy Department, chief of the Bureau of Construction and Repair.

THE 4–E PLATFORM

(1). Employment.
(2). Expedition.
(3). Economy.
(4). Efficiency.

The code as submitted by the shipbuilders, so far as it affects shipbuilding activities for the Navy Department, is generally satisfactory. In connection with the question of the 40-hour week as proposed by the code, the Navy Department is of the opinion that this is required by the industry and that any reduction in the working hours below this would interfere unduly with the proper prosecution of the naval building program, as well as with the normal ship-repairing activities of the navy yards and private ship yards. At the present time the navy yards are on a 44-hour work week with 48-hours pay. The Navy Department feels, however, that it would be fair to reduce this to 40 hours work.

There are a number of vessels now under construction in Government navy yards under specific appropriations, and the substitution of the 30-hour week for the present 44–48 hour week would seriously increase the cost and delay the completion of these ships. The loss of four hours' work per week involved in the reduction from 44 hours to 40 hours would not affect seriously the output and can be accepted. There are also a number of vessels under contract in private shipyards which would be affected by the proposed code.

Studies have been made as to the effect on labor in the shipbuilding industry of the 40-hour week as compared to the 30-hour week, and it is the conclusion of the Navy Department that the adoption of the 30-hour week would not be in the interest of labor, and in view of the size and content of the naval shipbuilding program, that the 40-hour week would not lead to unemployment in shipbuilding trades.

In other words, practically all skilled artizans available in the shipbuilding trades would be able to find employment on the 40-hour week basis.

The National Industrial Recovery Act under the provisions of which this code has been formulated, provides, as a part of the policy, "to promote the fullest possible utilization of the *present* production capacity of industries." The existing shipbuilding facilities of the country now in operating status are in excess of the requirements for new construction and projects contemplated under the National Recovery Act, or for any other prospective new construction. Establishment of new facilities or reopening of those that have been closed over a period of years will result in excess capacity and creation of new and very temporary labor markets leading to later unemployment and unsatisfactory conditions. *The Navy Department is of the opinion that some provision should be included in the code such that it will avoid establishment of new shipbuilding yards, reopening of those long since inoperative, or expansion of small yards and repair plants for shipbuilding purposes. This opinion is in direct accord with the declaration of policy of the National Industrial Recovery Act.*

Under the provisions of the code the hours of work for draftsmen would not be limited to forty hours per week for the first six months. The program of new naval vessels calls for a very large amount of drafting work in the preparation of designs and working plans and to permit preparation of lists of materials to be purchased, also to allow construction work to proceed and employment of labor to start. The number of trained draftsmen qualified for the preparation of plans and designs for naval ships is very limited, and there is no source of supply from which to recruit additional ones. It will probably develop that limiting the hours of work of draftsmen to forty hours may lead to delays in starting actual shipbuilding operations. The Navy Department is of the opinion that if practicable to do so, the hours of employment of draftsmen and other technicists should be exempted, at least temporarily, from the limitation.

The total money appropriated for the Navy Department for the fiscal year 1934 is in round numbers $329,000,000.

This amount has been limited by the Bureau of the Budget to a cash withdrawal during the fiscal year 1934 of $275,600,000. The difference between these two sums is $53,400,000.

In view of the above drastic curtailments, it will be possible for the Navy Department to function during the fiscal year 1934 if our navy yard and naval station work is done on a 5-day 40-hour week, and it is on this basis that the actual appropriations made by the Congress were reduced by the Bureau of the Budget. Should the Navy Department be compelled to work on another basis, such as the 44-hour week (48 hours pay), or on a 30-hour week basis, it would be absolutely necessary to run a deficit or else seriously cripple the efficiency of the Navy.

Attention is invited to the fact that navy yards are primarily repair yards for the maintenance of the fleet. Any arguments presented by shipbuilders operating repair yards are equally potent with regard to navy yards in so far as repairing vessels is concerned.

While the foregoing may not have a direct bearing on the shipbuilding program authorized under the N. I. R. A., it has a very vital indirect bearing on the basic proposals being considered.

In fact we are working under what might be called three laws or three orders, that is, work of 40-hour week and the 40-hour week on which we based our estimates with the Bureau of the Budget and the program of the National Industrial Recovery Act.

Admiral LAND. I think you will readily understand that it is impossible to work under hermaphrodite conditions such as those. We believe the correct solution would be to have the 5-day, 40-hour week.

Deputy WHITESIDE. You have not expressed yourself very definitely regarding the extension of plant facilities. May I have your opinion a little more in detail, if you care to give it?

Admiral LAND. The capacity of the shipbuilding industry in this country, including the navy yards, is more than ample to take care of any existing or prospective programs. The navy shipbuilding, in my judgment, is the most difficult, intricate, complicated type of shipbuilding that there is in the world. It requires more experience, more technical engineering staffs, and more skill in design and construction than any other type of shipbuilding in the world. Therefore, the program upon which we base this is what I call the fourth point program of economy and efficiency. From the Navy Department's point of view it is much more satisfactory to have these contracts placed with facilities that are familiar with the Navy Department work, Navy Department classifications, and so on. We think it is more strict and more difficult of accomplishment than any other type of shipbuilding in the world. On that basis I have no hesitancy in saying that the present existing, growing shipbuilding facilities of the country are more than ample to take care of the Navy program, any prospective Navy program and, so far as my own knowledge goes, any merchant marine program.

Deputy WHITESIDE. In your opinion, the facilities are now available to carry out adequately your program?

Admiral LAND. Yes, sir; they are. I might add, Mr. Whiteside, that if you wish any further statement from the Navy's standpoint, that Captain H. L. Wyman is here from Assistant Secretary Roosevelt's office, and he has a statement which has been presented to you.

Deputy WHITESIDE. I was going to call on Captain Wyman, but I just wanted your opinion. Captain Wyman, are you now prepared to speak on the subject of expansion?

Captain WYMAN. Yes, sir.

STATEMENT OF CAPTAIN H. L. WYMAN

Captain WYMAN. I have a statement which has been submitted.

Deputy WHITESIDE. Are you going to speak on hours?

Captain WYMAN. I have a very short memorandum which has been prepared which merely supplements to a small extent what the chief constructor has just said. The reason I am doing it is that Assistant Secretary Roosevelt is away at the present time and I happen to know that this has been passed upon already by him before his departure. So in placing this in the record I trust I am placing the Assistant Secretary's ideas in the record.

Deputy WHITESIDE. I would appreciate sincerely your reading it, because I think all of us should hear it.

There has been allotted to the Navy Department from the National Industrial Recovery Act the sum of $238,000,000 for the construction of ships.

The building program under this allotment provides for the construction of 32 ships, 16 of which are tentatively allocated to Government navy yards and 16 to private shipbuilding plants.

There is a provision in the Recovery Act reading as follows:

TITLE II—PUBLIC WORKS AND CONSTRUCTION PROJECTS

"SEC. 206. All contracts let for construction projects and all loans and grants pursuant to this title shall contain such provisions as are necessary to insure (1) that no convict labor shall be employed on any such project; (2) that (except in executive, administrative, and supervisory positions), so far as practicable and feasible no individual directly employed on any such project shall be permitted to work more than thirty hours in any one week; that all employees shall be paid just and reasonable wages which shall be compensation sufficient to provide, for the hours of labor as limited, a standard of living in decency and comfort, * * *"

At the present time the work week in navy yards provides for 5½ days, with 44 hours work and 48 hours pay. The proposal now has been made that this be altered to 30 hours' work with 30 hours pay; or in other words a reduction of 14 hours work and 18 hours pay per week.

There are now naval vessels under construction at Government navy yards under specific appropriations made by Congress. The estimates for these ships and the consequent appropriations therefor, were based on a work week of 5½ days with 44 hours work and 48 hours pay.

It is certain that the substitution of the 30-hour week for the present 44–48 hour week in navy yards would very seriously increase the cost and delay the completion of all ships built in navy yards.

The principal objectives of the Recovery Act are:

"To encourage national industrial recovery, * * * and to provide for the construction of certain useful public works * * *" which means the relief of unemployment and recovery of industry.

According to the best information obtainable by the Navy Department, the building program of the Navy, which includes 32 ships under the Recovery Act, plus 5 under the existing Naval Appropriation Acts, or a total of 37 new vessels to be laid down during the fiscal year 1934, will absorb the normal amount of labor employed in the shipbuilding industry (both government and private), on the 44-hour-week basis, and there may be an actual shortage of labor in certain trades.

Thus, insofar as the shipbuilding industry is concerned, the above mentioned objectives will be attained without application of the 30-hour week.

The Department does feel, however, that it would be fair to reduce the present work week from 44 hours work with 48 hours pay, to 40 hours work with 40 hours pay. Insofar as the navy yards are concerned this would cause a loss to labor of weekly pay amounting approximately to 16⅔ percent and would cause a loss of nominally 4 hours work per week to the Government.

As to the loss of 4 hours work per week, this is not as serious as it might seem on its face, for as a matter of fact, the 4 hours put in on Saturday mornings actually results in much less than that amount of really valuable labor, and it has even been estimated that on a basis of real value, only about 2 hours, or less, should be counted.

As to the loss in money to labor in the weekly pay envelopes, it is believed that a certain amount of the loss of 8 hours pay, through adopting the 40-hour week, could be absorbed by rearrangement of wage schedules, but if the 30-hour week should be adopted, it would be impossible to absorb the loss of 18 hours per week pay and keep anyway near within the amounts authorized by acts of Congress and allotments from the National Recovery Act, all of which sums were estimated on the basis of the longer week.

Several ships are now under construction in navy yards under naval appropriations on the 44–48-hour week basis. If the work to be added under the Recovery Act should be on a 30-hour week basis, administrative difficulties and confusion would be bound to result, with attending increased costs and serious delays; in other words, an impossible situation, which could only be met by:

(a) Authorizing all work both present and future on a 40 hours per week basis, or

(b) By obtaining increases in both appropriations and allotments to take care of additional costs so as to permit of the adoption of the 30-hour week.

Even if we could obtain the additional funds necessary we would be confronted with the element of delay. This might be met by working additional shifts but the Department feels that it is not desirable to employ more than one shift in the construction of naval ships owing to the insufficient number of men available in certain of the skilled shipbuilding trades and to the character of the work involved.

In the opinion of the Navy Department the adoption of the 30-hour week would not be to the best interests of labor engaged in the shipbuilding industry, in which there will be practically no unemployment after the program gets under way, as it would result in greatly reduced weekly wages for these men and women owing to the fact that it would be manifestly impossible to absorb the loss of 18 hours pay per week into the 30-hour week, whereas the absorption of 8 hours into the 40-hour week would not present the same difficulties.

To meet the situation on a fair basis—fair to the taxpayer, fair to the laborer, fair to the Navy which feels that the ships should be built as economically and as espeditiously as possible—it is believed that for the shipbuilding industry (including Government yards) a five day week of 8 hours per day, or in other words, a 40-hour week with 40 hours pay, be adopted.

Nothing is to be gained by adopting the shorter week, which would necessitate the employment in shipyards of men unsuited to the work and whose return to their normal occupations should be the primary objective.

To sum up: The foundation platform on which these ships are to be built is expedition, economy and efficiency. Should the navy yards and private shipyards be forced to go on a 30-hour week the shipbuilding program authorized and appropriated for cannot be built for $238,000,000; nor can ships now building and ships appropriated for in the 1934 Naval Appropriation bill be built within the "limit of cost" set by the Congress. The result will be that the Navy Department will have to forfeit its guarantee and its promises to the Congress, the President of the United States.

Deputy WHITESIDE. Are you prepared to say anything regarding the expansion of plants?

Captain WYMAN. No, sir; not other than to concur in what Admiral Land just said. That has been talked over considerably in the Assistant Secretary's office, and that is the feeling of the Department, just as expressed by Admiral Land a few moments ago.

Deputy WHITESIDE. Which is that the present plant facilities are adequate?

Captain WYMAN. Yes sir; that the present plant facilities are adequate, and that it would be undesirable to scatter into new plants the work and cause migrations of labor from centers where they are now living to build up plants in other areas.

Deputy WHITESIDE. Will you hesitate to place contracts with new organizations or with other organizations that were built hastily that had not previously constructed ships?

Captain WYMAN. I think the Navy Department would hesitate very much, for this reason, that they want to be sure of the output that they are going to get.

Deputy WHITESIDE. Do you feel that that provision in the code is peculiar to the situation in the shipbuilding industry?

Captain WYMAN. Yes, I do.

Deputy WHITESIDE. Now, may I ask one other question, Captain Wyman? How about the existing wage rates of the Navy as compared with those of the private yards?

Captain WYMAN. Of course, they are at least equal to and, I think, they are generally a little above. That is my impression. I do not like to make that positive statement.

Deputy WHITESIDE. Your feeling is that they are about on the same level?

Captain WYMAN. Yes, sir, that is my feeling.

Deputy WHITESIDE. And has that condition existed for some time or has it been only recently since your 15 percent cut?

Captain WYMAN. I think that that condition existed before the 15 percent cut, and then, as I understand it, private labor has gone down too.

Deputy WHITESIDE. You still keep that parity?

Captain WYMAN. I think it is nearly on a parity. Admiral Land may know more about that than I do.

Deputy WHITESIDE. Admiral Land, may I call you back for just a moment? I wish to thank you very much, Captain Wyman. Mr. Smith, I would like to call on Admiral Land on that one question, because it has not been answered yet.

Admiral Land, the question is, from 1926 on have wages in private plants been about on a parity with those paid by the Navy Department for like work in the shipbuilding industry?

Admiral LAND. Generally speaking, from 1926 to 1929, and on through possibly to 1930 they were, in accordance with the regulations and laws of the so-called "labor board." We have been on the 1929 wage schedule by administration policy and by law since 1929. The only modification made to wages was a 15 percent cut; when an effort was made to obtain data on this matter for the Appropriations Committee in the House this last session, the indications were that they were on rather flimsy evidence, and indicated that our wages were generally higher than those paid in the trade. That was before the 15 percent cut was made. I am not in that branch or in that department which would enable me to discuss the present status, and I do not think we have sufficient knowledge upon which to base it. But we were on a higher wage schedule on the 1929 wage basis and for those succeeding years. As private shipbuilders cut wages, naturally that variation increased. That is as far as I am prepared to go on that matter.

Deputy WHITESIDE. If a 40-hour week or a 48-hour week were decided upon, how many hours do you think the average worker would actually work and be paid for in a year?

Admiral LAND. Do you mean how many days of employment on that basis?

Deputy WHITESIDE. How many hours a week on the average does a man actually work when the hours designated are 40 hours a week? Do weather conditions and things of that kind affect the working hours?

Admiral LAND. Very little in shipbuilding. They do as you get north in the winter time. But the shipbuilding plants in the navy yards so arrange their work that they do the works in the shops instead of on the ship. It is somewhat less efficient, but I do not think they lose work because of extremes in weather, that is, because of extreme heat or extreme cold, as they do here in the administrative departments of the Government.

After all, that is merely a question of the over-all efficiency of the plants and actual loss of time.

Deputy WHITESIDE. Does the same answer apply to ship repairing?

Admiral LAND. So far as the navy yard is concerned—and that is all I am able to answer about—it does apply.

Deputy WHITESIDE. Thank you very much.

The next speaker is Josiah T. Newcomb, general counsel Gulf Industries, Incorporated, speaking on the subject of facilities, as I understand.

STATEMENT OF JOSIAH T. NEWCOMB, GENERAL COUNSEL GULF INDUSTRIES, INCORPORATED

Mr. NEWCOMB. Mr. Whiteside, a number of questions have been asked, and I am going to take the liberty of asking one myself, if I may.

Mr. Bardo, when speaking, discussed the question of financing a proposed project, and we are discussing the economic question of whether plant facilities should be restricted. I take it there is no connection between the two questions. I do not wish to have to discuss here, unless it is necessary for me to do so, the question of the proprietary of the United States Government financing an increased facility if an increased facility were desirable. I wish to eliminate that question, if I can. If I must discuss it, of course I must discuss it.

Deputy WHITESIDE. The point I was making was, I was simply trying to confine this paragraph in some way to this particular code.

Mr. NEWCOMB. I think I have not made myself clear. I do not refer to anything, to any question you ask. I would be delighted to answer myself any question, and I know everybody is, because really this hearing is for your information.

I do not refer to that at all. Mr. Bardo, in his statement, discussed the propriety of the United States Government financing a facility, if a facility in a shipbuilding business were desirable, the question of who financed it is not a question that should be brought up here, is it? That is the question I would like to eliminate.

Deputy WHITESIDE. It is a comment made in an informal way.

Mr. NEWCOMB. Yes; but I want to be very clear in discussing the questions of facilities that we are not discussing another question of whether it is proper for the United States Government under any conditions to put money into competitive industries.

Deputy WHITESIDE. That is the question of opinion of those who have expressed it. May I ask you, are you associated in the industry?

Mr. NEWCOMB. I am general counsel of Gulf Industries, a representative of the Pensacola Shipbuilding Company, which has been invited to bid on the naval program.

Deputy WHITESIDE. Are others joining in this, or is it for one specific company you are speaking? I am trying to get the identification of it for our record.

Mr. NEWCOMB. I want to present some considerations to you on behalf of all the interests that are grouped about this that I represent, which, I hope, will have some bearing on the question of whether or not you should prohibit in your code increased facilities. In order to do that it is necessary to get a considerable different picture of the shipbuilding industry from that which has been presented. I myself, after sitting here all day so far, wish I might join in the chorus and agree with everybody. It is not at all pleasant to be in an obvious minority. However, we have to perform our duty, and I believe we are right, and I believe that the picture of the shipbuilding industry that you should have in your mind in passing on this code is not confined to its exact present condition. It has seemed to me that if I had been speaking for the industry as it stands now, I would have spoken somewhat apologetically.

It has been described here as an industry that has not got by the handcraft stage. I would not be proud of that if I represented it. I do not believe it is essential for the shipbuilding industry to remain in the handcraft stage. My associates do not believe it is, and they have founded their project on the theory that it is not.

Moreover, if I were representing the present shipbuilding industries as they stand today, I would not be proud of the fact that my industry was idle. I would be sorry because of that. I would feel I had to explain it.

The interests I represent do not believe the shipbuilding industry belongs in any such class. We believe in the United States we have the skill, we have the ability, we have the energy, we have all the qualities that once made this the great shipbuilding country of the world. We believe it has been turned in a different channel for some decades. We believe that now is the time for it to be turned back into the channel where it once was so conspicuous, and if it is, what becomes of your proposition to stifle it with a provision in a code that is meant for a recovery from industrial depression?

I have got to undertake to give in some way or other, with my limited abilities, not a difficult subject, give some little picture of what my associates visualize as the future and the immediate future of the shipbuilding industry.

This provision, if it is found legal, if it goes into the code and is found to be legal and enforceable—I have not taken the time to discuss the legal phase of it, because you do not want it, Mr. Whiteside—I will call your attention to the fact the preamble of the act was depended on by Mr. Bardo, and I depend on the text. That is all I care to say. He can have his preamble, and I will take the text, and we will see.

The project which this provision, if it is found to be legal, would defeat, is one which in the opinion of its sponsors will make possible for the first time in eighty years, the building of adequate American merchant vessels at costs comparable to those of the other maritime nations.

The Congress by mandate in the acts of 1920 and 1928 enunciated the national merchant marine policy in the following language:

"That is is necessary for the national defense and for the proper growth of its foreign and domestic commerce that the United States shall have a merchant marine of the best equipped and most suitable types or vessels sufficient to carry the greater portion of its commerce and serve as a naval or military auxiliary in time of war or national emergency, ultimately to be owned and operated privately by citizens of the United States; and it is hereby declared to be the policy of the United States to do whatever may be necessary to develop and encourage the maintenance of such a merchant marine."

We have not such a merchant marine today.

Exhibit No. 1490

CONFERENCE HELD AT THE NAVY DEPARTMENT ON TUESDAY, FEBRUARY 8, 1927, AT 10:00 A. M., IN CONNECTION WITH THE PROPOSED FORM OF CONTRACT (CLASS 1) FOR THE CONSTRUCTION OF SCOUT CRUISERS NOS. 26, 27, AND 28

Present: Groesbeck, Bardo, Newell, American Brown Boveri Electric Corporation; Wakeman, Birkhart, Bethlehem Shipbuilding Corporation; Gatewood, Bailey, Palen, Newport News Shipbuilding & Dry Dock Co.; Mull, Metten, Wm. Cramp & Sons Ship & Engine Building Co.; Rear Admiral John Halligan, Jr. (U. S. N.), Commander C. A. Jones (U. S. N.), Commander H. T. Smith (U. S. N.), Bureau of Engineering; Captain W. P. Robert (C. C.) (U. S. N.), Captain L. B. McBride (C. C.) (U. S. N.), Commander H. E. Rossell (C. C.) (U. S. N.), Mr. Warren McLaine, Bureau of Construction and Repair.

Admiral Halligan stated that the meeting was called at the request of Mr. Wakeman.

Captain Robert inquired as to the matters which were proposed for consideration.

Mr. Wakeman stated that the meeting developed from a desire to discuss certain sections of the contract. The shipbuilders had a meeting to discuss the question of interchangeability of certain parts of the scouts and in the discussion many other points were brought out. He suggested that certain sections of the contract be considered first and that the matter of cooperation and interchangeability be taken up later in the meeting.

Mr. Palen stated that the meeting was the result of the request for duplicating the vessels, which presents a new phase to the shipbuilder. In considering the contract it was only natural to discuss the specifications, and the serious thing seems to be whether or not there is sufficient information for the estimators to make a fair and just estimate of cost and time for building these ships that would be equitable to the companies. That a memorandum had been prepared as to the matters desired to be considered.

The contract was then considered, clause by clause, in connection with the modifications as outlined in the memorandum.

Clause first, line 3, insert after the word "in" the word "substantial."

Mr. Palen. We thought a modifying word necessary so that we could comply with the contract.

Captain ROBERT. You could comply with them now as well as you could 2 years ago.

Mr. PALEN. There are in these general specifications many features which are almost a change of policy. For example, they state "the superintending constructor shall have the right to examine workmen as to their qualifications", this policy was never adopted by the Department before.

Captain ROBERT. We will leave that for later consideration.

Clause second, line 20, after the word "department", insert the words "or of the contractor."

Mr. PALEN. That section deals with things that are not known or understood at the present time. It is usual in commercial practice if anything in the plans is not in the specifications, or anything in the specifications is not in the plans, which is plainly shown in one or the other, it is considered to be shown in both, that acts of Congress are not understood by the shipbuilders; that such expense should not be imposed upon the shipbuilder.

Mr. WAKEMAN. It is feared that the Comptroller might rule that money should not be paid out except for something called for in the contract; and the builder should have some protection against this higher power.

Clause second, line 24, strike out the words "are hereby and in consideration of the premises expressly waived", and insert the words "should be determined by a board of naval officers appointed by the Secretary of the Navy."

Mr. PALEN. What you people have practically done is ask us to waive a right which might be a right we would want to use.

Captain MCBRIDE. It seems to make it simply a matter subject to change. If that were incorporated it might act to your disadvantage as well as to your advantage. I think that clause has been used for a certain freedom of exchange between the contractor and department and it is a saver of a tremendous amount of highly legal correspondence and if you don't have some such clause you are letting both parties in for long discussions on matters of detail.

Captain ROBERT. Suppose we put in the word "inadvertent." You should supply it without compensation if it is clearly something omitted that should be supplied.

Clause second, par. 2, line 11.

Mr. PALEN. We thought that for changes we should have a larger percentage of overhead for increases than for decreases. Any change causes an interference with the schedule of work which is not represented by labor and material. The word "damage" would cover this situation if the Board on Changes would take cognizance of that feature. When you omit labor you do not omit all overhead; a certain amount of overhead goes on and in omissions or decreases that is not omitted.

Capt. ROBERT. You are fixing an overhead rate which might vary according to the method in which your accounts are kept. I don't quite see how you can specify overhead in advance. Some will carry supervision in direct labor.

Mr. GROESBECK. We are trying to fix a basis for changes.

Mr. PALEN. You can specify that "direct labor" shall not include supervision.

Clause second, par. 2, lines 24 and 26, change "five (5)" to "two (2)".

Mr. PALEN. We thought 5% of the cost of the vessel is a large amount to allow for increases that are supposed to be made without possibly involving an increase in time. If these are to be $10,000,000 vessels, 5% is a lot to allow without an extension of time. We are not cut out from claiming delay. There is nothing interferes with our schedule of building more than changes.

Admiral HALLIGAN. The Comptroller in the case of the Westinghouse contract for machinery for the *Tennessee* has held up payment because we made payment of more than 5%, and he construed this clause as limiting.

Mr. MULL. I suggest strike it out.

Capt. ROBERT. We used to say * * * and then Ferguson, I think it was, came along and asked us to limit this to 5%. If you omit the last part you won't be any better off.

Mr. PALEN. How about omitting all about 5%.

Mr. WAKEMAN. Suppose we leave it out.

Capt. ROBERT. You want to leave out the whole business. We want to make it clear that when we call for changes it doesn't mean an extension of time. It puts the burden on you to show there is a delay. If we omit the entire sentence I don't know of any contractual phraseology that will put the burden on you.

Mr. WAKEMAN. It is hard to put delay on individual items.

Capt. ROBERT. Suppose you make it read * * * ?

Clause second, par. 3, strike out the first eight lines and to the word "thereof" in the ninth line, and insert the following: * * * .

Mr. PALEN. In general that puts our notice 10 days from the time we get approval of the drawings involving the change. Most changes go on under negotiations for some time after we first get notice. We want to shift the 10 days notice to a point where we know what the change is. We want it fixed so we will not be in default.

Clause fourth, change to read as follows: * * *.

Mr. PALEN. We are trying to impose on the department some part of this question of cooperation. We might better leave this part until we get through the contract and then go back to it.

Clause fourth, par. 2, line 5, before the word "and" insert the words "as far as practicable".

Mr. PALEN. There is a big difference between "identical" and "duplicate".

Capt. ROBERT. We meant made from the same plans.

Clause fifth, add at the end. * * * .

Mr. WAKEMAN. In these specifications there are a lot of new things, new applications, and we are very uncertain of the results. There are questions as to the use of aluminum alloy and electric welding. The idea of the department, I think, is that electric welding be used. It might be possible for a superintending constructor at one of these yards to be unfavorable towards electric welding. If one firm finds it cannot make aluminum alloy it might want to substitute something else. We are willing to take responsibility for weight but we think you should take responsibility for the material.

Capt. ROBERT. I think it better to have a matter of this kind cared for by change in specifications in regard to a particular feature.

Mr. WAKEMAN. The extent is so great that we cannot do it in the time we have.

Admiral HALLIGAN. I think it should be in the contract instead of the bids. The limit of cost should come in here.

Capt. ROBERT. I think the question entirely too broad to insert in the contract.

Admiral HALLIGAN. With Cramps we recently specified aluminum instead of cast-iron pedestals, and Cramps objected.

Mr. BARDO. Fix the contract and specifications and hold the contractors to them.

Admiral HALLIGAN. The natural tendency of the manufacturer is to give something he has had experience with.

Capt. ROBERT. Changes that you propose will be treated as a change and you will get the benefit of saving in weight and if there is increase in weight we will not charge you for it.

Admiral HALLIGAN. I think it would be fair for us to take the responsibility.

Capt. MCBRIDE. Design comes in. The success of any particular fitting is dependent upon (1) design, (2) material, (3) workmanship.

Capt. ROBERT. We should take care of that in the specifications.

Mr. WAKEMAN. There is not time.

Admiral HALLIGAN. If we specify the use of a material and the contractor designs the fitting, the failure might be due to design and not to the use of a material.

Mr. METTEN. Regarding steady bearings. We have had no experience in applying aluminum alloy to large castings.

Admiral HALLIGAN. In a case like that we should take the responsibility.

Mr. MULL. That should apply methods as well.

Clause sixth, page 5, between 1st and 2d paragraphs, insert a new paragraph, reading as follows: * * *

Mr. GROESBECK. The plan question is a most serious question.

Capt. ROBERT. The idea is entirely sound; I don't see how we can give you any more time.

Capt. MCBRIDE. Not practicable to make it as rigid as given in this proposal.

Capt. ROBERT. Cannot we use some adjective instead of a number?

Admiral HALLIGAN. We could say "In case of a plan submitted to the inspector there is a delay of more than * * * and in the case of plans submitted to the department there is a delay greater than * * * then the contractor may make claim to the department for delay."

Capt. ROBERT. We recognize your point and will try to care for it in some manner.

Clause eighth, strike out the entire clause and substitute the following: * * *

Mr. PALEN. You specify $5,000,000 insurance. That does not cover all the risk on this vessel, so the remaining risk has to be carried by someone. Therefore we are specifying that the remaining risk over and above $5,000,000 is to be carried by the department. I specified Builders Risk Insurance, American Form, as that is the best you can get, and that is what we will furnish. It is the broadest insurance written.

Capt. ROBERT. Suppose you were hoisting a boiler and dropped it overboard; is that in Builders Risk Insurance?

Mr. PALEN. Yes; and it is essential to make it payable to the Secretary of the Navy for distribution by him.

Capt. ROBERT. Does the last paragraph come in?

Mr. PALEN. Yes; it should read "*Provided*, That said insurance of $5,000,000 shall be increased * * *."

Clause ninth, line 7, after the word "therefore" insert the words "and any extension thereof."

(No discussion.)

Clause ninth, line 18, after the word "*Provided*" strike out * * * and insert * * *

Mr. PALEN. This language was taken from the Interdepartmental Contract Board's circular.

Clause ninth, page 6, paragraph 2, lines 4, 5, and 6, strike out the words "and his decision thereon shall be conclusive and binding on the parties to this contract."

Clause ninth, page 6, paragraph 3, line 7, after the word "delayed" insert the words:

* * * * * * *

Mr. PALEN. I am particular about this extension of time, because there is a question of getting the ships done on time. We will work in good faith if we don't have to pay demurrage.

Capt. ROBERT. That part of the clause you want to strike out is more apt to work to your advantage than otherwise.

Mr. PALEN. We have a clause covering the Secretary's decision being final and binding.

Capt. ROBERT. You really cut it out in one place and put it in in another

Clause tenth, line 5, after the word "immediately" insert the words "take steps to."

Mr. PALEN. We usually cannot stop immediately.

Capt. ROBERT. Suppose we say "promptly."

Mr. PALEN. I rather think "immediately take steps to" is good.

Mr. BAILEY. Why not say "stop as soon as feasible."

Capt. ROBERT. Suppose we say "immediately take steps to stop and shall stop."

Clause tenth, last (30th) line, after the word "vessel" insert:

* * * * * * *

Mr. PALEN. If we are slowed up we want the provisions of suspension to be applicable to us as far as practicable.

Capt. ROBERT. If we slowed you up is there not something else that will take care of it?

Mr. MULL. The worst thing that could happen is lack of appropriation to carry on the work.

Capt. ROBERT. Then the additional cost to the contractor caused by this shortage of funds should be treated as a change.

Mr. PALEN. That is what it means. Page 7 "*Provided*, That this contract shall not be construed as obligating the department * * *."

Capt. ROBERT. Why are you proposing such a condition, because we cannot go beyond the limit of cost.

Mr. PALEN. You say you will not pay us if it exceeds the limit of cost.

Mr. GROESBECK. Suppose you suspend work and cost for suspension and contract price exceed the limit of cost, we are not paid for costs incurred during suspension. Under those conditions we should not be required to do certain things.

Capt. ROBERT. Suppose the ship was 90 percent or 95 percent completed and we had paid you and we told you to stop work and then suppose that dragged on for a year or two and your charges for suspension were such as to bring you up to the limit of cost, then what would happen?

Mr. GROESBECK. If there is any default in payment we could stop work and not be bound to complete the ship.

Clause fourteenth, at the end of 4th paragraph, after the words "in each direction" add the words "at 20 knots."

Mr. WAKEMAN. Steering gear will not stand backing at a speed of more than 20 knots.

Capt. ROBERT. The fellow that goes to sea and gets in a jam says he has got to put the ship astern at full power and the steering gear must withstand it.

We must have some provision. What are we going to require?

Admiral HALLIGAN. I don't see any reason for going astern at a greater speed than 20 knots.

Capt. ROBERT. Whatever the turbines will do to a ship going astern, the steering gear must not be wrecked.

Comdr. ROSSELL. In the design for 24 and 25 we based the whole design on the maximum speed, on the basis of actual experience on the last cruisers, so that the gear would not be broken. The ruggedness of the whole gear is to be sufficient to stand full speed ship is making astern.

Mr. WAKEMAN. Engineering requires 50 percent more power and you have not provided for it.

Admiral HALLIGAN. We may have to put in here that the rudder shall not be operated from hard over to hard over.

Comdr. ROSSELL. There is a limit as to revolutions. The gear is designed to stand up at maximum power but not to operate.

Clause fifteenth, next to last paragraph, commencing with the words "*Provided, however*, That if the corrected fuel oil", stike out the entire paragraph.

Mr. PALEN. It depends on just how much of this you want to penalize us for.

Admiral HALLIGAN. The purpose was to define an unsuitable vessel.

Mr. PALEN. The margin is so slight we don't know what to do. If you say so much penalty for fuel consumption we can guess at it.

Capt. ROBERT. Would it be more agreeable if we made this limiting amount more liberal?

Clause fifteenth, page 13, last paragraph, line 4, insert after the word "vessel" the words "due to defective material or workmanship".

(No discussion.)

Clause fifteenth, page 14, paragraph 3, commencing with the words "In case of the rejection of the vessel", strike out the entire paragraph.

(No discussion.)

Clause nineteenth, strike out the clause.

Mr. WAKEMAN. What will the Comptroller say?

Mr. PALEN. We don't want anything in here to have a vessel on our hands.

Page 18, after clause twenty-third insert a new clause, as follows:

* * * * * * *

Mr. WAKEMAN. That is the exact wording as in the contract for the *Raleigh* and *Detroit*, except the amount.

Capt. ROBERT. Suppose you turned out a rotten ship and got by the inspectors and went to sea and during the 6 months there were a lot of defects plainly attributable to the contractors; if you've got a reservation of $250,000 it seems to me that there possibly could be a limited liability for guarantees but not a limited liability for defective workmanship.

Mr. PALEN. When we bid on fixed price ships we don't capitalize this sort of things.

Mr. GROESBECK. If you miss all your guarantees on the last scout cruisers by 5% you are out about $900,000. The shipbuilding condition is in such shape that we cannot gamble with that much money.

Capt. ROBERT. We would make collective liability to guarantees rather than for all purposes. We would not be willing to fix same limits towards guarantees.

Mr. BAILEY. There is no question as to material and workmanship with the inspection you now have.

Mr. WAKEMAN. You have a precedent, even it if was a cost-plus contract.

Capt. ROBERT. You are all willing to guarantee work.

Mr. PALEN. We are all bound to have our financial responsibility limited.

Mr. WAKEMAN. I don't think there should be a limit on this thing. We have got to carry a bag and if you think there is money in these contracts—we have no margin. We have not figured our estimates but we are not going to be in position to accept unlimited liability. You have stuck on penalties. You want to increase the quality and effectiveness of these boats but in doing that you don't want to put us out of business.

(Recess was taken at 1:20 p. m.)

(Reconvened at 2:10 p. m.)

Present: All parties mentioned above, and Rear Admiral Geo. H. Rock (C. C.) (U. S. N.).

Capt. ROBERT. If we would agree to limited liabilities as to guarantees?

Mr. PALEN. We were looking up the contract——

Capt. ROBERT. That was a cost-plus ship.

Mr. WAKEMAN. This is a ship we are paying for. You were paying for the cost-plus ship.

Capt. ROBERT. In a cost-plus you do what we tell you and there is little responsibility to take. You don't take responsibility for cost.

Mr. WAKEMAN. We did take some responsibility for cost in that contract.

Mr. PALEN. There is more reason in a fixed price ship as we take responsibility for cost.

Capt. ROBERT. If you have a limited liability of this kind and if you simply lay down on the job and don't do anything? (Several present objected.) I don't think the Department will approve the limited liability clause for all purposes, but think they will approve it for performance.

Admiral ROCK. I think we should make limited liability for performances.

Capt. ROBERT. We thought we were giving you a chance to make money on saving in weight.

Mr. WAKEMAN. You have an item of 50 tons for ——— and another item for ——— tons, a matter of about 160 tons, and we don't know what you have in there.

Capt. ROBERT. Don't we specify that if there is a change you are not to be charged with weight caused thereby?

Mr. WAKEMAN. You are going to specify aluminum gratings and we will have to substitute iron. We will have to take the increased weight.

Capt. ROBERT. Suppose you put that in—weight and performance—but not workmanship. I think there will be no objection to workmanship (being guaranteed by you without limitation).

Mr. WAKEMAN. You penalize us and have increased that, and don't give us a bonus.

Capt. ROBERT. I am proposing to limit liability to weight and performance.

Mr. PALEN. What is the objection to adding limit as to workmanship.

Admiral ROCK. I don't know what Admiral Beuret's attitude is.

Capt. ROBERT. I feel I can argue with him as to the other part of it.

Admiral HALLIGAN. I would be willing to limit them on performance and weights.

Mr. PALEN. The main point is that we must get our limit on financial responsibilities; we cannot capitalize on an uncertainty. I hope you will go the limit as to limiting us as to uncertanties.

Clause twenty-fourth.

Mr. PALEN. We tried to modify clause 24 as written so as to allow us to go to court on questions of financial responsibilities and we have gotten it out of the Interdepartmental Board's circular.

Capt. ROBERT. We are not bound by that form of contracts for ships.

(Mr. Palen read the clause as changed.)

Admiral HALLIGAN. You propose that the Secretary's action as to cost and time is not final?

Mr. PALEN. No; it gives us a right to go to court.

Captain ROBERT. In case of uncertainty you would serve notice on the department so as to "catch your breath".

Mr. BAILEY. It probably would be settled before notice was served.

Mr. WAKEMAN. The Supreme Court has handed down a decision that you have no right to open the case as the contract is now written, and by changing it we would have the right. It is not an attempt to force the Secretary, but we want the legal right to protect our contract.

Captain ROBERT. Are there any departures from the standard contract form? Element of time and financial consideration involved. Our most fruitful source of controversy in the past has been over delays.

Mr. PALEN. Time is delay.

Mr. BAILEY. It says the Board on Changes shall adjust this.

Captain ROBERT. The Board on Changes only exists to determine amounts of money cause by changes. It is nothing but a money-finding board.

* * * * * * *

Mr. PALEN. We have added a paragraph of our own [reads same]. Of course that is generally implied, but it is usually customary and stated.

Captain ROBERT. We have said elsewhere that where the contract and specifications are in conflict, the contract shall govern.

Mr. PALEN. I don't think so. I think it a perfectly reasonable and just request.

Captain Robert. This contract merely says this is the instrument to carry out the plans and specifications.

Mr. Palen. But it says when and how you will pay us and states the penalties.

Mr. Wakeman. We have two more questions.—I doubt whether the company would sign a contract with some of these specifications.

There are two things to discuss: The question of cooperation and the question of specifications. We don't think these should be turned over to the specifications people. We are talkng about things that are vital from our point of view.

Captain Robert. Suppose we talk about cooperation.

Mr. Wakeman. We want to settle the extent to which you want duplication or interchangeability on these three contacts.

Captain Robert. Heretofore we have not had interchangeability. We felt that these ships would be worth a great deal more if they all had the same pumps, intermediate shafts—if they were just as much alike as possible even if we cannot get 100 percent [duplication].

Admiral Halligan. It is a question of maintenance with us.

Mr. Wakeman. On page 4, first paragraph, it should read "The contractor will cooperate so far as practicable." We object to the word "identical"; insert "so far as practicable."

Suppose we have a central drafting room composed of the yards that get these contracts. We start in and make drawings and these drawings are submitted to the Bureau; the Bureau approves; the plans are sent out to each yard. Are you willing to tell your representatives at the yards, the superintending constructor and inspector of machinery, that their functions in the yards are limited to inspection and workmanship and that they have nothing to do with these plans, and limit them in the scope of their work.

Captain Robert. We are talking about a certain list of auxiliaries; most of them will be purchased.

Mr. Wakeman. It is a question of putting them in the ship. If we have a central drafting room we will have a central purchasing department.

Captain Robert. You don't raise this as a serious objection.

All shipbuilders stated they have not committed themselves.

Mr. Wakeman. If we have a central drafting room and submit a plan to you for approval, and you approve. Now that plan must go to two or three yard. What happens to the plan?

Admiral Halligan (concurred in by Capt. Robert). So far as that plan has been approved by the Bureau, the inspectors are not to change it except in necessary details to make it fit the ship.

Mr. Wakeman. Your men at the yards can change it and you are not getting a duplicate; unless you take away certain functions and limit them. We have this trouble on the *Lexington* and *Saratoga*. What authority will your inspectors have?

Captain Robert. Not to veto the Bureau.

Mr. Wakeman. If they have the same authority that they now have it will not work.

Captain Robert. They pass on drawings that don't have to be referred to the Bureau. You could not send out all plans from the Bureau.

Mr. Wakeman. We are talking about locating it in a building yard.

Mr. Groesbeck. The only thing is to limit it to diagrammatic plans.

Mr. Palen. Suppose we did not have a central drafting room and steel plans were gotten out for steel structure by Bethlehem and sent to the Bureau and approved by the Bureau. would that approval hold for us if sent on to us. That is plans approved for one ship by the Bureau no matter who made them.

Captain Robert. We only mention a few systems [in our proposal for duplication of plans].

Mr. Birkhart. You must either take the whole hog or none.

Captain Robert. Is there any particular difficulty in having a central drafting room and preparing all your plans except a few sketches?

Mr. Wakeman. I will say I believe it can be worked out but the great difficulty I see we cannot work for three or four different people. We can work for the Bureau, and can you get C. & R. to limit comments to inspection and things of that kind.

Mr. Bailey. Suppose the boilers were not the same design; exactly the same two types of turbines, but with a little difference. You have diagrammatic plans that will cover the bulk of the thing but when you get down to details you are going to have some difference.

Admiral Halligan. The important feature, so far as I am concerned, is to have duplicate auxiliaries.

Mr. Bailey. There is the question of capacity to get these out in time. There are several pump builders. You could not get any pump maker to make all these pumps. Every one will want these pumps and you will have to take more than one kind of pump.

Capt. Robert. One man could supply all pumps for a given service.

Mr. Palen. If the lines were gotten out in a central drafting room and approved by the Bureau they would go for all contractors. If we did not have a central drafting room and the lines were made, say, by Fore River, will all inspectors take those lines?

Capt. Robert. If we told him to, he would.

Comdr. Rossell. With a central drafting room the superintending constructor at that plant should pass on them and it should be compulsory on the other superintending constructors.

Mr. Palen. I am discussing plans that are approved by the Bureau.

Capt. Robert. They would be followed except so far as minor modifications on ship necessitated.

Mr. Wakeman. This question gets down to * * * If this plan is approved by the Bureau, what power would the superintending constructor at the yard have to change it?

Capt. Robert. If he picked up something glaring he might telegraph us.

Mr. Groesbeck. Now suppose you move a central drafting room to one shipyard. You have a superintending constructor there who will approve probably 75%; will his approval be final and binding on the other superintending constructors?

Capt. Robert. No. [See modification to this answer later.]

Comdr. Rossell. Why not?

Mr. Bailey. There are not draftsmen enough to do this in three or four different places. My plan is that each contractor take a certain portion and get that out and then the principal men at the yards consult.

Mr. Wakeman. We don't anticipate trouble with engineering. We anticipate more trouble with C. & R.

Capt. Robert. State your suggestion.

Mr. Wakeman. If you have a central drafting room will you have a superintending constructor there whose power is final to settle plans for all the yards?

Capt. Robert. When they get to the other yard they should not be changed unless there is some interference.

Mr. Wakeman. Should not be changed for personal opinion of the superintending constructors at the other yards.

Capt. Robert. Suppose the central drafting room is somewhere else and a structural plan comes to you and you say you are not willing to stand back of the structure——

Mr. Wakeman. We are going to stand back of it.

Mr. Palen. Suppose the central drafting room makes plans for gun foundations and our people don't think them right, we will send our people to the central drafting room to see if they cannot be changed.

Capt. Robert. If you are willing to go that far.

Mr. Wakeman. Make the change "as far as practicable." We want a definition of "interchangeable", "duplicates", and "identical."

Mr. Palen. If there are different boilers and different turbines going into the two ships we might still make the plans in the central drafting room.

(Considerable discussion was then had as to purchasing agents. All builders agreed to stand back of decision of central office.)

Mr. Bailey. As to delivery—who will get their delivery first?

Mr. Wakeman. That can be worked out. We want the Department to agree on this and if the ships are delayed we don't want to be penalized.

Admiral Halligan. If we are jammed for deliveries we will have to split deliveries.

Mr. Palen. In connection with purchasing. You could have a central purchasing department to purchase this list of things so they would be alike; all other purchasing to be done by separate yards.

Capt. Robert. So far as I am concerned (but I cannot speak for the chief constructor) we will try to get that across. We would have to modify our organization to get that result.

Admiral Halligan. Under existing conditions it would be helpful.

Mr. Palen. The purchasing of that list of things is not a serious matter.

Mr. Metten. Purchasing would be merely buying parts designated.

Mr. Palen. Except for those in the list, the purchasing would be done by the separate yards.

Admiral Halligan. It would be to the advantage of the Government and should reduce the cost of the ships and also tend to similarity between the ships. We would get concentration.

Capt. Robert. Is it practicable to design a ship away from the ships?

Mr. Wakeman. Yes.

Mr. Groesbeck. You might have to depart somewhat from your scheme, but it is entirely practicable.

Mr. Wakeman. The biggest difficulty is your changing your point of view in handling the superintending constructors.

Mr. Groesbeck. You have got to make a decided change.

Capt. Robert. I cannot speak for the chief constructor.

Mr. Groesbeck. All we want, so far as this contract is concerned, is the inserting of "so far as practicable."

* * * * * * *

Admiral Halligan. Suppose Congress gave us these three extra cruisers, making six instead of three. Probably we would ask each shipbuilder to bid on one, two, and three instead of on one and two as at present. How much additional time should we allow for that?

Mr. Wakeman. From the 10th of March? Will they be duplicates?

Admiral Halligan. They will be duplicates. Funds are such that we would have to defer the beginning of the last three about 10 months. The first three would be 36 months, and the next three about 45 months.

Mr. Palen. A couple of weeks.

Mr. Wakeman. The 30th of June. We have a lot of questions to settle and we want just as much time as we can get; because if we go into centralization it would influence bids. [Mr. Wakeman later changed his statement to agree substantially with above opinion of Mr. Palen.]

Capt. Robert. If these three additional ships are authorized, they must be contracted for before the 30th of June.

Mr. Wakeman. We want all the time we can get.

Capt. Robert. This is the 8th of February and the 10th of March is four weeks off. Suppose by the end of February we find three more ships available, which we will have to stagger about six to ten months after the first three. If we by the 1st of March send out advertisement for six instead of three and defer our date of opening, would a date say by the end of March be sufficient.

Mr. Wakeman. No. [This statement was later modified by Mr. Wakeman.]

Capt. Robert. That gives you seven week (from now to consider ways & means).

Mr. Palen. I don't see why a couple of weeks would not be all right.

Capt. Robert. They would be the same as the ships you now propose to bid on by the 10th of March. Surely you could if we add three more and give you three weeks longer.

Mr. Mull. The 10th of March is early for the first three.

Mr. Wakeman. We want to talk this situation over with you further.

Capt. Robert. You would also tell me that the 10th of March would not be satisfactory(?) If we notify you by the end of February would not two weeks longer be long enough?

Mr. Groesbeck. It is not simply a question of saying we will take two instead of one. We would have to write out to all prospective subcontractors and they would have to double the quantities.

Capt. Robert. Well, would not the end of March be time enough?

Mr. Groesbeck. No.

Mr. Wakeman. I would like to think it over.

Mr. Metten. We cannot place an order unless we fix the date of delivery.

* * * * * * *

(After a short discussion as to the ability of the steering gear to stand up under the test at the *required speed astern* as conducted by the trial board, the specifications were considered.)

(Adjourned about 5 p.m. Mr. Mull and Mr. Metten did not remain for second day.)

(Reconvened February 9, 1927, at 9:30 a. m., and continued the discussion of specifications.)

(Adjourned about noon February 9, 1927.)

Substantially correct.

W. B. R.

Exhibit No. 1491

[Memorandum]

2/18/17.

PROPOSED CHANGES IN FORM OF CONTRACT FOR LIGHT CRUISERS NOS. 26 TO 28—AMENDMENTS PROPOSED BY SHIPBUILDERS IN CONFERENCE WITH BUREAUS AT THE NAVY DEPARTMENT ON FEBRUARY 8TH AND 9TH, 1927. COMMENTS AND RECOMMENDATIONS BY BUREAU REPRESENTATIVES FOR FURTHER DISCUSSION WITH SHIPBUILDERS

1. In the following, reference is first made to amendments proposed by representatives of the Newport News Shipbuilding & Dry Dock Company, Wm. Cramp & Sons Ship & Engine Building Company, Bethlehem Shipbuilding Corporation, and American Brown Boveri Electric Corporation, on the occasion of the conference referred to above, these amendments being embodied in a memorandum handed by the shipbuilders to the Bureau representatives, which memorandum is attached hereto. For convenience, item (*a*) refers to the proposal of the shipbuilders and item (*b*) represents the tentative proposed action of the Bureaus

(*a*) Insert the word "substantial" after the word "in" in line 3 of the first clause of the contract.

(*b*) Not recommended. Such a word might be construed to limit the shipbuilder's responsibility for complying with the plans and specifications. The requirements of the plans and specifications should be interpreted intelligently, but if there are any points in which these plans and specifications are not definite the remedy lies in making them definite rather than in the insertion of a qualifying adjective of this kind in the contract itself. It is believed that the conference has resulted in clearing up certain points in the specifications, which will be modified where necessary to make them definite and reasonable.

(*a*) Line 20 of second clause, after the word "Department", insert the words 'or of the contractor." Also, in line 24 strike out the words "are hereby and in consideration of the premises expressly waived" and in lieu thereof insert the words "should be determined by a board of naval officers appointed by the Secretary of the Navy."

(*b*) The sentence to which the above proposed amendments apply is for the purpose of making it clear that any omission from the drawings, plans, and specifications of any feature that is clearly necessary to carry out the contract as a whole the omission being clearly an inadvertent one, is to be supplied by the shipbuilder in the same manner as if the inadvertent omission had not been made. To state that the omission shall not operate "to the disadvantage of the Department or of the contractor" might very well have a meaningless effect. The object of the requirement is to insure that the detail or feature inadvertently omitted shall be supplied without further cost to the Department, and if the words "or of the contractor" are supplied in juxtaposition to the Department if might be construed to mean that the inadvertent omission would be supplied without cost to the Department or to the shipbuilder, and that would be meaningless. It is proposed, however, that the sentence begin as follows: "No inadvertent omission in the drawings", etc. Also, at end of paragraph, add "Similarly, no inadvertent inclusion in the drawings, plans, and specifications of any detail, object, or provision not necessary to carry this contract into full and complete effect shall operate to the disadvantage of the contractor." This would relieve the shipbuilder of the cost of any inadvertent inclusion in the same manner that it would relieve the Government of the cost of any inadvertent omission. This phraseology was suggested by the bureaus, and it is believed that it will be acceptable to the shipbuilders as meeting, in a measure, the criticism advanced.

As regards the change in phraseology at the end of this sentence, it is believed that the proposed change should not be made, as the carefully considered opinion of the bureaus concerned should be as satisfactory to the shipbuilder as the opinion of a board of officers, particularly in view of the fact that the shipbuilder can always appeal to the Secretary in case he considers a bureau decision as unreasonable. The board on changes has no status except as a cost-finding board; it has no authority for interpreting the contract or specifications.

(*a*) At the end of line 11 of second paragraph of second clause, insert the words "which shall be taken to be the cost of the material and 10% thereof, plus the cost of the labor and 100% thereof, for increases and the cost of the material, plus the cost of the labor and 40% thereof for decreases."

(*b*) The proposal is an attempt to define the "actual cost." As regards "actual cost"—

First. The cost of material is not necessarily the cost of the net material plus 10%. The total material used may in some cases include more than 10% scrap (for example, in stock plates cut to odd sizes); in the case of purchased auxiliaries there may be no loss of material although the overhead cost of the purchasing department should be borne by the transaction, this being supposedly included in the office portion of the total overhead or burden charge.

Second. The actual overhead charge that is carried as a percentage of the labor cost varies from 1 yard to another and varies in any given yard according to the method of keeping accounts. For example, 1 yard charges in certain supervision as a part of direct labor and another yard may not do so. In any case the actual cost cannot be determined in advance by using a specified overhead.

The method of compensating the shipbuilder for changes has for many years past (with the exception of the river gunboats mentioned below) been governed by the act of 1886, which specifies that "if changes are thus made the actual cost thereof and the damage caused thereby shall be ascertained, estimated, and determined by a board of naval officers to be provided for in the contract." This law has not been effective since the operation of the naval bill that was passed June 24, 1910. However, as a matter of policy and convenience, the procedure thereof in regard to changes has been continued in effect with no departures until the six contracts for river gunboats entered into about a year ago; in these contracts it was provided that the shipbuilder would be entitled to the cost of the change plus 10 percent, and this 10 percent was also made to apply to decreases as well as increases.

Although shipbuilders have generally agreed that boards on changes use their best endeavors to be fair toward them in ascertaining the cost of changes, they generally claim, and I believe justly so, that changes are apt to interfere with the orderly progress of work and that although they may not be able to claim that an individual change delays the ship, the accumulation of a number of changes in the aggregate tend toward that end; and further, that although estimates may be made of all items that can at the time be considered as entering into a change, some items are at times left out inadvertently, both by the shipbuilder and the Government inspectors and the boards on changes, and that in spite of the best efforts of all concerned to arrive at the actual cost, they sometimes by the methods heretofore in effect suffer financially on account of changes. In order to protect themselves against losses bidders are apt to include in their bid price an amount for uncertainties of this character. It is considered very inadvisable, however, both from the viewpoint of the Government and that of the shipbuilder, to have an item of possible expense that has to be cared for in this manner. The subject is one that has resulted in much dissatisfaction—and in some cases marked irritability—on the part of the shipbuilder.

The "standard Government form of contract" approved by the President November 19, 1926, specifies in reference to changes that "an equitable adjustment shall be made"; it further specifies that the claim for adjustment must be made and specifies how the matter shall be settled "if the parties cannot agree upon the adjustment." The standard form of contract in this respect is therefore a distinct departure from the practice heretofore general in the case of changes in shipbuilding contracts. The standard practice of the Bureau of Yards and Docks is to be found in the following quotation from the "General provisions forming part of specifications for contracts for Public Works" dated December 1, 1926:

"In arriving at the amount of the change, due allowance shall be made, in the discretion of the contracting officer, for overhead and general expense, plant charges, and other expense items of a similar nature. To all estimates of cost 10 percent shall be added for contractor's profit."

Carrying out the spirit of the standard Government form of contract approved by the President and having as precedents the contracts for the river gunboats and contracts for Public Works, and in order to remove from the contract as far as practicable items of uncertain effect, it is recommended that the forms of contract be so changed as to allow the actual cost of the work, plus 10 percent both in the case of increases and in the case of decreases. This can be done by substituting the words "the actual cost, plus 10 percent thereof, and of the damage, if any, caused thereby" for the words "the actual cost thereof and the damage, if any, caused thereby."

(*a*) Paragraph 2 of second clause, lines 25–26, substitute "two (2)" for "five (5)."

(*b*) After discussion the shipbuilders present agreed that instead of reducing the percentage from five to two it would be better to delete the limiting clause "not exceeding a total increased cost, as determined by the board on changes, of five (5) percent of the contract price of the vessel", and to insert the word "however" in place of the clause so deleted. This agreement to omit the limiting clause was arrived at after Admiral Halligan pointed out that the Comptroller in the case of the Westinghouse contract for machinery for the *Tennessee* held up payments because the payment involved more than 5 percent of the original contract price, the limiting clause evidently having been construed by him to limit the amount of the changes that can be paid for as well as to deal with the question of delay. In view of the present conditions the shipbuilders expressed themselves as agreeable to the omission of this limiting clause and it is accordingly recommended that it be omitted, beginning with the words "not exceeding" etc.; the word "However" to be substituted at the beginning of the sentence next following.

(a) Strike out the first eight lines and the word "thereof" in the ninth line of the third paragraph of the second clause, page 2, and insert the following: "*Provided, however,* That no claim for delay or cost resulting from any change shall be submitted to the board or considered by the Secretary of the Navy unless the contractor, within ten days after the receipt of the department's approval of the plans embodying such change, notify the department in writing that the work will be delayed thereby, the said notice to be followed in due course with a statement of the grounds therefor, the extent of such delay and the amount of costs claimed on account thereof."

(b) The proposed amendment instead of requiring the shipbuilder to submit notice to the department as to delay and the cost of same within ten days after the receipt of the *order* for such change requires him to submit the notice of delay within ten days after receipt "*of the department's approval of the plans embodying such change*" and to follow this notice later with a statement of the grounds for the change, extent of delay, and amount of cost claimed on account thereof. The determination as to whether a delay is or is not involved can in general be made promptly upon receipt of the order for the change. The plan for the change does not always require departmental approval. If the change results in delay the bureau concerned should be promptly notified thereof, as in this case a modification of the order as to the change might be given. It should not be necessary to incur the expense of the preparation of plans if the change is not to be made. It is therefore highly advisable that the bureau concerned be notified promptly after the order to make the change is received by the shipbuilder. It may not be readily practicable in some cases to determine the extent of the delay and the amount of the cost claimed on account of the delay, but the existence of a delay can generally be determined promptly and without waiting for the plans embodying the details to be acted upon. In order to provide that the department shall receive prompt notice of the claim for a delay and, at the same time, in order to allow the shipbuilder ample time to prepare his claim as to the extent of the delay and the cost claimed on account thereof, it is recommended that the phraseology of the form of contract be modified to read as follows:

"*Provided, however,* That no claim for delay or cost resulting from any change shall be submitted to the board or considered by the Secretary of the Navy unless the contractor shall within ten days after the receipt of the order for such change notify the department in writing that the work will be delayed thereby, stating the grounds therefor, and shall within one month after the receipt of the order for such change notify the department in writing as to the extent of such delay and the amount of cost claimed on account thereof."

(a) In the fourth clause, pages 3 and 4, the three lines preceding the list of auxiliaries and the five lines following the list of auxiliaries to be deleted and the following to be substituted:

"The following items to be installed on this vessel will, as far as practicable, be duplicates of those installed or to be installed on Scout Cruisers ______ and ______, and the contractor will endeavor to cooperate with the contractors for Scout Cruisers ______ and ______ with that end in view; and the department will approve, for this vessel, plans and orders approved for Scout Cruisers ______ or ______ if the same are submitted for approval."

(b) The shipbuilders criticised the use of the words "duplicates" and "identical," fearing that a literal interpretation of these words might cause needless trouble. The bureaus desire the maximum amount of interchangeability of auxiliaries; the object to be desired can be secured by the articles in question being purchased or manufactured from the same plans. In the case of purchased articles, the desired degree of interchangeability will be secured by the purchase of duplicates from the same plans and order sheets. It is recommended that the following changes be made:

The three lines preceding the list of axuiliaries to read as follows:

"The following items to be installed on this vessel will be made from the same plans as the corresponding items installed or to be installed on Scout Cruisers ______ and ______."

The five lines following the list of auxiliaries to read as follows:

"The contractor will cooperate with the builders of Scout Cruisers ______ and ______ and with the Navy Department, to the end that the said items installed in the three vessels shall be made from the same plans and shall conform to the department's specifications."

It is believed that the proposed changes are acceptable to the shipbuilders.

(a) At the end of fifth clause add the following:

"*Provided, however,* That the department recognizes that the extreme necessity of saving weight, as evidenced by section fifteenth hereinafter, page 13, second paragraph, has led to the specification of materials and methods of construction whose reliability in the naval service has not yet been fully proved. Accordingly it is agreed that if and when the contractor is doubtful as to the suitability of the materials and/or methods prescribed, other materials and/or methods may be proposed by the contractor. If the department approved the proposed change, the contractor shall assume the responsibility for the increased weight, if any; the performance and the full contractual liability for workmanship and materials prescribed in section fifteenth hereinafter, page 13, last paragraph under the caption 'Guarantee period.' Should the department per contra disapprove the contractor's proposed change in material and/or methods then and in that case the contractor's further responsibility shall be limited to making a workmanlike installation in accordance with the specifications; and any replacements and/or alterations which the contractor may be required to make while the vessel is under construction, or during the guarantee period, by reason of deterioration, fracture, or other causes, will be treated as a change under the contract."

(b) The proposed change would be exceedingly broad in its effect and would permit a shipbuilder to object to materials and methods prescribed in the plans and specifications. It is belived that any objections that bidders may have to the requirements of the plans and specifications should be thrashed out in advance of submitting their bids so that they may be on a basis that is definite and satisfactory to both parties to the contract. After that is done any questions of departures from the plans and specifications can be handled as changes. It is believed that the principal objections that the shipbuilders have in mind can be settled as a result of the recent conference and it is recommended that no change be made in the form of the contract in this respect.

(a) At the end of paragraph 1 of sixth clause insert the following paragraph:

"Time being of the essence of this contract, it is agreed that plans submitted to the local inspectors shall be acted on within ten days of their receipt. Plans submitted to the bureaus shall be acted on within thirty days of their submission by the contractor. Delays in this connection will be considered as involving delays in the construction of the ship with corresponding extension of the contract time in each case. Plans returned for correction shall be corrected and resubmitted promptly but no corrections other than those called for in the first instance shall thereafter be required."

(b) The bureaus recognize that delays in plans have a bearing on the date of completion of a ship. Whether an actual delay in completion of a ship is caused and how much, if any, delay is so caused by delays in action on plans depend on whether the working plans reach the yard when required. This in turn depends not only on the time required by inspectors and bureaus to act on plans but, in particular, on when the plans are prepared and presented to the inspectors by the shipbuilder. If the plan is not prepared until immediately before it is needed in the yard to carry on the orderly progress of work, any time taken by the inspectors or the bureaus to examine and comment on the plan and cause changes therein will delay the work to which the plan relates and may conceivably cause delay in the final completion of the ship.

The time required to prepare a plan and the time required by the inspectors and the bureaus to examine and criticize the plan cannot be stated in advance as so many days, applicable to all plans, and it does not appear that the proposal of the shipbuilders in this connection is entirely practicable.

In order that the principle discussed above may be clearly brought out in the contract, it is recommended that a paragraph substantially as quoted below be inserted. The insertion of this paragraph will bring out prominently the recognition of the point involved, but each case would have to be decided on its own merits. The proposed paragraph is as follows:

"Time being of the essence of this contract, it is agreed that plans submitted to the local inspectors and to the bureaus will be acted on and returned to the contractor as promptly as practicable. In case the contractor considers that a plan has been held by the inspectors or by the bureaus an undue length of time and that an actual delay in the prosecution of the work covered by the plan is caused such as to cause a delay in completion of the ship, the contractor may upon receipt of the returned plan make claim for an extension of the contract time, giving reasons therefor and the amount of delay claimed. This claim shall be acted on as provided in the ninth clause hereof for action on other claims for delays."

(a) Strike out eighth clause and substitute the following:

"Said vessel and all materials and appliances provided by either the contractor or the department for and used, or to be used, in the construction thereof, shall be kept duly insured at the contractor's expense, by Builders Risk Insurance, American form of 192 , in the sum of $5,000,000, in the name of both the contractor and the department, and in such companies as shall be approved by the Secretary of the Navy; the loss, if any, to be stated in the policies as payable to the Secretary of the Navy, for distribution by him to the department or the contractor as their respective interests may appear. All risk, loss or damage from whatever cause not covered by and collected under such insurance is assumed and carried by the department. *Provided*, That this insurance shall be increased to such amount as may be approved by the Secretary of the Navy during the time the vessel may be away from the building yard, but this increased insurance will be treated as a change in accordance with the provisions of the second clause hereof."

(b) The question of this substitution should be handled by the Judge Advocate General.

* * * * * * *

(a) Ninth clause, line 7, after the word "therefor" add the words "and any extension thereof."

(b) It will be satisfactory to add the words "and any extension thereof approved by the department."

* * * * * * *

(a) Ninth clause, 18th line, after the word "*Provided*," strike out the remainder of the clause and substitute the following:

"That the contractor shall not be held responsible for any unavoidable delay in the performance of this contract (not the result of his fault or negligence) arising from causes beyond his control. Such causes shall include, but shall not be restricted to, acts of God, the Government, the public enemy or common carriers, fires, epidemics, quarantine restrictions and strikes, wherever any of the causes of delay occur, but such circumstances shall not be deemed to include delays in obtaining materials when such delays arise from causes other than those herein specified: *Provided, also*, That if it shall appear to the satisfaction of the Secretary of the Navy that the contractor ordered the necessary materials at the proper times, and used every reasonable effort to obtain the delivery of such materials at the time and in the order required to carry on this work properly, but that nondelivery of such materials delayed the completion of the vessel, he may, in his discretion, grant such extensions of time for the fulfillment of the contract as he may deem proper under the circumstances.

"In case any question shall arise under this contract concerning delay, such question, with all the facts relating thereto, shall be submitted to the Secretary of the Navy for determination.

"All delays that the Secretary of the Navy shall find to be properly attributable to any of the causes covered by the foregoing provisos of this clause and to have been delays affecting the completion of the vessel shall entitle the contractor to a corresponding extension of the period prescribed for the completion of the vessel; *Provided, however*, That in the event the vessel is not completed within the contract time and any extensions thereof, such contract time may be further extended in the discretion of the Secretary of the Navy, notwithstanding that the causes for such extension are not included within this section of the contract: *Provided, further*, That no delay in the completion of the vessel, or the alleged cause or causes thereof, shall be considered by the Secretary of the Navy unless the contractor shall, at the time of the occurrence thereof, notify the department in writing of the facts and circumstances in each case, and where possible of the extent to which the contractor claims that the completion of the vessel is thereby delayed: *And provided further*, That the said Secretary may, without prejudice to the rights of the contractor, reserve his decision on any or all claims for extension until such time as he may consider desirable and if deemed expedient until after the completion of the vessel, the work on her in the meantime, in accordance with the contract, plans and specifications, not to be discontinued or delayed on account thereof."

(b) It was stated by shipbuilders at the conference that the proposed changes in form of contract are based on what they understand to be the corresponding provisions in the standard Government form of contract. One of the principal changes proposed consists in the recital of causes for delay. The phraseology of the shipbuilders in regard to this point was evidently taken from the annual report of the chairman of the Interdepartmental Board of Contracts and Adjustments dated July 1, 1923. However, the standard form of contract as approved by the President does not follow the phraseology of the 1923 report in this respect. In order that the ship contract may be brought somewhat nearer into accord with the standard Government form of contract approved by the President, it is suggested that the causes of delay for which contractors are not responsible as specified in the standard form of contract be substituted for those specified in the form of ship contract heretofore used and now under consideration. With this object in view it is suggested that the following words, beginning on the 18th line of ninth clause, be deleted:

"That such delay shall not have been caused by the act of the department, or by fire or water, or by any strike or stand out of workmen employed in the construction of the vessel; or by other circumstances beyond the control of the contractor, but such circumstances shall not be deemed to include delays in obtaining materials when such delays arise from causes other than thoseherein specified;" and that the following be substituted therefor:

"That such delay shall not have been due to unforeseeable causes beyond the control and without the fault or negligence of the contractor, including, but not restricted to, acts of God, or of the public enemy, acts of the Government, fires, floods, epidemics, quarantine restrictions, strikes, freight embargoes, and usually severe weather or delays of subcontractors due to such causes."

In the next paragraph of ninth clause the shipbuilder proposes to omit the words "and his decision thereon shall be conclusive and binding on the parties to this contract." As stated orally by the shipbuilders, they propose in a later section of their amendments (discussed below in connection with twenty-fourth clause) to provide that decision of the Secretary shall be final and conclusive "except as to the elements of time and financial consideration involved." It will be seen in the comments below that this recommendation of the shipbuilders is not agreed to and it is recommended that the words quoted above for deletion from the second paragraph of ninth clause of the contract be not deleted but remain as at present worded.

The shipbuilder proposes in the third paragraph of ninth clause a proviso to be inserted authorizing the Secretary of the Navy to make further extensions in the contract time of completion of the vessel for causes other than those specifically named in the contract. This recommendation is concurred in in order that in the decision of the Secretary in such a matter, if made, may have standing with the Comptroller. This proviso should be added at the end of first paragraph of ninth clause and the following words should be inserted after the word "clause" in 3d line of last paragraph of ninth clause, "for which causes extensions of time without assessment of damages may be granted."

* * * * * * *

(a) Tenth clause, line 5, after the word 'immediately" insert the words "take steps to."

(b) After discussion it was suggested that the words "immediately stop" be changed to "immediately take steps to stop and shall stop." This was agreeable to the shipbuilders and is recommended.

* * * * * * *

(a) Tenth clause, page 7, at the end of second paragraph add the following proviso:

"*And provided further*, That if the department is compelled by the condition of its current appropriation for any fiscal year during the life of this contract to limit the contractor to the expenditure of a less amount of money than would be necessary for normal and orderly progress, then and in that event the provisions of this section shall be applied insofar as appropriate in ascertaining the extra compensation to which the contractor shall be entitled."

(b) The proposed proviso should, it is believed, be agreed to in principle except that the extra compensation to which the shipbuilder is entitled shall be determined by a board on changes rather than by a special board. The case of suspension of work covered by an earlier portion of tenth clause is so far-reaching as to warrant the special board referred to in the second paragraph of tenth clause, but the case now advanced by the shipbuilders, which is that of limited funds on the part of the Government rather than a suspension of work, may well be covered as a change. Provision is made elsewhere for taking care of the delay, as the cause in this case would be one for which the Government is responsible. It is recommended that the proviso read as follows and be inserted as paragraph 9 of twenty-third clause:

"If the department, by reason of the condition of its current appropriation for any fiscal year during the life of this contract shall limit the payments below those earned in accordance with the provisions of this clause, or if notice is given by the Government to the contractor that payments will be so limited and the contractor thereupon notifies the department that progress on the ship will be restricted by reason of such limitations in payments, then and in that event the cost to the contractor by the withholding of earned payments or the slowing down of work below that necessary for normal and orderly progress on account of the inadequacy of funds for payments earned, shall be treated as a change in accordance with the provisions of the second clause hereof."

* * * * * * *

(a) After the word "vessel" at the end of third paragraph of tenth clause add the following proviso:

"*Provided, however*, That if for any reason other than a default on the part of the contractor as referred to in section sixteenth, p. 14, 'Forfeiture of the Contract,' the Department defaults in the payment of any moneys due the contractor under the terms of this contract, the contractor may suspend work on the vessel without incurring the penalties prescribed for delays in section ninth supra, and without prejudice to any of its rights under the contract; and

"*Provided further*, That if the said default is caused by the fact that the limit of cost as fixed by law has or will be exceeded, then, and in that case the contractor shall be under no obligation to do further work under the contract except as prescribed under section tenth, page 6, hereinbefore set forth under the caption 'Suspension of Work'."

(b) The underlying feature of this provision desired by the shipbuilders is believed to be reasonable and is in general recommended for approval on the assumption that the withholding of payment of moneys due the shipbuilder is intended to cover the case of insufficient appropriation rather than withholding of payments as an offset, due to overpayments for other causes. However, the second proviso is unnecessary and is so worded as to be inconsistent; this second proviso is sufficiently covered in the first proviso and elsewhere. The following phraseology is recommended as caring for what appears to be the underlying thought of the shipbuilders. Paragraph 10 of clause 23rd.

"If the Department fails on account of insufficient funds available to make payments when such payments are earned in accordance with the provisions of the twenty-third clause hereof or notifies the contractor that on account of insufficient funds available payments will thereafter cease, the contractor may suspend work on the vessel or may slow down work on the vessel without incurring the penalties for liquidated damages on account of such delay as may be caused by this suspension or slowing down and without prejudice to its rights under the contract."

Original paragraph 9 of 23rd clause should be changed to paragraph 11.

(a) Fourteenth clause at the end of subparagraph (a) where backing standardization is described, after the words "in each direction" add the words "at twenty knots."

(b) This change is not recommended for approval. The shipbuilders' objection appears to be directed to the possibility of trouble with the steering gear if the rudder is put over after the ship reaches full sternboard. As has previously been pointed out to shipbuilders at a former conference, it is of great importance that the steering gear be sufficiently rugged not to carry away or take charge under any conditions that may obtain in service. The specifications cover the steering gear tests and include the requirement that the steering gear shall not carry away or take charge when the vessel is backing under full power and has gathered full sternboard and that the steering gear shall operate to control the rudder when going astern at revolutions equal to two-thirds of the revolutions for 32.7 knots ahead. It is considered absolutely necessary that this provision be carried out.

* * * * * * *

(a) Fifteenth clause, page 12, strike out the following: "*Provided, however*, That if the corrected fuel oil per knot on trial (f) shall exceed 475 pounds of fuel oil per knot or if on trial (c) it shall exceed 1,965 pounds per knot the Secretary of the Navy shall have authority to accept the vessel at a reduced price upon conditions to be agreed upon between the Secretary of the Navy and the contractor."

(b) It is not considered that this guarantee should be omitted as it is of great importance that the performance of the vessel should at least come up to the figures named. It will be seen below, however, that a limited liability clause is recommended and, in case this limited liability clause is inserted, the paragraph above quoted (which the shipbuilders recommend be deleted) while remaining in the contract, should have the following words added:

"The deduction for this cause shall, however, not be greater than an amount which, when added to the net deductions for trial performance guarantees and weight and liquidated damages, will cause to be exceeded the sum named in twenty-fourth clause as the collective liability."

* * * * * * *

(a) Fifteenth clause, last paragraph on page 13, 4th line, after the word "vessel" insert the words "due to defective material or workmanship."

(b) The clause as amended would provide that defects "due to defective material or workmanship other than that due to general design or to fair wear and tear", and the proposed verbiage is not logical. Upon discussion it developed that in order to be logical the inserted words would be "due to defective material, workmanship or design" and such verbiage would include all causes, the same as are now included. In any case a further exemption of the contractor than is now specified does not appear to be reasonable and no change in this connection is recommended.

* * * * * * *

(a) Delete last paragraph of fifteenth clause which provides for settlement in case of rejection of the vessel.

(b) On discussion it developed that the principal objection to this clause lies in the fear in the minds of the shipbuilders that conditions might arise which would leave the vessel on their hands. There appears to be no such cause except that covered by the eighteenth clause in connection with forfeiture. While rejection would appear to be extremely remote, still the various provisions therefor should should remain substantially as stated in the form of contract. The paragraph in fifteenth clause recommended by the shipbuilders for omission should remain.

* * * * * * *

(a) Nineteenth clause: Delete entire clause.

(b) This clause specifies that it shall not be obligatory upon the department to accept or pay for the vessel or any part thereof unless it shall have been completed in strict conformity with this contract and in accordance with the provisions of the acts of Congress relating thereto. Upon discussion it appears that the shipbuilders are fearful lest some great loss should rest with them such as to amount to a financial catastrophe. With the clause proposed below for limited liability it is believed that they are suitably protected, and it is recommended that the nineteenth clause stand as written.

* * * * * * *

(a) At the end of twenty-third clause add a new clause numbered twenty-fourth (chainging clause twenty-fourth to twenty-fifth), the proposed clause reading as follows:

"The collective liability of the contractor for the breach of guarantees and agreements as to material, workmanship, weight and the performance of the vessel contained anywhere in this contract shall be limited to $135,000 and the deductions therefor shall not in the aggregage exceed such an amount."

(b) Much discussion followed as to the reasonableness of a clause limiting the collective liability of the shipbuilder and, in particular, it was urged by the shipbuilders that they find that in their present financial condition they consider it essential to protect themselves against such very heavy losses as might follow from the possible accumulation of performance and weight penalties. It is not believed that this collective liability should extend to defects and deficiencies in material, workmanship and design, since these features can and must be covered by proper attention to details. However, performance guarantees and weight guarantees are in another category not so easily within the control of the shipbuilders and it is believed that a collective limited liability for these features would be reasonable and would be reflected in receiving more satisfactory bids. The same in general may be said of liquidated damages on account of delays in completion. This collective liability should, however, reach a more substantial figure than that named above. It is recommended that an additional clause numbered twenty-fourth be inserted, as follows:

"The collective liability of the contractor for the breach of guarantees as to weight and trial performance of the vessel contained anywhere in this contract and as to liquidated damages for delays in completion of the vessel shall be limited to $250,000, and the deductions therefor shall not in the aggregate exceed this amount. Provided, however, that this limitation as to liability shall not apply in case of forfeiture of the contract."

(a) Strike out twenty-fourth clause and insert in lieu thereof a new clause numbered twenty-fifth, as follows:

"If any doubts or disputes arise as to the meaning of anything in this contract, or the drawings, plans or specifications, or if any discrepancy appear between such drawings, plans or specifications and this contract, the subject in dispute shall be referred at once to the Secretary of the Navy for determination. The Secretary shall promptly render his decision and cause a copy thereof to be served on the contractor. The decision of the Secretary, when rendered, shall be final and conclusive upon the parties hereto and carried out by them as within the contemplation of this contract, except as to the elements of time and financial consideration involved and, the decision of the Secretary shall also be final and conclusive as to the questions involved in these elements, unless the contractor, within thirty days after the receipt of such decision, shall commence an action at law to determine his legal rights involved in such decision; or shall give written notice to the Secretary of the Navy of his intention to commence such an action: *Provided, however,* That so much of this paragraph as authorizes the contractor to commence an action at law shall not apply to disputes arising under the written order of the Secretary of the Navy to change the drawings, plans and specifications, as provided in paragraph numbered second of this contract and in the said act of Congress approved December 18, 1924."

(b) It was brought out in discussion that the shipbuilders have based this proposed amendment on what they understood to be the standard Government form of contract. It appeared that they had based their phaseology on the July 1, 1923, report mentioned above. However, the standard Government form of contract as approved by the President does not in a number of particulars follow very closely the form of contract contained in the 1923 report. In particular the exceptions of "the elements of time and financial consideration involved" that are mentioned above and are mentioned in the 1923 report do not appear as exceptions in the standard Government form of contract approved by the President. The exception as to "time and financial consideration involved" desired by the shipbuilders would if incorporated in the manner proposed by them be exceedingly broad. While the principle of appeal to the courts is fully recognized, it is believed that the requirements of the contract in respect to the elements mentioned herein which have satisfactorily withstood the test of so many years without working a hardship on the shipbuilders, so far as is known, should not be radically changed in the manner proposed. From discussion with the shipbuilders it is believed that their recommendation in this respect is based on what they consider abstract principles rather than any practical difficulties encountered with the Navy Department. No change is recommended.

* * * * * * *

(a) Add a new clause numbered twenty-sixth reading as follows:

"All general language or requirements contained in the specifications, and all other requirements inconsistent with this agreement, are superseded by this agreement."

(b) This is considered unnecessary as the express provisions of the contract take precedence over details of the plans and specifications and, moreover, the provision of the contract regarding inadvertent omissions cares for discrepancies of that character.

COVERDALE & COLPITTS,
CONSULTING ENGINEERS,
120 Wall Street, New York, May 13, 1933.

Mr. C. L. BARDO,
President New York Shipbuilding Corporation,
Camden, N. J.

DEAR BOSS: I understand that you phoned me yesterday and I presume that you wished to inquire what I have been able to find out with reference to Wilder's plans. I find that no application has been filed for a loan. Wilder and some of his associates have had a conference with Harrington who is the chief of the engineering committee which passes upon self-liquidating projects and they left a printed prospectus of "Gulf Industries". I was able to secure some extracts from this prospectus which will indicate the scope of the plans. Copy of this I am enclosing for your confidential information. Since no application has yet been filed no one can be said to be handling the matter. It would, therefore, seem somewhat early to take any direct action.

The situation in the R. F. C. is changing very rapidly and there is some prospect that the individual that I mentioned to you will not be in the organization long. I, therefore, do not believe that anything would be gained by any one talking to him. I should suggest that the situation be closely watched, but that you do not appear directly in the matter until there is more evidence that aid will be given Wilder's project.

Yours very truly,

JOHN.

EXHIBIT No. 1497

Personal

JUNE 28, 1933.

Honorable A. HARRY MOORE,
Governor, State of New Jersey,
Jersey City, New Jersey.

MY DEAR GOVERNOR: The Journal of Commerce yesterday carried an article in connection with Gulf Industries, Inc., which if carried out will have a very serious effect upon the shipbuilding industry's activities in the State of New Jersey. This plan has been conceived and the organization is being headed by Mr. Laurence R. Wilder, who organized the American Brown Boveri Electric Corporation and for a while was president of the New York Shipbuilding Corpoation.

The plan proposes to acquire two small shipyards or repair plants now located at Pensacola, Florida, and to borrow $35,000,000 from the Government under the Industrial Control Act for the purpose of building dry docks and a shipyard to build ships and steel dwelling houses.

The people of the South are considerably exercised about the possibilities of this development and no doubt it will have support in Washington. My information is that there is no financial background to the concern and that its success depends entirely upon the consummation of this governmental loan.

There is now in existence in the shipyards of the country about twice the capacity needed to take care of the shipbuilding requirements. The New York Shipbuilding Corporation has twice the capacity that it needs and this is equally true of the Federal Shipbuilding Company at Kearny, in addition to which there are a number of substantial repair yards in the Jersey City and Hoboken district that are equipped and in the market to build ships.

This new company has asked for and been furnished with the plans and specifications for the Navy building program now under consideration and it is possible that they may divert a very substantial part of this business from New Jersey industries.

It is important that this be prevented, if reasonably possible, and foreclosure against the loan at Washington would accomplish it. Anything you can do will be appreciated. Thank you.

Very truly yours,

C. L. Bardo.

INTEROFFICE CORRESPONDENCE

To: Mr. C. L. Bardo. Date: June 29th, 1933.
From: Mr. N. R. Parker.
Subject: ______________________ File ______________________

I had a long talk with Harry Maloney in connection with the Wilder matter. Maloney understands this situation particularly well, and while he was very busy, having just been sworn in today as collector of internal revenue, he said he would get in touch with Mayor Hague immediately and do everything possible to scotch the plan. As soon as he has a talk with Mayor Hague he will determine whether it will be necessary for either you or myself to have a talk with the mayor but he doesn't think this will be necessary as he fully understands the situation originally from the Cramp matter and later from the Wilder plan to rejuvenate Cramps, of which he was to be a part.

Have arranged the resolutions for signatures and the new resolution for possible Navy work and forwarded these to Miss Howe for the next directors' meeting.

Everything having been fixed up as far as possible at this time, I am taking your orders and starting a holiday but will be available at any time if you should need me. Mr. Doré can get in touch with me, if necessary. As soon as Mr. Doré has completed the closing of the books for June 30th and is ready to prepare the income statement for the quarter ending June 30th, I will come in and get this out of the way, possibly about July 17th.

If you should need me in the meantime just whistle.

EXHIBIT No. 1509

Whereas an organization known as Gulf Industries, Inc., has been formed to develop a new shipyard at Pensacola and have applied to the Federal Government under the National Recovery Act for the funds with which to establish such proposed new shipyard; and

Whereas there are already sufficient private yards in existence with large amounts of capital invested therein, ready, able and willing to undertake all necessary new Navy shipyard contracts; and whereas it would be a gross injustice to these private shipyards in which large amounts of private capital are already invested and which shipyard companies are already paying large Federal, State, and local taxes, to have such a new project financed by the Government in competition with such private capital so invested; now, therefore, be it

Resolved by the Board of Commissioners of the City of Camden, N. J., That a protest be lodged by the mayor with the Federal officials having charge of the disposition of the funds under the National Recovery Act, protesting against the Government, under the National Recovery Act, assisting the organizers of the Gulf Industries, Inc., or any other similar corporation thus disturbing these shipbuilding industries already established; be it further

Resolved, That in said protest the attention of the Government officials be called to the fact that Federal moneys should not be used to destroy private capital already invested or in competition with private capital already invested in this industry and that the organizers of the Gulf Industries, Inc., should procure private capital the same as the presently existing shipyard plants have already done; and be it further

Resolved, That the attention of the Government officials be called to the fact that there is no necessity for any new shipyard installation in any part of the United States, because there are already existing well-equipped shipyard plants in a number of places in the United States who are well able to take care of all Government and private needs.

Executive Secretary Camden County Chamber of Commerce,
Broadway Stevens Building, Camden, N. J.

DEAR MR. ODHNER: Yours of July 21st, having reference to the letter forwarded to the Secretary of the Interior and others.

Thank you very much for this action on your part.

Very truly yours,

C. L. BARDO.

EXHIBIT NO. 1521

[Telegram Received]

GRAY,
Rio de Janeiro, dated March 12, 1934,
Rec'd 8:30 p.m.)

(Paraphrased by LRB)
SECRETARY OF STATE,
Washington.

#37. Received call from Mr. Robert Aitken Workman, the N.Y. Shipbuilding Company's vice president. He asked that I wire immediately recommending a scout cruiser be sent to Rio for the "moral effect" while the Brazilian Gov't was considering bids for naval construction. His manner was rather truculent and he took me to task for not being here when he wanted to see me. He pointed out the fact that there were two British cruisers in the harbor and referred caustically to the fact that the British knew how to take care of their interests. The cruisers were there on a regular schedule—arranged some time ago—a fact which I pointed out to him. In spite of this he said that he would take the matter up with Navy through his own channels—to have a cruiser available for detached service sent to Rio.

I feel that no cruiser should be sent because of the effect its sudden appearance would have. I question the value of such a visit in view of the present unsettled political situation, without some valid reason.

GIBSON,
Department of State.

[Telegram sent]

DEPARTMENT OF STATE,
March 13, 1934.

AMBASSY,
Rio de Janeiro (Brazil):

The Department is in accord with your expression of opinion voiced in your last sentence of your #37.

HULL.

Department of State. File: 832.34/239.

EXHIBIT NO. 1522

NAVY DEPARTMENT,
BUREAU OF ORDNANCE,
Washington, D. C., Jan. 26, 1934.

Refer to No. L11-4(5/264) (B9).
Subject: Estimates of cost-bids on Brazilian cruisers.

SIRS: In connection with conference of recent date between representatives of your company and representatives of the Bureau of Ordnance, the following information is furnished you for possible use as a basis in preparing estimates for the building of two Brazilian cruisers.

The figures following represent the approximate costs and approximate weights of the most nearly similar United States naval material to that which you propose to furnish to the Brazilian Government. An exact comparison is not available in certain cases; for example, the Brazilian proposal is for an 8″/50-caliber gun, whereas the latest information available in the United States Navy covers an 8''/55-caliber gun. Similarly, the 4''7/50-caliber Brazilian gun is most nearly represented by the 5''/51-caliber American gun. No 1'' antiaircraft machine gun has been built by this country, and the estimates furnished for this gun are based to a certain extent upon the 1''.1 machine gun now under construction, although an exactly comparable mounting has not been proposed for the United States naval service.

In many cases the figures as to costs furnished represent prices of some years ago, and it is probable that under present economic conditions a considerable increase would be desirable for purposes of estimate.

	Unit cost	Total
6 8''/55-cal. guns	$45,000	
3 8''/55-cal. twin mounts	$100,000	$570,000
(Includes spare parts and accessories—all rotating parts of mounts. No armor except shield.)		
Weight of 2 guns and twin mounts (all rotating parts including shield, but no armor), approximately ... pounds		420,582
Spare parts, tools, etc., per turret ... do		4,000
12 5''/51-cal. guns	12,000	
12 5''/51-cal. mounts	17,000	$350,000
Weight of one gun and mount, complete, approximately ... pounds		23,369
Battery accessories, approximately ... do		1,315
4 3''/50-cal. A. A. guns	$3,500	
4 3''/50-cal. A. A. mounts	7,500	$44,000
Weight of one gun and mount, complete, approximately ... pounds		7,000
8 1'' A. A. guns	10,000	$80,000
4 1'' A. A. twin mounts	15,000	$60,000
Weight of one gun and mount, complete, approximately ... pounds		4,000
2 3-pdr. saluting guns and mounts:		
Total cost		$3,700
Weight of 2 saluting guns ... pounds		3,018
Weight of spare parts, etc ... do		75
Catapult:		
Cost approximately		$22,000
Weight, approximately ... pounds		18,000
2 1-pdr. boat guns, complete:		
Total cost		$2,600
Weight of 2 1-pdr. boat guns, complete ... pounds		788
Weight of spare parts, etc ... do		100
4 .30-cal. machine guns and mounts:		
Total cost		$2,000
Weight of 4 machine guns and mounts, approximately ... pounds		400
2 45-cal. line-throwing guns:		
Total cost		$100
Weight of line-throwing guns ... pounds		21
1 75-mm landing gun complete:		
Cost		$15,000
Weight of 75-mm landing gun ... pounds		4,150
Tools and spare parts ... do		300
150 .30-cal. rifles		$7,500
60 .45-cal. pistols		2,500
Weight of all small arms outfit, approximately ... pounds		6,000
2 triple torpedo tubes, 21''	$138,000	$276,000
Weight of one triple torpedo tube, apprximately ... pounds		10,500
Torpedoes 21'' (U.S. Navy unit cost about $15,000):		
Weight per torpedo about ... pounds		3,600
Weight of torpedo spares, tools, etc., per ship ... do		2,000
8''/55 projectiles, unit cost about	$150	
8''/55 projectiles, unit weight about ... pounds		260
8'' powder charges, complete:		
Cost, about		$68
Weight, about ... pounds		67
5''/51 charges, complete:		
Cost, about ... per round		$35
Weight of 5'' shell, about ... pounds		50
Weight of 5'' powder, about ... do		47
3''/50 charges, complete:		
Cost, about ... per round		$15.75
Weight of box of 4 rounds, about ... pounds		125
3-pdr. saluting charges:		
Cost, about		$0.90
Weight per box of 16 charges, about ... pounds		52
3-pdr. line-throwing projectiles:		
Cost, about		$5.00
Weight, projectile and spindle, about ... pounds		25
Torpedo impulse charges cost about		$1.50
1-pdr. charges, cost about ... per round		$1.25
1-pdr. charges, weigh about ... pounds per box of 60		120
.30-cal. rifle ammunition, costs ... per M		$29.50
.30-cal. rifle ammunition, weighs about ... pounds per 1,200 rounds		100

	Unit cost	Total
.45-cal. pistol ammunition, costs ... per M		$17.50
.45-cal. pistol ammunition, weighs ... pounds per 2,200 rounds		110
(Allowances as stated seem reasonable; 5″ AA might be increased—U.S. Navy carries 450 rds. per gun; 3″ AA might be increased—U.S. Navy carries 500 rds. per gun. The allowances of .30-cal. rifle machine gun and .30-cal. blank are about 40% less than those carried by the U.S. Navy for the 7,500-ton cruisers.)		
The following additional figures may be of value:		
Total cost, main battery fire-control system, approximately		$300,000
Weight of main battery fire-control system, about ... pounds		30,000
Total cost, antiaircraft fire-control system, approximately		$200,000
Weight of antiaircraft fire-control system, about ... pounds		20,000

The Bureau of Ordnance would be glad to furnish you any additional information which you may desire, and is ready to confer with your representatives at at any time.

Very truly yours,

E. B. Larimer,
Rear Admiral, U.S. Navy,
Chief of Bureau of Ordnance.

Exhibit No. 1526

U. S. S. "Tuscaloosa,"
North River, New York, October 1, 1934.

My Dear Mr. Bardo: We received your check for one thousand dollars as a contribution toward expenses incurred in decorating the wardroom. We certainly appreciate your kindness and assure you this check will be of material benefit to the officers who otherwise would have had to pay for the improvements made out of their own personal funds.

I know you will be interested to learn that while the *Tuscaloosa* was in Annapolis and in New York, we received many officers and civilian visitors. All these visitors were most complimentary about the appearance of the ship and the wardroom.

We sail from New York today and will arrive in Annapolis Wednesday. While there we will give a large reception to the Superintendent and the officers of the Naval Academy.

While in New York, as chance would have it, I met two friends of yours the other day, one, W. F. Kenny, of Tiger Room fame. He told me about having been a director for the New York Shipbuilding Company and of having had many pleasant contacts with you.

The other person was Mr. Ottinger who is President of some lumber concern and the Flexwood Company is a minor subsidiary of this concern. Mr. Ottinger and two members of the Flexwood Company came on board for lunch. They were highly pleased with the appearance of the wardroom and greatly encouraged over the results we have attained. This Flexwood Company is interested in using the wardroom of the *Tuscaloosa* in advertising. I believe their advertising manager is going to write up the *Tuscaloosa* in some magazine. Incidentally, Mr. Ottinger is writing to the naval architect at Newport News asking him to visit the *Tuscaloosa* during our stay in Hampton Roads.

Since our arrival in New York Mrs. McElduff and I have been very busy completing the arrangements for a thoroughly attractive wardroom. From M. J. Sloan we have ordered a grouping of furniture for the fireplace consisting of a small sofa for one side and two chairs and a table for the other side. We have also ordered some small low tables to be used in the four groupings for the corners of the room. From Lightolier Company we have ordered floor lamps for indirect lighting for the four corners of the room and three table lamps. We have also ordered one floor lamp for the center grouping around the fireplace. With these lamps I think the room will be beautifully lighted. We have also made arrangements for good looking table covers and other accessories.

We have done all this as moderately as possible and have been able to procure a discount of thirty percent from Sloan and a discount of fifty percent from Lightolier Company. However, even with the utmost economy in buying, the total cost for the wardroom will be approximately two thousand dollars. I am telling you all this because of the interest you have shown in our wardroom and because when I saw you in Philadelphia I informed you that the total cost would be only one thousand dollars.

Captain Ferguson and the wardroom officers join me in sending best wishes to you, Mr. Cornbrooks, Tommy Allen, and all of the other friends we have at New York Ship. We are all very proud of the *Tuscaloosa* and will do everything we can to make her the best cruiser in the fleet.

Sincerely yours,

D. A. McElduff,
Commander, U. S. Navy.

Mr. C. L. Bardo,
President New York Shipbuilding Co.,
Camden, New Jersey.

Exhibit No. 1528

Merger N. Y. Ship & Newport News, July 30, 1932

PROPOSAL

It is assumed that the comparison of earnings of the respective companies are accurate. It is likewise assumed that the earnings of Newport News Shipbuilding & Dry Dock Company are available for a period of years. However, limiting the consideration of the capacity of shipbuilding earnings to the past four years, as is necessarily the case with New York Shipbuilding Corporation, due to the fact that the company has by the barest margin escaped from bankruptcy and should at this time be considered as a new company, does not reasonably reflect the earning capacity of the New York Shipbuilding Corporation. It must be kept in mind that the New York Shipbuilding Corporation as such abandoned shipbuilding in 1925 and only was concerned in the completion of contracts then on hand. It changed its name to American Brown Boveri Electric Corporation and spent millions of dollars in the attempt to profitably enter the electrical manufacturing field. Certain additional shipbuilding work was taken in the period of 1925 to 1928 merely to occupy the facilities not otherwise useful. The passage of favorable legislation materially changed the outlook of the directors and officers and from 1928 to 1931 the American Brown Boveri Electric Corporation was in the process of liquidating its electrical business and at the same time carrying on a combined electrical and shipbuilding business in order to obtain the best possible return on its electrical property. This was concluded by the sale on July 16th, 1931, of the remaining electrical business to the Allis-Chalmers Manufacturing Company and subsequent removal of this business was completed approximately October 1st, 1931. Therefore, shipbuilding earnings as such must be ignored prior to 1925 and for the period 1925 to 1931, inclusive, must be considered as minimized by the necessary electrical activities, disposition, and general readjustment, making the New York Shipbuilding Corporation as now exists practically a new corporation, the earning prospects of which, based on those unfavorable conditions, indicate a normal earning capacity equal to, if not exceeding, Newport News Shipbuilding & Dry Dock Company. It would, therefore, appear that actual comparison of earnings is misleading, it being reasonably assumed that a shipbuilding company operating under the adverse conditions of a foreign name (Brown Boveri), operating in production of unrelated units, handicapped by excessive capital investment, abnormal depreciation and entering into the shipbuilding business anew and a period of intense competition, notwithstanding all of this, having been able to show an average earnings of approximately $1,200,000 per year, has demonstrated its earning ability under normal conditions as being equal to that of Newport News Shipbuilding & Dry Dock Company.

It is, of course, impossible to ascertain the general attitude of the Government toward the merger of two companies out of three available to afford reasonable competition on Government contracts. This is believed to be a controlling matter in the consideration of the method of the merger. The governmental attitude is indirectly connected with the possible distribution of new business. With but three shipbuilding yards available for competition and the announced desire on the part of the Government to maintain those yards as an independent but nevertheless part of the national defense system, governmental policy has generally distributed the work fairly equitable between the three active yards. A merger of two of these yards might very well divide the work into two parts rather than three, so that while now Newport News Shipbuilding & Dry Dock Company independently obtains one-third and New York Shipbuilding Corporation independently obtains one-third, or a total of two-thirds under independent operation, a merger might very well reduce the combined distribution to one-half for the combined yards. It is reasonably certain that if this was the result the loss in combination would far offset any possible benefits through merger.

N. R. Parker.

Exhibit No. 1529

New York Shipbuilding Corporation

MAIN OFFICE AND WORKS CAMDEN, NEW JERSEY, U. S. A.

Cable Address "Fairview"

Camden, *February 5, 1935.*

Hon. Gerald P. Nye,
Chairman Special Committee Investigating the Munitions Industry,
Room 357, Senate Office Bldg., Washington, D. C.

Sir: Supplementing our letter of January 17th, 1935, in connection with paragraphs (8) and (13) of the committee's letter to the New York Shipbuilding Corporation, dated January 2nd, 1935, the following additional information is available:

I. V. Gillis, foreign representative in the Far East, 1910 to 1927: Gillis was engaged October 20th, 1910, as of September 1st, 1910, on a basis of salary and allowances, to be borne by ourselves and four other shipyards. Amounts advanced Gillis, in the period September 1st, 1910, to September 1st, 1914, amounted to, $34,702.87, $19,912.96 of which was borne by others and $14,789.91 was borne by the New York Shipbuilding Company.

A new arrangement was made September 1st, 1914, and there was disbursed to Gillis for the period September 1st, 1914, to March 31st, 1916, $11,323.85, which amount was distributed approximately equal between New York Shipbuilding Corporation, Fore River, Cramps, Newport News, Dupont, and Bethlehem Steel. This arrangement apparently terminated March 31st, 1916.

Thereafter, New York Shipbuilding Corporation made disbursements for itself alone, on the arrangement of $1,000 per year, payable quarterly which arrangement, from the records, apparently continued from March 31st, 1916, to December 31st, 1926.

H. M. Hitchcock, New York representative, 1920 to 1922: Prior to June 1st, 1922, Hitchcock was a regular employee of the New York Shipbuilding Corporation on engineering contact work. The need for his services in this capacity not being further required, arrangement was entered into with Hitchcock on a basis of salary of $200 per month, with use of office space and office services, to be sales representative in New York City. This arrangement terminated December 31st, 1922.

Charles Denby, special representative, China and the Orient, 1922 to 1923: An arrangement was entered into with Denby about September 15st, 1922, as a special representative in China and the Orient, with an allowance of $1,000 for traveling expenses and salary of $500 per month as expenses and remuneration, from about November 1st, 1922, with a limit of 5% commission on net profit on any business concluded by Denby. This arrangement terminated about July 1st, 1923. The actual amount paid to Denby was $5,048.72. No commissions were earned or paid.

Sterling J. Joyner, special agent, 1920 to 1923: Joyner was engaged about October 1st, 1920, as sales representative on the basis of $2,000 per month, to cover traveling and other expenses and compensation while acting as our sales representative. In addition, Joyner was to receive a maximum of 5% of the net profits resulting from any ship contracts secured by his efforts. This arrangement terminated and final settlement was made with Joyner July 6th, 1923. Joyner was paid during this period, salary, expenses, etc., $103,432.98. Joyner was also paid in addition $13,750.00 commission on Japanese tanker *Kamoi.*

P. Peixotto, general delegate, France and Europe, 1921 and 1922: Peixotto was engaged about May 1st, 1921, to represent New York Shipbuilding Corporation on a basis of $500 per month to cover salary and expenses, and commission of 2½% to 5% on the net profits made on business or contracts concluded by Peixotto. This arrangement terminated about May 31st, 1922. The amount actually paid Peixotto was $6,000 for salary and expenses. No commissions were earned or paid.

J. J. Pearson, consulting engineer, 1919 to 1920: Pearson was engaged about January 1st, 1919, to investigate methods and prospects of foreign shipbuilding, at a salary of $500 per month and transportation; also a per diem allowance of $15 covering hotels, sustenance, etc. This arrangement terminated July 31st, 1920. Disbursements under this agreement were $9,500 for salary and $7,991.77 for expenses.

Harry R. Humphreys, special representative 1921 to 1929: It has been found impossible to accurately compile information requested. Further effort and investigation of expense items is continuing.

Casa Mayrink Veiga, Brazilian representative, 1934: Veiga was designated Brazilian representative of New York Shipbuilding Corporation on a strict commission basis in connection with proposed Brazilian naval construction. No commission was earned or paid.

Frank A. Lord, special representative, 1929 to 1932; Addison G. Foster, special representative, 1932 to 1934: Lord and Foster were Washington representatives for the period stated. At special request of the committee, the expenses of Foster for the years 1933 and 1934 are the subject of a separate letter. Further information requested for Lord and Foster is being compiled.

In connection with our investigation of this subject, we find another representative not previously reported in our letter of January 17th, 1935:

S. G. Hopkins, special foreign respresentative, promoting interest of New York Shipbuilding Corporation in Washington, Latin America, etc.:

Hopkins was engaged about November 21st, 1921, at a salary of $500 per month. This arrangement was terminated January 1st, 1926. Salary and expenses for the period $31,248.

Yours very truly,

New York Shipbuilding Corporation,
By N. R. Parker, *Treasurer.*

Exhibit No. 1530

New York Shipbuilding Corporation
MAIN OFFICE AND WORKS CAMDEN, NEW JERSEY, U. S. A.
Cable Address "Fairview"

Camden, *January 18th, 1935.*

Reference: Letter to New York Shipbuilding Corporation, January 2nd, 1935.

Hon. Gerald P. Nye,
Chairman Special Committee Investigating the Munitions Industry,
Room 357, Senate Office Building, Washington, D. C.

Sir: The reference letter (paragraph 20) requests information as follows:

"(20) Dates of the original and supplemental contracts on naval ships ordered by the Government during the years 1917, 1918, and 1919, until the completion of those ships, including a statement of the financial effect of those changes with regard to the company and the amounts involved in those changes."

Contract no. 199, airplane carrier S *Saratoga:* The original contract for this vessel dated May 5th, 1917, is on cost-plus-10% basis, an extract from the contract reads as follows:

"1. The price to be paid for the vessel to be constructed and furnished in accordance with this contract, including authorized changes therein, shall be the actual cost plus 10 percent for profit." * * *

Letter of the Acting Secretary of the Navy, dated October 11th, 1920, changes the contract from cost plus 10%, to cost plus a fixed fee of $2,000,000.00.

Supplemental contract dated October 30th, 1922, provides for the conversion of battle cruiser *No. 3* into airplane carrier *No. 3*.

Supplemental contract dated May 18th, 1927, provides a definite price for the contract.

Contracts nos. 200/201, battleships *Colorado* and *Washington:* The original contracts dated January 17th, 1917, were on a flat price basis of $11,450,000.00 each.

Supplementary contract dated July 18th, 1917, changes contracts to a cost-plus-10% basis.

Letter of Acting Secretary of the Navy, dated October 11th, 1920, changes the contracts from cost-plus-10% basis to cost-plus fixed fee for profit of $1,350,000.00.

Supplemental contract dated August 17th, 1923, cancelled the contract for the battleship *Washington*.

Contracts nos. 210/215, torpedo-boat destroyers: The contracts for these vessels dated July 11th, 1917, were on cost-plus-10% basis, and they were completed under the original contracts.

Contracts nos. 216/19, torpedo-boat destroyers: The contract for these vessels dated September 28th, 1917, were on cost-plus-10% basis, and they were completed under the original contracts.

Contracts nos. 220/239, torpedo-boat destroyers: The original contracts dated December 29th, 1917, were on cost-plus-adjusted-fixed-fee basis.

Supplemental contract dated May 8th, 1919, was on a revised cost-plus-adjusted-fixed-fee basis.

The limited time available does not permit the preparation of a statement of the financial effect of the changes with regard to the company and the amounts involved.

Yours very truly,

New York Shipbuilding Corporation,
By N. R. Parker, *Treasurer.*

Exhibit No. 1531

There was a meeting of representatives from plants engaged in the construction of naval vessels and certain allied industries engaged in the construction of materials and equipment for naval vessels held on May 8, 1934, in room 661, 11 Broadway, New York, New York, at 10:30 a.m.

Mr. H. G. Smith presided.

There were present: Mr. J. W. Powell, United Dry Docks, Inc.; Mr. R. E. Gillmor, Sperry Gyroscope Co., Inc.; Mr. J. H. King, the Babcock & Wilcox Co.; Mr. A. E. Phin, the Babcock & Wilcox Co.; Mr. Joseph Sullivan, Worthington Pump & Machinery Corp.; Mr. I. W. Jackman, Worthington Pump & Machinery Corp.; Mr. Roscoe Seybold, Westinghouse Elec. & Mfg. Co.; Mr. C. L. Bardo, New York Shipbuilding Corp.; Mr. D. W. Niven, General Electric Co.; Mr. S. L. Whitestone, General Electric Co.; Mr. A. B. Homer, Bethlehem Shipbuilding Corp.; Mr. H. H. Schulze, Bethlehem Shipbuilding Corp.; Mr. L. Y. Spear, Electric Boat Co.

Mr. Smith. Gentlemen, I called this meeting thinking it advisable that we give consideration to the particular paragraph in the Vinson bill which relates to profit, and I invited all of those shipbuilders who are engaged on naval contracts at the present time plus representatives of the larger allied industries. Of course you are all very familiar with the particular provision of the act which is covered under section 3, pages 2 and 3, of the act. Would you like to have it read? I think it is written on your hearts pretty closely, but unless you wish to have it read I will not do so. I have a few spare copies of the bill—would anybody like one? I previously asked for comments, if anybody wished to submit them, in connection with this paragraph, and I have received only two in writing; one from the Newport News Shipbuilding and Dry Dock Company and one from the Bath Iron Works. Mr. Newell apparently will not be here today. I might read these—they are very brief.

(Here Mr. Smith read letters from Mr. Gatewood and Mr. Newell.)

(Here Mr. Whitestone entered and was introduced by Mr. Niven.)

Mr. Smith. I will tell you all I know about this subject from the Washington end and what has been done on it up to date. A committee of five or six—I will say six, I do not know three of the men.

Mr. Niven. I was told it is five.

Mr. Smith. They have had several meetings and they finally decided to make a report to this effect, that cost is labor, plus material, plus a proper portion of overhead. That, I am informed, is where they began and where they ended. I have talked at length with Weyerbacker, one of the Navy members of the committee, and he said the other day as it stands at present the Treasury Department's idea is to proceed along the same lines as "income tax returns", and he feels you are entitled to set up whatever accounting system you need. He thinks in view of this you are entitled to set up a system to take care of problems arising under these contracts. You do not have to go along with your present system if you think it is inequitable. Gatewood thinks it would be inequitable to have a uniform overhead for all classes of work.

Mr. Niven. I understand they won't allow you to change your present set-up. Did you get that?

Mr. Smith. No—just the opposite.

Mr. Gillmor. I did not get that idea either. I talked to several members in the Navy Department and the opinion I got from all those people was that they would use the income-tax procedure and you can account under your present method or otherwise. Beyond that they were not prepared to say. They thought it might lead to a lot of controversy. They thought it would result in Treasury decisions which would gradually build up a lot of rulings on this just as on the income tax. They interpreted the words in the act—"the method of ascertaining the amount of excess profit"—should be determined by the Secretary of the Treasury. They interpreted those words to mean the administrative methods of ascertaining these amounts should be determined by the Secretary of the Navy.

Mr. Niven. Mr. Smith said Newport News was estimated to have a 20-percent higher overhead on naval work than on merchant work. They would not be allowed to do it in this case.

Mr. Gillmor. Not arbitrarily.

Mr. Spear. We have a special rate for submarines.

Mr. Powell. Your overhead percentage can vary 300 percent—there is no top limit.

Mr. Spear. You might be justified in changing your differential right in the middle of your contract. There ought to be some elasticity.

Mr. Powell. If you charged overhead on the basis of productive labor that would automatically take care of it.

Mr. Spear. I am talking about the distribution between the different classes of work.

Mr. Powell. In other words, you do not pro rate?

Mr. Spear. After we have segregated the cost of submarines the balance of cost is pro rated over all remaining items of work.

Mr. Bardo. I think you have to do that now. You necessarily would not make the fine line between overhead.

Mr. Smith. Mr. Gillmor, I got this thought which checks up with what you said. This Government committee has no intention at the present time of laying down elaborate rules. As questions arise they will settle them.

Mr. Gillmor. They seem to be pretty open-minded. I wrote them a letter on this matter as it is very important to us. A 10-percent profit to us is ruinous. The ratio of turn-over is so broad. It averages about 50 percent. You have to consider contingencies for past years so that you come out with about a three-percent profit. It is a risky business.

My committee (S.A.M.) got together and we drafted a letter giving a preliminary expression of our views and took that down to the Treasury Department and got Mr. Moore to give us a hearing. He did not raise any great objection to it.

Mr. Smith. He didn't?

Mr. Gillmor. No; he felt any reasonable expense would be justified, but they will proceed just as they did with income tax.

Mr. POWELL. During the war the cost-accounting system tendency was to cut out more things. They cut out our legal expenses. I do not know how they expected us to do business without lawyers.

Mr. GILLMOR. That was the Navy.

Mr. POWELL. The Navy and the Merchant Fleet Corporation.

Mr. GILLMOR. They propose to administer this through the same bureau as income tax.

Mr. SMITH. Yes. That is where it is going to be unless there is a change in the law. The Navy Department does not want to deal with it.

Mr. GILLMOR. They do not want to get into it.

Mr. SMITH. The man who drafted this bill drafted it with the purpose of allowing some leeway.

Mr. KING. Are you going to be allowed your actual expense? Will they allow the actual overhead or a predetermined one?

Mr. SMITH. I think you can collect your actual overhead as long as it goes against all work.

Mr. GILLMOR. They point to this provision in the act that the contractor must make his statement under oath.

Mr. NIVEN. They go on to say that the books shall be open for inspection at all times.

Mr. GILLMOR. I believe their present idea is to make check inspections only.

Mr. POWELL. This thing will go along all right until somebody turns back some money.

Mr. GILLMOR. I think the only thing to do is act in unison.

Mr. SMITH. Supposing you do have ten percent profit and a few dollars left over. The industry may find itself in a situation where there are items of cost which could have properly gone in but were not included. It seems to me very desirable that so far as the outstanding items of overhead are concerned, there should be unanimity of opinion.

Mr. GILLMOR. Does the shipbuilding industry have uniform cost-accounting systems?

Mr. SMITH. No.

Mr. SULLIVAN. Our industry is using a system which has been adopted by about a hundred firms, and in the system we have definitely stated how we arrive at cost. If the shipbuilding people would adopt such a manual as that, it would be all right.

Mr. KING. So far as we are concerned our cost-accounting system does not follow that exactly. It is the principle that we have adopted.

Mr. SULLIVAN. We follow it with slight variations.

Mr. SMITH. I think the question is what they might throw out. We should be sure that everybody puts in all that is allowable cost.

Mr. POWELL. We advertise for commercial work and they might say that should not be charged.

Mr. SPEAR. That benefits the naval work. In this case it ought to be in overhead.

Mr. NIVEN. If they want this Navy work exclusive work, do they want direct charges on naval work? I imagine nothing would be gained by either side.

Mr. SMITH. Of course, advertising is a type of expense that, in my opinion, is properly proportioned against all contracts, naval as well as others, because advertising is for the purpose of getting business and to the extent that new business is obtained, it helps to carry the overhead on all contracts.

Mr. SULLIVAN. I might mention copies of that manual are available at $1.50 each.

Mr. NIVEN. That means most of the allied manufacturers are following about the same system of accounting. To facilitate the shipbuilders and the allied manufactuers, the shipbuilders, as far as practicable, should follow that so that there would be no conflict.

Mr. SMITH. You have two definite things. This NEMA system, which has been developed with a great deal of care, I understand, is probably as good as any out. I am not familiar with the Worthington system.

Mr. SULLIVAN. It was worked up from that.

Mr. GILLMOR. We have written this letter:

(Here Mr. Gillmor quoted from a letter contained in a memorandum for members of Scientific Apparatus Makers of America, dated May 14, copy of which memorandum is attached to these minutes.)

Mr. GILLMOR. In regard to the interest and royalties, none of these items can be allowed under the wording of the act. They were of the opinion that our letter would be much stronger if these two paragraphs were deleted.

Mr. Bardo. Is that net profit?

Mr. Sullivan. Net profit. The Attorney General has written a letter to the Secretary of the Navy in which it is stated that it has no application to making repairs to vessels. Under an unofficial interpretation the following would be exempted from the act. That would exclude modernization, any items from stock, any items purchased by shipbuilders for new ships contracted for by the Secretary of the Navy prior to the date of the act.

Mr. Sullivan. You might say "the Secretary of the Navy." New contracts made by the Secretary of the Navy after this date.

Mr. Smith. That relates to authorization by contract not placed until after that date.

Mr. Sullivan. Any contracts made before the passage of the act would not come under this act.

Mr. Smith. As I understand it, Mr. Gillmor, the letter from which you are reading was drawn up for your association—it has not been submitted to anyone in Washington?

Mr. Sullivan. We are holding an annual convention next week at which we will get everyone's opinion.

Mr. Whitestone. In our company we have a number of plants and each plant follows this main system referred to and we do not keep our accounts in accordance with the regulations of the Income Tax Bureau. They require a plant to show the amount of income returned for tax purposes—we only show that to the examiner. The peculiar feature is, I understand now, the Income Tax Bureau is going to do the checking on this. It is utterly impossible for us to break down the overhead percentages used. To segregate for example one complaint that the income-tax examiners have made that the rates used are excessive and that you must not claim the full amount of that. The rates we are using we do not consider excessive for commercial purposes, but we are quite willing to cut out a certain amount.

We have not changed our companies now under a contract or subcontract. We will be getting these costs from each of our factories for each article furnished, but it is not segregated. I think as a commercial proposition it is impossible in view of the fact that we have always kept our accounts under this manual. The question arises whether it now becomes necessary to change and make it conform to regulations of the Income Tax Bureau. I assume that most of you gentlemen here have only one or two plants, but if you do your cost records may be at the head office. We have no cost records, they are all located at the factory. They have there detailed items all supervised from Schenectady. I do not quite see how we are going to do this if income tax examiners are to be sent in. We do not know how much is included. It is all merged and we have been using what we call a normal percentage of overhead. You say you have to give an explanation of using normal or actual items, otherwise your bids will not conform. I am in the same position and from all I have heard so far this morning we should use the actual percentage. Why should we give the Navy Department the benefit of all the commercial work we have had before. I think the terms of this contract are so rigid that we can afford to be rigid in our terms.

Mr. Smith. When you say "actual" I suppose you mean your actual average.

Mr. Whitestone. No; I mean actual expenditures.

Mr. Smith. As applied to that particular contract?

Mr. Whitestone. In case of shipbuilding it will probably apply to a whole ship.

Mr. Smith. If you had one plant using actual and another normal——

Mr. Powell. Suppose three or four yards take contracts on a competitive basis. Then one fellow turns in actual and has a very low overhead and he turns back a lot of money—it simply throws out your whole idea of competitive bidding. It seems to me you have almost got to come to a basis of agreeing with the Treasury Department on some fixed overhead. If we could spread our overhead over ten years I would say it would be high enough. I think it would be high enough so that you would not have to worry about your ten percent profit. The average overhead would be plenty high enough to satisfy anybody.

Mr. Spear. It is all a question of a figure.

Mr. Whitestone. You have no uniform system.

Mr. Smith. The yards have the same items.

Mr. Powell. There is a decided difference in overhead.

Mr. Whitestone. That is the most important thing. If you could print the NEMA Manual and say we are following this you would not have any difficulty. You have no uniform accounting system.

Mr. SMITH. I can see difficulty when we reach a certain stage in these proceedings if we have any marked differences. Take the specific case of leading men—there has been a great variation of practice. I can see the possibility of a situation where you might have a variation in practice. You might get a different conclusion from the Treasury Department.

Mr. POWELL. It depends on which companies you go into.

Mr. SMITH. You are going to wind up with some percentage of overhead.

Mr. SCHULZE. We have a separate account so that we could always tell what that is. The distribution of cost is the same.

Mr. WHITESTONE. If he devotes 100 percent to that job.

Mr. SMITH. There was a time when all leading men were charged to overhead.

Mr. SPEAR. They are tending away from that.

Mr. POWELL. We charge everything to overhead and distribute to productive labor. It would take more of a cost force to distribute labor that way.

Mr. SPEAR. It just naturally falls into productive labor.

Mr. BARDO. We have to get our accounting departments together and see whether we should have a uniform system. It seems to me we are just talking out the window now. We know a lot of things have to be done. We should get the accounting officers together and see whether the systems can be adopted.

Mr. SMITH. There must be a committee set up to study it. We have to see that you get into cost everything that belongs there.

Mr. BARDO. We should get the accounting officers of the different plants together and then proceed under the guidance of a committee.

Mr. SMITH. What is your reaction to this: You have the shipyards and the allied groups but your uniformity should be attained first amongst the shipbuilders themselves and then there can be some approach to uniformity between the shipbuilders and the allied groups.

Mr. GILLMOR. If the shipbuilders, boiler manufacturers and electrical manufacturers act in accordance with uniform rules it will be so strong that I think the Income Tax Bureau would have a hard time resisting it.

Mr. BARDO. They could not break it down. You have two established, recognized systems of accounting in the two principal groups with which we do all our business. We should get our accounting officers together. I do not think we can decide anything.

Mr. SMITH. Roger, what is your reaction?

Mr. WILLIAMS. I think Mr. Bardo's suggestion a good one. We should have a meeting of our accounting officers immediately. I think you could make it in one meeting.

Mr. BARDO. I think we should get the shipbuilders together first on a uniform plan.

Mr. SMITH. Homer, what do you think about it?

Mr. HOMER. The method of determining the ten-percent profit is to be established by the Treasury Department and the obvious thing is that the industry will have to establish something for its protection.

Mr. JACKMAN. They can establish it but the Treasury Department will have to approve it.

Mr. BARDO. We should get something in the first instance that will meet the requirements of the Treasury Department. We do not want to wake up and find a difficult situation due to some interpretation.

Mr. SMITH. Spear, what is your reaction?

Mr. SPEAR. All we can do is follow Bardo's suggestion. First get the shipbuilders together and then follow up with the others.

Mr. POWELL. I believe thoroughly in a uniform cost accounting system for the industry. I think this will force us into the adoption of something like that. If we can get together on a uniform system, that is a standard practice, it is going to be helpful in getting by the Treasury Department.

Mr. SMITH. If that meets with your approval we will call first for the comptrollers of the shipbuilding group to get together with the understanding that we will make use of whatever information is available. Take this NEVA system, which may be a great help and good guide. Then we will get together with the allied group for the purpose of seeing how close we can work in uniformity with them. There is no question about it, if everybody works along the same line we have a good front.

Mr. KING. Would it be any help to have the allied industries sit in with that group?

Mr. SMITH. I am perfectly willing to call them all together.

Mr. WILLIAMS. If they would give us one man like Mr. Seybold.

Mr. SEYBOLD. I think Mr. Whitestone is more familiar with the NEVA system than I am.

Mr. SMITH. I know we would like to keep in contact with what you have done.

Mr. GILLMOR. We will be glad to help you.

Mr. POWELL. Don't you think you would get along faster with the shipbuilders first meeting by themselves?

Mr. SMITH. All right. We will call the comptrollers of the shipbuilders to get together. This office is at their service. As soon as we make some headway we can get together with the allied industries.

Mr. KING. That should be done immediately.

Mr. SMITH. Yes. How will Thursday or Friday of this week be? Suppose we call it Thursday.

Mr. HOMER. You had better give them more time.

Mr. WILLIAMS. They will need several days.

Mr. SMITH. Suppose we start on Monday. I will notify all of the naval builders of the meeting next Monday.

Mr. BARDO. I think they should have a copy of Mr. Gillmor's letter.

Mr. GILLMOR. I can give you a copy of it now.

Mr. SMITH. Fine. Is there any objection to our sending copies of this out?

Mr. GILLMOR. None at all.

Mr. SMITH. Can you spare four or five more?

Mr. GILLMOR. Yes.

Mr. SCHULZE. It may save time to forward it to each of the comptrollers.

Mr. WHITESTONE. I think you can get the NEVA manual for $10. Some of them already have it.

Mr. SMITH. We should have them available for next Monday, at least one copy.

Mr. WHITESTONE. I was hoping to learn something about this restriction of profit which makes no provision for a deficit. I do not know whether you are concerned with that but we are.

Mr. GILLMOR. We can point to the justice of that very easily.

Mr. WHITESTONE. Of course you can. There are so many things. Here your profits are restricted. I do not see how you can get back any losses.

Mr. SMITH. You are in a bad situation. If you are in an unfortunate contract and lose money there is no recovery, but if you are in a fortunate contract and make money your profit is limited and you sign a check to the Treasury Department for anything in excess of 10 percent.

Mr. WILLIAMS. Who do you send the check to?

Mr. WHITESTONE. That is all in the contract.

Mr. GILLMOR. We should point out the uneconomic phases of this and get the act repealed.

Mr. SMITH. I think the Navy Department is appreciative of the difficulty in operating under the profit limitation clause of the bill. It is bound to lead to more or less trouble in accounting for cost and it is hoped that in the course of time the section will either be repealed or materially modified.

Mr. WILLIAMS. Mr. Smith, are you going to bring up today the subject of submitting subcontractors' bids?

Mr. SMITH. The apparent purpose of Mr. Ickes' bulletin seems to be to protect subcontractors and to prevent chiseling of prices, and it is understood under Mr. Ickes' bulletin that subcontractors' bids are to be filed twenty-four hours ahead of contractors' bids. As written the bulletin applies to all Government departments, but I am informed by the Navy Department they consider it unworkable and are seeking either to have it modified, or canceled so far as naval contracts are concerned which are dependent on P.W.A. funds.

Mr. WILLIAMS. The trouble is we cannot make any subcontracts in advance.

Mr. JACKMAN. Have you talked to Admiral Peoples?

Mr. SMITH. No.

Mr. KING. You have a modified form of Mr. Ickes' bulletin in connection with Army Engineers contracts. We just made a contract with the Army Engineers for two dredges. The Marietta Manufacturing Company was the successful bidder. In their bid form they have to use engines of a certain type. I do not know the name of the engines and the boilers are B. & W. and the pumps Worthington and they list the names of the equipment they propose to furnish.

Mr. WILLIAMS. Until detailed drawings are made it is impossible to do that.

Mr. KING. That is one objection you have to Public Works funds. They get the cheapest sort of thing they can. That is the big objection and is what causes this trouble.

Mr. Powell. The Navy will take a low bid from anybody.

Mr. King. We are very much opposed to this.

Mr. Smith. I think the Navy will get it straightened out. I think the status of all other Government contracts under this act is that we are likely to have trouble with it. The Navy, I think, because of the size of their contracts will be able to do something.

Mr. Williams. That is a case where uniformity is important.

Mr. Smith. I think from what Admiral Land said yesterday they are so sure it is not workable they will find a way to have the order modified or cancelled.

Is there anything else anybody would like to bring up at this time?

Mr. Spear. Is there any news on the forty-hour week?

Mr. Smith. Yes; I spent all yesterday on it. I think if the employees will say they want forty hours they will get it overnight.

Mr. Powell. I would not give two cents for our chances after getting through there last Monday.

Mr. Bardo. Johnson called me on Saturday and told me that if our employees want forty hours they can have it.

Mr. Bardo. The Federal and State employment agencies stated the fact that there was a very great shortage of skilled help, and that is the type of help we use. Another argument was that the city was not able to carry on its work.

Mr. Smith. That is also true in New York City.

Mr. Powell. I think I will send them another telegram asking for welders. I do not believe there is a qualified welder in this town that has not got a job.

Mr. Homer. We have had trouble getting lathe hands. We show them the big lathes and they say they never saw one like that before.

(The meeting adjourned at 12:10 p. m.)

Exhibit No. 1532

There was a meeting of comptrollers and others from the various shipyards engaged on the construction of naval vessels for the purpose of determining whether it would be practicable for the shipyards to adopt a uniform cost accounting system held in room 661, 11 Broadway, New York, N. Y., at 10:30 a. m.

Mr. H. G. Smith, presided.

There were present: Mr. H. A. G. Taylor, Electric Boat Company, Mr. G. H. Bates, United Dry Docks, Inc., Mr. W. A. Bagley, Federal Shipbuilding & Dry Dock Co., Mr. F. A. Shick, Bethlehem Shipbuilding Corp., Ltd., Mr. H. J. Harper, Bethlehem Shipbuilding Corp., Ltd., Mr. F. O. Ritter, Bethlehem Shipbuilding Corp., Ltd., Mr. F. C. Belser, Price, Waterhouse & Co., Mr. W. E. Blewett, Jr., Newport News Shipbuilding & D. D. Co., Mr. N. R. Parker, New York Shipbuilding Company, Mr. C. J. Langell, New York Shipbuilding Co.

Mr. Smith. The meeting called last Monday of shipbuilders engaged on naval work and certain of the allied industries engaged in manufacturing equipment for naval vessels considered the paragraph of the Vinson bill that relates to a restriction of the earnings to ten percent of contract price. At that meeting representatives of the allied group from General Electric, Westinghouse, Babcock and Wilcox, Worthington Pumps, and Sperry were present.

The outcome of that meeting was the feeling that a unanimity of action on the part of all those engaged on construction under the Vinson bill was very desirable so as to put up a united front in connection with any problems that might arise as to what properly belongs in cost. You are all familiar with what is going on in Washington. A committee of five has been appointed, three from the Navy Department and two from the Treasury Department who have been sitting as a committee to study this problem and the Navy Department has taken the ground that it is up to the Treasury Department. They do not want anything to do with it and it is wholly up to the Treasury Department to handle it. They spent a lot of time on it and finally decided that cost is labor plus materials, plus a proper percentage of overhead. That is all they have decided upon up to date.

I talked with one of the Navy members on the committee and he said the present intention was to handle it very much along the same lines as income-tax returns, and from time to time as questions arise they would settle them. However, they do not intend to make any elaborate analyses of what properly belongs in cost and what does not. They realize that there will be questions from time to time and they advised us very strongly to do the very thing we have done. That is, go carefully over the situation. They think we are justified in setting up an accounting system on a basis to take care of the work. He could not commit himself but he felt sure if the work requires a particular overhead that would not apply to all work we were perfectly justified in setting up such, not an average overhead but what could be called a normal and quite properly if you have been losing money on naval work to take account of that and write it off in your cost accounting system.

He is strongly of the idea that the Treasury Department will never go into it more deeply than in oncome-tax returns. I do not subscribe to that. If you are around the ten percent line you are apt to be asked some pertinent questions and you may have to return some money.

At our meeting last week it was felt there could be a considerable uniformity of practice as between shipbuilders and material men, and the group last week defined material men as anybody who supplied material, a subcontractor or those who do work within a shipbuilders plant only. A subcontractor is one who takes a contract to do work on the ship itself. It applies to both material men and subcontractors. What difference there might be in application of cost I do not know.

The outcome of the meeting last week was that it is best for the shipbuilders to get together first and see how near they were in accord. If items go into cost in one plant they will go into it in all. The shipbuilders having once gotten together and studied the matter and satisfied themselves they are in reasonable accord the matter should again be taken up with the allied group. We did not have them here today because there would be too many.

They left with us two things: Mr. Gillmor, president of Sperry Gyroscope, had a memorandum which had been prepared by their association, of which I sent a copy to the yards. They had some pretty constructive suggestions. They are in a very serious situation because of the very high development charges with which they are faced. I sent that memorandum out and then we got also two copies of the Uniform Accounting Manual of the Electrical Manufacturers Association, the NEMA Manual, which has a standard cost accounting system which is in pretty good shape. The Worthington Pump people also have a standard system taken from this manual. I imagine whatever you get out of this manual will cover what you will find in any of the other machinery groups.

I called this meeting, therefore, of the comptrollers of the various plants with the idea that you would want to set yourselves up as a committee to deal with these matters until they are pretty well disposed of. You would want to consider the doubtful items. Somebody will raise the questions they raised during the war. Advertising might be brought up. It has a very important place; if you can secure more work you can reduce your overhead on other work. Then you have your depreciation rates. I presume that they would try to allow the same as is allowed in connection with income tax.

Mr. Bates. Yes.

Mr. Smith. Your A. S. & G. charges in general are outside of advertising. You may find a good many questions ought to be worked out in the industry itself before we get into these contracts as to what the effect of charging an item as overhead rather than direct labor that needs to be considered if it goes in. The practice, I imagine, is quite different in the various plants. Some used to charge leading men into overhead and some through direct labor.

How far you need me in carrying on the work of this committee, I don't know, but I am at your service. I think in taking hold of the accounting problems to act you ought to appoint a chairman of the committee to carry on the work, and when you finish your deliberations today you may want a subcommittee to carry on permanently until you are satisfied that we are sufficiently in accord so we won't lose any tricks.

Mr. Shick. Do you think it necessary to have a uniform accounting system?

Mr. Smith. No; I do not. It should be sufficiently understood that all charges should be made by all.

Mr. Blewett. We have recently gone through the cost of changes. We asked a higher overhead on the changes than our normal overhead. We asked for twenty points higher and they granted us ten. In other words they admitted naval work called for higher overhead than commercial work. If we could obtain twenty percent higher it would cover everything such as equipment, development charges and all items. So far as going into a uniform cost accounting system, that is a job of five or ten years rather than a month or so.

Mr. Smith. I think that is so, but I think you could have a sufficiently uniform system to be assured that you have in cost everything that is entitled to go there.

Mr. Shick. Do you think it would be possible to get the Internal Revenue Department and the Navy to agree as suggested in this memorandum on a fixed overhead.

Mr. Smith. Percentage?

Mr. Shick. Yes.

Mr. Smith. I am doubtful and I do not know whether the industry wants it.

Mr. Shick. Can the individual concern get it? Could there be a clause in the ruling that the Revenue Department could agree on a fixed overhead?

Mr. Smith. I think that is a question that the industry wants very carefully to determine whether it wants it.

Mr. Shick. These people advocate it.

Mr. Smith. Yes.

Mr. Shick. We should make up our minds whether we want to go along with them.

Mr. Smith. You are immediately confronted with the problem of what is in your overhead. When you ask for a percentage are you not prescribing a uniform system? You have to define your direct labor.

Mr. Blewett. If they will permit twenty points more——

Mr. Smith. I do not know what your practice is. Take the question of leaders, you may charge them into overhead or direct labor, I do not know; another plant might do the direct opposite.

Mr. Blewett. What I am looking into is getting into cost the cost of development work and items which won't show up unless you apply them as a job which income tax people won't allow.

Mr. Begley. You would not want to change your system.

Mr. Blewett. You would not change your system. We are building a new galvanizing plant that has to go into government work. A higher overhead would take care of it.

Mr. Bates. You mean a standard or normal overhead?

Mr. Blewett. Yes.

Mr. Smith. Let me ask you this, Blewett, you say you asked for so many points higher. Would you do that on the basis of each plant saying here is my average overhead, we want twenty points higher for naval work taking into account no two plants might have the same.

Mr. Blewett. Yes.

Mr. Shick. Only if you could get it high enough.

Mr. Smith. That is the point where I see difficulty with the Government.

Mr. Shick. Going back to past experience I would be very much surprised if they ever agreed for any concern to have a standard overhead for those particular jobs. So far as Bethlehem is concerned we would agree on it. If you could do that you could take care of a lot of these special things, depreciation, A. S. and G. and that would save us all a lot of trouble four or five years from now.

Mr. Smith. You go on the assumption each plant might have a different figure?

Mr. Shick. We might or might not.

Mr. Smith. That is a point I doubt whether can be determined at the present time.

Mr. Shick. Will you represent shipbuilding if it is the intention of this meeting that we might agree on some features of our cost system and go to Washington with the electrical manufacturers to ask for certain considerations?

Mr. Smith. Yes. I wrote a letter sometime back volunteering on behalf of the shipbuilding and allied industries to handle it on behalf of the council.

Mr. Shick. I met with Mr. Whitestone last Thursday and he is going to Washington in connection with the electrical industry. He hoped this meeting might appoint somebody to go with him. I said you would go, Mr. Smith.

Mr. Smith. The prime contracts are with the shipbuilders and so far as all work is done in private yards, the others are subcontractors with us. That was my object. If you agree on certain specific things you think ought to be done we can cooperate with the other groups with a view of keeping them in line.

Mr. Blewett. There was one point—that is subcontractors—any excess profit made by them, is that credited to the shipyard contracts or is that paid direct to the Treasury?

Mr. Smith. That is a new one. I do not know.

Mr. Shick. I think it would be a mistake for this group to have an argument with the Treasury Department. I feel that if you get into such a controversy at the present time they would simply rule against you. If you go back under cost-plus contracts the selling expenses were disallowed. Contributions and donations were disallowed, and office furniture and fixtures had to be capitalized. Now there is another item mentioned in this memorandum if it were possible to get approved it might be possible to agree on a fixed rate of overhead. I think we would be satisfied to have somebody argue that for us. If you could get such a thing I would be satisfied and I think we could agree on a high enough percentage that we would all be satisfied, but to argue on detailed items of cost that were disallowed during the war I think we would lose.

Mr. SMITH. I would not do that. This group ought to go away satisfied as to what items get into cost. Each and everyone of us should be assured that we are going to put into cost everything that properly belongs there.

Mr. SHICK. Special facilities cannot be taken care of through overhead. Any money spent on special facilities should be considered as part of the contract price and also as part of cost.

Mr. SMITH. That is exactly what you want to determine here. It would never be brought up in Washington, until somebody challenges it.

Mr. SHICK. We have taken that position in reference to our work at Bethlehem. We have an order for shells. Our people say they have to put in additional equipment and, as I understand it, the other manufacturers have to do the same thing. We should state that in the contract. I am afraid if we do not do it in advance they will interpret such expenditures as capital and allow only depreciation.

Mr. BLEWETT. They say as much when they tell you it will be governed by income tax.

Mr. SHICK. We have taken contracts for armor plate and shells and will have to put in special equipment, and it has been the practice to put that in the contract. It seems to me if you leave a thing like that until the end you might lose out.

Mr. SMITH. You can put it into cost with the probability that in the end if the question is raised that you might have to allow some credit on it.

Mr. BEGLEY. It would only be thrown out of your income tax if you tried to charge it to tax.

Mr. BATES. You could with this ten-percent basis.

Mr. BELSER. You might overplay your hand. You could not get it on a subsequent contract. You get the whole cost added on to selling price, and that is a different thing.

Mr. SHICK. Do you want it in the selling price?

Mr. SMITH. You could not very well throw it into your bids.

Mr. SHICK. No. You could not get a high rate of depreciation.

Mr. BLEWETT. Didn't we have such a thing as adjusted prices during the war? We took such things as cost of machinery and put it into an adjusted price.

Mr. SHICK. That was a cost-plus contract. You only got ten percent of it. I can give you an example of what happened on a gun contract. The Navy wanted a sixteen-inch gun. We had to buy the equipment to machine it. Daniels said, "All right; this is not the last order we are going to give you for sixteen-inch guns. We will let you add $35,000 per gun so you can amortize this equipment. We will let you amortize part of the cost through this job so you will get paid for your new equipment, but you have to take a little chance." They did that for the reason they did not want to say to us, "We will pay you for this." If they did, then they would own it, but they wanted it to stay in our possession. We were only amortizing $35,000 on that job.

Mr. BLEWETT. That was just the price feature of it.

Mr. SHICK. I do not think you want it that way.

Mr. BLEWETT. Add it to the contract price afterwards.

Mr. SHICK. We have to return the excess profit over ten percent. It ought to be put right in these contracts that we have to pay so much for additional machinery.

Mr. BATES. This is a different kind of contract.

Mr. BLEWETT. I am talking about something entirely different.

Mr. BATES. Suppose you take a very definite thing. That is welded boats. There is no reason in the world why that welding equipment should not be considered cost of the job.

Mr. BLEWETT. We have enough equipment. You cannot include that.

Mr. BATES. Ours is already bought.

Mr. BLEWETT. We bought lots of items under this category. That is special facilities for naval work. You have to have certified welders for naval work—you have to run a school. That all should be chargeable against Navy work.

Mr. BATES. As direct cost? While they are being educated it should be charged. For purposes of contracts like this we would be much better off if it were put into direct cost.

Mr. BLEWETT. We should use these to satisfy them a Government job should have a twenty-percent overhead.

Mr. SHICK. Would you take that up in advance or would you wait until the job is complete?

Mr. SMITH. That is the thing to decide. Let us concentrate on that for a moment. Let us first come back to this overhead. Do we want to go on the basis of going to the Treasury Department now and point out and tell them we have set up on our books a higher overhead? If we do that and if they accept that, do we want to assume that will take care of new capital charges necessary because of naval work? If they do not accept that do we want to go to them now and take up this question of capital charges so that a proper percentage of it goes into cost? It seems to me there are one or two points around which this hinges. Supposing we could get twenty points higher——

Mr. SHICK. Suppose we could get an average over a five-year period.

Mr. SMITH. At fixed overhead? Do you mean you charge that all off in five years?

Mr. SHICK. Take five years. You would determine the average by including all such items. We could then agree on that basis to a fixed overhead.

Mr. SMITH. Establishing your overhead on a five-year basis so that some percentage above that is added.

Mr. SHICK. Yes; on account of naval work.

Mr. SMITH. Twenty points is a good thing to shoot at.

Mr. BLEWETT. Would it prejudice our case if they refused to talk about this?

Mr. SMITH. No; I do not think so.

Mr. BELSER. Why not do it and argue afterwards?

Mr. SHICK. These other people are talking, and we would have to go along with them or pull them off. I understand the electrical people are going to do the same thing.

Mr. SMITH. Whitestone said he was going to talk.

Mr. SHICK. He is going to argue that they cannot compile their actual cost on these contracts based on their present method of accounting, as their present method of accounting is a normal overhead.

Mr. SMITH. They may nail us down to something we do not want.

Mr. SHICK. I am afraid so. During periods of depression they do not cover all their overhead, but they had built up a reserve. It is what they call a "fixed overhead."

Mr. SMITH. But it is a higher overhead than their actual.

Mr. SHICK. Take 60 percent, for example. That may not take care of it in a bad year but through their reserve they figure that normal overhead is taken care of.

Mr. SMITH. But they have already set up that system.

Mr. BLEWETT. These gentlemen have apparently gone into the Treasury Department because the offices of the Treasury have very little comment to make. They are already putting their cost before the Government.

Mr. SMITH. There is a little danger if the other groups are going there talking, and it is best not to appear. We should face the music if there is any question of a return, Powell said there is an easy way to handle this—just lose money on the contract. I think if Whitestone is going there, and I guess he has been directed by his group, I had better go with him.

Mr. PARKER. It seems what we are trying to do is rewrite this act. That would be mighty fine; but, after all, when you get to the end of the contract you have to certify your accounts to the Treasury Department. The actual wording is actual cost. I do not believe anybody can make an agreement which would prevent your being hamstrung.

Mr. SMITH. I think that is so, too.

Mr. PARKER. You have to have somebody certify finally when you get down to the last signature on that it has to be just like the act.

Mr. SHICK. I do not believe you can get any advance decision as to what is cost.

Mr. PARKER. There is not an item in cost that Admiral Capps does not have a precedent written out on his chair. After all, the customs that have been established have been accepted by the Treasury Department. I think we are generally alike in our method of accounting, and I think we use the special items.

Mr. SMITH. You mean when you come to your final argument that you had allowed a higher overhead for that purpose?

Mr. PARKER. Yes; it would not affect a contract, but it would affect the amount of depreciation to be charged on them. That will be determined finally upon completion of the contract. We adjust that up or down.

Mr. SMITH. Would you be satisfied on a basis of higher plant overhead right from the start?

Mr. PARKER. I would be satisfied if I thought that it would stay put. We might go along four years and that would be thrown out. I would like very much to have it that way.

Mr. SMITH. Suppose the industry arranges this table and makes up its minds they would set up their accounts on that basis and make the defense when it is challenged.

Mr. PARKER. You are going to be called upon.

Mr. SHICK. I do not believe that would go. We should have it agreed in advance, otherwise they will only allow your actual overhead.

Mr. SMITH. I do not think they will agree to it.

Mr. SHICK. You ought to go down there because these other people are going down there.

Mr. SMITH. Suppose I go down and make a case. Then we would do that in order to properly cover our cost and they make no decision. We get nowhere. We just put it into the minutes. It will, perhaps, give it some strength in the final argument.

Mr. SHICK. And you are no better off than before.

Mr. BELSER. You are in a good trading position at any time. If a bunch of shipbuilders came up there with an ax to grind you would know at once they were going to try to get something they were not entitled to. You would turn them down.

Mr. BLEWETT. I would tell them early we anticipate a higher cost for Government work.

Mr. PARKER. We had some experience with that during the war.

Mr. BELSER. Why should there be a definite overhead for all the plants? I would keep a special account for special things. I would say, "Special naval contract overhead."

Mr. SMITH. I gather, if I get your point correctly what you think is that it might be a little dangerous to set up a little higher overhead. Your feeling is that it would be better to go ahead and get everything in contracts, a certain amount for A. S. & G., new equipment in whole or in part.

Mr. BELSER. If you purchase new equipment you charge special overhead for naval work.

Mr. SMITH. Would you charge a special amount for that specific item?

Mr. BELSER. I would have a group of items in that account.

Mr. BLEWETT. We had to build this plant much larger than for merchant work. We could have gotten along with a plant 10 by 2 for merchant work whereas this navy work demands 32 by 9.

Mr. BELSER. If it has a short life you are allowed to charge ten percent depreciation on the whole thing. Any particular section is applicable to navy and merchant.

Mr. SMITH. The proper set-up is the difference in cost between the two charges over navy contracts over a reasonable period.

Mr. BLEWETT. When you consider all equipment it is difficult.

Mr. BELSER. There is no reason at all why you should not charge five percent to merchant and naval on the ordinary items. You have some special depreciation which you charge only to naval work.

Mr. BATES. Do not forget the conditions in these plants is very different.

Mr. SCHICK. They have not had experience on cost-plus contracts. Do not let them tie us down to something definite for the items you now put into cost. If the question is raised then the only thing for the shipbuilders to do when they make a contract and have to buy new equipment is to put the cost of the equipment into the bid. For this particular contract you should be permitted to add to the cost this special equipment. They may say that the machinery belongs to us. We can say take it. They will say we do not want this equipment, you buy it back from us. We will need it for the next job and when the next job comes along they will not pay for it again. I agree with Mr. Parker that if you ask the Bureau to approve a fixed overhead you will not get very far. Mr. Smith, you should go with them and not let them get something approved we do not want.

Mr. SMITH. Yes; I think that is right.

Mr. SHICK. We should decide what we are going to do. For our own protection it would be a good thing if we did have an understanding so that on the completion of these contracts the overhead rate will not be out of line. If Bethlehem has 60 percent, Newport News 50 percent and somebody else 40 percent they will ask what is wrong. Therefore, it is important for the shipbuilders to have a very clear definition as to what is direct labor if that is the basis of distributing overhead. I believe we can agree on a definition of direct labor.

Mr. SMITH. Was Whitestone in the meeting of the steel people?

Mr. SHICK. Yes; on Thursday. There is nobody else going down. He said he was going to wait for you (Mr. Smith). After you decide he wants to go down with you.

Mr. SMITH. I will be there Wednesday and Thursday, I think that is sound. I think that we should not discuss details with this group in Washington because they cannot commit themselves and if they did it would not hold.

Mr. SHICK. They will say right away that they cannot agree on anything because they may be giving us something that is not cost.

Mr. SMITH. I do not think so.

Mr. SHICK. If those other people are going down we want to be a party so that they will not get something that won't suit us.

Mr. SMITH. That is what I am afraid of.

Mr. SHICK. We are not going to return any money until the end of the guarantee period. I suppose that is understood.

Mr. SMITH. I think when we have established contracts we can just draw up a little understanding amongst ourselves as to some of the high sport in connection with the contract.

Mr. SHICK. You should take up income tax.

Mr. SMITH. Are they going to deduct that?

Mr. SHICK. That is worth while discussing in advance.

Mr. SMITH. The Treasury Department will probably rule it will be subject to tax. This old act of 1920 which allowed deductions for your income tax of money set aside. They took the ground they objected to having any deductions of that character and tax should be handled as a mater by itself, and a profit I suppose will be put in on the same basis.

Mr. PARKER. That agreement would come in with our contract. The people you may make an agreement with now may not be the people with whom you have to make a final decision.

Mr. SHICK. A Treasury decision would hold.

Mr. SMITH. If it is made over the Secretary's signature.

Mr. PARKER. This should be kept elastic so that you can get everything in.

Mr. BELSER. Be careful you do not overdo it.

Mr. SMITH. In talking with Mr. Whitestone he says he understands that the Treasury Department in their final wording of this memorandum which will be signed by the Secretary today is directing everybody to continue their cost system on the same basis as in the past. Whitestone says he doubts the necessity for going at the present time.

Mr. SHICK. What does that interpretation mean—continue your system on the same basis.

Mr. SMITH. That means system, not details.

Mr. SHICK. I do not think that that means you could not change it.

Mr. SMITH. I think perhaps we had better wait for that order to see what it is. I think there are some points it might be well to talk with them about like the question of income tax, burdens under the code and if the other group is going to talk on the basis of fixed overhead we had better be next to it.

Let us summarize for a moment the high spots we have been over this morning:

1. Await letter from Treasury Department.
2. Keep in touch with Whitestone and Gillmor as to any possible move on their part in discussing the situation in Washington.
3. Upon receipt of letter from Secretary of the Treasury consider advisability of going to Washington to discuss such problems as the following:

(a) Status of Federal income tax in relation to profit.
(b) Status of bonuses in relation to profit.
(c) Status of equipment in relation to cost.
(d) Status of fixed overhead if brought up by others. Keep off the ground ourselves for time being.
(e) Subcontractors profits.

4. After discussion in Washington, ship comptrollers go get together on the question of—

(a) Direct labor.

(b) Fire insurance and workmen's compensation—premiums versus carrying own insurance.

(c) Depreciation charges.

(d) Development charges.

(e) Patents.

(f) Drydocking charges.

(g) Pensions.

(h) Group insurance.

Mr. Shick. You do not need a uniform cost system. The only thing we need is a definition of direct labor and other direct charges.

Mr. Parker. Everything that should be charged direct should be charged.

Mr. Smith. What do you want to do at this time. Is there anything further?

Mr. Parker. We should wait for that letter.

Mr. Smith. I think so.

Mr. Shick. We should write down an interpretation on direct labor before we come to the next meeting.

Mr. Parker. Send it in to Mr. Smith?

Mr. Shick. We might write these thoughts down and exchange them.

Mr. Smith. If you want to send them all here we will make a composite sheet and send them back to you. I have copies here of the minutes of the other meeting. We have tried to cover only the high spots in these minutes.

(After some discussion it was decided that the next meeting would be held on Thursday, May 31st, and that the comptrollers would exchange their interpretations of direct labor and that each would send a copy to this office.)

Mr. Smith. If you gentlemen will get your remarks in just as soon as you can it will be helpful. What else is there to bring up.

Mr. Shick. We should define what is direct labor and all other charges we think should be charged to the contract so that we can all agree to what we are going to charge direct. We want to charge everything we can.

(The meeting then adjourned at 12:20 p.m.)

Re Vinson Act.
To: Members of the committee.
(Membership attached.)

Gentlemen: I am pleased to enclose herewith the following correspondence that passed between the du Pont Company and Mr. Helvering, Commissioner of Internal Revenue, on allowable items of cost under the Vinson Act:

(1) September 28, 1934, H. W. Lynch to Guy T. Helvering.

(2) October 10, 1934, H. W. Lynch to Guy T. Helvering.

(3) October 16, 1934, H. W. Lynch to Guy T. Helvering.

Please be kind enough to read and be prepared to discuss the items at the next meeting of the committee.

Very truly yours,

C. C. Knerr, *Secretary.*

CCK:RR.

MEMBERSHIP OF COMMITTEE TO CONSIDER INTERPRETATIONS UNDER THE VINSON ACT AS OF JANUARY 1, 1934

Mr. C. F. Noyes, Comptroller, Baldwin Locomotive Works and its subsidiaries, Paschall P.O., Philadelphia, Pa.
M. S. L. Whitestone, Comptroller, General Electric Co., Schenectady, N.Y.
Mr. F. C. Belser, Price, Waterhouse & Co., 56 Pine St., New York City.
Mr. N. R. Parker, Vice Pres., New York Shipbuilding Corp., Camden, N.J.

Mr. S. P. Howe, President, Camden Forge Co., Camden, N.J.

Mr. L. S. Rice, Assist. Treasurer, DeLaval Steam Turbine Co., Trenton, N.J.

Mr. W. E. Blewett, Asst. to Pres., Newport News Shipbuilding and Dry Dock Co., Newport News, Va.

NATIONAL COUNCIL OF AMERICAN SHIPBUILDERS,
11 BROADWAY,
New York, December 18, 1934.

To all Members:

GENTLEMEN: Under date of October 26, 1934, we sent you certain correspondence that had come to our attention as between the du Pont Company and the Commissioner of Internal Revenue as to allowable items of cost under the Vinson Act (Public No. 135, 73d Congress, H. R. 6604) approved March 27, 1934. In the correspondence attached thereto was a letter dated October 10, 1934, from the du Pont Company to Mr. Guy T. Helvering, Commissioner of Internal Revenue, in which the du Pont Company referred in the third paragraph of their letter to a previous letter dated September 28th.

We have now been successful in obtaining a copy of the du Pont Company's letter of September 28th, which is enclosed herewith for your information.

Very truly yours,

H. GERRISH SMITH, *President.*

HGS:RR

[Copy]

SEPTEMBER 28, 1934.

Mr. GUY T. HELVERING,
Commissioner of Internal Revenue,
Treasury Department, Washington, D.C.

DEAR SIR: This will acknowledge receipt of your letter of September 21st, advising of the proposed meeting on Wednesday, October 3d, 1934, between representatives of the Navy Department and the Bureau of Internal Revenue-Treasury Department, which meeting you have invited our company to attend, for the purpose of discussing problems of allowable costs and cost determination involved with respect to contracts which may be entered into between our company and the Navy Department pursuant to the Vinson Act. Representatives of our company will attend this meeting.

Pursuant to your request, we submit herewith a general explanation of the manner in which would expect to determine our costs in relation to products sold under such Government contracts as may be governed by the provisions of the Vinson Act.

As a broad principle, it is our intention to continue to follow our established accounting practice and, in addition, to introduce certain supplementary allocations of general expenses as herein broadly described.

It is our practice to allocate all items of expense directly against the product involved insofar as it is practicable to do so; there are, however, certain general expenses which necessarily must be allocated on the basis of certain arbitrary assumptions.

Because of the many and varied lines of business in which we are engaged, and the practical difficulty of allocation, expenses such as general administrative, State income and Federal taxes, general research and experimental, extra compensation, unemployment insurance, etc., are not ordinarily allocated against the product. Such items of expense not customarily identified with individual products in our calculation of income arising therefrom are, instead, treated as general items in the preparation of our consolidated profit and loss figure. However, these items are, in fact, elements of cost which we must recognize as such under any contracts governed by the Vinson Act.

There are attached two schedules, setting forth the items which we shall expect to claim as legitimate costs under the Vinson Act. Schedule A covers items directly allocable and so handled in our accounting procedure. Schedule B covers those expenses broadly described in the preceding paragraph, which we treat as general items in our accounting procedure, some portion of which we shall expect to identify as cost by means of appropriatte supplementary statistical alloction.

Very truly yours,

H. W. Lynch, *Assistant Comptroller.*

Schedule A

1. Materials: These represent raw materials used as an ingredient or a component part of the product for which the bid is submitted. This does not include containers, such as boxes, barrels, etc.

Note.—Prices used for raw materials consumed in manufacture, will be: (*a*) Actual purchase price; (*b*) when, because of forward buying, our inventory of raw materials and supplies is on hand at a price under current replacement cost, the current market price at the contract date will be used; (*c*) raw or semifinished materials manufactured by us, used inf fulfillment of a contract, will be priced at market.

2. Operating labor: Direct labor employed in producing the material involved.
3. Repairs labor: This represents all money expended for labor in making normal day-to-day repairs.
4. Repairs material: Represents money expended for materials used in day-to-day repairs.
5. Power: Represents total cost of power cost consumed in manufacture.
6. Replacement: Represents abnormal repair items.
7. Direct superindence.
8. Depreciation.
9. Property taxes.
10. Experimental: Represents all monies expended either at the works or research laboratory in connection with the chemical control of the manufacture and improvement of the product.
11. Property insurance: Represents the insurance applicable to the materials and supplies and permanent investment. Our company carries its own insurance reserve, using rates established by our insurance department which are commonly lower than the cost of such insurance if purchased from a stock company.
12. Liability insurance: Represents accrual to meet the compensation paid employees for injuries received in the performance of their duties. Our company maintains its own insurance reserve on this item likewise, using rates of accrual as determined by our insurance division, which again are generally lower than the cost of obtaining like insurance from a stock company.
13. Works overhead: Represents all items of general supervision and service in connection with the manufacture of the particular product. Definite rates per 100 lbs. of product as and when manufactured, are applied to the production of respective commodities in order to determine the amount of works overhead applicable to the particular product. These rates are determined by periodical surveys made by representatives of the manufacturing division. Schedule "A"-1 attached, lists in detail the items of expense included in works overhead.
14. Manufacturing division; expense: Represents the proportion of the main-office operating expense chargeable to the particular product. This does not include any general company administrative costs, but does include a proportion of the expenses of other departments performing services for the manufacturing division, such as the purchasing, traffic, etc. Definite rates per 100 lbs. of product as and when made are established by the manufacturing division representatives and these rates are applied to the product as produced, in order to determine the amount of manufacturing division expense applicable to each commodity, schedule "A"-2 attached, details the items included in manufacturing division expense.
15. Royalty: Under this classification is included any expenses incurred by the company for the use of certain patents or methods of manufacture, where it has been found necessary to make such purchases.

16. Amortization: Where necessary, to install special equipment required to produce commodities applicable to Government contracts, and which would not be used in connection with the production of commodities generally disposed of through commercial channels.

17. Packing & Shipping: Represents costs of barrels, boxes, lining paper, etc. used in packing the product; and the cost of packing, transportation to railroad siding or wharf, and loading on the cars, steamships or other transportation equipment for shipment to customer.

18. Freight & delivery: Represents transportation charges on materials from shipping point to destination where product is sold on a delivered basis.

19. General administrative: Represents that portion of general company administrative expense susceptible of direct allocation to the manufacturing department. The expense so allocated is then applied against product on basis of dollar sales, schedule "A"–3 attached, details the general items included therein

Schedule A–1

CLASS OF EXPENDITURES COLLECTED UNDER WORKS OVERHEAD, ITEM 13, EXHIBIT A

Automobiles.
Barges.
Boats.
Burning grounds.
Cleaning & grading.
Drafting & surveying.
Fire protection.
General superintendence.
General clerks.
General buildings & shops.
General transportation.
Hospital.
Laboratory.
Levee maintenance.
Mechanical transportation.
Mill office expense.
Motor trucks.
Railroads.
Roads.
Safety inspection.
Salvage.
Stable.
Subsistence expense.
Tenant houses.
Tools.
Traveling expense.
Water delivery.
Watchmen & gatekeeper.
Welfare.
Wharves.
Works farms.
Works sanitation.
Works telephones.
Plant general.

Schedule A–2

CLASS OF EXPENDITURES COLLECTED UNDER MANUFACTURING DIVISION EXPENSE, ITEM 14 EXHIBIT A

Manufacturing director's office expense.

Materials & order section (handling of raw materials and shipments of finished products).

Departmental accounting section (maintaining manufacturing cost and finished product ledgers).

Chemical division.

Mail and file room expenses.

Purchasing department expense.

Engineering department expense (power & industrial engineering studies).

Traffic department expense (furnishing cars, car tracing, routing, etc.).

Service department expense (industrial relations, fire protection and safety).

Group life insurance.

Health and accident insurance.

Pensions (accrual for pension reserve).

Safety bonds (premium for bonds on operating employees).

Schedule A–3

GENERAL ADMINISTRATIVE

Industrial department main office expense: Salaries, sundry office expense, telegraph & telephones, office rent, depreciation of furniture & fixtures, pensions (accrual for pension reserve), general expense, departmental accounting, departmental management, group insurance, participating stock dividends, miscellaneous items.

Accounts receivable division: Expense of handling invoices, customer's accounts and preparation of the necessary customer's statements.

Accounts payable division: Expense of handling invoices and payments for purchases of raw materials.

Accounting statistical, and tabulating: Expense of preparation of sales statistics, profit and loss statements and tax returns for the U.S. Government.

Auditing general: Expense of auditing customers' accounts, checking payments, performance bonds, etc.

Salary division: Expense of handling salary and wage roll, preparation and forwarding salary and wage checks and the recording and preparation of income and other tax returns applicable to employees.

Credit & collection department expense.

Development expense.

Legal expense general.

Patent division expense.

Bad debts.

General administrative: Portion of salaries and expenses of corporate officers, directors and other departmental expense not specifically enumerated heretofore, but customarily identified with our operative income accounts.

SCHEDULE B

1. General administrative: Consists of portion of salaries and expenses of officers and directors of the company; telephone, telegraph, and mail-room expense; treasurer's office expense, legal department expense, development deparmtent expense, etc.
2. State income tax: Where such taxes exist in States in which plant or plants manufacturing the product are located.
3. Federal income tax: As we interpret the 10% profit clause of the Vinson Act to mean *Net Profit*, this item should be an allowable cost.
4. General research and experimental: Represents that portion of salaries and expenses of central technical staff and research chemists employed on experimental and research work of a general nature.
5. Extra compensation: Extra compensation awarded under the terms of our bonus plan.
6. Unemployment insurance: Should be included to the extent that products being manufactured at a plant located in any State where such laws exist are affected; should also include any Federal unemployment or old-age pension payments in event that such legislation may be presently accomplished.

[H. Gerrish Smith, president; Roger Williams, vice president; Henry C. Hunter, counsel-treasurer; Clifford C. Knerr, Secretary]

NATIONAL COUNCIL OF AMERICAN SHIPBUILDERS,
11 Broadway, New York, October 26, 1934.

To all Members:

GENTLEMEN: There is forwarded herewith for your information certain correspondence that has come to our attention as between the du Pont Company and the Commissioner of Internal Revenue as to allowable items of cost under the Vinson Act (Public No. 135, 73rd Congress, H. R. 6604), approved March 27, 1934.

Very truly yours,

H. GERRISH SMITH, *President.*

HGS B

OCTOBER 10, 1934

GUY T. HELVERING,
Commissioner of Internal Revenue,
Treasury Department, Washington, D.C.
(Attention of D. C. Moore, Genl. Asst. to Asst. General Counsel for Bureau.)

DEAR SIR: Referring to the recent meeting held in Washington on Wednesday, October 3, 1934, between representatives of the Navy Department, the Bureau of Internal Revenue, and our company for the purpose of discussing problems of allowable costs and cost determination involved with respect to contracts which may be entered into between our company and the Navy Department pursuant to the Vinson Act:

This letter will confirm our understanding of the agreement reached at that time regarding the many points involved.

Our letter of September 28th, addressed to your Department, outlined the broad principles which we intended to follow and set forth under separate schedules our proposed treatment of the respective items which we claimed should be considered as allowable costs under the Vinson Act. Because this letter was used as the basis of our discussion, I shall identify the specific items as those appearing under schedule "A" or "B" in that letter.

1. Materials (schedule "A").

You have advised that:

(a) Purchased materials should be taken into cost at actual purchased price.

(b) Materials manufactured by our own company, used as an ingredient or component part of the product being manufactured under the bid, should be priced at cost.

2 to 10, inclusive (schedule "A"). Operating labor, repairs labor, repairs material, power, replacement, direct superintendence, depreciation, property taxes, and experimental.

We understand you agree that these are allowable cost items and that generally you approve of our proposed method of allocation as described at this meeting.

11 & 12 (schedule "A"). Property & liability insurance.

You have asked us to file a brief in support of our contention with respect thereto. This brief is in course of preparation and will be forwarded to you shortly.

13 to 19, inclusive (schedule "A"). Works overhead, manufacturing division expense, royalty, amortization, packing & shipping, freight & delivery, and general administrative.

These items are considered by you as allowable cost items, and again speaking generally, you are in agreement with our proposed method of allocating such items.

With respect to schedule "A" 3, which covers detail of times making up general administrative, as set forth under item 19, schedule "A", you are in accord with us, with the exception of item covering bad debts which you have stated cannot be considered an allowable cost under the Vinson Act.

With respect to schedule "B", you have approved as allowable cost item 1, general administrative; item 4, general research and experimental; item 5, extra compensation; and item 6, unemployment insurance.

2 & 3 (schedule "B"). State and Federal taxes.

You have asked us to file briefs in support of our position with respect to these items before passing final opinion. These briefs, likewise, are in course of preparation and will reach you shortly.

* * * * * * *

Copies of this letter are being forwarded to all who attended the conference, so that if there is anything contained therein which is not in accordance with the agreement reached, our attention may be directed to it and correction made.

We thank you for the opportunity to present our views with respect to this whole subject, and appreciate the consideration given us.

Very truly yours,

HWL:J H. W. Lynch, *Assistant Comptroller.*

October 16, 1934.

Guy T. Helvering,
Commissioner of Internal Revenue,
Treasury Department, Washington, D. C.
(Att.: D. C. Moore, Genl. Asst. to Asst. Genl. Counsel for Bureau.)

Dear Sir: Pursuant to your request as made at the meeting held in Washington on October 3, 1934 (for the purpose of discussing problems of allowable costs and cost determination involved with respect to contracts which may be entered into between our company and the Navy Department for the supplying of material governed by the provisions of the Vinson Act), we submit herewith our position with respect to the several items regarding which no decision was reached.

PROPERTY INSURANCE

Our company carried its own insurance on materials, supplies, and investment in manufacturing facilities. An insurance reserve has been established, and currently we charge our manufacturing operations with an amount (in lieu of "premium" which we would pay if insured in a stock company) calculated as being necessary to maintain the reserve at an adequate figure to provide for any loss. Varying rates are used at our several points, these rates being based on our actual loss experience at the particular location. Rates are reviewed annually and revised where necessary, it being our intent that the rate as applied will produce an accrual to the reserve approximately equal to the actual charges against the reserve during the current year.

This accrual is assessed against the various manufacturing operations on the basis of investment and further broken down over the various commodities produced within the operating area on a production basis.

The effect of this treatment is that production costs are being charged with insurance at cost and while distributed over commodities on an arbitrary basis, this is for reasons of practical accounting expediency.

In computing the cost of a commodity which we might manufacture under the provisions of the Vinson Act, we contend that provision for such insurance (arrived at as described in the foregoing) should be allowed, there being further no element of profit involved in the insurance calculation. (The rates as used within our company are commonly considerably lower than those quoted by stock companies for similar coverage.)

LIABILITY INSURANCE

Our company likewise carries its own insurance to meet compensation paid to employees for injuries received in the performance of their duties. An insurance reserve has been established, and currently we charge our manufacturing operations with an amount (in lieu of "premium" which we would pay if insured in a stock company) calculated as being necessary to maintain the reserve at an adequate figure to provide for any loss. The rates as used at any given point are based on our actual loss experience and are reviewed annually and revised where necessary, it being our aim to have the rate as applied produce an accrual to the reserve approximately equal to the actual charges against the reserve during the current year. The rate as applied is based on the pay roll, and distribution of the insurance charge follows the direct labor to the commodity being produced.

The effect of this treatment is that production costs are being charged with liability insurance at cost.

We submit that in computing the cost of a commodity which we might manufacture under the provisions of the Vinson Act, provision for such insurance (arrived at as described in the foregoing) should be allowed, there further being no element of profit involved and the cost being considerably lower than would be the case if similar coverage were purchased from a stock company.

STATE INCOME TAXES

Where such taxes exist in States in which a plant or plants manufacturing a commodity being produced pursuant to the provisions of the Vinson Act, suitable provision should be made in production cost for such expense. In States where such income taxes exist, the property tax is usually lower than in those States where no such tax is in effect, consequently, it may be argued that this is another form of property tax altho based on income. Based on the foregoing and inasmuch as this is a direct "out of pocket" expenditure resultant from the manufacturing operation, we submit that it should be an item of allowable cost under the provisions of the Vinson Act.

FEDERAL INCOME TAX

This is an item of "out of pocket" expense resultant directly from the sale of the product involved and is normal business expense. Under the provisions of the Vinson Act, the contractor is permitted a "profit" of not to exceed 10 percent of the sales price, and we submit that the profit resultant from the transaction is the difference between the sales price and the total expense of producing the article or commodity. It is our contention that proper provision for Federal income tax should be allowed as an item of cost when producing an article or commodity pursuant to the provisions of the Vinson Act.

GENERAL

In dealing with the foregoing items, i. e., property insurance, liability insurance, State income taxes, and Federal income tax, all of which we intend to consider as cost on either an "out of pocket" or equivalent basis, we submit that each of them should be allowable items of cost pursuant to the provisions of the Vinson Act as they are legitimate and generally accepted items of business expense.

H. W. LYNCH,
Assistant Comptroller.

HWL:M

H. Gerrish Smith, president; Roger Williams, vice president; Henry C. Hunter, counsel-treasurer; Clifford C. Knerr, secretary

NATIONAL COUNCIL OF AMERICAN SHIPBUILDERS,
New York, December 18, 1934.

To all Members.

GENTLEMEN: Under date of October 26, 1934, we sent you certain correspondence that had come to our attention as between the du Pont Company and the Commissioner of Internal Revenue as to allowable items of cost under the Vinson Act (Public, No. 135, 73rd Congress, H. R. 6604) approved March 27, 1934. In the correspondence attached thereto was a letter dated October 10, 1934, from the du Pont Company to Mr. Guy T. Helvering, Commissioner of Internal Revenue, in which the du Pont Company referred in the third paragraph of their letter to a previous letter dated September 28th.

We have now been successful in obtaining a copy of the du Pont Company's letter of September 28th, which is enclosed herewith for your information.

Very truly yours,

H. GERRISH SMITH, *President.*

HGS:B

[Copy]

SEPTEMBER 28, 1934.

Mr. GUY T. HELVERING,
Commissioner of Internal Revenue,
Treasury Department, Washington, D. C.

DEAR SIR: This will acknowledge receipt of your letter of September 21st, advising of the proposed meeting on Wednesday, October 3d, 1934, between representatives of the Navy Department and the Bureau of Internal Revenue, Treasury Department, which meeting you have invited our company to attend, for the purpose of discussing problems of allowable costs and cost determination involved with respect to contracts which may be entered into between our company and the Navy Department pursuant to the Vinson Act. Representatives of our company will attend this meeting.

Pursuant to your request, we submit herewith a general explanation of the manner in which would expect to determine our costs in relation to products sold under such Government contracts as may be governed by the provisions of the Vinson Act.

As a broad principle, it is our intention to continue to follow our established accounting practice and, in addition, to introduce certain supplementary allocations of general expenses as herein broadly described.

It is our practice to allocate all items of expense directly against the product involved insofar as it is practicable to do so; there are, however, certain general expenses which necessarily must be allocated on the basis of certain arbitrary assumptions.

Because of the many and varied lines of business in which we are engaged, and the practical difficulty of allocation, expenses such as general administrative, State income and Federal taxes, general research and experimental, extra compensation, unemployment insurance, etc., are not ordinarily allocated against the product. Such items of expense not customarily identified with individual products in our calculation of income arising therefrom are, instead, treated as general items in the preparation of our consolidated profit and loss figure. However, these items are in fact elements of cost which we must recognize as such under any contracts governed by the Vinson Act.

There are attached two schedules, setting forth the items which we shall expect to claim as legitimate costs under the Vinson Act. Schedule "A" covers items directly allocable and so handled in our accounting procedure. Schedule "B" covers those expenses broadly described in the preceding paragraph, which we treat as general items in our accounting procedure, some portion of which we shall expect to identify as cost by means of appropriate supplementary statistical allocation.

Very truly yours,

H. W. Lynch,
Assistant Comptroller.

Exhibit No. 1534

Memorandum Re, Proposed Clause to be Inserted in Subcontracts under the Vinson Act

About Oct. 1, 1934.

1. The following committee was appointed by Mr. H. G. Smith to draft a clause to be inserted in all subcontracts made by shipbuilders, which would provide for such subcontracts to be on a cost-plus basis up to a fixed minimum price.

The committee:

N. R. Parker (chairman), New York Shipbuilding Corp.
W. A. Thorpe, General Electric Co.
W. E. Blewett, Newport News S/B & D/D Co.
J. H. King, Babcock & Wilcox Co.
H. O. Hunter (counsel), Natl. Council of Amer. Shipbldrs.
H. J. Harper, Bethlehem Shipbuilding Corp. Ltd.

2. After considerable discussion the following clause was drafted, to be put into proper language by Mr. Hunter:

Clause: Contract price to be your cost and 11.111% not to exceed (a) x dollars per unit (for lump sum or fixed prices per unit); (b) the following prices per pound or per unit (schedule of prices to be shown); it being agreed that cost to the subconstrctor shall be determined by it in accordance with its own established accounting methods; it being further agreed that this subcontract is not subject to audit or adjustment of cost by the contractor, but is subject to the provisions of Act of March 27, 1934, Public, No. 135 (73d Congress) and Treasury Department Regulation 4434.

3. The discussion brought out the following points for or against such a clause:

A. Contractor—advantages:

(1) If the subcontractor should exceed the full 10% profit allowed by the Vinson Act, the shipbuilder would benefit by, and the subcontractor would lose, a part of such profit.

Example (before Federal income tax)

	Vinson Act		Proposed clause
Total contract	$100,000	Maximum	$100,000
Cost	80,000	Cost	80,000
Profit to subcontractor	10,000	11.111%	8,888
Return to Treasury	10,000		
Total	100,000	Revised contract	88,888

(2) The transfer of part of the profit from the subcontractor to the shipbuilder provides a cushion for the latter by reducing the final cost to him.

(3) May tend to prevent payment of excess profit to the Treasury Department except on the main contract. (This is problematical, since cost for the purposes of determining the final price on the subcontract, and cost as may later be defined by the Treasury Department are likely to differ.)

(4) A clause of this type may be used in efforts to obtain an equitable revision of the act which will provide a guaranty of some profit on all contracts.

B. Contractor—disadvantages: (1) May possibly lead to a revision of the contract price to the shipbuilder on the theory that the shipbuilder has obtained advantages not intended by the act. (This is not considered probable.)

C. Subcontractor—advantages: (1) May possibly avoid an audit, or limit the extent of an audit, with the subsequent publicity and embarrassment from increased demands from labor, etc., if an excessive profit is shown.

D. Subcontractor—disadvantages:

(1) Loss of a part of the maximum profit allowed by the Vinson Act, if it should be earned (see A-1).

(2) Will require adoption by code authorities of resolutions permitting violation of any code provisions now in effect which would prevent members from bidding on this basis.

(3) Will disclose costs to shipbuilders currently, and perhaps create a precedent which may be difficult to overcome in the future. A similar disclosure may be made under the Vinson Act, but probably at a much later date, and with no certainty that excess profits under individual contracts will be made public.

E. Possible general advantages: (1) Mr. Parker fears that the Vinson Act may lead to a new and permanent form of taxation by the Federal Government on all profits over a certain maximum, without regard for losses which may be incurred. The general adoption of this proposed plan of letting subcontracts may, in his opinion, either avoid this possibility entirely, or at least limit it to Government work and then only on the main contract without extension to subcontracts.

[Memorandum]

Subject: Vinson Act. A profit limitation but not a revenue act.
Proposal: All subcontracts on a cost-plus basis, not to exceed 10% of subcontract, with fixed limit price.
Purpose:
  To establish a proper procedure.
  To prevent payment of excess profit except on main contract.
  To prevent establishment of new form of taxes.
  To protect subcontractors from embarrassment.
  To lead to equitable revision of the act.
Navy Department (informal):
  Without authority to approve or disapprove.
  Find no basis for objection.
  Consistent with main contract.
  Action left to Treasury Department.
  Attitude favorable.
Treasury Department (informal):
  Contractor may subcontract on any basis.
  Required to determine and collect excess profit.
  All suppliers likely to be subcontractors.
  Subcontract price, amount paid subcontractor.
  Form of certificate similar to income-tax certificate.
  Subsidiary companies likely limited to profit.
  Will not define cost at this time.
Subcontractors:
  Additional tax; code prices.
  Investigation of profit in excess of normal.
  Labor embarrassment.
  Provides retention of maximum profit.
  Provides opportunity to combine results.
  May avoid extensive audits.
Shipbuilder:
  Provides contingency reserve.
  Reduces final cost.
  Removes in part inequity of profit limitation.
  Agrees with intent of act.

Exhibit No. 1535

October 18, 1934.

To the Board of Directors of New York Shipbuilding Corporation.

Sirs: I herewith tender my resignation as president and director of the New York Shipbuilding Corporation to take effect November 1st, 1934.

There is attached hereto a memorandum summarizing briefly the results of the past several years, together with my comments and observations relating thereto, with the request that it be filed with the board records.

Very truly yours,

C. L. Bardo.

OCTOBER 18, 1934.

To the Board of Directors of New York Shipbuilding Corporation:

SIRS: Having today submitted my resignation as president of this corporation, it seems only fitting that I should leave as a matter of record a brief account of my stewardship.

When I first became connected with this corporation in the latter part of 1925, the shipbuilding activities were only a part of a wide prospective field, including construction of transformers, circuit breakers, electric locomotives, public utility equipment, etc. These extended activities, together with the change of management which had taken place, resulted in the serious demoralization of the morale of the shipbuilding organization, and further resulted in such a falling off in the quality and character of the work that the corporation and its officers were subjected to very severe criticism and condemnation by the Navy Department for the work which was then in progress.

In the ensuing months, while efforts were being made to reorganize the shipbuilding personnel, the financial affairs of the corporation grew rapidly worse and reached a crisis during the year of 1927.

Following this crisis, progress was steadily made from the standpoint of the corporate organization, financial condition and organization of personnel. It is not necessary to review in detail what has been accomplished in each of these fields. I content myself in pointing out certain pertinent factors of the present situation as compared with that at the end of 1926, as follows:

1. Net current assets increased from $1,300,000 to $5,000,000. (Note: At the end of 1926 there was a tax claim of $3,800,000 which later was settled for $2,350,000.)

2. Funded debt of the corporation reduced $1,500,000.

3. Preferred stock reduced from $4,000,000 (including $1,000,000 of preferred stock of a subsidiary afterward sold) to $2,000,000.

4. Participating and founders stock, 695,256 shares, reduced to 500,000 shares of $1 par value. In doing this we were able to establish the equity relationship between the founders and participating stock, so that except for voting rights the stocks are equal in very respect.

5 (a) Balance sheet intangible assets—contract and patent rights, patents, goodwill, etc., $4,432,845.21, written down to $1.00.

5 (b) Corporate reorganization and electrical division development expenses, $532,653.89, written off.

6. Surplus increased from $1,654,000 to $6,804,000.

7. Net profit during this period was $6,075,607.70. The average income during this period far exceeds that of any similar period in the corporation's existence, with the exception of the period durlng and immediately following the war when all work was on a cost-plus basis.

8 (a) Cumulative dividends defaulted on preferred stock in 1927 and 1928 were paid and preferred stock dividends have been earned and maintained since 1929.

(b) Common stockholders have received 40 cents per share per year since March 1933.

9. The value of uncompleted contracts on hand at the present time exceeds those at the end of 1926 by more than $40,000,000.

In other words, during this period the management which came into full control early in 1927 and the reorganized personnel have been able to eliminate the highly dangerous actual and contingent liabilities on the one side and the intangible and highly questionable assets on the other side, and to provide a balance sheet for all the stockholders of which, in my judgment, any company may well be proud.

During the same period the reorganization of the supervisory personnel took place. It is significant, however, that except for two positions this was accomplished by promotions within the plant; the two exceptions being experienced executives from other shipbuilding organizations.

Following this reorganization the spirit and morale of the officers and employees progressively improved, and it is due to that fact, as well as to the efforts of the officers and department heads, that great progress was made in improving the quality of the work and in radically reducing the expenses of the accomplishment. As to the quality of the work, I refer to the contrast as between the severe criticism made by high officers of the Navy in 1926 and the letter in December 1933 from the Assistant Secretary of the Navy which, as you will recall, commends in the highest terms the technical skill and efficiency of the organization and expresses appreciation for the fine cooperation given by the organization to the Navy Department. I also refer you to the letters and telegrams from Mr. P. A. S. Franklin, president of the International Mercantile Marine Co., expressing his appreciation and admiration for the results of the organization's efforts in building the *Manhattan* and *Washington*. The highly satisfactory performance of the ships in service more effectively emphasizes the skill of our technical and operating forces.

The satisfaction of our customers, the Navy Department, the Export Steamship Corporation, and the United States Lines, is an asset of immeasurable value to the corporation. This has not been obtained at the expense of the stockholders, as evidenced by the substantial income earned during this period. Such net earnings have been increased through the efforts of the staff in reducing costs below the estimates. For example, the actual cost of labor and material upon the three cruisers constructed during this period was $3,620,000 below the estimate or a saving of 15 percent. On the balance of the work a similar comparison shows favorable results. In the case of each Navy contract we have earned substantial bonuses and have incurred no penalties.

Improvement has not been confined to the production field but has been extended also into important items of overhead, such as local taxes, fire and compensation insurace. We are advised by the State rating bureaus that we enjoy the lowest rate for any comparable industry in the State of New Jersey for fire and compensation insurance. Notwithstanding an increase in the tax rate of 25 percent, the actual taxes paid on the shipbuilding plant have increased less than 10 percent.

These results have been brought about not only by the experience, skill, and efficiency of the supervisory personnel and the excellent morale of the rank and file, but also by the harmonious cooperation of all department heads and their subordinates. Shipbuilding is a highly complex industry which by its very nature requires a diversified personnel. The avoidance of discordant elements within our organization has been one of the most important factors in improving the financial standing of the corporation, in placing it in such high standing with its customers, and in producing the favorable earnings results in the past years. I am confident that a continuation of this policy will assure the success of the corporation in future years.

Respectfully yours,

C. L. Bardo.

MAIN OFFICE AND WORKS, CAMDEN, NEW JERSEY, U. S. A.

Cable address "Fairview"

Camden, *January 15th, 1935.*

Reference: Letter to New York Shipbuilding Corporation, January 2nd, 1935.

Hon. Gerald P. Nye,
Chairman Special Committee Investigating the Munitions Industry,
Room 357, Senate Office Bldg., Washington, D. C.

Sir: The reference letter (paragraph 10), requests information as follows:

"(10) Ownership of bonds of the company held by individuals in blocks of % or over as of the same dates."

All of the bonds of the corporation, while subject to registration as to principal, re in bearer form. Attached hereto is our inquiry dated January 11th, 1935, o the registrar and the reply of the registrar dated January 14th, 1935, in which ve are advised that none of the bonds are registered at the present time.

Therefore, the only record available, which would indicate possible ownership, s the ownership certificates returned with cashed coupons. From such ownership ertificates there has been compiled a list of apparent owners, as far as they can e ascertained (excluding certain coupons which have not yet been cashed for he last interest period), which is the only available record in connection with ond ownership.

Yours very truly,

New York Shipbuilding Corporation,
By N. R. Parker, *Treasurer.*

New York Shipbuilding Corporation

INTEROFFICE CORRESPONDENCE, CAMDEN, N. J.

To: J. S. Ritchie. Date: Janaury 11th, 1935.
From: N. R. Parker.

In connection with the Special Committee Investigating the Munitions Industry, U. S. Senate, letter of whom dated January 2nd, 1933, requests compilation of certain information for presentation to the committee on January 21st.

It is requested that you prepare summary covering paragraph 10 thereof, as follows:

(10) Ownership of bonds of the company held by individuals in blocks of 5% or over as of the same dates.

Please obtain from the Bankers Trust Company, registrar of these bonds, a registration list covering the registered holders.

Please prepare a complete list as disclosed from ownership certificates returned with bond coupons, as of the last interest date.

N. R. Parker.

January 11th, 1935.

Bankers Trust Company,
16 Wall Street, New York, N. Y.
(Attention C. W. Campbell, Asst. Secy.)

Gentlemen: As registrar of the first mortgage 30-year 5W bonds of this corporation, will you kindly furnish us with a list of the registered holders of these bonds?

Yours very truly,

New York Shipbuilding Corporation,
By N. R. Parker, *Treasurer.*

Chairman Special Committee Investigating the Munitions Industry,
Room 357, Senate Office Building, Washington, D. C.

Sir: The reference letter (paragraph 19) requests information, as follows:

"(19) All fees for legal services, including retainers and other expenses, 1920 to 1934, inclusive, itemized by individuals of companies."

Attached hereto is statement showing the legal expenses of the New York Shipbuilding Corporation for the years 1926 to 1932, inclusive, and also similar statement for the years 1929 to 1932, inclusive of the New York Shipbuilding Corporation.

The legal retainers as of January 1, 1935, are as follows:

Pruitt & Grealis	$15, 000. 00
Goldwater & Flynn	15, 000. 00
Foulkrod, Sheppard, Porter & Alexander	2, 500. 00

The limited time available does not permit the preparation of this data for the years 1933 and 1934 or the years prior to 1926.

Yours very truly,

New York Shipbuilding Corporation,
By N. R. Parker, *Treasurer.*

EXHIBIT No. 1538

NEW YORK SHIPBUILDING CORPORATION
MAIN OFFICE AND WORKS, CAMDEN, NEW JERSEY, U.S.A.
Cable address, Fairview

CAMDEN, *January 17th, 1935.*

Reference: Letter to New York Shipbuilding Corporation, January 2nd, 1935.

HON. GERALD P. NYE,
Chairman Special Committee Investigating the Munitions Industry,
Room 357, Senate Office Bldg., Washington, D.C.

SIR: The reference letter (paragraphs 16 and 17), requests information, as follows:

"(16) All company contributions, dues, entrance fees, loans, etc., to all national or State associations or individuals."

"(17) A summary of all publicity and/or propaganda expenses disbursed by the company and/or its officials for magazines, press, radio, or for publicity consultation and assistance, 1920 to 1934, inclusive."

Company contributions, dues, entrance fees, etc., for year 1934, are as follows:

Middle West foreign trade (year 1933), $200 per mo	$2, 400. 00
National Council of American Shipbuilders (year 1933)	12, 000. 00
Manufacturers Council, State of New Jersey (dues to Feb. 1, 1934)	25. 00
National Association of Manufacturers, year ending February 1935	100. 00
American Institute of Weights and Measures, year 1934	125. 00
National Industrial Conference Board, year 1934	100. 00
National Safety Council (Chicago), year 1934	125. 00
American Welding Society, year 1934	10. 00
Crab Point Gun Club and Old Mill Fishing Club, year 1934	1, 000. 00
Manufacturers Association of New Jersey, year 1934	25. 00
International Chamber of Commerce, year 1934	200. 00
Assessment, Shipbuilding and Ship Repairing Industry Committee, 7/33 to 7/34	3, 834. 00
Patrolmen's Benevolent Association	50. 00
Woman's Auxiliary, Cooper Hospital	30. 00
Citizens Family Welfare (New York City)	200. 00
Camden Police & Firemen's Assn	150. 00
West Jersey Homeopathic Hospital	1, 000. 00
Camden County Chamber of Commerce	500. 00
Philadelphia & Reading Railway Athletic Assn	50. 00
Army and Navy football program (advertising space)	200. 00
Camden Democratic Club	1, 000. 00
New Jersey State Chamber of Commerce	100. 00
Camden Y.W.C.A	500. 00
Will R. Wood Memorial Assn	1, 600. 00
Salvation Army	100. 00
Camden Y.M.C.A	2, 000. 00
Dinner reservations (Chamber of Commerce of U.S.)	50. 00
Christmas presents R.R. men $90.00, Christmas basket fund $250.00	340. 00
Special subscription to underwriting fund, National Assn. of Manufacturers	2, 500. 00
New Jersey Taxpayers Assn	1, 000. 00
Donations to Rev. Sloan and Rev. Pemberton	500. 00

In connection with paragraph (17), the only apparent record of publicity and/or propaganda expenses disbursed by the company and/or its officials, except local advertising and ordinary magazine and program space (which items are assumed to be outside the request of paragraph 17), is in connection with publicity suporting the enactment of merchant marine legislation in 1927–1928, disbursements in connection with William B. Shearer at Geneva, and out-of-pocket expenditures for proposed high-speed project of Trans-Oceanic Corporation, the summaries of which, as previously presented to the Senate committee for investigation of William B. Shearer at Geneva, and also to the committee investigating foreign and domestic ocean- and air-mail contracts, have already been given to investigators for the committee investigating the munitions industry.

Yours very truly,

New York Shipbuilding Corporation,
By N. R. Parker, *Treasurer*.

NEW YORK SHIPBUILDING CORPORATION
MAIN OFFICE AND WORKS, CAMDEN, NEW JERSEY, U.S.A.
Cable address, "Fairview"

CAMDEN, *January 17th, 1935.*

Reference: Letter to New York Shipbuilding Corporation, January 2nd, 1935.

Hon. GERALD P. NYE,
Chairman Special Committee Investigating the Munitions Industry,
Room 357, Senate Office Bldg., Washington, D.C.

SIR: The reference letter (paragraphs 8 and 13), requests information, as follows:

"(8) The names of all representatives or agents of the company in the United States or abroad, together with their salaries, the expense itemized by individuals for the years 1920 to 1934, inclusive."

"(13) A list of foreign sales agents by name, including the rate of commission, salaries, and expenses and commissions actually paid them for the years 1920 to 1934, inclusive."

The information requested in the subject paragraphs is assumed to exclude sales agents or representatives having to do with the electrical business conducted under the corporate name American Brown Boveri Electric Corporation. It is further assumed that the information requested applies to representatives, agents, or foreign sales agents having to do with the shipbuilding activities of the corporation.

The limited time does not permit a complete examination of the records or does it permit the compilation of salaries, commissions, and expenses actually paid.

The following is a list assumed to be requested under the subject paragraphs, based on incomplete records, recollection, or memorandum agreements:

I. V. Gillis, foreign representative in the Far East, 1910 to 1927.
H. M. Hitchcock, New York representative, 1920 to 1922.
Charles Denby, special representative, China and the Orient, 1922 to 1923.
Sterling J. Joyner, special agent, 1920 to 1923.
P. Peixotto, general delegate, France and Europe, 1921 to 1922.
James J. Pearson, European consulting engineer, 1919 to 1920.
Harry R. Humphreys, special representative, 1921 to 1929.
Frank A. Lord, special representative, 1929 to 1932.
Addison G. Foster, special representative, 1932 to 1934.
Casa Mayrink Beiga S/A, Brazilian representatives, 1934.

Yours very truly,

NEW YORK SHIPBUILDING CORPORATION,

MAY 16, 1934.

Reverend JOHN PEMBERTON, JR.,
409 Penn Street, Camden, New Jersey.

MY DEAR REVEREND PEMBERTON: I beg to apologize for not having communicated with you earlier expressing both on behalf of the company and myself our very great appreciation for the helpful and constructive aid which you rendered in the final settlement of our labor situation.

The men returned to work in full force on Monday and apparently are happy and exceedingly well pleased with the outcome.

As a more substantial token of our appreciation I beg to enclose herewith check for $250.00 which I hope you will accept in the spirit in which it is sent. This is intended for your personal use.

Thanking you, and with high personal regards, I am,

Very sincerely yours,

C. L. Bardo.

Exhibit No. 1544

Centenary-Tabernacle Methodist Episcopal Church,

John Pemberton, Jr., Pastor,
Camden, New Jersey, May 17, 1934.

Mr. C. L. Bardo,
President New York Shipbuilding Corp.,
Camden, New Jersey.

My Dear Mr. Bardo: Your very gracious letter with its generous enclosure came all unexpectedly this morning. I was as surprised to receive it as Moses must have been to receive the manna when he was leading the children of Israel out of the wilderness.

I interested myself in the New York Shipbuilding strike solely because of my concern for the welfare of my fellowmen and the community. It never occurred to me that either side would express such genuine appreciation as you have shown. I wish to thank you for the splendid way in which you received us and allowed us to counsel with you and for accepting such suggestions as you felt were wise.

I shall always be happy for the privilege of coming to know you and for being used in helping to solve this social problem. My experience as a worker in the yard stood me in good stead both in appreciating the needs of the workmen and also the cost of production on the part of the Company.

At any time in the future that I can be of assistance to you or the men, I shall be pleased to be called upon.

I accept your gift in the same spirit in which you sent it.

Sincerely yours,

John Pemberton, Jr.

P. S.—I am still looking forward to another bowl of bananas and cream, with you.

J. P.

Exhibit No. 1545

E. L. Cord,
Chicago, January 22, 1935.

Mr. L. B. Manning,
105 W. Adams Street, Chicago, Illinois.

Dear Mr. Manning: In connection with the letter from the United States Senate Special Committee Investigating the Munitions Industry to Mr. E. L. Cord, dated January 4, 1935, Mr. Cord's records and files disclose:

(1) No reports, records, diaries, notes, or other data relating to bidding on naval vessels by the New York Shipbuilding Corporation in 1933 and 1934.

(2) No evidence of ownership of stock of the Corporation with the exception of his own individual holdings aggregating 4,200 Founders Shares, and no information concerning outstanding loans, notes or other obligations outstanding against stock.

(3) No record of any options taken or given on New York Shipbuilding Corporation stock for the years 1928 to 1934, inclusive.

(4) No copies of analyses, surveys, or other data concerning New York Shipbuilding Corporation received prior to August, 1933.

(5) No contributions or loans to political parties or individuals prominently connected with political parties, made either directly or through agents, since he became interested, either as a stockholder or director, in New York Shipbuilding Corporation.

Yours very truly,

H. C. Reyelt, *Secretary to E. L. Cord.*

Mrs. Ruth Benson Blinn, c/o Central Hanover Bk. & Tr. Co., Plaza Office, 785 5th Ave., New York, N.Y	230
Maurice F. Lautman, 902 Medical Arts Bldg., Hot Springs, Ark	300
Mrs. Isabel S. Lewis, 4600 Spruce St., Philadelphia, Pa	220
Archie D. W. Smith, 3200 Lewis Tower, 15th & Locust Sts., Philadelphis, Penna	600
Edith T. Sturtevant, 1448 Lake Drive, Chicago, Ill	250
Founders:	
A. MacDonald Flook, c/o Mr. William M. Flook, 420 Lexington Ave., New York, N.Y	2,300
H. Stuart Flook, c/o Mr. William M. Flook, 420 Lexington Ave., New York, N.Y	2,153
William M. Flook, 420 Lexington Ave., rm. 2805, New York, New York	2,000
Sabin P. Sanger, 423 Walnut St., Brookline, Mass	2,822
Matilde Schoen, 470 4th Ave., rm. 1004, New York, New York	3,800
Frank B. Sloan, 117 Essex St., Saugus, Mass	2,000
Floyd B. Dean, c/o Cord Corp., 105 W. Adams St., Chicago, Ill	17,600
J. C. Friese, c/o Cord Corp., 105 W. Adams St., Chicago, Ill	5,000
Leslie K. Grant, c/o Cord Corp., 105 W. Adams St., Chicago, Ill	5,000
Herman C. Reyelt, c/o Cord Corp., 105 W. Adams St., Chicago, Ill	5,000

Floyd B. Dean, J. C. Friese, Leslie K. Grant, and Herman C. Reyelt, whose names appear above as stockholders of record owning founders stock, do not personally own the same, but are nominees of the Cord Corporation, and the shares of founders stock registered in their names belong to the Cord Corporation.

EXHIBIT NO. 1548

NOVEMBER 13, 1933.

Mr. L. B. MANNING,
105 West Adams Street, Chicago, Illinois.

MY DEAR MR. MANNING: One could hardly have gone through the experiences I have with this company without having some pretty strong views regarding its policies. Now that is is definitely settled that I am not going along with the company's development, I think I should outline these policies to you.

During a very large part of the company's history it was controlled by Mr. Mellon and I think it may be taken for granted that there was strong and aggressive management. We have its records for the last twenty-nine years, during which the average annual earnings applicable to the present common stock are in round figures $550,000, or $1.10 per share. Eliminating the so-called "war years" (that is, the years in which profits were abnormally large because of orders placed during the war) this average is $420,000, or 84¢ per share. The earnings for 1933 will be approximately zero. On the basis of the figures used in making up the bids for the recent naval order of some $38,000,000, the earnings on the business now on the books will be $560,000, or $1.12 per share, for 1934; $735,000, or $1.47 per share for 1933, and $560,000, or $1.12 per share for 1936. In these estimates, considerable sums were inserted for contingencies of various kinds; but if the present labor outlook continues, it is doubtful if the estimates can be realized.

The New York Shipbuilding organization has a considerable technical superiority over the other yards in naval work, and I think it is fair to say that it can make more profit at a given price on a cruiser than any of the other yards. It has, however, never been possible to get any unduly high prices for naval work, because the technical naval officers are fully aware of costs and because of the competition of the navy yards.

In merchant-marine work New York Ship is at a disadvantage because the Bethlehem and Federal yards are much more interested in finding an outlet for steel than in making money for their shipyards, and because Newport News has a distinct advantage in the lower prices of its labor, in its climate, and in its favorable location for repair work. In addition to the repair work, it has a considerably diversified and prosperous business.

Another fact is that there never has been, and in the absence of actual war conditions there never can be, enough naval work to keep the large yards really busy. This is where the merchant-marine business is of such vital importance; because, while it is not so remunerative as the naval business, it helps out enormously on the heavy overhead. It is therefore absolutely vital that everything possible should be done to foster a merchant-marine policy. Fortunately, the best thought of the country is now solidifying on the proposition that, whether war times or peace times be considered, nothing is of such vital importance to the country's safety and prosperity as the maintenance of a powerful merchant marine.

From the foregoing it must be apparent, however, that at best there is little in the shipbuilding business as such which could possibly interest men thinking in terms of big profits.

It is for the above reasons, of course, that I have been trying so hard to find lines of activity which we could properly go ahead with. I am satisfied that the Livermore transmission will be perfected into a very valuable thing, that the Bassoff transmission will be a much more valuable thing, and that Kinetor will produce fabulous profits, if these things are handled sympathetically and intelligently.

Another matter on which a good deal of work has been done, but which is not yet in option form, is the Brenner valve. This is very promising but perhaps not so important as the above three. I think continued and persistent search for other devices is indicated.

I gave the small-boat proposition considerable attention a long time ago and dismissed it as being uninteresting from our standpoint. I have heard, however, in an indirect way of your ideas for metal cruisers, using your motors and your marketing organization, and with the scant information I have I am frank to say it seems to me most interesting.

If I have made myself at all clear, there is involved here not merely executive management in the ordinary sense of the term but literally the creation of a profitable enterprise upon the solid groundwork already established.

As you know, we some time ago sold 15,000 shares of Allis-Chalmers and purchased, practically out of the proceeds, 30,000 shares of our own stock. The relative price of the two stocks is now again almost in that ratio, and I think advantage should be taken of the situation to still further reduce our outstanding stock.

Also, such preferred stock as can be picked up at anything like the present market price ought to be bought.

There are two small matters of organization which I was just on the point of correcting when the change of control occurred, and which I therefore venture to suggest to you.

The sales manager, Mr. Workman (an excellent man), should be fully responsible for the sales representative in New York and, therefore, this New York representative should be appointed by and be answerable to him.

Our representative in Washington, Mr. Foster, was put there on trial, having had no experience in exactly this work. He has in every respect made good and, therefore, should now be given a salary commensurate with his abilities, and to enable him to live in such a way as to be most effective in the important work he is handling.

I am sure you will believe that in writing this letter I have no motive other than that of turning over, along with the company's other assets, the high spots of my convictions for what they are worth.

With every good wish for the company's prosperity.

Very sincerely yours,

———— ————

Exhibit No. 1551

[Copy]

August 5th, 1929.

To: Mr. C. L. Bardo.
From: Mr. N. R. Parker.

Paid to H. C. Hunter, March 17th, 1927	$2, 500. 00
Paid to H. C. Hunter, June 24th, 1927	2, 500. 00
Paid to H. C. Hunter, Dec. 7th, 1927	3, 333. 33
	8, 333. 33

The above represents New York Ship's proportion of the $25,000 paid to W. B. Shearer.

In addition to the above, there was paid to William M. Flook, November 13th, 1928, $5,000, which was the amount received from the Sun Shipbuilding Company. There was also advanced on your instruction from the New York office petty cash fund, January 9th, 1929, $250.00.

Total received by W. B. Shearer from this company, directly and indirectly, is as above, $13,583.33.

Exhibit No. 1553

[Confidential]

January 23, 1929.

Mr. C. L. Bardo,
President New York Shipbuilding Company,
Brown Boveri Corporation, Camden, New Jersey.

My Dear C. L.: Miss Howe telephoned me in reference to the memorandum left by Mr. Flook and suggested that I would telephone you.

The position is this: It was understood, as I recall it, that you stated to Mr. Flook you were willing to do anything to help the situation. Just prior to my going to Washington, Mr. Flook instructed Miss Howe to give me a check and stated to me that when I needed anything more, call for it.

As you know, the situation which is vital in the interest of national defense that first we must pass the cruiser bill as it now stands and maintain the time-limit clause. When that is done the Dalanger amendment must be taken care of. Other than preparing articles for patriotic societies, bulletins, the press, and the papers that I subscribe to, I have a very big mailing list which covers the entire United States. All this is operating and functioning in the interest of sea power.

Realizing just what the United States is up against, I find it necessary to release bit by bit, a British secret document that has come into my possession. The first reference to this document I herewith enclose; and before I am finished I will, without question, prove a case against England which was so ably referred to in Senator James A. Reed's speech before the Senate. There is much that I could tell you which I don't care to write on the evidence in my possession. However, I will submit it at a later date. In the meantime, it was distinctly understood that, to carry on my work, Mr. Flook was to contribute towards the expenses, and as I have assumed the position as well as the obligation, I am forced to look to you in Mr. Flook's absence.

I believe you realize that this fight means more than a naval program of 16 ships. It means that the United States will declare itself by the building of these cruisers of a real naval policy.

As the originator of the cruiser bill in 1924, you will see that I must keep up my part of the fight until the fight is won. If it is not convenient for you to give me an appointment in New York, please instruct Miss Howe as to your intentions.

Sincerely,

W. B. SHEARER.

WBS/RW.

The following information was introduced during hearings of March 12, 1935. See text, page 5128, for request.

EXHIBIT NO. 1671

PRUITT AND GREALIS,
(Law Offices)
105 West Adams Street, Chicago, February 12, 1935.

Hon. ARTHUR H. VANDENBERG,
Vice Chairman Special Committee to Investigate the Munitions Industry,
357 Senate Office Building, Washington, D. C.

MY DEAR SENATOR: At the time of Mr. L. B. Manning's appearance before your committee last Thursday it was requested that additional information be furnished the committee regarding campaign contributions made by Mr. E. L. Cord, Mr. Manning, and myself prior to August 2, 1933, the date of our election as directors of the New York Shipbuilding Corporation. Information as to contributions made subsequent to said date has already been furnished your committee in response to the original questionnaire, and while we do not think that any contributions made prior to our connection with the New York Shipbuilding Corporation are material to this inquiry, I am glad to give you the same information at this time as was given to Senator Black's committee last year when an investigation was made of the air-mail contracts.

Prior to 1932 Mr. Cord made the following contributions to the local Republican State committee of Indiana:

Jan. 7, 1929	$100.00
Jan. 24, 1930	100.00
Oct. 23, 1930	250.00

In addition to the foregoing he gave a check for $300.00 to one Felix McWhirter on October 19, 1928. Mr. Cord's books do not show that this was a political contribution or not, but I believe same was a political donation as Mr. McWhirter had something to do with Indiana State politics at that time.

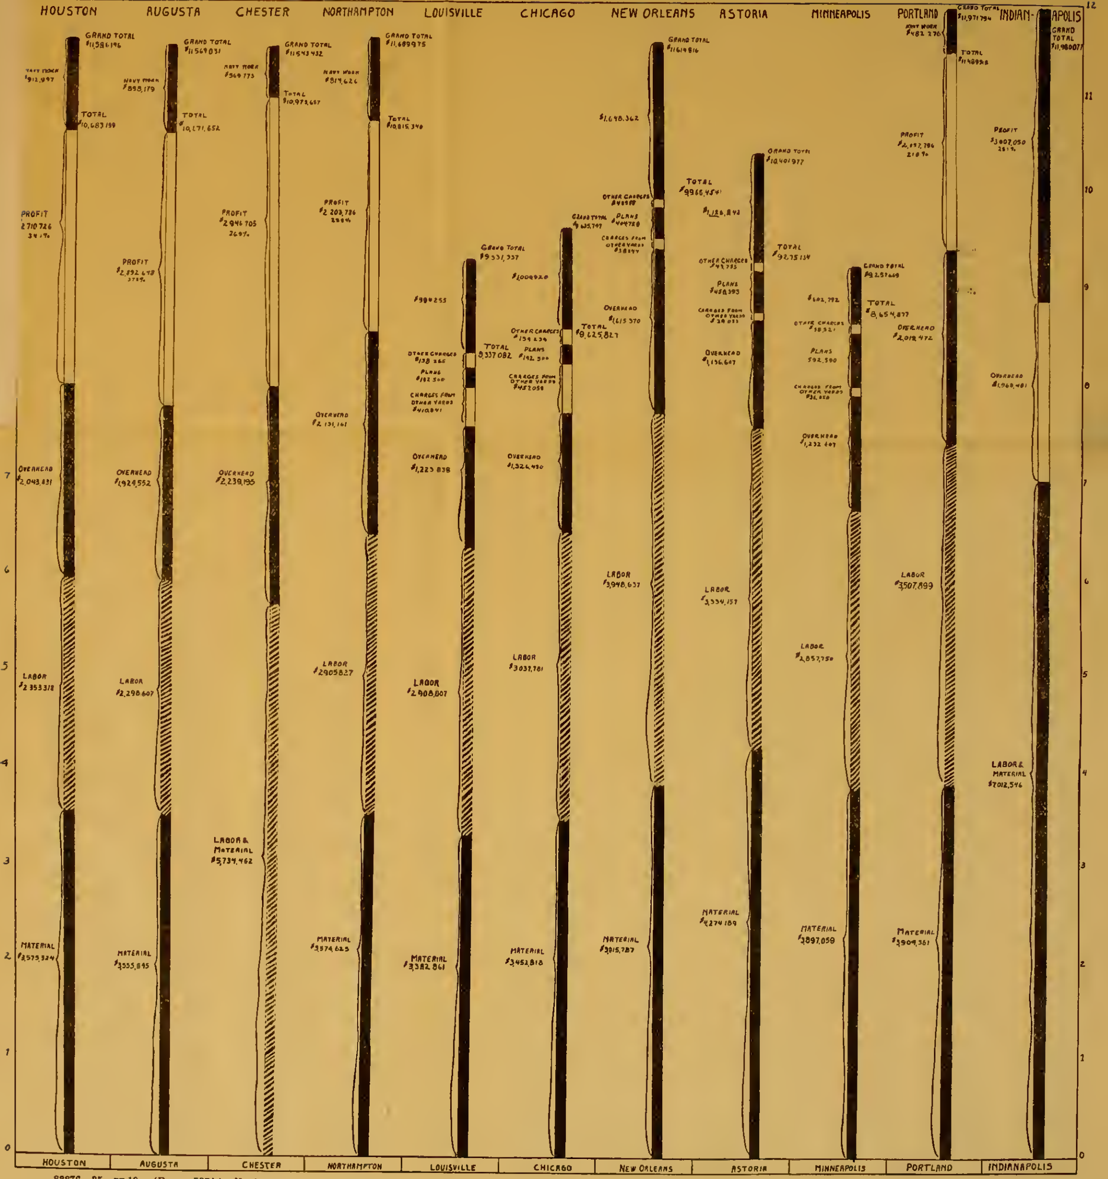
I have no record of any donations made by Mr. Manning or myself prior to 1931.

On March 18, 1932, Mr. Cord contributed $5,000.00 to the Garner preconvention campaign. This contribution was made through Milton K. Young, a Democrat residing in Los Angeles, California.

In addition to this $5,000.00 contribution made by Mr. Cord personally, Mr. Cord, Mr. Manning, and myself during the year 1932 made the following contributions:

E. L. Cord	$19,385.00
L. B. Manning	7,825.00
R. S. Pruitt	1,590.00

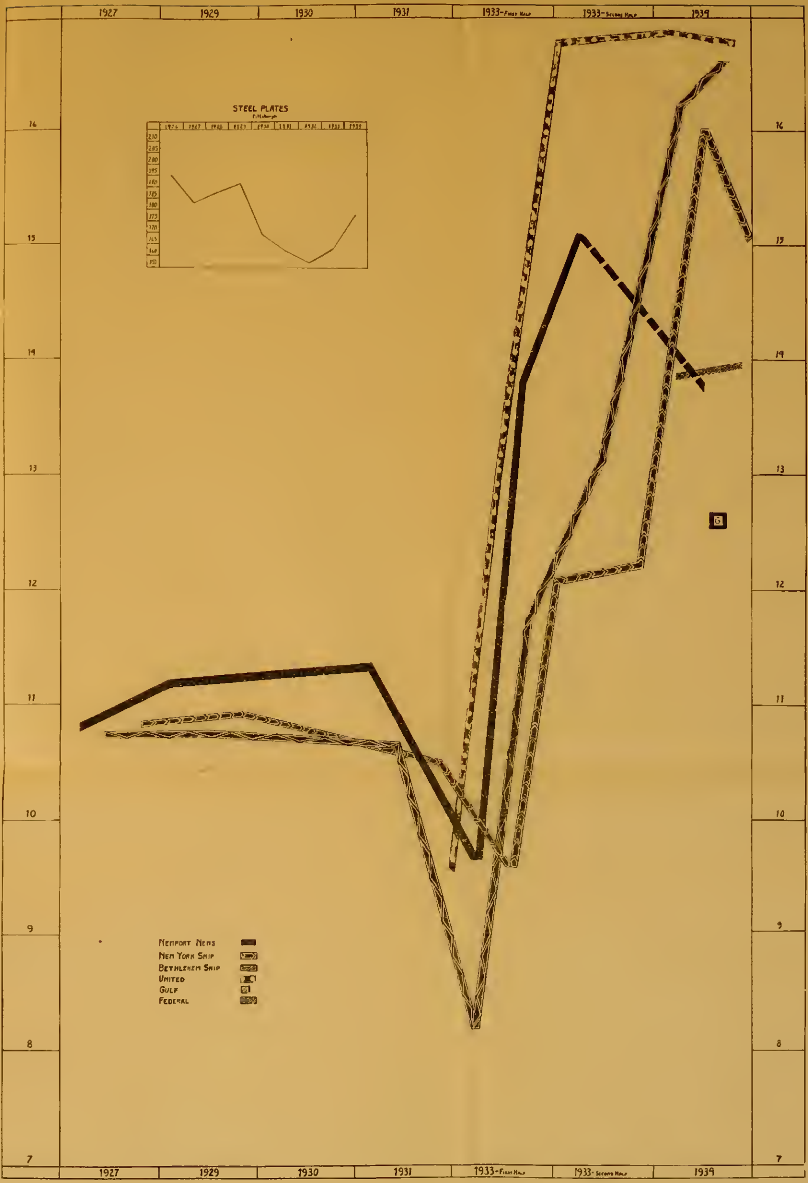
COSTS OF NAVAL CONSTRUCTION — 1927 AND 1929



88876—35—pt 19. (Face p. 5274.) No. 1

CRUISER BIDS AND ESTIMATES

1927-1939



The payments made by Mr. Cord were as follows:

October 18, 1932, check to R. S. Pruitt	$2, 000. 00
October 31, 1932, check to R. S. Pruitt	1, 685. 00
October 18, 1932, check to Republican National Committee	3, 500. 00
October 18, 1932, check to L. B. Manning	8, 250. 00
October 18, 1932, check to W. H. Beal	2, 200. 00
October 18, 1932, check to F. M. Bender	1, 750. 00
Total	19, 385. 00

Mr. Manning's contributions were as follows:

October 17, 1932, cash to R. S. Pruitt	1, 075. 00
October 18, 1932, check to Republican National Committee	2, 250. 00
October 24, 1932, check to Republican National Committee	1, 750. 00
No record date, cash to Melvin Traylor	11, 000. 00
Total	16, 075. 00

Of said total Mr. Manning received $8,250.00 from Mr. Cord, leaving his net contributions $7,825.00.

It is my understanding, as well as Mr. Manning's, that Mr. Traylor contributed $10,000.00 of the $11,000.00 cash so received by him from Mr. Manning to the Democratic National Committee and the remaining $1,000.00 to the local Democratic campaign fund.

My own contributions were as follows:

October 17, 1932, check to A. J. Cermak, treasurer, Cook County Democratic Committee	$1, 000. 00
October 18, 1932, Republican National Committee	2, 000. 00
October 19, 1932, Senator Otis F. Glenn	250. 00
October 20, 1932, check to Will Wood, Congressman, Indiana	500. 00
October 21, 1932, Republican National Committee	1, 550. 00
October 21, 1932, to John E. Northrup, Republican candidate for Attorney General	50. 00
November 1, 1932, to Senator James E. Watson	1, 000. 00
Total	6, 350. 00

Of said amount I received $1,075.00 from Mr. Manning and $3,685.00 from Mr. Cord, leaving my net contrbutions $1,590.00 as above set forth.

Mr. W. H. Beal, who received $2,200.00 from Mr. Cord, and F. M. Bender, who received $1,750.00 from Mr. Cord, as above mentioned, contributed these amounts to the Republican National Committee in the latter part of October 1932.

The foregoing are all of the political contributions made by Mr. Cord, Mr. Manning, and myself at any time that I have any information about with the exception of those previously reported to you which I personally made subsequent to my election as a director of the New York Shipbuilding Corporation.

Yours very truly,

R. S. Pruitt.

DEPARTMENT OF THE NAVY,
OFFICE OF THE SECRETARY,
Washington, March 2, 1935.

Hon. GERALD P. NYE,
United States Senate.

MY DEAR SENATOR NYE: In view of the inaccurate newspaper statements, (presumably emanating from the hearings before your committee), in regard to the visit of the U. S. S. *Ranger* and U. S. S. *Tuscaloosa* to South American seaports, and in order that the action of the Navy Department in this matter may be in evidence before your committee to correct these inaccuracies, I am writing this letter which I ask that you read into your records.

In the early winter of 1933–34 the Department laid the following plans for the shakedown cruises of the new ships under construction:

Name	Class of ship	Area for cruise
San Francisco	Heavy cruiser	South America (west coast).
New Orleans	do	Europe (Antwerp).
Minneapolis	do	Mediterranean.
Astoria	do	South Pacific.
Tuscaloosa	do	South America (east coast).
Ranger	Aircraft carrier	Gulf of Mexico.
Farragut	Destroyer	Europe.
Dewey	do	Gulf of Mexico.
Cachalot	Submarine	Caribbean.
Cuttlefish	do	Do.

You will appreciate that the purpose of these shakedown cruises is two-fold: First to train the crew and at the same time to test fully the machinery-plants within 6 months of delivery to the Government while the contractors' guaranty is still in effect; and, secondly, in conformity with the approved naval policy, to make foreign cruises, to cultivate friendly international relations, and to support American interests, especially the development of American foreign commerce and the merchant marine.

The aircraft carrier *Ranger* was originally not scheduled to visit any foreign port, but on the representation of her commanding officer that proper safeguarding of her special features would be effected, in which the Chief of the Bureau of Aeronautics concurred, the Department agreed to send the *Ranger* to Rio de Janeiro, Brazil, in order that a longer free-route cruise might be had and the crew have the experience of seeing a large foreign port south of the Equator. Accordingly, the Navy Department, on July 14, 1934, requested the State Department to make the usual diplomatic notifications of the proposed visit of the *Ranger* to Rio de Janeiro, from August 30 to September 9, 1934. On August 6 this Department was informed by the State Department that the visit met with full approval of the Brazilian authorities and no objections were offered by the American Ambassador to Brazil, and the *Ranger* was ordered to depart from Hampton Roads for Rio de Janeiro on August 17, 1934; public announcement of the visit being made by the Acting Secretary of the Navy on August 8, 1934. Following the public announcement the American Ambassador to the Argentine Republic wired the State Department to the effect that he hoped the visit of the *Ranger* to the Brazilian port of Rio de Janeiro and failure to visit the Argentine port of Buenos Aires would not cause adverse criticism in the latter country. The American naval attaché at Buenos Aires also urged the cruise be extended to include Buenos Aires. The Department was not favorably inclined to this extension of the cruise of the *Ranger*, because the additional time and distance involved would restrict her later operations prior to her final acceptance trials, and also in view of the fact the new cruiser *Tuscaloosa* was due to visit Buenos Aires in November, as will be noted later on. However since these reasons were not vital and as the Department desired to cooperate with the State Department in furthering friendly relations in South America, the decision was taken, on August 14, 1934, to extend the *Ranger's* cruise to the Argentine and Uruguayan Republics. It may be stated that the ship was visited by Presidents of all three of the Republics of Brazil, Argentine, and Uruguay, and that most favorable impressions were created in all three national capitals.

The new cruiser *Tuscaloosa* was originally slated to visit the east coast of South America, the initial itinerary proposed by the Department on April 7, 1934, providing for calls at Pernambuco or Bahia, in Brazil, and at Buenos Aires and Montevideo. Rio de Janeiro was omitted in view of the visit of the *Ranger* having been scheduled for that port, on March 22, 1934, and because the Department, in general, tries to avoid sending ships to the same foreign port more often than once in 12 months. However, the commanding officer of the *Tuscaloosa* requested to be allowed to visit the Mediterranean Sea instead, and on April 28, 1934, this request was granted. On July 6, 1934, the *Tuscaloosa* submitted an itinerary for a cruise to southern European ports, but, before the final approval was given, serious political disturbances, leading up to and following the death of Dr. Dolfuss, the Austrian Chancellor, broke out in Central Europe. The Department therefore decided a European cruise was unwise and on August 6, 1934, directed the commanding officer to submit an itinerary for a voyage to Buenos Aires and Montevideo, stopping en route at Martinique and Bahia, Brazil. On August 20, 1934, the cruise itinerary was approved but Rio de Janeiro was substituted for Bahia, because of its better harbor and better facilities for handling the liberty parties. The cruise was conducted between October 15, and December 20, 1934, and was also very successful.

From the above, it will be seen that these visits of the *Ranger* and *Tuscaloosa* were initiated by purely naval reasons and were entirely agreeable not only to the American diplomatic representatives in the countries visited but also to our own State Department, as well as to the officials and citizens of the foreign nations visited. The records of the Navy Department are available to substantiate the particulars set forth above, if further documentary support is deemed desirable.

If I may be permitted the observation, it is my opinion that these visits of the *Ranger* and *Tuscaloosa* in the autumn of 1934 have become confused with a suggested visit in the spring of 1934 to Rio de Janeiro—which visit did not meet with approval and which was not made.

Sincerely yours,

CLAUDE S. SWANSON.
